THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 1.] YOKOHAMA, SATURDAY, JANUARY, 1, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

On the 27th instant, at the Yamato Yashiki, Tokio, the wife of C. A. McVEAN, Esq., of a daughter.

DEATH.

At Yokohama, on the 28th December, 1875, CLIFFORD BATE, Registrar of H.M.'s Court at Kanagawa, aged forty-five years.

Notes of the Week.

One of the native papers circulates a report that a telegram has been received from Mr. Hirotz to the effect that the Coreans had refused to receive the Japanese Envoy. But there is good reason for believing this is to be incorrect. Some delay has taken place in the departure of Mr. Kuroda, though this may have arisen solely from the desire to make the staff of the Mission more complete. It is significant that Mr. Enouye Bunda accompanies the Chief Envoy. The Mission will probably leave on or about the 10th of January.

The decision of General Van Buren upon the case of "assault with intent to kill" brought before him, was published after our note of last week was written, but is entirely in harmony with it, and must commend itself by the fair spirit which it embodies to the acceptance of all reasonable men. The terms in which the charge brought against Mr. Middleton was couched, have brought upon those entrusted with the case much well-merited censure, but it seems to us absurd to blame anyone for them but the foreign adviser or advisers who were responsible for the bill of indictment.

But while General Van Buren's decision is undoubtedly quite conformable to Mr. Fish's despatch on this subject, and generally to justice and common sense, it should be remarked that this despatch, which guides the action of United States officials in this country, places its citizens under the authority of the Japanese in municipal matters to a greater extent than is entirely desirable. We have no great fear that advantage would be taken of this to insist on petty regulations irksome and annoying to the foreigner. But this certainly might be the case, nor do we see how any citizen of the United States could now be supported by his Consul for refusing compliance with any foolish regulation which might be made by a foolish local authority. The probabilities, however, are so much against the issue of any such regulation under the present condition of things, that the broad principle of justice involved in Mr. Fish's ruling must be accepted in spite of the small dangers which lurk in it.

The meeting of the seat-holders of Christ Church held on Thursday last readily despatched such business as was presented to it. The Report and Accounts of the Committee were passed, and the announcement was made that a deed of trust had been executed providing for the future constitution of the establishment, which is now entirely detached from all connection with the British Government. An important feature of this deed is one which provides that any person who has paid $20 during any one year towards the maintenance of the church, and has been domiciled here for six months, possesses the privilege of a vote for that year at the meetings of seat-holders. This extension of the franchise was undoubtedly necessary in view of the present and probable future condition of affairs here, nor is there any good reason to think that it will operate prejudicially to the interests of the Church.

It has been represented to us from a friendly quarter that an expression which crept into an article in our columns of last week was calculated to give just offence to some of the American officers who took part in the late Formosan Expedition. The representation is just, and, in that conviction, we withdraw the expression without hesitation, and regret that it escaped us.

We stated last week that the Chinese corvette *Yang Woo*, now in harbour, was fitted out by the *Provincial* Government of Fohkien. We are informed, however, that the Arsenal of Foochow is an *Imperial* establishment, and controlled by an Imperial Commissioner who is entirely independent of the provincial authorities. The present Viceroy of Nanking, Shen-pao-Chen, was for many years Commissioner of this Arsenal, and during his tenure of office eighteen gun vessels were constructed there. The present Commissioner is the well-known Ting of Tientsin. The cost of supporting the Arsenal is borne by the three provinces, Kwantung, Chikiang and Fohkien, and though gun boats are occasionally transferred to other provinces their cost is invariably reimbursed.

The accident to the *City of Tôkiô*—the loss of one of the blades of her screw-propeller, which in falling interlocked with another blade and carried it also away—is being repaired with all possible despatch. It has been found necessary to remove the cargo from her after-end so as to allow of obtaining a sufficient elevation of her stern to render the screw accessible. This has been accomplished, and all the bolts and attachments are removed preparatory to fitting on the new blades. It is hoped, should the fine weather continue, that the work will be completed, and the vessel prepared to take in cargo, on Monday. All circumstances being favourable, it is probable that she will be ready for sea on Tuesday.

We should ask Mr. Black to continue a series of his pleasant "Evenings at Home" were we simply to consult our own sense of delight with his first, and had not the aspect of the room on the night of the entertainment warned us that a minstrel, like a prophet, may perchance find but little honour in his own home. For although the warm reception accorded by a comparatively small number of *virtuosi* to the gifted foreign artists who have visited us of late, seemed to justify expectation that the touching melodies of our own islands would find eager listeners, when adequately interpreted, in the larger class which they addressed, we must confess to some disappointment in the result. The circle of those to whom the well-remembered songs of childhood unresistingly appeal—who only *par complaisance* lend an ear or nod a head to a classic

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

composition (for, like Congreve's Sir Sampson, "your sonatas and solos always give them the spleen")—is so wide, that the slender interest shown in Mr. Black's artistic performance seems utterly irreconcileable with what we should suppose the fitness of things. The exquisite feeling and melancholy with which he invested his rendering of the favourite "Harp that once through Tara's Halls," and his tender and sympathetic vocalisation in "John Anderson, my Jo," must have delighted, in equal degree, the simplest and most highly cultivated musical intelligence, apart entirely from the charm of association which the genius of his art conferred; and we must venture to doubt if any loftier degree of excellence in ballad-singing be attainable. Our own experience, at least, is conclusive. Mr. Black also displayed a rare—and, we think, to most of his listeners, unsuspected—dramatic power in the grim old Scotch ballad "Come under my plaidie," which he recited rather than sang; nor must we refuse due praise to his humorous side, for never was the broad fun of the gayest of Dublin's living poets better presented than in "Won't you lave us a lock of your hair?" Of the *scena* of the "Maniac" we cannot speak so well. It was, we think, unwisely added to an already overflowing programme.

The ostensible ground-work of Mr. Black's entertainment was the tender passion. But of the pathology of that morbid condition of the affections which we call love—its hopes and fears, burnings and chills, alternate attraction and repulsion, Mr. Black was content to say but little. The theme furnished an admissible excuse for drawing upon the stores of every poet who has lived, and Mr. Black exhibited in his illustrations the excellence and appositeness of his taste.

The appointment of Mr. Seward as Minister at Peking for the United States, is announced by the China papers. It may be presumed that, under these circumstances, Dr. Wells Williams will vacate the post of Secretary of Legation, which, alternately with that of Chargé d'Affaires, in the absence of a Minister, he has held for some years. Mr. Seward's promotion is a well-earned reward for many years of efficient service as Consul-General in Shanghai, but it is impossible not to regret that the large knowledge and experience and calm judgment of Dr. Williams should be, as it now probably will be, lost to the service of the United States in China.

We are requested to inform residents of Yedo that Miss Jenny Claus purposes to give a Concert at the Horaisha Rooms, near the Railway Station, on Wednesday next at 9 p.m.

The China papers also announce the dismissal from office of the Governor-General of Yunnan for dilatoriness in returning to his post. Will not this enable him to evade all responsibility in regard to the murder of Mr. Margary? And is it not probable that the dismissal has been made with a view to that end?

Signor Castelli, Italian Consul in Yokohama, left on Wednesday for Shanghai for the purpose of taking charge of the Italian Consulate-General, which the death of Signor Vignale has left vacant.

Mr. Arinori Mori left Chefoo for Peking on the 16th instant, travelling overland, and will probably reach the capital about the 18th January.

The usual New Years' Day Paper Hunt for a presented cup, will start from the old coffee-house at 3 o'clock p.m. to-day, finishing at the Rifle Range.

The usual Mail Summary of this journal will be published on Monday, 3rd instant.

In consequence of the interruption by past and present holidays, the nature of business during the closing week would seem scarcely to demand the issue of our usual commercial report. We therefore abstain from publishing it.

The M. M. S. S. *Menzaleh* sailed from Hongkong on the 30th ultimo for Yokohama, at 6 o'clock p.m., with the Marseilles mails to the 21st November. The Company's s.s. *Volga* will leave to-morrow, the 2nd instant, with goods ex the *Amazone*.

From the "Japan Mail Daily Advertiser."

A collision occurred between the steamers *Nagoya Maru* and *Osaka Maru* off Minassi in the Inland Sea on the night of the 25th instant. The latter steamer was sunk, but the telegram does not state if the calamity was attended with any loss of life. The *Nagoya Maru* will remain for the present at Shimonoséki, the mails and passengers being conveyed to their destination by a vessel despatched immediately for that purpose from Kobé.

On enquiry at the Mitsu Bishi Company's Office we have failed to learn any further particulars of the catastrophe in the Inland Sea. The *Osaka Maru* was engaged in carrying troops, but the number of men on board is not known;—report says 150.

Tendo, a *Kuadzoku*, on resigning from the *Daikioin* was invited to become a member of the *Kuadzoku Kuaigi*, or Noblemens' Club. He replied that he was willing to join it, but upon the condition only that its members agreed to contribute one-half of their pensions to assist in the extinction of the foreign debt. The members have not as yet replied.

Yamagata, Miura, and Torio of the Army Department and some Buddhist priests have formed a society styled *Hakurenkai*. The priests deliver their discourses every fifth day.

The *Nichi Nichi* reports the discovery of Kerosene in the province of Owari. From the use of the word "mine" it is inferred that shale, not the crude fluid, has been found.

The Government at Peking has ordered four thousand maps of the Chinese Empire to be prepared in this country, after the model of an elaborate and accurate map drawn by Japanese hydrographers which was recently submitted to its inspection. The circumstance is indicative of the attention awakened in the Sister Empire by the material progress made by Japan, and affords a promise of future and more friendly relations between the two countries.

We learn from the *Hochi Shimbun* that specimens of flour made from wheat grown in the Island of Yesso have recently been submitted to the inspection of the representatives of the Foreign Powers. They have been pronounced, by competent judges, equal to the best quality of American flour. The wheat we believe to be of the description known as Oregon.

The *Nichi Nichi Shimbun* relates this somewhat incredible story. There is a temple at Kurahiki in Yetchiu, known as Miosenji, which is under the care of a single *Bonze*. Having lighted his kitchen fire early one morning he proceeded to his early orisons, but was startled while praying by the crackling of burning wood in the room he had just quitted. He hastily left the temple, and on returning to the kitchen observed to his amazement four or five apes busily engaged in piling wood, not alone upon the fire but all about it. The discovery was made too late to save the building, which was burnt to the ground.

The Great Northern Telegraph Company has transmitted the following telegram for the information of senders of messages viâ Hongkong.

Until the restoration of the Adm-Suez section, which is now momentarily expected, we direct all homeward messages viâ Teheran unless specially ordered viâ Turkey.

The highest price bid for the P. & O. s.s. *Massilia* on Tuesday at auction, not reaching the limit of $50,000, there has been no sale.

The *Hochi Shimbun* writes:

The *Kuadzuoku* residing in Toriô will repair to the Imperial Palace to-day, (29th instant), and two following days for the purpose of addressing the usual compliments to His Majesty on the close of the year.

The *Eiri Shimbun* has this very small joke on the coming display of official costume.

As the new year is approaching we may expect to be gratified with the sight of many men wonderfully clothed,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

We read in the *Akebono Shimbun*:—

Mr. Healens (?), a Prussian gentleman who has sold large quantities of breech-loading firearms to our Government, accompanied Shimadzu Saburô to the South.

No further particulars are available as to the ill-fated *Osaka Maru*. The *Hôchi Shimbun* says that twenty lives were lost in her.

Inouyé Bunda was appointed *Gikuan* (member) of the *Genrô-In* on Monday last.

A notification has been issued by the Tokiô *Fu* to which the attention of Foreigners may also be called. It is to the effect that a number of 20 sen *satzu* have been altered to 50 sen and are now in circulation at the higher value. The warning is of course proper, but it is difficult to understand how many mistakes can occur in view of the difference in colour.

There is, we regret to learn, every probability of the streets of our settlement being again in darkness after the 1st January next. Acting upon the general feeling that the price charged for the supply of gas has been hitherto excessive, the Foreign Committee submitted to the *Machigaisho*, to whose hands the Gas Company has been transferred, a proposal to reduce its charge by a reduction of 10 per cent; but, after a long and tedious negotiation, their proposal has been refused on the ground that this would involve a similar concession to the native consumers in Benten and Tokio.

Setting aside the question of reduction, it is we think hardly to be expected that an amount equal to that contributed this year can be reckoned upon in 1876. The value of rentals has considerably diminished, and, unless a reduction of the charge be made, a higher percentage subscription than that of last year would seem to be unavoidable.

The latest account of the number of lives lost in the *Osaka Maru* fixes it at 16.

The *Nichi Nichi Shimbun* announces that one of its Editors will accompany the Corean embassy by special authority; it is to be presumed as correspondent for that journal.

We direct attention to a meeting of the Subscribers of the British Episcopal Church, which is announced to take place at the British Consulate at 3 p.m. this afternoon.

A heavy punishment has been allotted to the respective editors of the *Akebono* and *Hochi Shimbun* for having published a letter calculated to bring the authorities of the Tzurugaoka *Ken* into contempt. They are ordered to be imprisoned for one month and condemned to pay a fine of 200 *yen*. [The letter, headed "Trouble in the Tzurugaoka *Ken*" will be found elsewhere.]

The *Nichi Nichi* notices the departure of Mr. Inouyé Bunda for Ôsaka where he will wait the arrival of Kuroda. The mission will leave for Corea on or about the 6th January.

The new Chamber for the Sittings of the *Genro-in* has been completed. The *Hochi Shimbun* describes it as being in the "French style" and to have cost a sum of 10,000 *yen*.

The *Nichi Nichi Shimbun* gives the following particulars of the letters, newspapers, book and other parcels, transmitted through the Imperial Post-office from January to July in the present year. The total quantity was 12,289,868 of which 1,839,846 were newspapers. The latter exhibit an increase in circulation over the preceding year of 39.9 per cent. and is more than six times in excess of the number of newspapers carried through the Post-Office in 1873.

The Tokio Exhibition was closed on the 26th instant, but will be re-opened on the 6th January.

The *Akebono Shimbun* notices the observance of Christmas as a holiday by all the leading tradesmen of Yokohama and Yedo. There are indications, it thinks, that it will in course of time become a national holiday.

THE EASTERN QUESTION.

AFTER a more or less fitful repose of nearly twenty years the course of events has once more brought into prominence the mutual relations of two great European Powers in Asia, and it is apparent that the Eastern Question is now about to enter upon a new and interesting stage of development. In the interval which has elapsed vast changes have been witnessed in the commercial economy of Europe. The growing need of the products of the East on the one hand, and the demand for European manufactures on the other have strengthened the bonds of trade by increasing mutual interdependence, and commerce has been at once stimulated and facilitated by the creation of a new route to India and the prodigious development of steam shipping. But while the question possesses a general interest to Europe, it is in its connexion with the special aims of England and Russia that it is now our intention to trace the influence of recent events, and we propose to consider the position of the latter in its bearings upon the Ottoman Empire and upon the interests of Great Britain in her Indian dominions. With regard to the first, it is demonstrable that the result of the Crimean war convinced Russia that the object of her ambition, the overthrow of the Turkish Power in Europe, could not be accomplished by making her ground of quarrel with Turkey an European one. Too many of the great European powers were interested in the maintenance of the Turkish dominions, while on the other hand but one power in Asia, and that power England, would be entitled to raise its voice in any dispute arising between herself and Turkey on Asiatic grounds. But it was also apparent to Russia that if Turkey were driven from Europe she might obtain formidable influence in the East by agglomerating in one defensive alliance the Mohammedan Powers of Central Asia and Arabia. To provide against this it was necessary that she should consolidate her power in Asia; a policy which would naturally have the effect at once of undermining the power of Turkey, and of rendering her eventual overthrow more easy by weakening her influence in Europe. That Russia must have adopted some such view as this is shown by the progress of events. On the conclusion of the Crimean war all her energies were devoted to the subjugation of the Circassians, the result of which brought her frontier to unite with those of Turkey and Persia in Asia. The effect of this on Persia has been virtually to render her a dependency of Russia, and has enabled Russia to carry out the easy conquest of the independent Khanates. Persia, impoverished, with an effete population and a corrupt government, has, by its dependent and helpless condition, been of material assistance to Russia in the pursuit of this policy. Stretching from the head of the Persian Gulf to its junction with the Russian frontier in Georgia, on the flank of the Asiatic possessions of Turkey, its position has offered an admirable screen behind which Russia could mask her designs in Central Asia without fear of molestation. The religious sectarian differences existing between Persia and Turkey have been carefully fomented, and for the last twenty years these two countries have seemed perpetually on the brink of war. But Turkey has wisely shunned the consequences of attacking her helpless neighbour, perceiving that this, by involving her with Russia, would also jeopardise her Asiatic territory. The consequence has been that Samarcand, Bokhara, Khiva and Khokand have each in turn succumbed to the victorious arms of Russia, while Turkey, though doubtless sympathising with

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

the disasters of her semi-dependants and co-religionists, has been powerless to interfere on their behalf. The influence Russia has acquired over Persia may also be illustrated by reference to the concession for a railway granted by the Persian Government to Baron Reuter and English capitalists, which was cancelled by the Persian Government after the work had been already considerably advanced, and handed over to Russia. This is really a matter of congratulation to the English shareholders, as a more unprofitable work in an impoverished and impracticable country like Persia cannot be conceived. Should Russia, however, deem the work of importance from a military point of view, and can afford to throw away an enormous sum of money on labour of such doubtful utility, it is a matter in which she alone is concerned.

With Persia and the Central Asian Khanates lost from her control, Turkey now lies completely at the mercy of Russia. The latter has recently reorganized her army, and on a war footing is supposed to have upwards of 1,800,000 men under arms. Almost the whole of her forces are retained in Europe, as the garrisons of Siberia and the Amur aggregate at the most but a few thousand soldiers. Her forces in Europe are massed chiefly on her Western and Southern frontiers. The northern coasts of the Black Sea and Sea of Azoff present one line of fortifications and arsenals, connected by railway with the important centres of the Empire. On the frontier of Georgia, where it joins the boundaries of Turkey, a railway connects the Black and Caspian Seas viâ Tiflis; while Poti, its terminus on the former, is distant but twenty-five miles from Batoum, the Turkish frontier sea-port. In this district a standing army of 150,000 men is maintained, and forty-eight batteries of artillery. Turning to the Caspian Sea, we find Bakou, its seaport, in communication with Astrakhan and the Volga by numerous and important lines of steam vessels, while the Volga, the great southern artery of the Empire, connected by railway with the North-West on the one side and the Don on the other, communicates by the latter with the Sea of Azoff and the Black Sea. Thus, within her own territory and ready for aggressive enterprise, an overwhelming Russian army may be brought within a short space of time to bear upon the Turkish frontier. This is some 600 miles distant from Constantinople, and not only is there no railway communication but the roads are in a ruinous condition from long neglect. Nor would water communication be possible: the superior position of Russia would convert the waters of the Black Sea into a vast Russian lake. By extending round its Southern shores—and this she could do without obstacle—Russia would cut off support to Turkey from her Asiatic dominions and render her position in Europe untenable. By this policy, she may also count upon the support of Persia to overawe the Bagdad and Armenia Pachaliks, and effectually prevent the possibility of assistance from those quarters.

It may be assumed that Turkey is powerless to defend herself for long in Europe against the grasp of Russia which is now gradually tightening around her. Whether the Great Powers will permit the partition of her European Empire is another question. But even though driven from its seat in Europe, it must not be forgotten that the Empire will still possess vast interests and influence in Asia—influence which the powerful secret associations of Mohammedanism alone in her Indian possessions render it wise for England to conciliate and retain.

It is natural that the animosity of the Mohammedans should be chiefly directed against Russia, a country they look upon as the inveterate enemy of their faith; but it is also possible that these fanatical races may fail to distinguish between friend and foe and that the wars of the Cross and the Crescent will be again fought out. If such be the result, Russia must bear the responsibility of having provoked this calamity, and it remains to be seen if she is strong enough to resist the consequences of her action and at the same time preserve her position. That she is now strong enough may fairly be doubted by those who carefully estimate her position in Asia and the internal agencies at work within the Empire. If the wave of Islamism again rolls back on Europe, it is the Eastern nations of Europe which must suffer, and they can expect but little sympathy from their Western neighbours, and the consequences would probably alter their present views and ambitions. Her easy victory over the independent Mohammedan rulers of Central Asia must have been matter of surprise to Russia, but signs are not wanting that she is now learning painfully the weight of responsibility which her conquests have brought with them. She has conquered but not subdued this wild and turbulent people, and her highest skill in government will be requred to assimilate them to her institutions. The work of taming them will be none the more easy that the conquerors are the inveterate enemies of their faith. The *prestige* of the Empire has been partly earned by the absorption of vast tracts of unpopulated wastes and arid deserts in Asia, but it remains to be seen if Russia possesses sufficient administrative genius to secure to her sway the wild nomadic tribes which her recent conquests have subdued. It may be believed that this will prove a work of no small difficulty; that it must be the work of ages, and that the success of her ambitious aims in Europe will but add in all probability to her embarrassments in Asia.

However much Russia may envy England her Indian Empire, she cannot with her responsibilities seriously contemplate an endeavour to wrest it from her. Her military tactics in Asia have been simple enough. Her theory has been to extend from a centre, and, when driven back on her supports, to advance again, and thus, alternately advancing and retreating, to persevere until in the end she overcomes. In her successes in Central Asia a force of 10,000 men is the largest her generals have been able to handle effectually and with advantage, and this only for short distances against her *isolated* enemies, for she has been careful to attack the Khanates separately, at the same time contributing towards the rivalry and enmity existing between these fanatical governments. If an army of 10,000 men has been found by Russia to be the maximum to be conveniently moved in Central Asia, can it be possible to move 100,000—for this must be allowed to be the minimum force with which she could expect successfully to cope with the English forces in India? The cost of moving such an army, even assuming the practicability of placing it on our Indian frontier, would seem insuperable in the barren regions on which it must be concentrated. To effect it, moreover, it would be necesary to transport forces for over a thousand miles from the Russian military centres, through countries incapable of supporting such vast numbers, in which the want of water is but one of the many privations European troops would have to endure, and inhabited by a fierce and treacherous race. And assuming a Russian army of adequate force to have gained the frontier of India, and forced back its defenders upon their supports, the facility of communication would enable these to gain their centres rapidly, vast reinforcements would be brought forward by railway, and an army

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

of invasion would be hopelessly imperilled. It has been said that under Russian influence the Affghans may be incited to aim a blow at British rule in India. The ruler of Cabul is not without experience of British prowess. The overthrow of many of his fellow rulers is a matter of history. And an easy compliance with the projects of the bitter enemy of his faith for objects of conquest, which he could never make good, is so far probable that we may believe that fears in this quarter are illusory and unwarranted. England, indeed, may be expected for many years to retain an influence with the Ameer which there is every reason to suppose will largely predominate over that of Russia.

A consideration of the complications of this large and much vexed question has led in later times, and under the peaceful influence of other feelings, to a solution by which both the interested powers may retain, the one the undisturbed possession of past conquests, the other the means to pursue unchecked and unmolested the extension of its power among the barbarous hordes which people Central Asia. The first of these possesses in British India an Empire which its ambition does not prompt it to extend towards the north and which is limited by natural boundaries on other sides. She may view with no unfriendly eye the advance of a great and responsible power, sweeping before it barbarism and superstition, and shedding on every side the light of civilisation and progress. Granted that this advance covers no lurking design against her hardly-won conquests, she may surely sympathise with an agency which, to be successful, must substitute law and order for disorganisation and rapine; which stops the misery of internecine bloodshed, and bears to the semi-civilised peoples of the East the humanising arts of peace and the example and lessons of a purifying faith. We have not here touched upon the bearing of the question in its newest phase upon this country and the great neighbouring continent. But it is not improbable that both China and Japan may be called upon later to play no inconspicuous part in the future development of the Eastern Question.

THE MITSU BISHI MAIL STEAM SHIP COMPANY.

THE transfer of the whole carrying coast trade of Japan from foreign to native hands is an event which might have been predicted as one of the steps which a Government anxious to increase the wealth of the country by commercial enterprise, would sooner or later adopt. It is perfectly natural that the Japanese should desire to reap for themselves the advantages of a trade which is specially their own, and they will certainly not be begrudged the benefits arising from it. But whether the enterprise known by the title embodied in our heading will result in benefit to the Empire, or will prove a source of loss and humiliation, will depend upon the soundness of the principles on which it is conducted, the efficiency and economy of its organization, its adoption of definite aims and close adherence to them. In view of the great interest which foreigners possess in this coast trade, they cannot but feel deeply concerned in the conduct of this enterprise. It is now their sole regular means of locomotion between this port, the coast ports, and China. They are the main contributors of freight, and the safety of this involves large foreign insurance interests. They put life, time, and property at stake, and expect that the safeguards with which these are surrounded in western countries shall be extended to them here. If we look to the history of similar undertakings elsewhere, we find that, as a general rule, they have grown with the requirements of that trade which they were instituted to meet, and that the experience gathered on a small scale has been the guide of the enterprise in its more mature form. The necessity for a close but wise economy at the outset has always been regarded as a vital condition of success, and the lessons which could be plentifully gathered from the success or failures of other organizations with similar ends in view, have always been made use of. In this respect the Mitsu Bishi Company is at some disadvantage. But a few months back it consisted of a small fleet only, chiefly occupied in the coasting trade. It now possesses almost a complete monopoly of this trade and the trade between the north of China and this country. Every year will add to the growth of this trade, and whether or not the company retains it in its own hands will mainly depend upon the manner in which it may use the power of which it is now the depository. So abundant is the wealth, and so great and active the spirit of enterprise in the West, that a considerable and expanding trade like this is sure to attract attention, and competition for it is certain to be invited if it is conducted with less efficiency than the public interests demand.

It is worthy of note that during the last four years the Chinese have made strenuous efforts to wrest from the hands of foreigners that coast trade which they think was unfairly taken from themselves by the provisions of the early treaties, made when they were ignorant of its value and of the great interest they possessed in retaining it in their own hands. It was of course conducted with efficiency, and it was profitable to the foreigner and valuable to the Chinese, as is proved by the enormous increase of trade to which it led. But the Chinese were not unnaturally dissatisfied to see it entirely in foreign hands, and set themselves to work to get it into their own. In this endeavour they have been partly successful, but it yet remains to be proved whether that which appears an immediate gain will not prove ultimately a source of serious loss to them. They entered the competition without sufficient knowledge of the subject, or attention to the true conditions of success. Their vessels were expensive and not perfectly suited to the required purposes. Their organization was imperfect, and their first expenses of establishment were disproportionately large. The consequence is that, so far as may be judged from the last Report made to the shareholders, the success of the undertaking seems far from assured, as is the accomplishment of the purpose aimed at by its promoters. The Japanese cannot do better than take warning by this example, which is so near to their own doors that all the data regarding it are easily accessible. It is obvious that the risks which were formerly taken for them by foreigners—risks of loss by shipwreck, fire, or collision—now lie on their own shoulders. The national purse is interested in every step they take, and will suffer by every mistake they commit, and the gratification of a legitimate national pride may entail a heavier expense than it may always be wise to incur. If the managers of the Mitsu Bishi Company conduct it with wisdom and economy, they will ensure a good return for the capital employed in the enterprise, will indemnify the Government for the subsidy it pays, and promote that extension of the trade of the country which is so much to be desired. But in view of the grievous failure which has attended so many of the new enterprises into which the Japanese have entered of late, foreigners may easily be forgiven for entertaining more fear than hope as regards the future of this Company. In common with the

Original from UNIVERSITY OF CALIFORNIA

Japanese, however, they are deeply interested in its success, and will be proportionably pleased to see this achieved.

SPIRIT OF THE JAPANESE PRESS.

COREA.

("Hôchi Shimbun," of 27th December 1875.)

When will Mr. Kuroda the Envoy Extraordinary and Minister Plenipotentiary embark from Shinagawa? The attention of most persons appears to be concentrated on this one point. The street rumours which are cropping up just now follow one upon another without any cessation. According to a street rumour of five or six days back it was stated that the 25th instant had at last been fixed as the date of the departure of Kuroda, but, though that day passed by, the news of his departure was not received, and consequently the street rumours have become more noisy and people's minds more agitated than ever. According to one rumour in a telegram which was sent to the Government lately from Nagasaki it was stated that Mr. Hirotsu, who started from Japan to precede the Ambassador and proceed to the Capital of Corea, had been prevented from landing by the Coreans; that Mr. Hirotsu had discussed various matters with a Corean official who had visited our official residence at Fusankai, but that the latter would not listen to his propositions, and refused to entertain the subject of his negotiations, saying that not one foreigner would be permitted to have access to the district in which the Capital stands.

We cannot tell for certain whether this telegram is true or not, but according to the rumours of the streets "the "25th instant was fixed as the date of Kuroda's departure, "but owing to the receipt of this telegram the departure "has been further postponed; still the time is probably "close at hand." These cannot therefore be given credence to, and accordingly we cannot by the help of these form any opinion as to the policy of the Government. In the first instance, that of the report that the departure would take place on the 25th instant was not certain information communicated by the Government; it was purely a street rumour. The statement about the arrival of a telegram from Nagasaki is another street rumour of precisely the same kind, and the report that the embarkation had been postponed in consequence of this telegram is also nothing but a street rumour. The information which we have sought for and obtained, therefore, has from first to last been nothing but one street rumour after another; we have not as yet elicited anything to which full credence can be given.

Nevertheless, if we consider the question having due regard to the noisy issue of the street rumours hitherto, we cannot help deciding that there can be no doubt of the existence of some vestige of fact to account for all this noise. Therefore when we pursue a train of reflection in this matter, taking it for granted for the time being that all these street rumours represent the truth, there is much that we cannot understand. In connection with this Corean question discussion was carried on noisily in this country many months ago, and in the end, according to the excellent views of the best part of politicians, it was decided that the wisest policy was to leave Corea alone without demanding an explanation from her. However, the Government not being able, owing to what causes we do not know, to let the matter drop without demanding any explanation, it has come to pass that Mr. Kuroda has received the appointment of Ambassador to Corea. This being the case, as it is a matter of such importance that a deaf ear has been turned to the excellent views of the best part of politicians, there must be far seeing discernment and deep thought on the part of the Government; distant eventualities must have been considered, profound reflection brought to bear and added to profound reflection, innumerable obstacles and countless possibilities have been considered, and in the case of these obstacles a plan rich in detail has been thought out which shall provide how this difficulty and that obstacle shall be met, and a settled policy has (of course) been decided upon by the government, stating in the event of any slight hitch occurring, the case must be dealt with according to the circumstances of the occasion. Therefore, as regards the departure after the day has once been fixed, whatever telegram might come from Nagasaki the fixed date of departure would not be postponed. As for the Coreans refusing to allow our ambassador admission to the Capital, this is only what might have been expected beforehand, and it is nothing to be surprised at. This point cannot possibly have been overlooked in the plan drawn up by the Government, still if it be a fact that this sudden postponement has taken place in consequence of this telegram, then we cannot guarantee that there will not be persons who will say that the nation suspects that the Government are without policy, without plan of action, that as for the carefully wrought scheme the existence of which we supposed for the sake of argument, this does not exist, and that (the Government) are gambling with victory and defeat in looking for unexpected good fortune. We firmly believe that such is not the case with our Government, but there is no help for it if we cannot explain (the grounds of our belief) to our countrymen.

The above is of course merely a conjecture on our part, formed on street rumours which are in themselves again nothing but conjectures. What we have said are mere surmises which the moment that an actual and reliable fact appears will be disposed of at one sweep. However, it is not in the interest of the Government that street rumours, in which no credence can be placed, should be so noisily active as they are, and that people's minds should thus be agitated to no purpose. But what can be done? The designs of the Government are of great magnitude and depth; their deliberations are secret, and therefore these cannot be suffered to leak out at large throughout the town; and if in consequence some confusion is created this is a matter which cannot be prevented. The fact of the matter is this, that if in the observance of secrecy the transgression of the proper limits be not put a stop to, even if conjecture does transgress the proper limits, there is no help for it.

Alas! Now that we have arrived at the present time when the question has become imminent and an envoy sent to demand an explanation—who is really but a superficial gloss put on to cover an army of retribution—is shortly about to take his departure, what remains to be said on the subject? We can only look on with all respect at the near approach of a time which will be recorded in large characters in the History of the Period of Meiji, as the occasion on which the men of the * * * Clan (*s*) inflicted chastisement on Corea—Oh! no; we make a mistake—when the incomparable Government of Japan despatched an envoy to Corea to demand an explanation.

(Signed) MIURA KATSUTO.

COREA AND CHINA.

("Choya Shimbun," of December 28, 1875.)

A telegram has been received to the effect that Mori, Envoy Extraordinary and Minister Plenipotentiary, has arrived at Chefoo and was to proceed overland to Peking; and the High Envoy Kuroda is preparing to leave for Corea taking with him ships of war and troops. The nation do not as yet know the plans of the Government. They are reflecting with anxiety what turn events will take in the matter of Japan's relations with China and Corea, and thus it is that the conversation of even such low-class fellows as Torakichi and Kumaryo is upon the subject of Corea. And politicians in the country, too, hold that because the High Envoy in question is going North war will at once be commenced, and the entrance to the Bay of Kokwo enveloped in the smoke of artillery.

The minds of the whole nation are agitated and cannot become tranquil, and in consequence of the disturbing influence arising therefrom the price of rice has risen.

Recently on the authority of a street rumour we stated that the Government had adopted the memorial of Mori and would probably in the course which they pursued towards Corea act in such a manner. This we stated in our leading article of the 13th of the present month, and since then we were enabled to pick up as street gossip the news of what Mori had said in the Cabinet to the *Daijin* and *Sangi*, and the detailed official instructions which he had received from the Government respecting his interview with the Government of China.

The affairs of the world are not all such as can be predetermined, and in questions in which Foreign countries are concerned it is impossible to guarantee the non-occurrence of accidents in the working of the various minor details of a policy. However, there is something by which we are enabled to learn the plans of the Government. We will therefore proceed to state what this is to those individuals who are anxious on behalf of their country.

The substance of the opinion given on the 22nd and 23rd of November, by Mori to the two *Daijin*, and to the *Sangi* Ôkubô and Itô respecting the despatch of an envoy to Corea is as follows :

"At a time like the present, when the country's coffers "are empty, inconsiderately to force things to a crisis on "the pretext that the situation is such as admits of no "other action, is the way to add loss to loss. And how "much more then, when there are such useless and wrong "things as to call the forcing of things to a crisis 'the "renewal of a former intercourse,' and 'the demanding "of an explanation for the outrage of the island of Kokwa?' "Will it not come to this that in external matters Japan will "gain an evil reputation in all foreign countriet, that in in-"ternal matters the confidence of the people in the Govern-"ment will be shaken, and that in the end irreparable "ruin will be brought upon the Government? Therefore, "this expedient (of sending an Envoy to Corea) is of all "clumsy plans to which the name of suicidal methods of "administration on the part of the Government must be "given preeminently the most clumsy.

"The object of the proposed mission and the plan of "operations must therefore be modified. To cause the "opening of Ports for the protection of surveys and traffic "in Corean waters must be made the object, and full de-"tails of the intentions with which the mission is des-"patched must be communicated to the Corean Govern-"ment beforehand ; the vessels of war carrying the am-"bassador should be anchored off a part of the coast of "the Island of Kokwa where there is no fort ; and clear "notice should be given that the intentions of the Envoy "are pacific. The capital of Kokwa should be reached "quietly and the local officials be caused to notify the "arrival of the envoy to the authorities at the Capital, "and Commissioners, vested with Plenipotentiary powers, "should be made to repair to the Kokwa *Fu* and conduct "negotiations. Should the date assigned for the coming "of the Plenipotentiary commissioners arrive, and should the "latter not come to negotiate, then the envoy should at once "proceed to the capital and carry out his instructions. "At this stage of the proceedings even in the event of "the vessels being fired upon from forts or stockades our "vessels of war should do all in their power to avoid the "fire, and should it by any chance happen that a com-"bination of circumstances is met with such as to make "fighting an unavoidable necessity, it is needless to say "that that action should be taken which is best calculated "to secure the protection of the lives of our men and of "our vessels. In the event of hostilities being ultimately "decided upon after this step has once more been been "discussed and approved by the Government, the reasons "(for our adoption of such a course), should be notified to the various countries, especially China, with which we "are allied, and then action should be taken. Should "matters fortunately terminate pacifically this will be "a gain to Japan in many ways ; in external matters the "Japanese Government will acquire a brilliant reputation "in all Foreign Countries, and the credit and power of "Japan will be enlarged ; whilst in internal matters the "confidence of the people in the Government will be "increased, and internal administration placed on a better "footing. And even if a rupture takes takes place and "hostilities are commenced, owing to the justness of the "pretext (upon which we go to war) all foreign countries "will agree with us, and thus no difficulties will be creat-"ed ; the nation too will exert itself and join the "Government in managing matters with despatch and no "feeling of opposition will be created. This is the plan "under which any pecuniary losses are met by special "compensation. If things are established on this basis it "will leave me free when I arrive in China to act as I "think best in my communication (with the Chinese "Government), and I shall be enabled to cause the "English, Russian, and other Ministers to approve of the "action of Japan by explaining to them (the reasons on "which such action is formed) and to prevent them from "siding with China."

The *Sangi* and *Daijin* concurred in Mori's views, and they were adopted by the Government as the policy to be followed.

Prior to the Envoy Mori's departure the Minister for Foreign Affairs received the Imperial commands, and drew up and handed to Mori a document of instructions of which the following is the substance.

Our Government in consequence of the great weight which they attach to sincere and friendly relations with the Government of China have appointed you Minister Resident in that country, and charged you with the task of proceeding to the Chinese Yamên and informing them of the following points in connection with Corea.

"Neighbourly intercourse was carried on between Japan "and Corea under the Tokugawa dynasty for 300 years. "In the first year of Meiji a new administration with the "Emperor at its head having been formed, our Govern-"ment, in conformity with the custom hitherto obtaining, "drew up a letter and prepared themselves to maintain "the former relations and to increase the intercourse, "(between the two countries.) The Corean Government "however rejected the letter and would not receive it. "Subsequently, though letters were sent on several oc-"casions we were unable to obtain answers."

"Last year Moriyama an official of our Foreign office "obtained a promise from Bokuan, officer of the Toraifu "that a letter should be written by our Foreign Minister, "and that a proper envoy should be sent who should pro-"ceed to Toraifu and carry on communications there. "We have clear proof of this promise in writing. But "when the appointed time came, and the letter was "despatched by our Government (though who would have "thought it possible?) they (the Coreans) answered us "with rudeness, and contrary to the promise made would "not meet our official and would not receive the letter. "Consequently Moriyama returned without having effected "anything. Still as there was yet no clear word from "them that they had broken off relations with us we still "hoped that friendly intercourse would be established "However, on the 20th of the 9th month as a steamer "belonging to us was on her way to *Giu-sô* whither "she was bound with all despatch, being near the Island "of Kokwa she proceeded in quest of water, when she "was suddenly fired at from a fort on the shore, and "being taken unawares in a critical position she was "compelled to take suitable measures for her own "protection. Our Government are not acquainted with "the intentions of the Corean Government, but we "apprehend that this affair arose from the local officials "acting without orders in the commission of violence, and "they still trust that intercourse may not be broken off "between the two countries. Now, we are desirous by "despatching an envoy extraordinary and Minister "Plenipotentiary High Commissioner, and by demanding "an explanation for the affair of Kokwa on the one "hand while on the other hand we show our increasing "sincerity of feeling, to learn the real intentions of the "Coreans, and settle the matter pacifically, and thus to "effect the continuance of former intercourse extending "over 300 years. What we consider as most essential "is a peaceful solution of matters ; anything else "than this is foreign to our wishes. We cannot yet "guarantee that Corea will follow a peaceful course "in our regard; and therefore we are constrained "to protect ourselves by means of soldiers and ships. Nevertheless we know that Corea has no good excuse to offer for making any serious resistance to us. However, in communicating our purposes to the Chinese Government owing to this question being one which is connected with the relations of countries to each other, we (simply wish to) lay before them this statement of the causes which have led to the affair, and of the intentions with which we propose to meet those causes. We deem it essential that the chief thought of both Governments should be a desire for the observance of a truthful line of conduct between our Government and that of Great China, and for the existence, unimpaired by any concealment on either side of a common bond of intercourse

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

between the two countries. Do you, our Envoy, bear in mind this our intention, and be guilty of no mistake in the carrying out of your instructions."

We say secretly:—Dealing with questions which concern foreign relations is like a game of chess. The aspect of the chess board changes with the moves of one's opponent. Before the game begins one cannot decide beforehand on what positions one's pieces shall be placed. Now in connection with the despatch of the two Envoys, Kuroda and Mori, if China and Corea fall in completely with the wishes of this country, and each and all of the plans formed beforehand (by our Government) are realized, then it will be all right. However we cannot guarantee that the Chinese Government will certainly raise no objection, or that the Coreans will certainly receive our envoy in a friendly manner. How can we prevent the formation of a policy of the worst kind by the adoption of which dirt will be heaped upon dirt, and as we shewed in our article of the 13th instant, war though wished for will be impossible, or war though undesired, unavoidable? If the action taken by our Government be good, and our country be not made to incur shame by China and Corea, this will be great happiness for the nation. We will only pray that our prophecies will not come true.

If it be stated that what we have noted above is not true, but is simply the report of a rustic from the east of the country of Sei, what is there for us to say?

COREA.

"Nichi Nichi Shimbun" of December 26th, 1875.

The date of the departure to Corea of the Envoy Extraordinary and Minister Plenipotentiary is probably close at hand. We are aware that the designs of the Government are deep. We know that the Ambassador has profound discretion. But although we are persuaded that when Corea is reached and negotiations are opened relations will not be lightly broken off, and a notification declaring war issued should a slight hitch occur in arriving at an understanding, still, in the matter of this envoy sent to demand an explanation, it is not our fault if we cannot guarantee that, in the midst of the atmosphere of peace which at present exists, there do not lie hid the seeds of misfortune.

If we look at the dark side of the question, starting with the presumption of failure, even if we decide that this action of sending an envoy to demand an explanation is of a surety the first step towards bringing to the light the misfortune we have mentioned, still our conjecture will probably not be altogether incorrect; and even if we set aside for the moment our private convictions, and look at the matter in the most favourable light, we yet cannot give less weight to the advent of misfortune. Not only ourselves who are against war, but even those politicians who advocate war, cannot guarantee that an ample explanation will be obtained without recourse to arms. Taking the general opinion of the nation, we are probably not wrong in asserting that seven or eight persons out of every ten are inclined to the presumption that the ambassador must have recourse to military force.

That Corea being a small and weak country Japan can do what she likes with her, becomes clear on a consideration of what actually took place at Kokwa. Therefore, if Corea were simply an independent country, standing alone by herself, the two *shôtai* of marines and one *shôtai* of artillery which the envoy is taking with him would be sufficient to destroy the stronghold of Yeiso, and to make a forcible entry into the Capital. For our part we certainly think it would not be hard to do this. Such a force would also be sufficient to take the sovereign of Corea prisoner, to conclude a treaty under the walls of their castles, to cause them to observe the Japanese calendar, and to achieve the exploit of planting on the banks of the Ari-nare river a copper post setting forth that "This is a dependency of Japan." We think that this also would not be a hard matter. (In stating this opinion we adopt for the time being the view which starts with a presumption of success, and we have given in to the advocates of war and have waived in their favour our own strong grounds of argument). However, when we come to the question of whether Corea will remain (*i.e.* unassisted) all along in the character of an independent state, and allow our troops to work their will in deeds of violence, here even those politicians who advocate war cannot help advancing a step further in the argument.

Who is it who will not allow Corea to remain all along as an independent state? It is China. Not only ourselves who are against war, but even those energetic persons who are eager advocates of war and pin their faith to the most favorable aspect of the case, to a presumption of the success of our flag,—even such as these, we say, cannot guarantee that the Chinese Government will fold their hands and observe the international law of neutrality. There can be no doubt that, taking the general feeling of the country, the probabilities are as six or seven to ten in favour of the presumption that they (the Chinese Government) will assist Corea.

The general belief of the country is this. Therefore the chances are seven or eight to ten that the ambassador will quit the field of negotiations and have recourse to arms, and six or seven to ten that China will assist Corea. How can it be otherwise asserted? Hitherto we have conducted our argument in accordance with the presumption of success, but we have only taken up this view for a short time, and we will now recur to our own side of the question which is the presumption of failure, and taking back the ground of argument which peculiarly belongs to us, we cannot help feeling an anxiety lest misfortune should occur and reach an extent impossible to estimate.

In forming the resolution to appeal to arms should matters not be peacefully arranged, the belief that China will preserve a neutral attitude must not be entertained. If it is entertained this is a policy which is like the so-called looking for the occurrence of a thing against which the chances are as 10,000 to 1. This is to lose all chance of success and invite failure, to leave the sum and reach the cyphers, to abandon the policy which will ensure success and to revert to no policy at all. Our opinion is that, regarded logically, to harbour the presumption of success is nearly allied to having no policy whatever. According to street rumours it is the intention (of the Government), in connection with the despatch of an envoy, to demand an explanation; merely to address a communication to China, and not to wait until a clear answer is received. If this report be correct, if China maintains a neutral attitude it will be all right; but if on the other hand China gives assistance to Corea, she will be regarded by Japan as a hostile country, and how is it possible to assume that Japan in engaging the allied forces of China and Corea will find it an easy task to secure victory? Where did the presumption that it would be an easy task originate? We are quite unable to discover this.

We have used every means in our power to gain information (on the subject in point), and in the course of our investigations we have heard that China has sent a large number of troops to Kiwan-tô and has caused garrisons to be established at the two places of Kitsurin and Shin-Kin. These troops, in guarding localities adjacent to the Corean frontier, if they are not preparing against Japan for what are they holding themselves in readiness? (This appeared in the Tientsin and Shanghai papers). Certainly this took place prior to the Kokwa affair. It has now reached us as an indistinct rumour that the Peking Government have heard of the affair at Kokwa and that views have been put forward to the effect that a large number of troops should be instantly despatched and assistance given to Corea. (It is said that this was told in conversation to an Englishman by a Chinese official). In addition to this, in foreign newspapers which we have read at various times, suspicion has been expressed as to whether the Chinese Government would maintain neutrality or not. All that is stated in these newspapers must not of course be taken for granted, still at the same time the aspect of things is shown in other ways. If we review the state of the case we find that the feeling of China towards us has, though in no one particular instance, been unsatisfactory ever since the Formosan Expedition of last year, and that this feeling became intensified by the question of the double allegiance of Loochoo. Now, therefore, if we become involved in hostilities with Corea, we cannot help thinking that China will not be able to control herself so as to preserve a neutral attitude.

The politicians who are advocates for war and take the most favorable view of the question,—*i.e.* the presumption of success,—ignorantly believe that the present is with China a time of internal trouble, and that she cannot therefore spare the time to give her attention to foreign matters, and accordingly they consider that this is a favourable opportunity for inflicting chastisement upon Corea. Certainly on the North-West China has enemies in Kashgar and Turkestan ; on the South-West there is the difficulty connected with *Shin-i* and *Yun-nan* ; at Peking the negotiations with the English Minister have not yet reached a termination ; and the mutual distrust and bad feeling between the members of the cabinet is growing more and more intense. Nevertheless, it cannot be definitely decided that China has reached a point of distress at which she is perplexed for sustenance for her thousands of troops and thus cannot assist Corea. Again, military men amongst us when talking of military matters, commonly say that the Chinese troops are clumsy at drill, and that their officers are not well acquainted with the tactics of warfare; and Europeans, too, when discussing military topics, say that one Japanese soldier is a match for three Chinese. This has been taken to be sufficient proof, and accordingly the Chinese have been set down as weak troops who could be defeated with little difficulty. Certainly the defeat of Tientsin and Koten furnish evidence that the Chinese troops are weak. We know that this is a fact. Still what shall we say to the subjugation at the present date of the rebels in the district of Kaheki. This is explained by the fact that the Chinese troops were able to crush a few by means of many, which according to the laws of warfare is the first element in deciding victory and defeat. Should China give assistance to Corea, however brave our soldiers, and however skilful the tactics we may employ, in the event of the war being prolonged indefinitely with an invading army on foreign soil, by the help of what miraculous policy can the impossibility of a few coping with many properly end in victory ? We cannot help having a predetermined opinion on the subject.

Therefore we say : "The chances are seven or eight "to ten in favor of the presumption that the envoy sent to "demand an explanation of Corea must have recourse "to military force ; and six or seven to ten that China "will assist Corea ; to entertain the unreasonable expec- "tation that China will preserve a neutral attitude, and to "look upon Corea in the light of a solitary and unsup "ported enemy, is to have no policy whatever ; as for the "fixed belief that Japan in engaging the combined forces "of China and Corea would certainly come off victorious, "for our part we cannot discover the miraculous policy "upon which this belief is based."

Although we yielded our ground of argument for a time to the advocates for war, and argued the question starting with a presumption of success, yet we came to the conclusion as above stated that misfortune lies concealed. How much more readily do we see the hidden existence of this misfortune when we start with the presumption of failure, and argue the matter from the point of view of those who are adverse to war.

Trouble in the Tzurugaoka *Ken*.

(Akebono Shimbun.)

It is well-known that for a long time past grave differences have existed between the officials and people of the Tzurugaoka (formerly Sakata) *ken*. With the view of allaying this feeling of irritation the Government despatched several officials to the district, without, however, effecting any good, until at length Mishima, a *Daijo* of the Kiobusho, (Department of Public Worship), upon being created *Kenrei*, dismissed a number of the persons who had been in office, and appointed others in their place. Mishima, however, being a man of generous sentiments, was willing to overlook the improper conduct of the officials whom he found it necessary to dismiss, and did not cause any investigation of their former official career to to be instituted. One by one these persons visited the villages of the *Ken*, and here by soft language, there by harsh menaces, sought to obtain from the peasantry an admission that they had no complaints to prefer. But the people were to be deceived neither by promises nor threats. The more assiduous the officials in their attentions, the more urgently they demanded that their wrongs should be redressed. They asked that the unjust judgments of their old officials should be reversed, and that the unjust taxes which their rapacity had wrung from them should be returned.

During Mishima's twelve months' tenure of the office of Governor many farmers were seized and imprisoned, but the greater number of these have since been acquitted and set at large.

Now the Government of the *Ken*—at that time at Sakata—finding that the people of Tzurugaoka were inclined to be turbulent, forwarded a memorial to the Imperial Government praying for the removal of the *Kencho* to the latter place. This change was approved of, and the removal accordingly took place on the 12th September last. On this occasion every well-to-do household in Tzurugaoka was required to send two, and each poorer household one coolie to Sakata to assist in the transportation of the effects of the *Kencho* and its officers from the latter town, and for these services not one cent of remuneration was granted to them. Some of the tradesmen and farmers were induced by the merchants who transacted business for the authorities to offer *saké* and fish to the officials; the town was gaily illuminated in the evening, and the townsmen of Tzurugaoka capered about like men possessed. On the 13th September the *Kencho* was opened. Now from time immemorial it had been customary for the people of the district to enjoy dancing on this day, their dance being known as the "clear moon dance." But never was the occasion celebrated as on this especial day ; never did *saké* flow more generously nor the inhabitants dance with greater alacrity and gusto. While some alleged that this demonstration was the spontaneous ebullition of satisfaction at the opening of the new *Kencho*, others pretended that the people were ordered to exhibit signs of their pleasure and that under any circumstances they showed their anxiety to give pleasure to their new Governor. On the 14th of the month the *Kenrei*, accompanied by several other officials, proceeded to the residence of a certain Hayashi, who had assembled in his house a number of singing girls and courtesans, who danced in his presence and to whom he subsequently presented ten *yen*. But several of the officials who were with him felt displeased at this and left the house in anger. I can hardly decide whether those who went away or those who remained to share the amusements are the better. But the *Kenrei* is the chief man of the District, occupying the position of the highest honour, and his conduct and sayings should form a model for people of a lower rank to follow. That he should pass his time in associating with the low and degraded class which I have just mentioned causes me to reflect upon the marvellous effects of the new "Civilisation."

* * * * * * * * *

The *Kenrei* had been in the habit of resorting to certain hot-springs in the vicinity to which he repaired every night, returning to his office on the following morning with so much regularity that he allowed neither rain nor wind to delay him. On the 29th of September, the festival of the gods of the mountains Chokaisan, Gasan, Yudonosan and Hagurosan took place. The *Kenrei* caused their images to be removed to a Confucian temple in the grounds of the *Kenchô*. The morning was wet and stormy and the *Kenrei* composed a verse of poetry which ran as follows:—"The strong winds from the god of Yudonosan sweep a miserable world." The weather became clearer in the afternoon and ten singing girls, riding naked in *jinrikishas*, caused a great commotion by coming into the town from the hot-springs. Since the abolition of the *Han* the poverty of the *samurai* and merchants of the district has been excessive, and it was pleasant to observe the heartiness with which they joined in the celebration of the festival of the gods. But how many more of the poor farmers were lying bound and in misery for alleged disobedience to the orders of the *Kenchô* it is indeed difficult to conceive! Wise as Mishima may be, it is difficult to understand how he can succeed in preserving order among a people so uncivilised.

On the 10th October, in accordance with the prayer of Mori Toyemon addressed to the *Genro-in*, Numa, an officer of that department, arrived here for the purpose of investigating the subject of his grievance. Of sixty of the former officials and *Kucho* and *Kocho* who had been

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

remanded for this investigation, some had died during their imprisonment either from natural causes or by suicide, and fourteen others, among whom was the *Sangi* Vice-Governor, suddenly discovered perhaps that the part of the country was unhealthy and failed to present themselves at the enquiry. Then, too, the *ken* officials became possessed of marvellous industry and carried their labours far into the silent hours of the night; for many of them dreaded dismissal and daily enquired among themselves if their time was not yet come. But many of the farmers on the other hand, who had been imprisoned by the officials, were hastily set at large.

Mr. Numa fixed his temporary court at the temple of Daishoji, where Mori Toyemon and about three hundred other individuals attended to give evidence: there was besides a large number of spectators. The enquiry resulted in the discovery of yet greater evils than those to which Mori Toyemon's memorial had pointed, and the people rejoiced greatly. On the 7th November, Mr. Numa returned to the Capital.

On the 8th November, the day following, the *Kenchô* demanded a written statement of the enquiry. Much to the surprise of all men they found much fault with it, and I now learn from current rumour that the *Genro-in* has been rebuked by the Ministry for having exceeded its executive functions in thus appointing a court of enquiry. Now this grieves me greatly, for if the rumour should prove to be true it may be that the judgments given, and which have afforded so much satisfaction, will prove to be null and void.

When will the innocence of the people of this *Ken* be made clear to the world? What crimes have they committed that they should be harassed with such perpetual misery? The words this "miserable world" in our *Kenrei's* poetry find an echo in every heart, for here, indeed, each one of us feels their truth and their application.

Ômori Soyemon,
Tzurugaoka *Ken*.

P.S.—All I have here described I have witnessed with my own eyes and it is beyond dispute. But as there may occur some misapprehension in reference to the petition of Mori Toyemon, from the number of persons through whom the story is disseminated, you will kindly publish this letter in support of the truth;—not indeed for my benefit, but that good may result to all the inhabitants of this *ken*.

Trade Marks.

(Nichi Nichi Shimbun.)

If we desire to improve the productions of this country it is necessary that we should first protect the interests and the character of our manufacturers. It is not difficult to perceive that the falling off in the character of our products arises from the carelessness and greed of our workmen, who do not attempt good work but are content to imitate articles of reputation. By this means not only is the tradesman whose productions are imitated seriously injured in his character, but he in turn is compelled to lower the standard of his work, and in order to succeed is forced to imitate himself.

I have always thought that a law should be enacted to protect manufacturers against the consequences of imitation. I am told that in Europe and America laws exist for the prevention of this form of piracy, and that when a trade mark is granted to a manufacturer of any description of goods, and this trade mark is counterfeited, the Government undertakes to investigate any imitations that may be made of it and to punish the offenders.

It has been customary with our Japanese manufacturers to place their special marks upon the fans, porcelain, &c., which they make, and although the Government does not in any way guarantee the inviolability of such marks, they may be said to correspond with those in use in European countries. It is important, however, that a Government should protect manufacturers from forgeries, and I trust ours will not delay in recognising the necessity of doing so, granting an exclusive right to the original manufacturers. By this means imitation will be stopped, and the competition which now exists as to cheapness only will be turned into other channels. Not only will our manufacturers profit individually, but the wealth and reputation of the nation will by such means be largely enhanced.

SUMMARY OF OFFICIAL NOTIFICATIONS,

Issued in November, 1875.

5th.—Regulations regarding Recruiting for the Army have been revised and published.

8th.—The shipping Regulations, which had been issued during the 7th month of the 7th year of Meiji, have been temporarily suspended from this date, and regulations for foreign built ships entering and clearing from open ports have been established and enforced from the same date.

10th.—The conclusion of the Treaty for the exchange of Saghalien for the Kurile Islands was publicly announced and promulgated.

10th.—The Tonari machi Adachi Gori in the province of Musashi, under the jurisdiction of the Sakitama *ken*, has been a taken under the jurisdiction of the Tokio *Fu*.

10th.—Provisional regulations with regard to the payment of the *karoku* (allowance in money made by the Government) to the *kuadzoku*, (ex-*kugé* and ex-*daimio*), *shidzoku* (*samurai*), and *heimin* (people of the lower class) were this day established. (The regulations are here omitted).

12th.—The pattern of uniform to be worn by combatant naval officers and that of the officers attached to the Naval Department have been altered.

12th.—The uniforms, and distinctive marks of the lanterns used by policemen in every *Fu* and *Ken* have been decided on, published, and notified to all the *Fu* and *Ken*, the Tokei-*Fu* excepted.

13th.—The boundaries of Kameda-*Kori* and Kayabe-*Kori*, in the province of Watashima (Hokkaido) under the jurisdiction of the Kaitakushi, have been altered. In consequence of this change Yododonabe-mura has been annexed to the Kayabe-mura, which up to this time has formed part of Kameda-*Kori*, but will henceforth belong to Kayabe-*Kori*.

18th.—The boundaries of Iwamaye *Ken* and Fukushima *Ken* have been altered. Their respective jurisdictions consequently will be henceforth as follows: The eleven villages up to this time belonging to the Ishikawa-*Kori*, have been annexed to Shirakawa-*Kori*, under the jurisdiction of the Fukushima *Ken*, and two villages belonging to the same *Kori* have been annexed to Iwase-*Kori* in the Province of Iwashiro, under the jurisdiction of Fukushima *Ken*. Fourteen villages, belonging hitherto to the Iwase *Ken* in the Province of Iwashiro, have been annexed to the Ishikawa *Kori* in the same province, under the jurisdiction of the Iwamaye *Ken*.

19th.—It is notified that any person presented with a decoration by a foreign government shall apply for permission to wear it, forwarding the diploma and a statement of the act for which he was decorated, in conformity with the following rules:

1st.—Officers from the seventh rank upwards, shall apply for permission to wear foreign decorations, to the *shikuwan* (Secretary of the *Daijokuan*) with the certificate of the *Gaimusho*.

2nd.—Officers of and under the eighth rank shall make an application to the Chief of the Department to which they belong, and from the Chief, to the *Sei-in*, with the certificate of the *Gaimusho*.

3rd.—*Kuwadzoku*, *Shidzoku* and *Heimin*, shall apply to the *Chiji* and *Kenrei* of the *Fu* and *Ken* to which they belong, and from the *Chiji* and *Kenrei*, to the *Sei-in* with the certificate of the *Gaimusho*.

22nd.—The *Kencho* (Government Office) of the Mizawa *Ken* has been removed by order to Ishinoseki in Iwaye-*Kori*, in the Province of Rikuchiu, and the designation Iwai *Ken* adopted.

24th.—Three villages in the Ishidzu-*Kori* and one in the Ampa-*Kori*, in the Province of Mino, under the jurisdiction of the Gifu *Ken*, have been united into one, under the name of Makimura, annexed to the Taki-*Kori*. Another village, which has hitherto been under the jurisdiction of the Ishidzu *Kori* has been annexed to the Taki-*Kori*.

24th.—The uniform of military officers has been altered (attached paper omitted.)

25th.—The offices of *Gondajo*, *Gonshojo*, *Kissei* and

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Seisho, have been established in all departments and their ranks are as follows:

Daijo	4th rank.
Gondaijo	5th rank.
Shojo	6th rank.
Gonshojo	7th rank.
Kissei	14th rank.
Seisho	15th rank.

25th.—An office of *Kanji* (Administrative Secretary) in the *Genro-in* has been established.

25th.—The *Yekiteiriyo* (General Post Office) under the department of the *Naimusho* (Home Office), which was formerly a section of the second rank, has from this date been raised to a section of the first rank under the same department; and the *Keihoriyo* (Central and Provincial Police Office) of the *Naimusho*, and the *Kogakuriyo* of the *Kobusho*, formerly of the first rank, have been reduced to second rank offices.

25th.—The *Yeizen riyo*, (office for superintendence of the repairs of public buildings) has been established in the *Kobusho*; this office is of the second class.

28th.—The Islands which were ceded to Japan for the Island of Karafuto (Saghalien) have been placed under the jurisdiction of the Kaitakushi.

OUR NEIGHBOURHOOD.

(AN OLD WELL.)

What's in an old well? Many persons confronted by such a query would in all probability reply, water perhaps? Whilst others, again, leaving out any note of interrogation in their voices, and indifferent to the obvious and commonplace nature of their answer, would, in nine cases out of ten, dismiss the subject with a testy "Water, of course;" and so, shrugging up their shoulders, pass on without wasting a second thought upon the matter, content to admit that an old well is simply an old well and nothing more to them.

Aye, but there's more than water in some old wells: a vast deal more. There's more for instance in the old well which stands in that open space which lies to westward of "Our Neighbourhood." There are tangled growths of old associations, so matted together and twined and twisted round about it that, could they but assume materiality, they would so obscure and hide it out that it would not only become invisible, but its very whereabouts would be unapproachable from any quarter. Besides, there's the ghost of a dead woman in its gloomy depths; the ghost of a fair young girl, whose life had scarce commenced, it might be said, before she found the burden laid upon her to be more than she could carry. A solitary looking old well it is; standing all alone in a desolate enclosure, and haunted by a woman's ghost since a certain winter's night long years ago, when the frost lay white upon the ground, and a clear cold moon looked down upon a slumber-stricken world where none was stirring, and the ever-watchful stars had naught to feed their prying eyes on, but were fain to content themselves with the sight of peaceful hamlets, barred and bolted against the icy air and bathed in silvery light. Who could be found to venture out on such a night? Who, unconstrained by pressing duty, would halt to choose between a padded quilt, with mayhap a box of smouldering charcoal at its foot, diffusing a genial glow, and the chilled and frozen air without? Aye, who?

And yet a girl is stirring; a slim and shapely girl of sixteen summers. Creeping noiselessly from out her warm bed, and stealing past her sleeping mother, she undoes with trembling hands the wooden shutter and slips into the little garden. Here with hands tightly clasped upon her palpitating heart, she stands a moment, as though listening, and then emerging from the shadow of the house, picks up with eager haste a large round stone from the ornamental river at her feet, and hiding it in her sleeve flies out into the open moonlight. Ah me! the glancing stars are now rewarded for their vigil. They look upon a flying maiden, with a frozen stone clasped to her bosom, no colder, may be, than the leaden heart within, with tear-drops on her cheeks, but a settled purpose in her face, and flying—whither?

Across the withered grass she goes, nor casts a glance behind her at the house, so peaceful looking in the moonlight; beneath the gate, along the road that leads towards the well, without a faultering footstep and heedless that her feet are bare and the stones are cold and sharp. She has reached the fatal well, and mounting on its edge where the frost has sown a glistening icicle, whilst the shadow of a woman with her hands before her face is thrown by the moonlight on the ground beside her, a moment—and she disappears. A hollow plash, the sound of water in commotion, and bye and bye a gurgling as of air bubbles arising from below, and all is still. The sleeping landscape assumes once more an undisturbed appearance, and the moonlight is no longer busy with the shadow of a fair young girl with her hands before her face and in her sleeve a stone, for the shadow has plunged into a shadowy well and disappeared for ever, as, though faithful to the last, it desired to attend upon its owner to the land of shades.

'Twas but the old, old story. Old as the world, and yet for ever new to every suffering human being whose fate it is to learn it off by heart. A pair of lovers; a pair of hearts so tuned together that a false note struck on one, and the other so vibrates that it flies to pieces with a fracture so irreparable that the golden lute is broken and the silver cord loosed once and for ever.

Was it accident which led the footsteps of the faithless lover to the well next day? Who can tell? However that may be the story shews him leaning against the upright beam which supports the old well's roof and toying with the rival of the dead below. Behold her standing where last night the moonlight threw the shadow of a girl with her hands before her face,—a silken hood upon her head, whose purple folds set off the rosy color of her dimpled cheeks, as with down-cast eyes she twists a spray of cherry in her dainty fingers. A spray of cherry studded o'er with opening blossoms—fit emblem of her budding hopes—and—evil omen—in her agitation she picks them off and casts them from her one by one. Hark to that sound within the well! What can it be? A gurgling sound as of bubbles rising from below the water. There's something surely in its gloomy depths? Aye! that there is; there's something ghastlier than the reflection of two horror-stricken faces. For, a little later when assistance comes, the body of a fair young girl with a stone taken from an ornamental river, in her sleeve, and hands clasped upon her bosom, is laid in the joyous sunlight upon the frost-bound grass.

* * * * * * * * * * * * *

For many years the ancient well was closed and padlocked, until, as time went on, it's crazy cover falling to decay, disclosed a goodly store of water, clear and fresh. The requirements of a growing community but badly off for water sanctioned by slow degrees the use of that from the well so long disused. At first for washing purposes, and then, upon its being discovered to be of surpassing excellence, for draught and cooking. By general consent it was refitted and supplied with wheel and pulley, but no maid or mother can be found with hardihood sufficient to drop a bucket into its depths when the sun has set; for, ever and anon, a splash is heard and a gurgling sound as of bubbles rising from below, and the ghost of a dead girl is seen, 'tis said, of moonlight nights, when the frost is on the ground, to hover round about it.

YOKOHAMA RACE CLUB.

The annual meeting of the Club took place yesterday afternoon, at the Chamber of Commerce rooms.

Amongst the members present were—Messrs. Strachan, Melhuish, W. Cruickshank, Winstanley, Dodds, Johnstone Hay, Keswick, Kirkwood, Jackson, Mollison, Reimers, Urquhart, Pinn, F. Cruickshank, Beato, Kingdon, Cope, Bennett, D'Hanger, Taylor, &c.

Mr. A. Winstanley was voted to the chair.

The minutes of the last meeting, and the accounts were then read by the Hon. Secretary, and, on the motion of Mr. Kingdon, seconded by Mr. Mollison, were passed.

A ballot then took place for a new Committee, Messrs. Melhuish and Fraser declining re-election, when the following

Digitized by Google

gentlemen were elected: Messrs. Strachan, Keswick, R. Robertson, J. Robertson, and Cruickshank,

Mr. Mollison then proposed, and Mr. Cruickshank seconded, a vote of thanks to Messrs. Melhuish and Fraser for their energetic exertions on behalf of the club.

This was carried with applause.

Mr. Melhuish, on behalf of himself and Mr. Fraser, acknowledged the honour done them, and expressed a wish for the continued success of the Race Club.

This concluded the business, and the usual vote of thanks to the Chairman brought the proceedings to an end.

Law Report.

UNITED STATES CONSULAR GENERAL COURT.

Kanagawa, Japan, Dec. 23, 1875.

THE PEOPLE OF THE UNITED STATES *Ex Rel* MURATA SADAHIRA, a Japanese subject, against JOHN MIDDLETON.

Charge: Assault with intent to kill.

The Court is of the opinion that malice essential to maintain the charge against the accused has not been proven, and indeed it is not proven beyond doubt that the shot which appear to have struck the prosecutor were fired by the accused. The proof, on the contrary, shows conclusively that the accused fired at a bird; that the police officers were at a great distance off; that the accused had not the slightest idea that he had hit or could have hit anything but the bird at which he aimed. It is manifest, therefore, that if any shot struck the prosecutor it was the purest accident, and that the accused was ignorant of the occurrence.

The Court is aware of the responsibility, which attaches to any act or the consequences of any act committed by a person while engaged in the violation of law; but in order to visit this responsibility there must be a similarity of offences. In this case the law which it is claimed the accused was violating, is a law of the Japanese Government forbidding hunting and shooting by any person unless possessed of a license for the purpose. A copy of the law is produced in Court. The counsel for the defence, however, contends, that the law only affects the subjects of Japan, and that no foreigner residing in the Empire is under the slightest obligation to obey it, and this appears to be the commonly received theory in the community. The Court cannot subscribe to this theory. All persons coming to Japan from a country having no treaty with this government, are of course subject to Japanese laws. Those from countries having such treaties are exempt from obedience to Japanese laws only in so far as said treaties expressly define such exemption. That there is nothing whatever in any treaty between the United States and Japan that exempts American citizens residing in this Empire from obedience to the law in question, is settled by the proper authorities of the United States Government. In 1873 the then U. S. Minister, Mr DeLong, caused to be published and posted in the open ports a copy of the law in question, with a warning to all U. S. citizens to render due obedience to it; and afterwards, in the same year, the present U. S. Minister to Japan, in reply to a despatch from the Department of State of the U. S. Government, expressed his opinion to the Department that the said law was binding upon U. S. citizens resident in Japan, and the Department endorsed and approved said opinion in the most emphatic manner. (See U. S. Foreign Relations, 1874, pp. 653, 654, 658, and 659.) If, therefore, said law remains unaltered or unrepealed, in so far as to prohibit unlicensed persons from hunting or shooting within the territorial limits of the Empire, is is manifestly the duty of this Court to take judicial notice of its violation according to the laws of the United States. In this present case, however, the complaint is not of a violation of this law, but of an alleged malicious and felonious assault upon, the prosecutor with the intent to kill and murder him, and it is sought to attach such felonious intent to the accidental shooting by proving that the accused was at the time engaged in a violation of the law in question. The evidence, however, clearly establishes the fact that he had no knowledge of the existence of the law in question, and was not engaged in a malicious trespass. There is nothing whatever shown that warrants the Court in finding the accused guilty of any offence, and he is therefore acquitted and discharged.

(Signed) THOS. B. VAN BUREN,
Consul-General.

G. P. SPOONER,
G. L. MONTGOMERY, } Assessors.

JUDICIAL COURT OF KANAGAWA KEN.

Friday, 24th December, 1875.

Before Mr. KITABATAKE HARAFUSA, President

Alfred ROPER *vs* MITSU BISHI MAIL S. S. Co.

This was a claim for $5,320 for alleged breach of agreement and wrongful dismissal.

Defendants in their answer pleaded breach of agreement on part of plaintiff, and disobedience of orders, as justifying them in dismissing him.

Mr Dickins appeared for the plaintiff, and Mr Ness for defendants.

Mr Dickins this morning continued his examination of Alfred Roper.

Witness.—I was never directed by the Company or its Agents to engage pilots for the Shanghai river. The expenses in connection with the running aground of the *Kanagawa Maru* in the river were paid by the Government and not by the Company, as the ships did not belong to the Company then but to the Government. The ship touched the bottom in Yokohama harbour, through the failure of the engines to act. She touched on the Kanagawa flat. When a pilot is on board a ship the Captain is still in command. The Captain would be in command even if the Admiral was on board. A pilot is merely an assistant to the master. The Captain has discretionary power over the pilot; if he is too rash he can check him, and if too cautious can encourage him to go on. In the Shanghai river our flag mast came into collision with the foremast of a small junk. Our flag mast was not broken, the junk's mast was broken. We were going up the river with a fair tide. The anchor was let go and it was in swinging round that this happened. There was no disagreement with the pilot. The ship did not touch the junk; it was only the flag staff that did. The damage amounted to $10. I paid half, and the pilot paid half. I did not cause the Company any trouble whatever.

Cross examined by Mr Ness: On the 5th February this year I entered the service of defendants. I received a general letter of instructions from the Company to use all caution, and to take a pilot for the Inland sea and Shanghai river. (Letter produced). I do not remember if I received a letter of general instruction from the Company on the 9th February this year. I took command of the *Kanagawa Maru* on the 5th February at Yokoska. The ship was in dock at the time. A few days afterwards I brought her up to Yokohama. After I anchored the tide fell and the ship took the mud. She heeled over and fouled a small Japanese steamer and broke her jib-boom. I only had one collision in the Shanghai river, and that was when the small junk's mast was carried away by the steamer's flag staff. I do not know if Mr Iwasaki had received Captain Mooney's account of our disagreement when he wrote me the complimentary letter I received from him (Mr Iwasaki.) I made two voyages after this, and was not censured. Whilst I was in *Kanagawa-Maru* there were many changes amongst the officers. Since I left the ship there have been 6 or 7 different captains in her. The changes in the officers were some of them brought about by their own insubordination. If they got drunk I discharged them. If I pointed out a man as incompetent the Company discharged him. On my last voyage I was informed by letter that a pilot would be waiting for me at the lightship, at Shanghai. I did not stop at the lightship to take a pilot. I saw no signal. It is an uncommon thing to take a pilot from a lightship. Pilots always have their own boats and cutters. I never before in my life took a Pilot from a lightship, and I have been knocking up and down Shanghai river for more than 20 years. On the night we passed the Light ship it was clear overhead but a little cloudy on the horizon. We first saw the light of the Lightship about 11 miles off on that night. I never told anyone as we were passing the Lightship that I ran a great risk in going up the river without a pilot. I could not have thought such a thing. No change took place in the weather as we were going up the river. I did not inform the Japanese Consul that I ran aground in the river on two occasions on that evening. It was entered in both Log Books. The first time I grounded it was a trifling affair. There was no other steamer in sight when the ship ran aground on the first occasion. On the second occasion a steamer caused me to run aground. The haziness of the weather caused me to run aground on the first occasion. The approaching steamer was in the shoal water where my steamer could not go and that caused me to run ashore the second time. The deep part of the river is about 400 yards wide; the shallow water is much wider. By the appearance of the other steamer's light I should say she was in the shoal water. I do not say that I should have collided with the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

other steamer if I had not run aground. If it had been daylight I could have passed the other steamer. It was a pure accident that the ship ran aground. I do not admit that it was a mistake. The other steamer had passed us only a few seconds before we took the mud. We took the mud almost as she was passing us. The other steamer passed us at a distance of 150 yards on our starboard side. I do not know if more than one steamer passed us. I was busy trying to get my steamer off. I saw some tug boats and a ship being towed up. I do not know the name of the steamer that caused us to run aground. I am not aware that I told the chief officer what to enter in the log book on this night. I might have told him to make an entry of it. I do not think I dictated what he should enter in the log book. I am sure I did not. Six foreigners were on deck, at the time of running aground, looking after the ship. The chief officer must have got his information for the entries in the log book from the log slate which is kept by the officer of the watch. I do not know if Mr Grosser was on deck when the accident occurred: all the passengers came up. Mr Grosser asked everybody on board how the accident happened. He asked me how it occurred, and formed his own opinion about it.

The Court here adjourned till 1 p.m.

Court re-assembled at 1 p.m., when Mr Ness continued his cross-examination of Plaintiff.

Witness:—The steamer that caused us to run aground was about 3/4 of mile off when I first saw her. I did not sound the whistle because there is a code of whistling signals for the Shanghai river and I did not know it. It is only compulsory to use a whistle in a fog. The fact of the ship running ashore proved that it was necessary to run ashore to avoid a collision under the circumstances, it being night time. If it had been daylight it would not have been necessary to go so near the bank of the river. In no case is it necessary to sound the whistle if the lights of the vessel can be seen. If another ship had no lights up then I would sound the whistle so that she might put her lamps up. In a thick fog I would sound the whistle every five minutes day or night. The other steamer did not sound her whistle. When we passed the other steamer my steamer's engines were going astern. The other vessel passed us just before we took the ground. When the other steamer passed us she was in the deep channel, almost in the middle of it. I can't say if I wrote a letter to Mr Bell asking him to give evidence in my favour. I may have done so. I have not kept copies of all the letters I wrote in connection with this case. I did not send statements to any one, but I went on board the *Kanagawa Maru*, and asked him (Bell) questions which I took down in writing. He said they were correct and rewrote them. He accompanied me to H. B. M.'s Consulate and signed an affidavit in the presence of the Consul. Mr Bell volunteered the affidavit before I spoke to him about it. I don't remember that I wrote to Ritchie asking him for his evidence; it is very unlikely that I did write to a second engineer. I have no personal knowledge that the Government paid the expense of running ashore in the river at Shanghai. I was told this by the agent. Our wages came from the Government through the Company.

Re-examined by Mr Dickins:—The fact of it being night time had much to do with our running ashore. I could not see how much wheel the quartermaster gave her when I gave orders about the steering. If I had followed the rule of the road when I first saw the steamer I should have gone into shoal water. We were going 7½ or 8 knots: it was nearly high tide. It would take about four minutes at this rate to bring the two steamers abreast of one another. When I found we were going near the bank I sang out "hard a port" and had the engines reversed. The ship did not answer her helm. It is an every-day occurrence for ships to touch in the Shanghai river. Since this accident happened some of the Company's ships have touched The *Niigata Maru* and others. (Witness explained at great length the grounding of the ship in Yokohama harbour) The ship has nearly been lost twice through the breaking down of the engines. Once I saved her by means of her sails. The bottoms of the air pumps had been broken and had been repaired with bricks and cement! My professional capacity has never been attacked by the Company. There have been trifling disputes about cargo being short &c.

G. P. Jones was then called by Mr Dickins.

Witness:—I was third officer of the *Kanagawa Maru* in May this year. I remember entering the Shanghai river on 21st May in a voyage from Nagasaki to Shanghai. I remember passing the lightship. We were abreast of it between 9 and 10 o'clock We passed within a hundred or 150 yards of the lightship. We whistled 3 times when abreast of the lightship. It was a loud whistle. I saw a small white light in the waist of the lightship. I saw no other light except the one shown by the lightship. This small white light was stationary. I saw no "flare up." I remember the ship going aground at Black point. I was on deck at time. I was on the port side. I don't remember if the awnings were up but I think so; they generally were so.

The Court here adjourned till Monday 27th inst., at 10 30 a.m.

Monday, 27th December, 1875.

Mr. Dickins continued his examination of

G. P. Jones.—The boats would fill up the space between the awning and the deck; in addition, the mizen-mast also prevented me from seeing forward on the starboard side, as I was on the port side of the poop. I saw a steamer after we had gone aground at Black point; she was rounding the point. I have no doubt about this.

Cross-examined by Mr Ness:—About eight minutes after we were ashore she rounded the point astern of us. The point was about a quarter of a mile distant from the place where we ran ashore. The other steamer was going out from Shanghai. I called the mate's attention to this vessel and suggested that we should get a line from her to pull us off before we settled down in the mud. The *Kanagawa Maru* was lying at an acute angle towards Shanghai. When we went ashore I left the wheel and went on to the bridge. I was at first accused of carelessness by Capt. Roper, till the quartermasters explained the matter. In half an hour he released me from the charge. He does not think now that I was careless. If Capt. Roper had written on the following day to the Japanese Consul at Shanghai, that the accident had happened through my carelessness, it [the statement] would have been false. I recollect Capt. Roper singing out "hard-a-starboard." That was before I saw the other steamer; I do not know how long. We were going 7 or 8 knots at this time. I can't say whether the awning was up or not; it must have been. We passed the lightship at full speed, 8 or 9 knots. We ran ashore shortly afterwards. We ran on shore twice that night, the first time in the middle of the river. I have no idea of the width of the river at the place where we ran ashore the second time. I do not know the river. The night was clear on the water with a low haze on the land. There was no difficulty in seeing the bank of the river. I should think the other bank was too far to be seen. I saw the hull of the other steamer, her mast-head light, and one smoke-stack and the smoke coming out of it. I can't say if she was a paddle or a screw boat. The steamer must have passed very closely to us.

Re-examined by Mr Dickins:—She must have passed very close to us. The haze made it a little difficult to judge distance that night. The Captain never exonerated me in so many words from blame for my conduct at the wheel.

Mr Ness here produced two letters written by Captain Roper. One was to Mr Bell and the other to Mr Ritchie, both of which were admitted by Captain Roper who explained that he wrote them to these parties to get what evidence he could touching upon his case.

—McKenzie: I am not not doing anything at present. I was second officer of the *Kanagawa Maru* on the first voyage she made in February. I remember previously to that voyage coming up from Yokoska. After leaving the dock we were delayed by something going wrong with the engines, and whilst coming up the bay to Yokohama we stopped twice through the fault of the engines. When we were in 4½ fathoms the engines were stopped. There was lots of steam in the engine room, through some part of the machinery leaking. The engines did not go astern as they ought to have done to take the way off the ship. In proof of this 45 fathoms of chain ran out before the vessel stopped. We fouled the small Japanese steamer whilst attempting to warp off the *Kanagawa Maru*. The damage done was very slight. It was blowing freshly when we were trying to warp off.

Cross-examined by Mr Ness.—We attempted to warp off before we were aground. It is not true that we fouled the little Japanese steamer when we heeled over after the tide fell. The small steamer was fouled while we trying to warp off.

Mr Dickins announced to the Court that Mr Ness wished to send the Commission to Shanghai at once to take evidence there. Captain Roper could obtain evidence at the same time. This could be done during the vacation.

Court adjourned *sine die*.

Before Mr. ASAINO KANSUI, Assistant Judge.
Monday, 27th Dec., 1875.

SCHULTZE, REIS & Co. *vs.* FUKUSHIMA CHOHEI and FUKUSHIMA SEIHEI.

In this case the plaintiff claimed the sum of $2,500, being the balance alleged to be due of a certain loan to defendants, made on fish oil on the 17th May, 1872.

The judgment, rendered this morning was in favour of the defendants.

EGYPT FOR THE ENGLISH.

(Pall Mall Budget.)

Something has happened in England within the last fortnight to fix the attention of every Court and Cabinet in Europe. To St. Petersburg, Vienna, Berlin, Paris, Constantinople, Cairo, certain sounds have been carried from these shores which will at once be fitted with a meaning as yet not fully comprehended by ourselves. This may seem strange, but it is at least explicable. For while it has long been our habit to look forward no further than to-morrow in the future of European affairs, contenting ourselves with the business of to-day (the natural and common habit of people satisfied with what they are and what they have got), a far different temper has never ceased to prevail amongst statesmen who are *not* satisfied with their share of the world or sufficiently secure in it. That being their situation, they, of course, are for ever on the look out; every rational calculation of the future—of the chances that lie here or lie there, of what may be grasped and what must be resigned—they are familiar with; and we may be sure that they are alert to catch every sign of action or resolve that may make movement on their own part desirable. To these, then, we cannot doubt, certain sudden little bursts of reference—now blundering in one newspaper, now in another—to Egypt as a possible English dependency of some sort has struck home. But not as a surprise. There is no statesman in Europe who has not long looked upon the future of Egypt as intimately and necessarily bound up with the future of the British Empire. If dulness or indifference to the prospect existed anywhere, it existed in England itself; where, till only the other day, any talk suggestive of the annexation of Egypt would have been assorted with the politics of the moon. No doubt our own statesmen have diverted their minds with the subject from time to time; but that has been of little avail for practical purposes, for the reason that while even in foreign affairs English Ministers now stoop for a policy to "popular opinion," popular opinion is studiously led away from the contemplation of every circumstance, every contingency, of a disquieting character. We shall allow ourselves to remark, parenthetically, that that is a system which cannot work to advantage. If popular opinion is to control foreign policy or to shelter Foreign Ministers it is necessary to adopt the Bismarckian manner—that is to say, to make the country a confidant in politics which it may otherwise baffle through ignorance, and acquainted with facts that may come crushing in upon "opinion" too late. That is a danger now, in more than one direction. To return to Egypt. While our hold upon that country—(an exclusive hold, in the last resort)—is an almost desperate necessity, and though events of late years have been bringing it nearer to view with astonishing rapidity, not a whisper of it descended from high places; and amidst all the speculation with which a free press and free speech are exercised, it never appeared. Perhaps because it was thought wicked to dream of annexation of any kind—the doctrine of a school of politicians which, though it is disgraced cannot carry into retirement all the error it has preached; perhaps because it seemed "Quixotic," and had something to do with Russophobia; or because it wasn't polite to Prince GORTSCHAKOFF; or because it seemed to imply going to war; or because the mass of Englishmen actually did not perceive that the occupation of Constantinople by any great foreign Power or Powers *meant* English occupation of Egypt or the downfall of the Empire Whatever may have been the reason or reasons, this wonderful dulness, this miraculous reserve, must have astonished foreign observers, and we can easily imagine them listening for the first sound of awakened consciousness. This they now hear, and they know it marks a period in the game before them.

The way in which the first note was struck was curious, but perfectly characteristic of our country and our time. It was not brought out by the startling complication of disasters and signs of disaster that lately revealed the fast approach of dissolution to the Turkish Empire. That ought to have done it, rather than the more speculative matter that did move our imagination and open our eyes and mouths at last. It came to pass that the Prince of Wales made a pleasure trip to India. He tarried at Alexandria on the way, and there was magnificently entertained by the Viceroy of the country; and on taking up his route he decorated the Viceroy's eldest son with the Star of India—on the Queen's behalf, of course. This was precisely the sort of incident to kindle British fancy; it took fire accordingly: no doubt being largely fed from the too visible conflagration of the Grand Turk's finances. The Star of India guided the newspaper press, club-room debaters, and, above all, a vast body of interested bondholders, to the fact that Egypt must be nobody's to take, nobody's to hold, if not by ourselves. And not only so, but that it must be kept free at any cost, war or no war, till the the break-up of the Ottoman Empire, which cannot now be far off. And more—that, in all likelihood, it will then be no matter of choice to hold the country safe for ourselves, in no less dubious fashion than Gibraltar is held. We do not say that the whole inevitable necessity has yet been brought home to people generally or has been anywhere fully expressed. But in cases like these, when perception once begins it rapidly spreads on to the envelopment of the whole subject; and before long the English at Alexandria will be as familiar a subject of discussion as the Russians at Constantinople.

And why should it not be? Stated plainly as it is here, we have no doubt that even now it startles many a mind as something too improper for speculation. We shall permit ourselves to assume that those who take that oblique view of the subject are generally the kind of men who permit themselves to think of nothing except upon safe and respectable authority. To these, then, may be told the otherwise inconsiderable fact that what is here set before them is a part of the material with which Mr. Grant Duff is now engaged in recasting his opinions. After that, it will be perceived that there is nothing at any rate "improper" in making the English at Alexandria as open a subject of discussion as the Russians at Constantinople. Nor, on the face of the question, is there any reason why it should not occupy the same ground in discussion as it does as a matter of fact. To be sure, we have been taught for a long time that it is impolitic to debate in public such matters as are likely to excite suspicion and distrust in other nations; and it may be objected that this is clearly one of those matters. The general doctrine was entirely fallacious; and its main result was to impose a bugbear upon the discussion of events and probabilities affecting the very existence of the empire. And what is true in the general is certainly true of this particular question. Of course if it had never occurred to the statesmen of other countries—if the momentous importance of Egypt to England had all along been a Foreign Office secret—there might be sense in the cry of indiscretion. But who cherishes that preposterous supposition? The necessity of which we speak is plain upon the face of the time as India is upon the map of the world. It is one of the few things that have to be taken as certainties by those who employ themselves in forecasting and dealing with the changes that must follow upon the disruption of the Ottoman Empire:—an employment which has now lasted so long that Egypt for the English must be as familiar in Continental Cabinets as Poland for everybody but the Poles. If England had turned a willing ear to the Emperor Nicholas when he proposed to dispart the Sick Man's territory, the words would have been first seriously uttered by foreign lips; and when the time comes for listening again, it is exceedingly probable that in some shape or other our enormous interest in Egypt will be acknowledged and provided for at the first suggestion. Let us not be afraid, then, to keep this matter openly and clearly before ourselves and all the world. We may rely upon it that nobody will be surprised, nobody irritated. It has long been familiarly contemplated in every Continental Cabinet, and in Turkey and Egypt too. To various minds at various times, no doubt, it has seemed to belong to a more or less distant order of events. But granted that certain other changes have happened which all the world agrees must happen one of these days, the substantial possession of Egypt by England (or rather, perhaps, the effectual safeguard of the country against occupation or surprise by other Powers) is seen to follow as a matter of sheer necessity for her. Why it would be so is too plain to need discussion. The Turks on the Bosphorus are one thing; any other Power or Powers that are likely to succeed them, quite another.

It may perhaps be necessary to guard ourselves from misconception by saying that when we speak of annexation, possession, and so forth, we use the best words that lie to hand to express the total exclusion of other Powers, and instant means of defending the country (when the new time comes) from surprise. Territorial possession as Ireland is possessed is not necessarily implied by any means. But no more are "guarantees;" if by that is meant

mutual promises and vows like the Treaty of Paris, though signed by every European Sovereign in full uniform. Whatever may be the arrangement ultimately arrived at, it must be guaranteed by nothing less than positions where force can be always maintained, and whence it can speedily be exerted. Nor do we intend to suggest that this is a matter of immediate importance. It may be very far off; but also it may be as near to us as the fall of Paris was to France when the battle of Sadowa was fought. The death of a single man might bring it close upon us at this moment. Wherefore it is time to think of it boldly, and all that appertains thereto.

GERMANY.

(The Saturday Review.)

Life is made up of small things and of great things, and what is true of the lives of ordinary men is conspicuously true of the lives of men so highly placed as the German Emperor and his great Minister. After a week's stay in Italy, and the enjoyment of all that cordiality and splendour could do make his reception there worthy of him, the Emperor returns to Germany, and is laid up with an attack which has prevented his being present either at the opening of the German Parliament or at the ceremonial held in honour of Stein. Prince Bismarck also has been ill, and his illness was serious enough to keep him at home, and to debar him from the pleasure, or save him the trouble, of going to show himself to the Italians. The slight attack of the Emperor is of no political importance, but a German journal has found courage to hint that it is exceedingly inconvenient that whenever Prince Bismarck is ill, or wishes to seek repose in the country, the business of the Empire comes to a standstill. Whether Prince Bismarck may be right or wrong in allowing no inferior hand to meddle with his work, it is certain that he has always much on hand to worry him. Building up an Empire and reducing a spiritual power to obedience are not things that can be done by a sudden stroke or once for all. It is only by slow, persistent determination, by patient watching, by trying to solve one small problem after another, that such ends are to be achieved, if they are to be achieved at all. Some such contest as that now being waged in Bavaria between the Empire and a combination of clerical partisans and lay separatists has already shown itself in other districts, and can scarcely fail to reappear from time to time in some quarter of the new Empire. While each contest of this kind is going on there is much for Prince Bismarck to think of, and the varying circumstances of each case demand appropriate means of meeting the difficulties that arise. For the moment there is quiet in Bavaria, for the King has had his say, and Parliamentary opposition is made impossible by the prorogation. What is likely to happen, and what must be done, when the Parliament is suffered again to meet, must cost those chiefly concerned many anxious thoughts. But the difficulty is one that may probably be overcome by time and patience. There can scarcely be any fear of a revolution, and even if the King did what the Emperor himself did not many years ago, and collected taxes which the Parliament refused to vote, the opposition that would be excited might be one that would stop short of disobedience or resistance. There is, however, no reason to expect that such a course will be taken. The Bavarian Parliament cannot exercise any great pressure by refusing to vote supplies. It is the Bavarian public, and not the Crown, that would suffer by supplies being withheld, and a public cut short of its money by a Parliament is sure to make its grievances heard.

The speech at the opening of the Session, which the Emperor was not well enough to deliver to the German Parliament, dealt chiefly with the large question of the political state of Europe and the prospects of peace. The Emperor took occasion to express his conviction that there are now surer guarantees for the existence of peace than there have been for many years. More definitely he says that peace is more assured now than it was at any period of the twenty years which preceded the establishment of the Empire. This does not seem to be saying much, as those twenty years witnessed the various adventurous schemes of the Emperor of the French to create by wars, by rumours of wars, by secret alliances and territorial bargains, a special position for himself and his dynasty in France and in Europe. But the Emperor William adduces reasons for believing in the continuance of peace which are calculated to produce a considerable impression in Germany. In the first place, he is able to announce that Alsace-Lorraine is gradually accepting the rule of its conquerors. In the next place, his recent visit to Italy has assured him that the Ultramontanes have at present too many and too determined adversaries on their hands to think of giving practical effect to their dreams of a crusade. Lastly, the league of the three Emperors, supported, as is politely assumed or prudently hazarded, by the wishes of their respective peoples, remains in fuller force than ever. It is undeniable that while Russia and Austria unite with Germany in desiring peace there is little chance of the disturbance of the peace of Europe. Whether this implies the reign of peace elsewhere may be another question; and Englishmen cannot help reflecting how very convenient it might be to Russia to persuade Europe that a conflict on her remote Eastern borders with the mistress of India was a purely Asiatic affair, which could be settled without the burning question of the possession of Constantinople being raised. But this is a point in which Germans are not much interested, and the object of the Emperor was to awaken the confidence of the Germans in peace, and especially that species of confidence which is necessary to revive the sinking trade and flagging industry of the Empire. His speech was, in fact, a solemn announcement that the famous scare of last May was at most an accidental interruption of a settled policy, and that the timid and the cautious need have no apprehension of its recurrence.

For many years a statue in honour of Stein has been in course of erection at Berlin, and it has been at last completed, in a large measure through the liberality of the Emperor. Next to the great Frederick, there is no one whom Prussians and the Royal Family of Prussia may be more proud to honour. Stein was one of the chief authors of the bold measures by which in 1807 and 1811 the peasants of Prussia were raised from serfs to freemen, the land was freed from feudal distinctions and incumbrances, and the tenant was given a proprietary interest in the soil. This was the beginning of the new life of Prussia and Prussians. Further, to Stein and his associates Prussia owes the inception of that military organization which led her in triumph to Leipzig and Waterloo, and swept down before it like a broken reed the strength of France in 1870. To the same set of benefactors is due the creation of the Prussian bureaucracy, which, however marked by the inseparable failings of a bureaucracy, has done its work with an enlightenment, a zeal for the public good, an unwearied industry, and an independence of Kings and Ministers, for which it would be very difficult to find a parallel. Lastly, from the same source there also flowed the famous system of Prussian public education. The merits and success of this system have indeed been in recent days much exaggerated, and English travellers, fresh from the glowing pictures of German education invented to rouse the fear or emulation of English audiences, have been surprised to find how little education has really spread among the German poor, and among women of every rank. But it would be totally unjust to deny that Prussia made a great effort, and an effort of a very novel character, in organizing education when education was little thought of in Europe, and that much gratitude and honour are due to those who first led the way on the path of popular instruction. All these claims to the respect and admiration of his countrymen Stein shared with a small band of colleagues or supporters; but he had himself an exceptional and special title to distinction. He had the honour to provoke the personal hatred of Napoleon; and the conqueror of the Continent rarely, if ever, gave a more signal instance of the extent and insolence of his power than when he issued from his camp at Madrid an order that Stein should be treated as the enemy of France, and be banished from Prussia. The present Emperor's father had no choice but to yield, and Stein went into exile to prepare, with the ardour of public enthusiasm and private indignation, his secret and ultimately successful plans for the downfall of the oppressor of his country and of himself. The piquancy of the contrast between the Berlin from which Stein was exiled and the Berlin in which his statue has been set up must have been one of the chief pleasures attending the recent ceremony; and the Emperor especially, whose personal memories carry him back to the days of Stein's exile, must have dwelt with satisfaction on the thought that things are very much altered now, and that, instead of a Prussian Minister being ordered away by a foreign prince into exile, Europe now waits with anxious attention to know whether the rheumatism of a Prussian Minister is a little better or a little worse.

Shipping Intelligence.

ARRIVALS.

Dec. 23, *Lathley Rich*, American ship, Lewis, 1,300, from New York, June 19, Coal, to Chipman, Stone & Co.

DR. BRIGHT'S PHOSPHODYNE.

(OZONIC OXYGEN)

A CHEMICAL PREPARATION OF PHOSPHORUS, WITH THE VEGETABLE ALKALOIDS QUINIA, CYPRIPEDEN, XANTHOXYLIN, &c.

This Phosphatic combination is pronounced by the most eminent members of the Medical Profession to be unequalled for its power in replenishing the vitality of the body, by its supplying all the essential constituents of the blood and nerve substance, and for developing all the powers and functions of the system to the highest degree.

It is agreeable to the palate, and innocent in its action, while retaining all its extraordinary properties; and as a specific, surpassing all the known therapeutic agents of the present day for the speedy and permanent cure of—

Nervous Prostration	Lassitude
Liver Complaints	Shortness of Breath
Palpitation of the Heart	Trembling of the hands and limbs
Dizziness	Impaired Nutrition
Noises in the Head and Ears	Mental and Physical Depression
Loss of Energy and Appetite	Consumption (in its first stages only)
Hypochondria	Timidity
Female Complaints	Eruptions of the Skin
General Debility	Impaired Sight and Memory
Indigestion	Nervous Fancies
Flatulence	Impoverished Blood
Incapacity for Study or Business	Nervous Debility in all its Stages
Sick Headache	Premature Decline

and all morbid conditions of the system arising from whatever cause The action of the Phosphodyne is twofold—on the one hand increasing the principle which constitutes nervous energy, and on the other the most powerful blood and flesh generating agent known; therefore, a marvellous medicine for renovating impaired and broken-down constitutions. It quickly improves the functions of assimilation to such a degree, that where for years an emaciated, anxious, cadaverous, and semi-vital condition has existed, the flesh will rapidly increase in quantity and firmness, and the whole system return to a state of robust health. The Phosphodyne acts electrically upon the organisation; for instance, it assists nature to generate that human electricity which renews and rebuilds the osseous, muscular, nervous, membranous, and organic systems. It operates on the system without exciting care or thought upon the individual as to the process. It moves the lungs, liver, heart, kidneys, stomach, and intestines, with a harmony, vigour, yet mildness unparalleled in medicine.

The Phosphodyne gives back to the human structure, in a suitable form, the phosphoric or animating element of life, which has been wasted, and exerts an important influence directly on the spinal marrow and nervous system, of a nutritive, tonic, and invigorating character, maintaining that buoyant energy of the brain and muscular system which renders the mind cheerful, brilliant, and energetic, entirely overcoming that dull, inactive, and sluggish disposition which many persons experience in all their actions.

The beneficial effects of the Phosphodyne are frequently shown from the first day of its administration, by a remarkable increase of nervous power, with a feeling of vigour and comfort, to which the patient has long been unaccustomed. Digestion is improved; the appetite increases wonderfully; the bowels become regular; the eyes brighter; the skin clear and healthy; and the hair acquires strength, showing the importance of the action of the Phosphodyne on the organs of nutrition.

Finally, the Phosphodyne maintains a certain degree of activity in the previously debilitated nervous system; its use enables all debilitated organs to return to their sound state and perform their natural functions. Persons suffering from Nervous Debility, or any of the hundred symptoms which this distressing disease assumes, may rest assured of an effectual and even speedy cure by the judicious use of this most invaluable remedy.

DR. BRIGHT'S PHOSPHODYNE

IS SOLD ONLY

In CASES at 10s. 6d. by all Chemists and Patent Medicine Vendors throughout the Globe.

Full Directions for Use, in the English, French, German, Italian and Dutch Languages, accompany each Case.

☞ *CAUTION.—The large and increasing demand for Dr. Bright's Phosphodyne has led to several imitations under somewhat similar names; purchasers of this medicine should therefore be careful to observe that each case bears the Government Stamp, with the words Dr. Bright's Phosphodyne engraved thereon, and that the same words are also blown in the bottle.*

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!
HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

DYSENTERY, CHOLERA, FEVER, AGUE, COUGHS, COLDS, &C.

Dr. J. COLLINS BROWNE'S

CHLORODYNE

(Ex Army Med. Staff)

IS THE ORIGINAL AND ONLY GENUINE.

CAUTION.—Vice Chancellor Sir W. P. Wood stated that Dr Collis Browne was undoubtedly the Inventor of Chlorodyne; that the story of the Defendant, Freeman, being the Inventor was deliberately untrue, which he regretted had been worn to. Eminent Hospital Physicians of London stated that Dr. Collis Browne was the discoverer of Chlorodyne; that they prescribe it largely, and mean no other than Dr. Browne's.—See "Times," July 13th, 1864.

The Public, therefore, are cautioned against using any other than

DR. J. COLLIS BROWNE'S CHLORODYNE

REMEDIAL USES AND ACTION

This INVALUABLE REMEDY produces quiet refeshing sleep relieves pain, calms the system, restores the deranged functions and stimulates healthy action of the excretions of the body withou creating any of those unpleasant results attending the use of opium Old and young may take it at all hours and time when requisite Thousands of persons testify to its marvellous good effects and wonderful cures, while medical men extol its virtues most extensively, using it in great quantities in the following diseases:—

Diseases in which it is found eminently useful—Cholera, Dysentery, Diarrhœa, Cholics, Asthma, Rheumatism, Neuralgia, Whooping Cough, Cramp, Hysteria, &c.

EXTRACTS FROM MEDICAL OPINIONS.

The Right Hon. Earl Russell communicated to the College of Physicians and J. T. Davenport that he had received information to the effect that the only remedy of any service in Cholera was Chlorodyne.—See "Lancet," December 31st, 1864.

From A. Montgomery, Esq., late Inspector of Hospitals, Bombay:—"Cholorodyne is a most valuable remedy in Neuralgia, Asthma, and Dysentery. To it I fairly owe my restoration to health, after 18 months' severe suffering, and when other remedies had failed."

Dr. Lowe, Medical Missionary in India, reports (Dec. 1865) that n nearly every case of Cholera in which Dr. J. Collis Browne's Chlorodyne was administered the patient recovered.

Extract from "Medical Times," January 12th, 1866.—"Chlorodyne is prescribed by scores of orthodox medical practitioners. Of course it would not thus be singularly popular did it not supply a want and fill a place."

Extract from the General Board of Health, London, as to its efficacy in Cholera.—"So strongly are we convinced of the immense value af this remedy that we cannot too forcibly urge the necessity of odopting it in all ceases."

Beware of spurious and dangerous compounds sold as CHLORODYNE, from which frequent fatal results have followed.

See leading article. "Pharmaceutical Journal," August 1st, 1869, which states that Dr. J. Collis Browne was the inventor of Chlorodyne; that it is always right to use his preparation when Chlorodyne is ordered.

CAUTION.—None genuine without the word "Dr. J. Collis Browne" on the Government stamp. Overwhelming medical testimony accompanies each bottle.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

DEATH.

At Marseilles, on the 4th December, EDUARDO LOUREIRO, Esq, late Consul-General for Portugal in Japan.

Notes of the Week.

The Budget has been produced this week and is much more favourable than was generally anticipated. It shows a small surplus of revenue over expenditure, but this is mainly attributable to the far greater yield of the land-tax than is usual. Owing to the length to which our Summary has extended, and the impossibility of analysing the Budget this week with anything like the care it demands, we must defer its publication and our remarks upon it until next week.

The resignation of Mr. Santo Naoto, who for many years has held various offices in this Ken, and since 1872 that of Vice-Governor of Kanagawa, has, we regret to learn, been accepted by the Government. A recent notification from the Daijokuan restricted the number of officials of the seventh rank and upwards in each Ken to two, and there having been up to the present moment four in Kanagawa Ken it became necessary for two of them to resign their posts. The retirement of Mr. Santo is to be regretted, as he had, during a long intercourse with foreigners, won universal esteem and confidence. Always endeavouring to meet their wishes as far was compatible with his duty, he has done much to promote friendly feelings between the foreign and native population of Yokohama. The Government can ill spare such a man at present, and though retrenchment and economy cannot but be commended, an exception to the general rule, we venture to think, might have been made with advantage in the principal open port of the Empire, in favour of an officer whose experience and success in dealing with foreigners have greatly facilitated the intercourse between them and the Japanese, sometimes rendered difficult by the absence of these qualifications. We are sure that all who have known Mr. Santo will be sorry to hear that we are to lose him and his kindly offices.

Miss Claus's playing at her concert on Wednesday evening last in Yedo was worthy of a reputation which has steadily increased as she has been more widely heard. Her fine tone and broad bowing, her delicate perception of the beauties of music and the characteristics of the various writers she interprets, and a thousand winning graces in her playing, have struck the most fastidious listeners with admiration, and given them a pleasure the sense of which has been dormant but too long. Her reading of the Beethoven trio in C minor on Wednesday evening, or such part of it as was played, was most delightful from beginning to end. The *Andante con variazioni* is not very interesting except to the performers, and is too delicate for the opening of a concert. But the *finale* is equal in its line to anything Beethoven ever wrote, and contains one subject, which he repeats three or four times at intervals and with some variation, as lovely as anything we know even in *his* works. But the richest treat of the evening was the three last movements of Mendelssohn's Sonata for violoncello in D major—the greater of the well-known two. Of the *Allegretto Scherzando* we have not time to speak. But the *Adagio* claims at least a few words. It consists of a chorale of the loftiest German type, though whether original or adapted from one of the old writers, we have never heard. It is arranged with very full, rich chords, and is grand and devotional in the highest degree. The part allotted to the violin is a kind of recitative, which is borne floating on the melody of this sublime hymn. It is comparable to nothing we know of but the reading of a chapter of the prophet Isaiah—the fortieth or fifty-fifth—to the accompaniment of a full organ playing one of the great German chorales. Miss Claus played it superbly and with deep solemn feeling. We venture to think it gains in grandeur up to a certain point in proportion as it is taken slowly. The last movement forms a worthy conclusion to the Sonata, and recalls the meteor-shower of November '68—a sight greatly to be remembered. Instead of the stringed quartett, which had to be omitted, owing to the absence of one of the performers, Miss Claus played Ernst's *Elégie* with fine feeling and effect, and closed the Concert brilliantly with Vieuxtemps *Ballade et Polonaise*. Both parts of this excellent piece of writing showed her great talent to advantage. The 'Ballad' was as sweetly 'sung' by the violin as the Polonaise was effectively played upon it Mr. Black sang *Vi ravviso* and *Land meiner seligsten Gefühle*, and, as an *encore* 'Caller Herring,' which we are a little afraid was not well understood by the majority of his audience, though he sang it admirably well.

The upper room of the Horaisha was filled to overflowing, and though comparatively small, it is admirably adapted for chamber-music. Certainly a large room like that of the Machigaisho, unless purposely constructed on sound acoustical principles, is wholly unsuited to music of this class, and those who have not had the advantage of hearing Miss Claus except in that room can have formed no true estimate of her powers, or of the pleasure derivable from her playing.

Again on Friday evening, Miss Claus delighted her audience with a performance of the *Andante con variazioni* and *Finale* from the Kreutzer Sonata, Beethoven's beautiful Romance in F, a tarantelle of Dancla's, which she played so brilliantly that it was loudly redemanded, and a selection of airs from Flotow's *Martha*. How much pleasure the few who were present to hear her masterly performances derived from them will never be known by the many more who were absent. Miss Claus's playing on both occasions, but especially on Friday evening, was that of a really great artist—an expression we have hardly liked to use up to the present time, but which she has now extorted from us.

Original from UNIVERSITY OF CALIFORNIA

We have to acknowledge the receipt of the first number of the "Weekly Messenger" (*Shichi Ichi Zappo*) a Japanese newspaper recently begun at Kobé under the charge of the American Missionaries residing there. Without possessing an exclusively theological design the journal is of course intended to subserve the dissemination of religious truth and of the spirit of Christianity, and is thus deserving of the support and countenance of all friends of progress and enlightenment. The following, which are among the contents of the first number, fairly illustrate the object of the journal: An article upon the new discovery of a process for toughening glass; Notice of a settlement of Chinese in California who are listening to religious instruction; On the style of writing thought to be the most fitting for our paper; The story of a schoolboy martyr; A serial article to shew the need and universality of religion; An article on hygiene.

The *Peking Gazette* announces the appointment of Kwo-Sung-To, Senior Envoy-elect to England, to the post of Senior Vice-President of the Board of War. The appointment is said to be temporary, but it indicates that the mission to England stands indefinitely postponed, awaiting probably the result of the enquiry in Yunnan. Kwo is an able mandarin, of about fifty years of age, and a native of the province of Hunan.

From the "Japan Mail Daily Advertiser."

The advent of 1876 was celebrated in the Capital with the usual rejoicings. On New Years' Day His Majesty received the congratulations of the Ministry, heads of departments and the chief native officials, and on the day following a reception was granted to Foreigners, in the course of which some sixty gentlemen in the employment of the Government were presented.

We are informed by the Agent of the Great Northern Telegraph Company that the Shanghai line is interrupted. It is, however, hoped to re-establish communication without delay.

The *Unyokan* has been despatched to the scene of the wreck of the *Osakx Maru*.

We regret to learn that intelligence has been received of the death at Marseilles of Mr. Edward Loureiro, late Consul-General for Portugal in Japan.

The officials of the higher ranks were presented to His Majesty on the 3rd instant, at the Imperial Palace. Those of lower rank will be received by the heads of their various departments, and will, as is customary, be entertained with refreshments.

The M. B. Company's steamship *Nagoya Maru*, which was in collision with the ill-fated *Osaka Maru*, arrived in port from Shimonoséki on the 5th instant.

A virulent disease broke out in the stock farm of the *Kangiorio* (or Department of Industry), at Yedo about a fortnight since, which is very generally ascribed by foreigners to bad or insufficient provender. It has apparently defied treatment, for we read, in the *Hochi Shimbun*, that twenty-one of a total of thirty head of horned cattle have been carried off by it.

At an early hour on the 4th instant, a fire broke out at the temple of *Daijingu* in Shiba. It was extinguished two hours later, having destroyed about sixty houses.

The *Choya Shimbun* has had intelligence of a dispute said to have occurred at Kagoshima between the *samurai* followers of Shimadzu Saburo and those attached to Saigo.

We learn from the *Hochi Shimbun* that the workmen of a branch of the Shinagawa Arsenal have been busily occupied of late in casting cannon ball.

The P. & O. Mail Steamer with the next English Mail left Singapore on the 28th ultimo.

A Marine Board commenced its Session in Yedo on the 5th instant, for the matriculation examination of candidates for admission to the Naval College.

The following shipments of Japan tea were made by the *City of Tokio* which sailed on the 4th instant, for San Francisco. She also took 45 bales of waste silk, chiefly for New York:—

From	San Fran.	New York.	Other cities.	Total.
Hiogo - - -	695	3,704	23	4,422
Yokohama -	5,461	7,840	809	14,050

The case Perry *v.* Smedley has been settled by the Russian Minister's decision to award plaintiff the sum of three hundred (300) dollars.

H. M. S. *Dwarf* left on the 5th instant, for Yokoska, in tow by the *Sylvia*, in order to be docked there. The *Sylvia* will proceed on a surveying expedition on the coast below Omai saki.

A writer in the *Hioron Shimbun* has learnt that the Government purposes to send the troops to overawe the *samurai* of Satsuma. And in support of this intelligence he quotes the generally accepted rumour that "Enouyé had said Japan would never be tranquil until Saigo of Kagoshima *ken* and Mayebara of Yamaguchi *ken* were punished."

A Japanese newspaper gives the rumour that Okubo has visited Kido at his residence for the purpose of endeavouring to overcome his unwillingness to return to official duties.

The firemen of Yedo had their usual exercise on the 4th instant.

Kuroda, Envoy Plenipotentiary to Corea, sailed from Yedo on the 6th instant. He will be joined at Kobe by his colleague in the mission, Enouyé Bunda.

On and after the 11th instant, we learn from the *Nichi Nichi Shimbun*, the Government will begin to draw young men for the reserve forces. This had been originally designed to take place in February, but the period has been unexpectedly anticipated for what are presumed to be urgent reasons.

The *Hochi Shimbun* notices the return to the capital of Mr. S. Shioda of the Foreign Office, who accompanied Mr. Ishie of the Telegraph Department to the St. Petersburg convention.

The decision in the case of Ito Hachibei *vs.* Walsh, Hall & Co. will be given in the U. S. Consulate to-day.

The *Nichi Nichi* relates that a few days since two servants of Shimadzu Saburô presented themselves at the residence of the Prime Minister, Sanjio, with whom they requested an interview. He declined to see them, but the men refused to withdraw, and only retired upon the arrival of the police. No reason for the visit has been disclosed.

IMPERIAL GOVERNMENT RAILWAYS.

YOKOHAMA STATION.

Statement of Traffic Receipts, for the week ending Sunday 19th December, 1875.

Passengers, Parcels, &c.....	$6,056.84
Merchandise, &c.....	$ 503.79
Total.....	$6,560.63

Miles Open 18.

Corresponding week last year.

Passengers, Parcels, &c.....	$6,958.88
Merchandise, &c.....	$ 731.14
Total.....	$7,690.02

Statement of Traffic Receipts, for the week ending Sunday, 26th December, 1875.

Passengers, Parcels, &c.....	$6,831.30
Merchandise, &c.....	$ 533.97
Total.....	$7,365.27

Miles Open 18.

Corresponding week last year.

1875.

THE history of this country during the year which has just expired has been characterised by none of the stirring events which lent life and colour to the record of 1874. With the exception of the action which is now being taken regarding Corea, and the issue of which will belong to the year 1876, such movement as the nation has exhibited has been chiefly directed towards the re-adjustment of its institutions to the changed and still changing condition of its internal life. The task of analysing this movement is an extremely difficult one, for the data are far from being easily accessible, or themselves easy of analysis; while so little is really known to foreigners of the national mind of Japan, that they are as often misled by its manifestations as they are generally wrong in prescribing for such maladies as seem temporarily to affect it. It is not alone the barrier opposed by a most intractable language, or even a certain secretiveness and want of frankness in the Japanese mind, which produce this difficulty. The main source of our errors seems to lie in a kind of mechanical belief that the institutions—including all the various influences which may be comprehended under that term—under which we ourselves have grown to maturity, are equally suited to the oriental nations. It may indeed be contended that the very desire which the Japanese have shewn to assimilate their condition to that of the western nations, and to adopt their learning, or at least to pursue the paths which lead to it, is an evidence of latent powers the development of which will eventually produce results something similar to those which we see in Europe. Nor is the contention without some value. But if the researches of the most acute investigators of human affairs may be trusted on this question, the records of nations are quite as much the reflection of a strictly individual, and, in some sense, necessary, life, the events of which present an inseparable *nexus* of cause and effect, as of a life modified, if not entirely moulded, by external influences.

An enquiry into the causes which have prepared the way among the Japanese for a movement wholly without parallel in the history of the oriental nations, would be extremely curious and interesting. But it is one of great difficulty, and doubts might fairly be entertained whether any European student has acquired sufficient knowledge of the history of the Japanese mind to undertake it with anything approaching to success. It is conceiveable, however, that the wholly unique form of government under which the affairs of the nation were administered for upwards of seven hundred years, has had more to do with this than may at first sight seem apparent. If we contrast China with Japan, we see that the former has developed a very democratic form of government working upon a theological basis. The decree of the Emperor is there the reflection of the supposed will of Heaven, and not the less so that it is generally made to harmonize with the wishes and prayers of the people. The source of power, though present on earth, has ever been held as divine, and hence as possessing a sacred nature which could be as little analysed as questioned. But in Japan, a widely different condition of affairs has obtained. There existed indeed, the representative of Heaven in the person of the MIKADO, but this visible, though strictly concealed, presence of the Deity was only distantly associated with the idea of the administration. It was an abstraction, of great force and value indeed, yet still only an abstraction, so far as the mass of the people was concerned. They did not identify it with the active internal life of the nation, with the administrative acts of government, with questions of taxation, or finance or military movement. All these were the acts of the SHOGUN, a man exalted indeed in station and possessed of commanding power and influence, yet still a mere man whose position might be wrested from him by any other man who had energy enough to do so, and whose acts and policy were as much the dictates of human wisdom or unwisdom as those of other men. So long as this power remained in strong hands, and was exerted in harmony with those coordinated forces on the balance of which its continuance depended, the people looked to it as the depositary of all such power as actually affected them. It increased or diminished their taxes, regulated their daily life by its ordinances, punished or rewarded them, and compelled the obedience of their immediate feudal lord. It was purely human, fallible, and, so to speak, visible and tangible. It was shrouded in no mystery and consecrated by no superstition, and no mysterious awe prevented the analysis of its acts, or even forbade a sceptical estimate of its virtue and wisdom.

And hence, partly, as it appears to us, the national mind of Japan has developed and transmitted a certain mobility of political temperament which has not a little conduced towards the striking attitude it at present exhibits. Unlike that of the Chinese, it has lent itself most readily to external impulse, and while we still see the one affected to a mere infinitesimal extent by the motion around it, we see the other swaying with every new impulse, and discarding, even with too little of sentiment and regret, ideas, feelings and institutions inseparably identified with the national history. Some cause must exist for this wide and striking difference. The climate of the two countries is practically identical. The two nations are but branches of one race. Both are fed with the same food. The root-morality and religion of the two are alike. Why then this truly astonishing diversity of character? The clue to the problem may be of a more complex character than that which we have indicated, but we venture to think that the future discoverer of it will find that we have placed one of the component threads in his hand. We will leave the domain of speculation, however, and now proceed with the business more immediately before us.

The year 1874 closed with the settlement of the dispute with China which arose out of the expedition sent by Japan to Formosa, and the year 1875 dawned on the nation in high good humour. It had thrown its glove in the face of a neighbour, inert and but little respected, indeed, yet still powerful and of an acknowledged position among the nations. By pertinacity of effort, adroitness of manœuvre and bold address the Japanese had brought the Chinese to terms, and returned with substantial evidences of their success. But they somewhat resembled a whaler which had made a voyage and taken but one fish. The boat's crew had gallantly attacked the huge animal, the harpoon held fast, there was the plunge, the dive, the long run out of the line, the return to the surface to breathe, the usual snorting and spouting, and ultimately, the cutting up and boiling down. Yet the voyage cost ten times as much as the oil brought, and the account of the whole venture was a Flemish one. We are in no humour, however, to estimate a national exploit too narrowly by a debit and credit test. The Japanese achieved their immediate purpose, allayed the disquiet which was one of the causes of their action, made an impression of greater or less value upon China, and proved that their new powers were not wholly to be expended on internal modifications of their polity.

On the 14th April, appeared one of the most important proclamations which the MIKADO has ever issued. It was nothing less than an amendment of the constitution, by which two new wheels were added to the machinery of Government. These were first, representative institutions, in the usual form of an upper and lower assembly, and secondly, a centralised justiciary. In undisguised imitation of the forms of the French Revolution, the upper deliberative body was named the *Genro-In* or Senate; and it was doubtless intended that it should have a more influential voice in regard to the weightier matters of administration than had belonged to the body it superseded, the *Sa-In*. To the lower house, the *Kuaigi-In*, a subordinate position was assigned, its first session being limited to fifty days, in the hottest season of the year, and the subjects for its deliberations being strictly prescribed beforehand. Whether the experiment thus begun will justify the hopes entertained by its promoters is doubtful. What is certain is that the *Gen-ro In* has remained in a state of extreme quiescence since its institution, though its members have drawn their salaries with commendable regularity. The discussions in the lower house, the *Chihokuan Kuaigi*, were marked by a practical ability and a moderation of tone that augur well for its future meetings; and it is to be hoped that one eminently sensible suggestion made last session will be definitely, adopted namely, that each official member should be accompanied by a non-official colleague, elected by popular suffrage of the city or department, (*Fu* or *Ken*).

In the last week of May was published the Constitution and Rules of the High Court of Justice, the *Dai Shin In*, and also the details of the new organization of a complete judicial establishment for the whole empire. By this scheme the Courts of first instance, of which there are sixty-three, one in each of the three *Fu* and sixty *Ken*, are subordinated, for the purposes of appeal, to the four Superior Courts newly established at Tôkiyô, Osaka, Nagasaki and Fukushima, the grouping of the lower Courts under the jurisdiction of each of the higher being determined, of course, by considerations of local convenience. The *Saishin In* or High Court of Justice forms the apex of the juridical pyramid. It has a concurrent original jurisdiction both with the Superior Courts; and is the ultimate Court of Appeal in all cases criminal as well as Civil. It has most of the powers exercised through the prerogative writs of our own Court of Queen's, Bench though the model most closely imitated in its construction seems to be the French Cour de Cassation. Its proceedings and decisions will be watched with great interest; for it is an experiment as bold as it is novel, and its judges will have a clear field before them. As it can scarcely be said to have been set in motion yet, it would be premature to express an opinion as to how it will work; but we wish it every success. We await with not a little curiosity its judgment on the appeals now pending before it from some of the severer sentences awarded by the Local Courts for transgressions of the Press-laws.

Among the indications of the growing life of the people, none had been more promising or gratifying than those furnished by the native Press. Newspapers had sprung up apace in Tôkiyô; Kioto and Osaka had followed the lead; and in every town of importance in the Empire there appeared the same desire to read and write about topics of current national importance, to learn what was going on abroad, and to discuss social, moral, religious or political questions. Speaking generally, these journals were conducted with good sense and discretion, while now and then articles of marked ability appeared in them. They attacked or defended the policy of the Government with creditable moderation and insight, and though their range of speculation was somewhat narrow and their reflections were apt to be trite and commonplace, they afforded abundant indications that the nation possessed an ample fund of intellectual life, and that this could find profitable occupation in developing similar life among the masses of the people. Under their influence distinct lines of thought began to appear, and they collectively formed an instrument by means of which a kind of rude spectroscopic analysis of the national mind could be made. In one line might be discerned an impatience for the representative institutions of the West, towards which the minds of ardent young politicians were turned, with much of hope, and something, it must be confessed, of superstitious faith. In another might be read the growing dissatisfaction with the learning of China, and the preference felt for that of the western nations. The fierce red glow of theological antipathy found a clear reflection in a third, while a fourth indicated the presence and activity of a large body of discontent, arising from various causes more easily indicated than removed. These manifestations were regarded by all foreigners with great satisfaction. Those who thought that neither the *personnel* nor the policy of the Government was in harmony with the wishes, nor adapted to the wants, of the nation, looked upon this growing power with a favour proportioned to their own unfavourable conclusions. Those, on the other hand, who thought that the Government had been fairly successful in grappling with the vast difficulties which beset it, still recognised the importance of a vent through which some valuable opinion, otherwise inaccessible, and much discontent, otherwise rendered more malignant by being forced inwards, might find their way to the surface, with benefit and relief in both cases to the body politic. Nor can there, for a moment be a doubt of the value to the nation of the institution which these journals represented, or its applicability to the condition and wants of this Empire. The ease with which it sprang into life, and the vigour it displayed even in early infancy, showed that the surrounding conditions were not only favourable to its existence but actually demanded its advent. The pulses of a new thought and a new life beat high throughout the land. The relations between the governors and the governed had assumed a new aspect. A great, venerable, and, for some ends, useful, institution had disappeared, and after the echoes of the storm amid which it fell had died away, and the darkness amid which it broke up was dispelled, men felt that the change had brought about with it new demands on their minds and lives, and that, in some way, as yet undefined to them, they must take part in a work which they had been content hitherto to see done for them by others.

But it soon became apparent that the Press had been endowed with an amount of freedom out of all harmony with other conditions of the national life. Presuming the ideal of government to be represented by a pressure as equal and as light as possible over the whole area of its jurisdiction, it was obviously a dangerous experiment which hazarded the bestowal of almost absolute liberty on any one section of a community so little accustomed to it as the Japanese people, even though this liberty were but that of expression. Thought and action are so completely and closely correlated that the one is readily translated into the other, and a Government which permits the untrammelled expression of the former, while it closely watches and controls the latter, may indeed show that it is animated by hopes creditable alike to itself and

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

its subjects, but imposes on itself a task which the logic of action and of prudence alike would far prefer to decline.

In looking back to our summary of the events of the year 1874, we observe that we limited our misgivings upon this question to the words "We trust this freedom will not be abused." It would have been easy to acquire a cheap reputation for prophetic instinct by saying "This freedom will inevitably be abused." For nothing is more certain than that in every community of men, some will be found ready, and indeed, anxious, to go to the very verge of prohibition and to brave its attendant punishment; and thus the lawgiver has to deal not with the expected average of human action, but with its extreme tendencies or possibilities. It was too much to expect or even to hope that the Japanese writers would not abuse a gift which is precious or prejudicial to society as men know or know not how to use it. The problem offered for solution was not, Is freedom a good thing? but, Can unlimited freedom be given safely at once without the recipients being prepared for a right use of it? and it solved itself in the only way in which the problem ever will be solved. Writing of a violent and seditious character began to make its appearance, wholly failing to justify its existence by demonstrated evils, or by any alleged indisposition on the part of the Government to remove such grievances as must exist in one form or another, and in a greater or less degree, in every state. It was obvious that if this kind of writing were permitted to pass unrestrained, mischief would come of it. In a country accustomed to a free Press it might have been regarded as seditious, though perhaps passed over as too insignificant for notice. But here, at the very outset of the career of the Press, the failure to check would only have encouraged it, and in a very short time incendiary writing of every form would have most surely increased the difficulties of the Government manifold. The old newspaper edict was therefore withdrawn, under which little more was required than the registration of the journal about to be established, the name of the proprietor &c., and a moderate code of Press-laws was substituted for it. The check was at once felt. The newspapers protested and were much much disinclined to accept the new situation; but the Government was firm, and even pushed its position further than we are inclined to think was wise. But it is the business of a Government to see that its laws are obeyed, and an administration which thought the state endangered by a certain course of public action, and yet refrained from repressing it, would deserve to fall amid the contempt of all rational men.

The more liberal section of the Cabinet was, however, deeply disappointed with the failure of an experiment from which it hoped great things. Influenced partly by a desire to bestow on the nation the benefits of an institution of great educational value, partly, as we firmly believe, to extend the freedom of the people, and partly to supplement those rudimentary representative institutions which had been established but a few months previously, the Cabinet had been induced to place a vast power in the hands of the people, in the sanguine hope that it would be used discreetly and beneficially. The error was a pardonable one; but it was expiated by failure, and brought on the Government some temporary obloquy. Had the Press-laws been issued when journalism first burst into life, we think little would have been said against them even by the extreme partisans of democracy, because their necessity would have been at once recognised and acknowledged. But coming as they did after the Press had begun to flower, and when it might easily have been pleaded that such noxious odours as it exhaled, like that of certain eastern fruits, would be more than counterbalanced by its beneficent qualities, the measure was denounced with some asperity, though with little reason and less argument. Reasonable critics abroad have generally approved of the action of the Government in this matter, and our own mind has never wavered on the subject for a moment, while we have abundant testimony from all quarters to the soundness of the views we expressed at the time of the contention. Were there not something akin to complaint in the word, we might say that we were bitterly opposed by those who publicly differed from us. But as, generally speaking, the character of their reflections only seemed to illustrate the evils inseparable from the existence of a free Press, and to show that poison and medicine alike may have residence within the rind of one fruit, they unconsciously assisted in making all reasonable men feel the necessity for that control which the new code provided.

But while we have no misgivings in regard to the necessity for the Press-laws, it appears to us, on mature consideration, that there is one clause in them which urgently demands modification. We refer to Clause XIV, which is as follows:

XIV.—Any one who reviles existing laws, or confuses the sense of duty of the people to observe them, or who by perverted reasoning attempts to justify offences plainly contrary to the criminal law, will be punished with imprisonment for not less than one month, and not more than one year, and with a fine of not less than five *yen*, and not exceeding 100 *yen*.

Now this clause, as interpreted by the judicial authorities, has been held to forbid all criticism upon laws now existing, or hereafter to be passed. This is utterly unreasonable—destructive of real and proper respect for law, benumbing to the sense of the people as political entities, tyrannical, and most unwise. The remark of Bishop WATSON in the House of Lords—it was made so recently as the latter part of the last century—that "he did not see what the people had to do with the laws except to obey them," is the only fitting parallel to this bad clause as now interpreted. We earnestly hope the Government will give attention to it, and either exclude it *in toto* from the Code; modify it in such a manner as to give the Japanese people a fair opportunity of discussing the laws they are called on to obey; or fix upon it some interpretation by which fair criticism may be sanctioned, if not indeed encouraged, as it more properly should be. The only analogy for an unalterable law, as was said by a wise wit, is an unalterable fool, and the same arguments as those which consigned the prophet to the den of lions might be urged for any oppression which a servile judge would be able to perpetrate under this clause.

Nor should we leave this subject, to which on account of its vast importance in the life of this nation, we have paid great attention, and have even now treated at tedious length, without expressing a hope that the Government will forbid harsh and repressive interpretations of the whole Code. The object to be attained is the development of a good Press—one with which honourable men may honourably be associated; one which shall foster the political instincts of the people and help them to rise to the great and noble task of taking an active and, above all, an intelligent part in the management of their own affairs, one which will attract and worthily retain the services of men of virtue and of intellect, and this never can be attained under oppressive laws or even under mild laws rigorously interpreted.

That the new Code has so far produced any deterioration of the Press, cannot for a moment be pleaded. Such

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

weakness as it formerly exhibited has, perhaps, taken a somewhat different form, but such strength as it before possessed, it still apparently possesses. How much more powerful or worthy, or how much more unruly, it might have become but for these laws, it is, of course, impossible to say; but advantages of even a high order must not be purchased at the risk of certain palpable and demonstrated danger of the gravest kind. When the now tiny stream of freedom has, with time, slowly broadened down from precedent to precedent, an unfettered press may become the safe prerogative of the people of this country. Until then, at least in this matter, let its representatives hasten slowly, and accept as their motto that of an illustrious line of English nobles, *Patience passe science.* The journalists have ample room,—except where fettered by the obnoxious clause we have pointed out,—wherein worthily to exercise their functions, to their own credit and for the benefit of their country. If they are wise they will make themselves strong within this limit, and, by gaining the confidence of the people, whose trustees and representatives, in some sense, they are, will extort for themselves the attention and respect of the Government.

We are disposed to think, though we hazard the idea with some diffidence, that the history of this contention between the Government and the Press gave the Japanese a more definite idea than they had ever before possessed of the far more robust constitution which the political organization of the Western nations exhibits than that of this country. They see that certain nations have been able to maintain in the hands of the people an engine of enormous power and efficiency for making known its will and compelling obedience to it, and they cannot but have their conceptions raised of the freedom, intelligence and higher political development of the nations which possess this power. No reflecting man can regard it as symptomatic of the weakness of a Government, but as indicative rather of the power of a people, expressing its will through the acts of its Government, which it creates, and, at the same time, obeys.

The cession of the Island of Saghalin to Russia, in exchange for the Kuriles, terminated a joint occupation of the former which would have given rise to interminable disputes, and is so far acceptable to Japan. But Russia has by far the best of the bargain, unless, indeed, Japan may be consoled by having got rid of an estate she was neither strong enough to hold, nor rich enough to work. Saghalin was a constant source of expense to her, and she has neither men nor money to spare for developing its alleged mineral wealth, of the extent of which, however, not much is at present known. The Kuriles are barren and practically uninhabitable, but afford good hunting grounds for marine fur-bearing animals. The seal and sea-otter abound there, and if proper care be taken to ensure the observance of certain close months, the breeds may be perpetuated, and the Islands continue to yield wealth to the Yezo merchants and a fair revenue to the Government. But the advance of Russia southwards in these waters should be regarded with suspicion by Japan, nor should England lose sight of it. To a powerful nation it matters less; but to a weak one it matters much. A pawn in front of the game, if only fairly supported, gives a player a prodigious advantage, and a wise antagonist will seek to neutralize this by placing another to prevent further advance.

Among the most serious questions at present occupying the attention of the Government is that connected with the continued payment of the hereditary incomes of the great nobles, the gentry and *samurai.* At the time of the Restoration these classes, the former especially, surrendered their lands to the Government of the MIKADO, on condition of receiving from the public Treasury a certain proportion of the revenues accruing from them. The great nobles retained quite enough to maintain themselves with dignity. They were absolved from the necessity of maintaining large bodies of retainers, and though shorn of many sources of pride and personal influence, they held, and still hold, an exalted position in Empire. If they have no longer their moated and fortified castles, they have their residences in the capital and their country seats, as many attendants as befits their rank, and such surroundings of luxury and ease as comports with the character of a wealthy aristocracy. But it is now well known that with perhaps half a dozen prominent exceptions, these great territorial magnates were at the time of the Revolution, and had been, for generations, mere puppets in the hands of their principal retainers. The surrender of their lands, which was for some time regarded as an ideal and almost sublime instance of self-sacrifice on the part of an aristocracy, was, in real truth, a matter in which they were hardly consulted. Does any one imagine that if these men had been possessed of the spirit, the power and influence of PERCIES, STANLEYS, NEVILLES or MONTMORENCYS, they would have surrendered their principalities, or permitted themselves to be stripped of all their splendid plumage at the bidding of a few men who, however active, were in no sense men of previous mark? Never. They would have taken the field in twenty-four hours and asked some one or another for a good reason why they should give up their broad lands, their castles and forests, and the willing obedience of thousands whose fathers had served their fathers and whose sons desired no better than to fight for them. The real truth is that, in vulgar parlance, it was a mere pasteboard affair. There was none of that proud sense of personal dignity, that courage, resolution, and force of individual character which belong to an aristocracy of illustrious descent, habituated to public affairs. A very small proportion only of these nobles were capable of discharging the duties rightfully devolving upon men so highly placed. They were excluded from all real knowledge of public affairs. They were nursed in indolence, luxury and fiction. Feeble in body and mind, they were the puppets of active and intriguing retainers, who used the prestige of their lord's name to cover their own designs, and maintained a perpetual fermentation in the affairs of their clan of which they enjoyed at once the sweets and the pleasure of producing them. After the Restoration, these higher retainers found employment under the MIKADO'S Government, while to the lower orders of them small pensions were promised, about equal to the allowances they had previously received from their feudal lord.

It cannot be doubted that the maintenance of these privileged classes has been a cruel burden upon the people of this country. It has prevented the accumulation of wealth in the hands of the agricultural classes, and has thus checked the tendency to increased cultivation which a larger command of capital would have fostered. The question is now no longer whether these large classes are still to be quartered for ever on the people, for it has been resolved that they shall not. It is rather, What is at once just and possible towards them in view of the actual condition and financial resources of the Empire?

We shall not hesitate to admit our view that the impossibility of improving the condition of the country, so

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

long as the present enormous draft upon its resources on this account continues, constitutes a valid argument for dealing with these pensions in a somewhat trenchant manner. A charge which condemns a whole people to poverty, and its Government to weakness and financial straits, which prevents the development of its commerce, and thus retards its progress in civilization, is one which *ipso facto* is condemned out of its own mouth, and must be extinguished. By this, however, of course we do not mean that all these claims are to be ignored—that would be a wicked unjustice and would assuredly lead to revolution. Nor, indeed, can we doubt that the claims of those who have actually surrendered their lands to the state on the faith of a promised share in the revenues derived from them, must be faithfully acknowledged. Such income might be taxed to some extent—a course not wholly free from injustice perhaps,—but they could not be withheld without a flagrant breach of all public morality. We think, however, that those who held their pensions on the ground of readiness for military service—a duty now no longer required of them in view of the establishment of a regular army—have little more claim than can be met by the redemption of their incomes for a few years' purchase, and this measure, already now in progress, we hope may be vigorously pushed.

Apart, however, from mere financial considerations, which all point one way, there are considerations of a social and political character which point in an opposite direction. It is inconceivable, at least to the mind of an European, that a monarchy can exist without an aristocracy, and we are persuaded that the institution of Monarchy in this country is not the object of much reverence, loyalty or affection on the part of the people. It touches neither their hearts nor their minds, and reaches them only in virtue of certain superstitious feelings which grow weaker year by year. It is conceivable that as education is extended, a rational estimate of the value of the institution may supply the place of the useful superstition now on the wane, and that as the MIKADO is more associated than formerly with the acts of the Government, an idea of power similar to that which surrounded the Shogûn, may sooner or later attach to his office in the minds of the masses. But assuredly the idea exists at present only to a very small extent, and in this fact we see elements of serious danger in a not remote future. Nor should it be forgotten that the mind of the rising generation is largely affected by a strong infusion of liberal, if not of very democratic, thought. Numbers of young men have received their education in America, more are under American teaching; and while we are quite sure that the character of the gentlemen who impart this would prevent their influencing the minds of their pupils in any consciously subversive manner, it is idle to suppose, and, indeed, it would be the worst possible compliment to them to suppose, that on one of the most important subjects with which the human mind can deal, viz, the experimental science of government, the contact of mind inseparable from the relations of teacher and pupil, should have no influence. He who sets himself to copy the external form of a flower cannot but be sensible to its odour, and it is absurd to suppose that the political speculations of the rising youth of Japan will not be affected by books and other influences which are redolent of liberal thought. Thus if the Monarchy is to remain stable in this country, the effort of a wise statesman should be rather to build up the aristocracy again, although on a new footing, than to destroy it.

In regard to the middle and lower ranks of the *samurai*, thoughtful Japanese seem to regard the class as a reservoir of the intellect of the country, and imagine that if its walls are destroyed and its valuable contents dissipated, as they would be were these men forced to mere manual labour, they would soon evaporate from the great surface over which they were spread. It might be contended that, contrariwise, they would prove sources of intellectual fertilization to those among whom they would be thrown. But experience seems certainly to point in the other direction. For one man whose moral and intellectual fibre is tough enough to retain its quality and impart its strength when surrounded by inferiors, ninety-nine will gradually sink to the level of those about them, and this fibre will wither and become flaccid and unresisting. Thus, then the problem stands; nor can any foreigner for a moment attempt with any chance of success to solve it. We doubt, indeed, whether it can be settled, as we have recently argued, until the voice of the nation, expressed by some organ of its own choice, has pronounced definitely on the subject.

Meanwhile, however, it may be remarked that the dreaded power of the *samurai* is assuredly on the wane. Their defeat at Saga was a heavy blow to their *prestige*, which has further been checked by taking from them the old caste monopoly of military service. Large numbers of them are ardently studying the learning of the West and assisting to diffuse it. Some of the best educated among them are to be found associated with the Press, others are studying medicine, civil or mechanical engineering. Members of the lower ranks occupy humble posts about the new schools and colleges, assist in laboratories, superintend the gymnastic exercises of young lads, or teach the more congenial arts of horsemanship and sword-exercises. These are, of course, the more intelligent and adaptable of the class, variously educated and endowed, and alive to the altered spirit of the times. The *samurai* of the old type, though still unhappily largely in a majority, are survivals of a by-gone period, and are rapidly becoming extinct. As the more intellectual members of the class join the ranks of the liberal party, the power of those less well endowed decreases. Their leaders have deserted them, and they know it. The times are against them, their reign is over, and the soul which animated and united them has almost, fled. It is possible that some man, or body of men, among them might yet revive the dying spirit, or that some ambitious leader of the new party might use them for his own purposes in case of any important national crisis. But their present condition recalls the appearance of the disintegrated lava of their own 'Matchless Mountain.' Once its fiery tide was the terror of the land, and so long as this retained its heat, it consumed and scorched, and resisted Nature's efforts to turn it to useful account; but this heat once lost, the particles are scattered hither and thither, and a beneficent chemistry converts them into sources of comfort or sustenance to man.

The growing change in the condition of the *samurai* to which we have referred, and in their relation to the mass of the nation, is due partly to the force of circumstances, but also greatly to the deliberate purpose of the Government, which has used and supplemented this force with great wisdom. The chief weapon used against the *samurai* has been the measure which recruited the army from the *Heimin* class, or the common people. Judging from all appearances, the material is excellent. No one who passed New Year's day in Yedo could fail to have been struck with the appearance of the soldiers, whose various uniforms lent gaiety and animation to the streets. Though not yet

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

quite as well 'set up' as satisfies an English eye, the generality of these men possess an exeellent *physique*, and may be favourably compared with any but the best European troops. Their improvement from year to year is marked, and whether cavalry, infantry or marines, they present a highly creditable appearance. Of course the *samurai* element is present in the army in the persons of the officers. But it may fairly be inferred that these are loyal to the Government, animated with the new order of ideas, and sensible to the necessity for conforming to conditions which they have now no power, and perhaps no desire, to oppose.

Another marked feature of the year is the gradual welding of the Satsuma clan into the main body of Empire. Its power has hitherto been so preponderant as to constitute it the arbiter of every discussion of vital importance affecting the national interests. But by adroitly withdrawing SHIMADZU SABURO, the hereditary representative of the clan, from the capital of the province, by giving him high office at Court, and by associating many of the higher Satsuma men with the liberal members of the Cabinet, and so overcoming their dislike to the new *régime*, the Government has skilfully contrived to undermine his influence, the hollowness of which was proved a few months ago at a moment when he thought he could test and compel obedience to it. He fell from power together with ITAGAKI, and not a hand stirred to save them. It is sufficiently well known, too, that the elder SAIGO, next to SHIMADZU the most influential man in the clan, is now opposed to him in the main body of his views, and is far more in harmony with the Government than was the case a year ago.

It appears to us unquestionable that, as time wears on, the Japanese see that the treaties by which they are bound in friendly intercourse with the western nations, have in them more of justice and of reason than they imagined, or have been led to think. Their ears have been plied with stories of the injustice of the foreigners, of their desire to place their feet on the neck of the nation, and make it bow to their yoke. Every error, or supposed error, almost inevitable to the thick darkness in which foreigners moved on their first arrival in Japan, has been magnified into a great crime, and used, with every accompaniment of unworthy personal attack, to persuade the Japanese that those who desire nothing more than to see them strong and prosperous, had no object but their impoverishment and humiliation. But he who will take a just and calm view of the history of western intercourse with the oriental nations, must see, and, if he is honest, will acknowledge, that the key to the whole problem which this intercourse undoubtedly presents, and to what we shall not hesitate to call some of its attendant injustices, is the harshness of those natural laws under which conflicting civilizations, brought into contact with each other, invariably exhibit. We should be misunderstood were it inferred from this that we seek to excuse man's injustice by that of Nature—or let us say rather, the absence of all apparent justice in Nature. But there is profound truth, as well as a touching sadness, as profound, in the poet's reflection that

> .....error is spread over all things,

and though it is right and well to show where this 'error' has made Justice swerve in her path, not the less is it right to show the true cause of the deflection. For whether we regard man as the object, or the instrument, of this stern, cold arbitrament, we see that his nearest approaches to wisdom or justice are but distant approximations. So short is his sight, and so fallible his judgment, that if his acts do not resemble concentric circles of error ever enlarging with his increasing sphere of action, his mind—to use Bacon's fine image—"is not like a plane mirror, which reflects the images of things exactly as they are, it is like a mirror of an uneven surface, which combines its own figure with the figures of the objects it represents." His analysis of the events of history convinces him that

> There's something in this world amiss,

which Faith declares

> Shall be unriddled by and by,

and all that he can sometimes plead—and this he may do with a good conscience—is that he did what seemed best under all the existing circumstances. The policy of the European nations in the East must be either of the school which kept the Dutch prisoners in Decima, not only little to their own national credit, and but in a most restricted sense to the advantage of the Japanese, but to the exclusion of all other nations from intercourse with the country; or it must be that of England, which has opened the East to the West, not for her own exclusive advantage, but, with that liberality which pervades her genius, for the advantage alike of the East and all the Western nations. And the nation which assumes this attitude is sooner or later compelled, however unwillingly, to bring the relative strength of the opposing civilizations to the test of force. This once done, a thousand fictions disappear, and the ground is cleared for laying the foundations of satisfactory intercourse. We have never concealed our regret that some passages in the history of the relations of the Western Powers with Japan during the past fifteen years, are what they are. But it must not be forgotten that the party which ultimately seized the reins of power sought deliberately to embroil its rivals with the European Governments by the assassination of their subjects, and succeeded in doing so. The nation was held responsible and paid the penalty, nor do we see how the lives of foreigners could have been rendered safe in Japan had execution been stayed.

How far it can be pleaded that seas which form highways among or for the nations, can or should be closed by those who hold the straits which command them, is a question which we shall not pretend to discuss here. But it was at least one for negotiation and not for settlement, prior to this, by violent means. It cannot be questioned that the tendency of modern thought on this and similar points is opposed to any doctrine which encourages the seclusion of nations; and it is not an unamusing feature of the present attitude of Japan towards Corea, that she is disposed to use the kind of argument towards that country which she and the supporters of her ancient policy so much deprecate in regard to herself. If the whole question here referred to is examined calmly, and removed from a sentimental to a practical ground, the policy of the Western nations *vis-à-vis* of Japan daring the past sixteen years, though not free from error and not untainted with harshness, will gain the verdict of any jury which can approach the question without prejudice against, or prepossession for, either side.

In broader and more enlightened views on this subject, and in a clearer appreciation of the quality of their own civilization relatively to that of the most advanced Western nations, lies, we think, good ground for hoping that the Japanese will, for some few years to come, abandon their craving for immediate jurisdiction over foreigners, and work strenuously to enable themselves to assume it with satisfaction and benefit to both sides. Admitting, as we freely do, that the denial of it to them has in it something of hardship, it is most unquestionably

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the lesser of two evils. Our intercourse with them could not continue for a week on any other footing without giving rise to troubles of a far worse nature than any they have now to bear, while it is unquestionable that the task of fitting themselves to assume this jurisdiction will nerve them in a thousand desirable directions. Precisely as the struggle which attended our intercourse with them precipitated a revolution which has brought them light and knowledge, so this struggle for jurisdiction, if they pursue it wisely, will raise them in the scale of nations. Their assumption of it now would be attended with lamentable failure and consequent disgrace, if not with still more serious evils, while the concession of it to them somewhat later, and when fit for it, will mark a vast step in the progress of the nation. At present the effort is made to attain the end without showing that the means exist whereby it can be reached. Were it not better to expend this effort on developing the means? Let the Japanese demonstrate their possession of these, and the desired end will not be far off.

The same observations seem to us to apply very nearly to the supposed hardship of an immovable tariff tacked on to the treaties. If there be any value in the fundamental principles of political economy, or perhaps rather of free trade, which is a corollary from those principles, a moderate tariff, such as that now existing, will be most instrumental in assisting the nation to find out what it can, and what it cannot, do, with greatest advantage to itself, and this discovery will best promote its growth in wealth. It can only grow rich by increasing and improving its exportable produce, and developing its mineral resources. Why it should be anxious to make dearly what it buy cheaply, instead of selling dearly what it can produce cheaply, we are wholly at a loss to know. The power and influence in the East of which it is apparently desirous, can only be secured by an increase of wealth, and the path to this lies in the direction we have indicated.

The real trouble of the country is the enormous burden imposed on the land, and the necessity for this is bound up with the payment of the hereditary revenues of the nobles and gentry, and the pensions of the *samurai*. What the land-tax is in China we have no means of ascertaining at this moment, but in India it varies from 12 to 18 per cent. In this country it runs from 35 up to 55 per cent, according to circumstances not easily explained. This keeps the farmers and peasants only just above starvation point. They cannot capitalize any savings, and are thus unable to extend the area they cultivate, or to improve their methods of cultivation by applying labour-saving machinery to it. It is true that labour is extremely cheap in this country, but it is inconceivable that the enormous advantages derived in other countries from agricultural machinery could not be reaped here by its introduction. The advantage, of course, would be less in proportion as human labour is cheaper here than elsewhere; but we cannot think it visionary to hope for some improvement from this source, so soon as the agricultural classes can save enough from their earnings to command it.

We have reason to believe that a large measure for the equalization of the land-tax is at present under consideration by the government. The anomalies and intricacies of the present system are said to be grievous and are sources of endless trouble. But they have grown with the growth of centuries, and prior to the Revolution there was no urgent necessity for dealing with them. The measure will doubtless prove of some advantage, but equalization is not reduction, and we see no great chance of real improvement in the condition of the country until such reduction is made. Time will assist in bringing it about, for besides the measure now in operation for redeeming these pensions, which can only go a short distance, however, many of them lapse from year to year. But without some further important measure directed to this special end, another generation, perhaps two, must pass away before the Japanese peasant knows more of the sweets of life than pertains to the possession of its barest necessaries.

The existing commercial condition of the country is not such as to give encouragement to those most interested in it. Its reserves of the precious metals have greatly decreased during the past two years, while we have no great assurance that that for which they have been parted with forms a very substantial equivalent for them. A nation may have a more or less intelligent perception of its real wants, but an unforced trade reflects transactions by which both buyer and seller, at least in their own opinion, are benefited. Nations, no more than individuals, part with their money except for that which they value more highly. It is impossible to force men to use coin, if they prefer the use of paper as a currency, and though a state cannot afford to dispense with metallic reserves which represent both its obligations and its sole power of paying its foreign creditors, the various internal conditions of nations must be accurately estimated before rules clearly demanded by the circumstances of one can be made binding on all. In this country the people have more confidence in the paper of their Government than in its coin, and another generation will have to pass away before this estimate is reversed. And the reasons for this are obvious. Prior to the establishment of the Mint, the coins issued by the Government and the various daimios were frequently debased to meet the financial exigencies of the moment. But the promise of the Government to pay, as represented by its paper, has never been repudiated or suffered depreciation, and so long as nothing occurs to disturb this estimate of the two forms of currency, so long will the rooted preference of the people remain for the one over the other. We are not for a moment pleading that great economical laws, which experience has proved to possess the potency of physical laws, can be evaded or disregarded in any country. But we plead that the extremely simple nature of the obligations and external trade of this country in no way demands those complex adjustments necessary to the commercial safety of countries like England or France.

The failure of the old established banking house of Ono has created many embarrassments in the economy of the internal trade of the country, and has put out of gear an old machinery which greatly facilitated the transaction of it. The banks established during the past three years under advice from which delusion and failure might have been, and indeed was, long ago predicted, have done nothing but mischief. The children of pure, blank ignorance, and not even of book knowledge, they have utterly failed to attract the capital of the country into any reservoir from which it could be diffused with advantage to trade. A not uncommon superstition among Englishmen, especially in the East, is that if they want a cook and hire a Frenchman, they have got a French cook; nor is their faith in this strange delusion shaken by the appearance at their tables of dishes which would infuriate them in a roadside inn in England. Precisely in the same manner the Japanese have an idea that a foreigner can necessarily teach geometry, devise a grand and perfect

Digitized by Google
UNIVERSITY OF CALIFORNIA

banking scheme for the country, or a constitution adapted to the requirements of thirty-five millions of human beings, within forty-eight hours. Nor is this delusion altogether unexplainable. All but very wise Japanese—and it requires some genius to possess so much good sense—believe that foreigners are individually possessed of a wisdom incomparably higher than their own. But their belief is only true in this sense that owing to a thousand complex and intertwined causes, among which may be named a process of natural selection in virtue of which the best method of arriving at truth has survived, foreigners have in their hands not only an immense body of positive knowledge, but a certain method by which the extension of it may be secured. Of all this knowledge, and of this method, however, the majority of foreigners are almost as profoundly ignorant as the Japanese themselves, and the sooner the idea is dispelled that we can perform the enormous intellectual feats demanded of us, the better. It may suit the aspiration of a conjuror to foster delusions regarding his powers, but a serious and honest teacher would a thousand times rather dispel them. It has hitherto not been difficult to prey upon the credulity of this people, and their constant demands that their lead shall be converted into gold proves that they retain their belief in our possession of these occult powers. Worse almost than this. Their lads, new-fledged with the mere down of Western knowledge, and with sight yet so dull that they cannot even see to the bottom of one of MILL'S translucent sentences imagine they have mastered his whole Political Economy, and instead of minding the simple routine of duty in their offices, presume to send up to their chiefs schemes for a national banking system, keeping perhaps in their desks for a more convenient season theories for the better government of the universe.

Few know the tremendous difficulties of getting any radical reform carried in this Empire. In his Speech on Economical Reform, BURKE showed how the whole economy of Great Britain hinged upon the King's turnspit. No financial reform was possible; the judges were inactive and unpaid; the justice of the kingdom bent and gave way; the foreign ministers were inactive and unprovided; the system of Europe was dissolved; the chain of English alliances was broken; all the wheels of government at home and abroad were stopped—*because the king's turnspit was a member of parliament.* And here we have much the same thing. The chief of some subordinate and affiliated, yet important, department represents such and such a clan, or is cater-cousin to some powerful member of the Cabinet. A million a year could be saved, a good currency system, it may be, or a good banking system, adopted by getting rid of him. But what can you do? He is, so to speak, the "king's turnspit"; he is in parliament; he has got into your amber or your ointment; and what can you do? Are you to make a revolution to turn him out, or assassinate him, or what? Economical reform in this Empire will be a slow affair, and merchants, if they are wise, will not be sanguine of any such early increase in the wealth of Japan as will unduly stimulate their hopes or transactions.

It is greatly to be deplored that evil days have fallen upon one of the chief industries of the country. Owing chiefly, as by good advice we are instructed to think, to the excessive export of silk-worms' eggs during the last ten years, the breed of worms has suffered serious deterioration, and the silk produced by them has lost its fine quality and reputation. The crop of this season is worse than we had fair reasons for hoping it might prove, and the best that can be hoped for is very gradual improvement.

The production of tea increases steadily, the plantations yield excellent profits to the cultivators, and the consuming market seems to expand without difficulty.

The abundant rice crop of a year more than usually productive, promises to leave a large quantity of surplus grain available for exportation.

It were greatly to be wished that some new article, available for exportation, and capable of being cheaply produced, could be introduced into the country.

Illustrative of the growing interest springing up in China regarding Japan, and the manner in which the example of the latter is affecting the sister Empire, it may be stated that a Chinese Mandarin of the third rank, despatched for the purpose by LI HUNG CHANG, recently visited this country in order to report upon its condition, especially the public works, mines, &c. The visit extended over three months.

It is an interesting fact that the first sailing vessel built by the Chinese Government on a foreign model visited Japan in September, and has since continued her voyages, carrying coals from Nagasaki. In December Japan was first visited by a Chinese man-of-war built on a foreign model.

The Japanese have also devoted some attention during the past year to the cultivation of friendly relations with China. In May a Commercial Mission left Tokio for Peking under the charge of one of the chief officials of the *Kaitakushi* Department, with a view to seeing what steps could best be taken towards advancing the commerce between the two countries, and the cordial reception and encouragement with which the Mission met, courtesies which were extended here in like manner to the Chinese Mission, promise well for the future good understanding between the two countries.

A Military Mission from the United States of America, under the presidency of General UPTON, visited Japan in September, and met with a cordial reception from the authorities, who supplied them with every information regarding the military system of the Empire.

The amount of attention we have usually devoted in our yearly summaries to the progress of education in Japan, must be somewhat diminished on this occasion. There have not been wanting evidences during the year that all the various establishments in Tokio devoted to this purpose are doing good work. The University—now established as such, with the power to confer diplomas—the Naval, Military and Engineering colleges, the Medical College, and the Normal School for the education of girls as teachers—the latter endowed and recently opened by the EMPRESS—together with thousands of schools in the country and the greater and less provincial towns, show how much attention is being bestowed on this great subject. There are not wanting symptoms of a reaction in favour of Chinese learning, as may been gathered from some of our translations during the past month. But we trust that while such concessions are made to it as are necessitated by its intimate connection with the literature of the country, the mind of the Japanese people may be kept steadily directed towards the 'dry light' of European knowledge, for this alone has given results admitting of verification. We shall not pretend to deny that the vast beds of learning which the Chinese mind has deposited during the lapse of so many ages, present strata with the product of which the lamps of knowledge may be fed. But the fuel

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

is gross and impure, and the light it yields conveys but faint impressions of things as they actually exist, or of their true relations to each other. Far otherwise is it with the learning of the Western nations. Processes of infinite subtlety and ingenuity have been devised to purify and refine it; adjustments have been provided by means of which the imperfections of the mind as an instrument of observation are recognized and guarded against, if not eliminated; the light which it yields is white, 'dry' and brilliant, and by means of it men may walk and enjoy something of that heaven upon earth to which Bacon compares the perception and apprehension of truth. It is for the intellectual leaders of this country to set their faces against any reversion towards Chinese knowledge. Some attention, as we have allowed, must be paid to it, but it should be as little as is compatible with a purposed ultimate and entire abandonment of it.

We should deem it necessary to enter with some fulness of detail into the relations existing between this country and Corea, were it not that we have lately treated the question at length, and publish to-day a translation from one of the native papers* which we have good reason to believe contains an accurate statement of the policy of the Government on this question. Far from entertaining any desire or idea of attacking Corea, Japan merely wishes to place its relations with that country on a friendly footing, though its honour demands an explanation of the conduct which has suggested the present mission. If the Coreans offer any insult or molestation to the Envoys it will be forcibly repelled, reinforcements will be sent over from Japan, and such punishment will be awarded as circumstances may seem to demand. But the object with which the Expedition starts is a peaceful one, and any calamities which may arise out of it must lie at the door of the Coreans who provoke them.

Our readers will perceive that we that we have paid less attention on this occasion to the occurrences of the year, than to the reflections which some of them, together with the condition of the country, seem to suggest. But, in truth, the events of the year have been little fitted to command attention, while the state and progress of the Empire unceasingly suggest and demand it. Superficial and imperfect as is our review—and no one can be more sensible of this than ourselves—we shall have wholly failed in our task if we have not left an impression on the minds of our readers of a country advancing, by toilsome and uncertain steps indeed, yet surely and with ever increasing firmness, in the path of real progress. No nation ever undertook a harder task, none ever pursued one so hard without falling into many errors. The spirit which rejoices in and exaggerates these is one with which we have no sympathy, and for which we entertain no respect. From an intellectual point of view it seems to us as feeble as from an emotional point of view it is mean and unworthy. If the great races of the world have one privilege more enviable than another, it is the power of sympathizing with the less advanced nations, and promoting their efforts to rise in the scale of humanity. This seems to us, too, one of the distinguishing marks of superiority of race, and should be the key-note to which all our intercourse with this people is brought into unison or harmony. Some of our lessons may seem harsh, nor are we disposed to disguise the difficulties incidental to advance of a solid, serious and lasting character. Much that we see done bears a superficial character. The imperfections, vices, or deficiencies of subordinate instruments often obscure the real statesmanship which is forced to employ them as means, and superficial observers fail to see the one behind the other. They are also too dull to see that a friendly critic and observer must at times change his stand-point in order to see more of the game, and, perchance, to direct his remarks to some special point which betrays weakness or calls for commendation.

All that now remains for us to do is to express the hope that the year on which we have just entered may be one of prosperity to this country, and of such satisfaction and happiness to the members of the foreign community, of all nationalities, as they may reasonably expect from the known condition of the Empire. Of any rapid revival of trade we are not sanguine, nor can it be forgotten that the movement now in progress towards the Corea may bring trouble, perplexity and distress on the nation. But the policy of the government on this question is characterised by great moderation and wisdom, and should command the entire sympathy of the western governments. In view of the manner in which France and America successively, and now at last England, have been treated by the people of this contumacious and barbarous country, it will reflect a lasting dishonour on them if Japan is left alone to avenge any insult which may be offered to the purely peaceful mission now leaving these shores.

* *Hiôron Shimbun*, December, 1875.

SPIRIT OF THE JAPANESE PRESS.

COREA.

"Hiôron Shimbun" of December 1875.

It is rumoured that the following are the views of a high official and that they have been adopted by the Government.

"In sending an envoy to Corea and carrying on negotiations with that country the opening of Ports should be Kokwa on the West Coast, Fusankai, and a convenient place on the Northern Coast, this last to serve as a place of call for ships to obtain fire wood and water.

The opening of negotiations having for their object the offering of no resistance to the survey of Corean waters for the protection of navigation, and the conclusion of a treaty to this effect, should be made the primary and most important objects. The want of courtesy in the reception of our commissioner last year, and the outrage of Kokwa should be set aside for the time being until the primary objects are effected. These concluded, the other matters should be discussed with calmness and deliberation.

Before the departure of our envoy notice of his coming should be given in a few words by the Japanese Agency at Fusankai to the Corean Government, and it should be so arranged that the communication from the Japanese Agency should reach the Corean Government before the arrival of vessels of war conveying our envoy. And this should be done to obviate any alarm or suspicion on the part of the Coreans, and to shew them that our envoy proposes to meet the Corean Government in a calm spirit and with pacific intentions.

With regard to the despatch of an envoy by our Government, an escort of troops suited to his official rank should be furnished to him; but he should not take with him a large number of vessels of war, for this reason, that precautions should be taken lest any unexpected misadventure should occur through unreasonable alarm on the part of the natives of that country.

There should be no other special motive in providing the envoy with an escort of troops. Should the Coreans not grant a courteous reception to our envoy, and should anything like the affair of the other day take place through their ignorance, if a way lies open by which a collision can possibly be avoided, it should be taken, and by the exercise of self-restraint and forbearance care should be taken to prevent grave complications arising from slight causes.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

The vessels conveying our envoy will of course shape their course for the Harbour of Kokwa which is in proximity to the Capital, but should they touch en route at a convenient spot, one of the lesser officers on the staff of the envoy should land and in holding intercourse with the local Corean officials he should inform these latter of the principal object of the envoy and of the pacific intentions of the mission. When they have well comprehended this, he should proceed to discuss with them the arrangements for the landing of the envoy and for the holding of an interview between the two parties. Should the Coreans wish the envoy to land he should do so; but should they not desire it, then the Corean Officials should be invited to a conference on board one of the ships. The subject of the negotiations from first to last should be the communication of our envoy's instructions to the Corean Government; the various minor points should be discussed in due order and in a calm and dispassionate spirit; all haste or undue eagerness should be avoided, and no violence or severity of behaviour exhibited."

Then follows a long argument the drift of which is that the writer deprecates both war, and the action of the Japanese Government. If the Government do not want war then the Corean question should be suffered to drop, but, in the present state of relations between the two countries, to send an envoy to Corea, with no previously fixed determination but with an intention to be guided by circumstances, is a policy which can only defeat itself, and war must inevitably be the result.

Corea.

("Choya Shimbun" of January 4th, 1876.)

It is said that Mr. Mori proceeds on his mission to China solely in connection with the Corean question. Will his object be to produce clear and distinct proof to the Chinese Government that Corea is not a dependency of China, to give full explanations, and invite the assistance of the Foreign Ministers at Peking, and to compel the Chinese Government to acquiesce in the views of Japan? No! As the relations between China and Corea are of that nature that the latter country sends a yearly envoy with tribute to Peking it cannot be said that Corea is not actually a dependency of China. The object of Mr. Mori's mission is known. He will conduct his communications with them in the following manner. He will regard Corea as a dependency of China, and will turn to the Chinese Government and lay a complaint against them for the Kokwa outrage. Further he will say to them:—"Corea has hitherto for a long time observed the "policy of seclusion, and has refused to enter into com- "mercial relations with foreigners. Her action in this "respect is opposed to all right principles. Therefore you "should exhort her to better things and should lend us your "assistance in the opening of Ports in two or three places." If China undertakes to do this—well; but if the Chinese Government in the obscure language which she is wont to make use of say, "Although Corea is a dependency "of China, yet such matters as the opening of her ports "which have hitherto been closed to foreign traffic &c we "will leave to her own inclination, and we will not "interfere," then Mr. Mori (we think these are his sentiments) will reply:—"If that is the case my country "will despatch an envoy to Corea and will make friendly "exhortations to the Corean Government to the above "effect. Should, however, the Coreans do anything in "the shape of another outrage, then there will be no help "for it, and it is possible that we may have recourse to "military measures. I wish to have a guarantee from you "that when that time comes no objection will be raised "by your country." Mr. Mori will urge this point with all energy and having obtained what will serve as written proof in the future he will immediately report to the Japanese Government (the result of his efforts). On the receipt of this report it is intended that the High Envoy Kuroda, who will have been awaiting its arrival, shall proceed to Kokwa, taking with him land and naval forces in several ships of war, that he shall hold interviews with Corean officials, and, if there is no help for it, that war shall be declared.

If it be believed that these are the details of the plan which the Government at present have in view in dealing with Corea, then it becomes clearer than ever that the chastisement of Corea is a mistake and why? Because whether Mr. Mori in his interviews at Peking regards Corea in the light of a dependency of China, or does not so regard her, Corea will certainly turn a deaf ear to the exhortations of our High Envoy. Nor will she stop here; she will also as certainly commit a repetition of the former outrage. And in that case though our country sends several thousands of soldiers, both land and naval forces, punishes her for her crime, gains victories and conquers that country, seizes the persons of the Corean Sovereign and of his Consort, still we cannot hold Corea long as a territorial possession, and thus we cannot obtain profit from levying taxation on her. Alas! immense sums of money and many lives will be thrown away, and the result will be that not a particle of gain will be acquired. This might aptly be called "the reward of fatigue for labour thrown away.*"

(Signed) Chikamatsu Takanari,
of Atagoshita-Machi.

Corea.

(Choya Shimbun.)

Kuroda is at length about to leave the country on a mission to Corea, and it is only fair to suppose that we may anticipate more or less trouble in the future. Some, however, allege that we may now cease our discussion of the matter, since people are tired of it and the government having decided upon a certain policy—be it of war or of peace—the time for argument on the expediency of the question is past and all debate is in vain and useless. It is better that we should preserve silence, say these persons, and watch the progress of events. But it is not to the prudence of war with Corea that our arguments have reference, it is rather the obscurity which envelops the question, and hides the ultimate aim of the government, that prevents us from containing our thoughts.

When we decide to engage in any enterprise it is necessary before all that we should first see that the road is clear. If we are to make war on Corea, we must first of all determine what we shall do with the country if we succeed in conquering it; or, if our intentions be strictly pacific, must so regulate our arrangements with it as to secure the continuance of peace between the two countries. But whether our Government desires peace or war is at this moment hid from us. We have already shown the views said to be entertained by Mr. Mori, and expressed by him to the Cabinet; how the Cabinet acceded to his policy, and how, finally, he took his departure for China and Kuroda was nominated to the Corean Embassy. Even the *Hioron Shimbun*, which is so quick in gathering news, says in reference to this rumoured interview, "We are inclined to the belief that, whether war ensue or not, the government will in all probability so mould its policy as to satisfy the wishes of the nation. But it may place itself in such a predicament as to be unable to make war should war be necessary, or to procure peace should peace seem desirable." We are unable to acquiesce in this conclusion. From the fact of their sending an expedition to a cold climate in the depth of winter we must infer that the object of the government is merely to sound the purpose of the Coreans. "Never send an expedition northwards in winter, nor southwards in summer" is an old Chinese saying, but our Government took little account of its wisdom when it despatched an army to Formosa in the height of summer, by which many valuable lives were lost and our soldiers endured great suffering by reason of the intense heat. If the Government believes an expedition to be necessary, it would be better to make our preparations at home, and await the return of the warm season to send an embassy. Let our envoy be followed by troops, who should at once march upon and seize the capital and bring the enemy to terms. It is surely imprudent to despatch our men to a rigorous climate, in which they must necessarily endure great hardships, in the depth of winter.

We have already sent envoys innumerable to Corea within the last eight years. The dogged and sullen obstinacy of the people of that country is known to all the world, and we do not suppose that our present envoy

* Japanese Proverb.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

will be permitted to land on its shores. They will no doubt reply to our message with their fire, receiving, in all probability, our fire in return. Will the number of troops we propose to land, and the season itself be favourable to their operations so that our country may not be disgraced? This is the momentous question.

Youthful Officials—A Source of Danger.

(Hochi Shimbun.)

If we compare the officials of our various government departments and the officers of our sea and land forces with members of the same classes in foreign countries we shall find them as a rule much more youthful and inexperienced. In Europe and America, if we may judge from report, persons who hold honourable offices are usually of more than fifty years of age, and few of the representatives of the people are less than thirty; for though young men do not lack intelligence, their want of the skill which age alone can give renders them imprudent or unguarded. In our own Tokugawa times our officials were men of years and ripe experience, and we shall now endeavour to explain how the change which substituted young for elderly officials has originated.

When Commodore Perry's visit roused us from our apparent slumber, and it was seen to be necessary to enter into treaty with foreign potentates, it was found that long-rooted habit had rendered the old officials unfit for their new relations. An excusable conservatism bound them to old traditions, which, as it were, had become crystallised about them. And thus the Government cast about them for men of a more plastic nature and acquainted, however little, with foreign languages and ideas or who had had even a glance of foreign countries, and appointed them to offices of importance and trust. This had naturally the effect of encouraging young men in the pursuit of a foreign education, and many devoted themselves with temporary ardour to study with such success as in their turn to obtain important posts in our departments, and hence the fact that so many of our chief officials are young men. Now young men prefer to see young men around them, and accordingly our officials are recruited from the young: hence grave evils must certainly one day arise unless presently checked.

It is remarked that students who aim at an official career relax in the ardour of their study as soon as they see its end accomplished and themselves appointed to office, and this is true, not only of those who have selected the civil service, but of all our young men. The Chinese have a wise saying "Draw your nets in the lake too often, "and where shall ye find the large fishes; hew down "your young forests and whence will ye obtain your big "trees?" And this is equally true of men. If we use up our youth before experience has ripened their minds and study has informed their intellects, we cannot expect to rear a supply of wise and learned men—and still less of great men—for the State.

Compared with the more complete civilisation of European and American States we are like children, and, from the administration of the affairs of the nation, to the ordinary traffic of every day commerce, are indebted to the teaching of our Western guides. Would it not, therefore, be wise to do all we can towards setting about teaching ourselves? Looking to the internal economy and welfare of our country it is obvious that we must reform our custom of late years of appointing youthful and unripe officials. We entreat our young men to abstain from presenting themselves, until they shall have reached thirty years of age, as candidates for offices which their fathers or grandfathers would more competently fill, while there is yet so much to be learnt and their education is so incomplete. And we entreat the Government to refuse appointments to candidates whose age does not qualify them for posts of confidence and importance.

As there can be no true progress in civilisation without a basis of solid learning, we trust that our young men will not relax in the career of study on which they have entered, but pursue it until their intellects are thoroughly informed and their judgments matured by it.

A Great Man Wanted—Saigo Kichinosuke.

(Choya Shimbun.)

Looking to the actual situation of our national concerns at this moment, we find ourselves externally in complications with Corea, and troubled at home by the disaffection of the Loo Chooans; our merchants are despondingly watching the drain of specie from the country; the farmers are murmuring at the change of form of land taxation, and the discontented *samurai* are venting ill-boding reproaches on the government and exciting our people to declare war against Corea. In fact, the country is in a condition of extreme agitation, which can be allayed neither by a change of administration, nor religion, nor by the art of our rulers. It is only by the intervention of some master mind at this moment that the country can be tranquillised or indeed maintain its equilibrium, and there is no man in all Japan in whom we find all the qualifications for this lofty post but Saigo, who has frequently held within his own hands the absolute rule of the country, which he governed at the risk of his life.

On his return to his province, on the division in the Cabinet on the Corean question, many of the troops who sympathised with him left the Imperial service in displeasure; and were we to investigate narrowly the secret motives of the Saga insurrection, and the attempt to assassinate Iwakura, we should find these events to have sprung from the resignation of this popular leader. Since he has retired to his clan he spends his time in pastime and in the pleasures of the chase, and we may have been justified in presuming that he would end his days in retirement. But there are said to be some fifty thousand men who declare themselves ready to lay down their lives for his sake, and the hearts of all patriotic men are yearning for his return to power as, in a season of drought, the thirsty earth gapes for the wished-for showers.

Were Saigo not truly great he would not have gained the good opinions of all men. It is he alone who can tranquillize the nation, and help our thirty millions of people to plant the national flag in all quarters of the globe. It is alleged by some that he is skilful only in leading men to deeds of valour; by others, that he is waiting his opportunity to step in and overthrow the ruling Government, and assume himself the reins of power. We cannot believe this. The desire for power in government is the paltry ambition of vulgar minds. But this we do believe; that, when the fitting moment arrives, he will be found in his place—be it in Japan or on the continent of Asia,—leading his men on to victory, to his own world-wide fame and honour.

The minds of great men are not easily understood: hence we have thought it wise to dilate somewhat upon this subject.

A Forthcoming Change—An Argument for a Popular Assembly.

(Hochi Shimbun,)

We have reasons for believing that an important change in our administration is close at hand, and that it must indeed, without fail, take place during the present year.

In what direction, we may be asked, shall we look for this change, and into whose hands will the administration of our Government fall? Not, if we may believe rumour, to any member of the Mikado's family, nor to any among the people; but again to the official class or rather, to be precise, into the hands of one powerful personage.

There are reasons, we conceive, for assuming this rumour to be not altogether void of foundation. In every establishment, whatever its nature, governed by men who are emulous of gaining each one the supremacy over his fellow directors, the interests of the general welfare are too frequently lost sight of in the greed of power. Or again, should its managers humbly defer each man to his colleague it is equally clear that the labour of supervision will fall to the lot of subordinates, the functions will be carelessly discharged, and the concern may be compelled to close its doors.

This is an argument for unity in government.

Now our government is but a large establishment, which must suffer from the personal rivalry of its *per-*

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

sonnel on the one hand, or their mutual deference or indifference on the other, and as an administration which embraces these elements cannot long continue, we may reasonably look forward to its dissolution.

But although the administration should even fall within the grasp of one man we should care little were he controlled by the proper checks which another institution would impose upon his ambition, and we are only apprehensive because this much desired institution has not been called into existence. We hope that the coming minister may prove a man of a large and public spirit. Rumour, however, names one who is connected with a particular party and has gained his power and influence through the strength and favour of his clan. If this should be true—and we can hardly deem it credible—there is grave cause for apprehension. To what remedy could we resort in such a situation? We can perceive but two resources: the one a People's Assembly; the other a revolution. As a revolution is at the best a violent remedy we should resort preferably to the institution of a People's Assembly. The unfortunate results which may arise from the strength of clannish attachments are well known, and yet we make no attempt to neutralise them. This is because we do not as yet possess the means. Does not this clearly demonstrate the necessity for a People's Assembly?

ASIATIC SOCIETY OF JAPAN.

A regular meeting of the Asiatic Society was held on Wednesday, the 15th December, 1875, at the Kaisei Gakko, Tokio.

The Rev. Dr. Veeder was called upon to take the Chair.

The Rev. Professor Syle moved: "That the meteorological instruments offered to the Society by the Meteorological Department in Washington some time ago be accepted."

Some discussion then arose with regard to the propriety of accepting the instruments, before the report of the Committee appointed by the Council to consider the matter had been given in. This Committee (consisting of His Excellency Sir H. S. Parkes, Dr. D. Murray, Rev. Dr. Brown, and His Excellency C. de Struve), having made no report, it was moved as an amendment by Dr. Antisell and seconded by Professor Grigsby "That the consideration of the subject should be deferred until the next meeting." This amendment was carried by the casting vote of the chair.

Objection was taken to the adjournment of the regular meetings as was done lately upon the authority of the Corresponding Secretary, who stated that, there being no paper to read, he had to adjourn the meeting. Dr. Antisell thought it was unsatisfactory to make such changes, and that it would be better to meet whether there were any paper to read or not.

The Rev. Professor Syle then entered upon the reading of Captain Scott's Paper on "The Winds and Currents of Japan," in the absence of the writer, prefacing the subject with a reference to the wrecks of the "Hermann," the "Relief" and the "Nil"—all which ships were lost from the effect of unknown or imperfectly understood currents on the coast of Japan. He also instanced the case of some Pelew Islanders having been drifted 1,000 miles to the coast of Formosa in sixty days by a supposed current.

Captain Scott's paper was then read, after which Dr. Antisell remarked that he thought the observations of Captain Scott and the remarks of the naval officer (Mr. Dupen) had considerable value, and it was very desirable that the Society should collect observations of the winds and currents of the western side of the Pacific Ocean. Too little attention had been directed to what is already known about the Kuro Siwa, and on that account he could not, agree in all the statements of the papers. It is now well known that this body of warm water which passes North East of Japan is not lost in the great mass of the Ocean, but keeps a distinct course N. E., as far as parallel 50 N. when, sending a very thin channel of water through Behring's Straits, the main body of warm water turns easterly, approaching the shores of North America, coasting along Sitka, Washington Ty., Oregon and California as far south as Cape Mendocino, raising the mean temperature and modifying the flora of those lands. He did not agree with the paper in limiting the origin of this stream to the coasts of Siam and Cochin China. No doubt the Southern China Sea had its share in originating this current; but it was a lesser share; the main portion of the current being derived from the Pacific Ocean around and east of the large equatorial islands, and passing North is split in half by meeting Formosa, one portion going west of that island through the Formosa channel and thence Northward through the Japan Sea to the Straits of Tsugaru and La Perouse, through each of which it sends a small stream Eastward to join the great body of water coming Northwards along the Eastern shores of Formosa and Japan. This body of water is of much greater dimensions than is supposed: it is of great depth and several hundred miles wide in summer, off these shores; and although differing in temperature and rapidity of current, it can be scarcely considered inferior to the Atlantic Gulf Stream.

Dr. Veeder said that, having resided for eleven years on the Pacific coast, he could bear testimony to the effects produced upon the climate of the coast of Oregon, California &c. by currents running in a southerly direction. The climate of places only eight or nine miles from the coast differed materially from that of the coast itself. He attributed this mildness of temperature along the thousand miles of coast to the influence of the Kuro Siwa; and as Great Britain enjoys a mild climate from the Gulf Stream, so California is similarly affected by the great Japan current.

The Meeting then separated.

ANNUAL MEETING OF THE BRITISH EPISCOPAL CHURCH.

The following report was read at the Meeting of Seatholders held on the 30th instant.

GENERAL REPORT OF THE TREASURER AND TRUSTEES OF CHRIST CHURCH, YOKOHAMA, FOR THE YEAR 1875.

To the Subscribers.

GENTLEMEN.—The Treasurer and Trustees of the British Episcopal Church Establishment at this Port in closing their year of Office, beg to tender this Accounts, and Report for the year ending 31st December 1875, which they trust will meet with your approval.

ACCOUNTS.

	Dr.
To amount of Subscriptions actually received from British Residents during the year	$2,360.84
To amount of Subscriptions actually received from other than British Residents	378.33
To amount of Special Subscriptions...	8.10
To Balance due Treasurer...	790.10
	$3,537.37

DEPENDENCY.

Amount due for Seat rents but not yet received $140.00.

	Cr.
By paid Treasurer, balance due him 31st December, 1874	374.68
„ paid Stipend to various Clergymen for conducting Services, during the year...	1,700.00
„ premia on Fire Insurance Policies, covering Church, Parsonage and Organ for $10,000	290.00
„ paid for Repairs to Church and Parsonage	510.30
„ paid Ground Rent on Church and Parsonage Lots...	179.59
„ paid for Telegrams to and from London...	99.54
„ paid sundry items for Coal, Oil, Mombau's wages, advertising &c. &c.	383.26
	$3,537.37

Your Committee regret that the balance due the Treasurer, instead of being lessened, is considerably larger than at the same time last year, but the present year has been one in which exceptionally heavy expenses have been incurred, and it is to this reason alone, and not to any falling off of receipts from pew rents that the deficit is owing.

In June, it was found that several portions of the Church roof were in very bad order, and after being properly surveyed by an European Architect it was considered necessary to take off, and relay the whole roof; this was done at an expense of $359. And at the same time a guarantee was obtained from the contractor, to keep the roof in repair, free of charge, for 12 months, from date of contract.

The Parsonage was also put into a thorough state of repair, in anticipation of the arrival of the Rev. Mr. Garratt, at a cost of $270, and a portion of this, viz., $163.19 was defrayed from proceeds of the Christmas collection, and the balance $106.81, carried to the Church Account.

In explanation of the sum of $99.54 for cost of telegrams to and from London, which is an exceptional item, your Committee would remind you, that in view of the speedy termination of the kind offices of the Rev. Messrs. Piper and Fyson in conducting the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

services, a great portion of the correspondence in arranging matters with the Rev. Mr. Garratt had to be conducted by telegrams—hence the expense; and it must be borne in mind that that Gentleman landed in Yokohama, without the subscribers being asked to contribute towards his travelling expenses.

During the year a new fence has been erected round the Church and Parsonage at a cost of $263 28, and has been paid for by Special subsciptions, and collections in the Church.

Having thus dealt with the accounts, your Committee are desirous of recalling to your recollection the resolutions passed at a Meeting held at the British Consulate on the 23rd December 1874. It was then resolved that the Rules in respect to the governance of Church Affairs, prior to the withdrawal of the government grant should continue in force, and that the Committee elected at a subsequent Meeting held on the 15th January should make due provision for the celebration of Divine worship in Christ Church.

It will be remembered that the Revd. E. W. Syle's temporary engagement expired on the 30th April 1875, and for the ensuing period, upwards of seven months, the services were undertaken by the Rev. John Piper, and the Rev. P. F. Fyson, both of the Church Missionary Society, and residing in Tokio.

The assistance rendered by these gentlemen is cordially acknowledged by the Committee.

As both Mr. Piper's and Mr. Fyson's good offices could only be counted on for a very limited time, and in order to give effect to the wishes of subscribers, your Committee took measures in concert with the Right Reverend the Bishop of Hongkong, and by direct communication, to provide for the permanent occupancy of the chaplaincy. These resulted in an offer by the Rev. W. F. H. Garratt, M.A. Trinity College, Cambridge, to undertake the duties. The offer was accepted. Mr. Garratt reached this on the 16th inst., and has been duly inducted into his charge, as will be seen by one of the annexes to this Report.

Your Committee have thought it right in view of the severance of the connection with H. B. M's Government, to execute a deed of trust by which due and continued celebration of divine worship accoding to the rites of the Church of England is provided for, and simultaneously with the execution of this deed, a conveyance has been drawn up, by which the Church property has been passed by H. B. M.'s Consul to the trustees. An important feature in the deed of trust is the amended qualification entitling a subscriber to a vote at ordinary and at extraordinary meetings;—whereas formerly a payment of £20 was necessary before entitling a Subscriber to vote; payment by a seatholder of the annual amount due for his sitting, provided also that he shall have been a resident for six months, is now considered as a sufficient qualification for a vote at any meeting held during the period which the payment may cover.

The Trust Deed of Conveyance above referred to, has been duly signed and registered. Before closing their report, your committee wish to convey their thanks to Mr. Howell, Mr. Henley, and the members of the Choral Society, for so ably conducting the musical portion of the Services: and also the Ladies who took part in decorating the Church.

We remain Gentlemen,
Your obedient Servants.
RUSSELL ROBERTSON.
W. W. CARGILL.
GAVIN P. NESS.
A. J. WILKIN.
F. S. JAMES, *Treasurer.*

Prior to the reading of this report Mr. Wilkin proposed and Mr. James seconded the following motion which was unanimously agreed to.

"That the 8th Regulation for the management of the Church affairs pertaining to the qualification of a subscriber to vote be altered to the following effect: Any person who has subscribed twenty dollars or any other sum representing for the time being the annual subscription for one sitting will be entitled to vote at general meetings during the year for which he shall have made such a payment. But no person can be entitled to vote at any such meeting who shall not have actually made such payment before the notice for such meeting shall have been issued by the Chairman, and who shall not have been domiciled in the place for six months.'

Correspondence.

THE BRIDGES AROUND YOKOHAMA.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, 5th January, 1876.

SIR,—Though it can scarcely be expected that such trivial matters as Road making or Bridge building can receive any attention just now when the civilized portion of Japan is engaged in paying and receiving New Year's visits in dress suits and tall hats of the latest fashion, I venture to suggest that the want of some bridges, and the dangerous state of others all round Yokohama has become very annoying, and is a subject well worthy of somebody's attention. It evidently cannot be in the hands of the Municipal Director or that energetic functionary would have long ago represented the matter to the Kencho in such a way that it could scarcely fail receiving attention.

Starting for my usual afternoon's ride, I come to a place, just past Ishigawa, where a bridge has been demolished, and a wide gap left, dangerous enough for anybody who does not know his way about, but as I am scarcely likely to tumble into the water from the want of such knowledge I won't complain, but make my way across a ricketty bridge, which appears to have been built first with an idea of its being only temporary, but alas! I'm afraid it's doomed to be permanent. Cantering along by the side of the canal in order to get into the Kanasawa valley road, I am brought to a standstill in consequence of a bridge which utterly collapsed some months ago, not being quite repaired yet, the Kanagawa Ken apparently not having the slightest intention of ever making it again available. However, I'm not very particular about time, so I follow a wretchedly rough road along the left bank of the canal, and pass over a bridge somewhat narrow for ponies at all restive, and having gained the right hand bank, in safety look forward to a pleasant ride as far as Mississippi Bay. The road, however, is not so pleasant as I expected, the first slight impediment being a wooden trough the bridge over which is broken. My pony does't like it, but after dismounting I manage to get him over and, very soon after, come upon a very narrow path, where apparently a landslip has occurred, and which most probably will be impassable after the first heavy rain. At the entrance of the canal I find the bridge which was carried away months ago not yet rebuilt; so, as I can't get over, must fain extend my ride a little further, and, following what was once the charming Gap Road, now disfigured by heaps of mud, get into the Kanasawa valley road at last, intending as usual to cross the bridge at the end of the "Long Canter." Again am I disappointed; the Kanagawa Ken says I *musn't*, and as I certainly *can't* pass, it is necessary to make a *slight* detour by going down the valley again, branching off to the right, and following along the bank of the little stream, enabling me to cross a bridge which is fairly safe now, but looks very likely to go the way of all bridges in the neighbourhood of Yokohama before long.

I reach home, however, strongly anathematizing the authorities who used to provide us with bridges before "civilization" came so much into vogue.

This is a long prosy letter, and yet I have not said a word about the numerous small bridges, which are in in many instances either rotten, full of holes, or so narrow, that men like me who have no wish to hurt either themselves or their ponies, fear to attempt crossing.

If, Sir, this letter has the effect of causing the bridges to be rebuilt—may I suggest in a little more substantial manner,—I shall feel that I have conferred a benefit upon the Community generally.

I am, Sir,
Your obedient Servant,
G.

Law & Police.

U. S. CONSULATE GENERAL, KANAGAWA, JAPAN.

Saturday, January 8th 1876.

ITO HACHIBEI against JOHN G, WALSH,

S. K. LOTHROP, R. W. IRWIN, A. O. GAY.

The following judgment was delivered in this case this morning by General T. B. Van Buren.

This action was commenced by filing the petition on the 21st of May, 1875. and issue thereon was joined on the 22nd June following.

The plaintiff is a Japanese subject, and the defendants a firm of American merchants doing business in Yokohama. The action was brought to recover an alleged indebtedness of $108,715 24. due as a balance of account and interest on certain joint transactions in money and rice, and to enforce the return of certain bonds and valuable papers, the property of plaintiff, and deposited with defendants as security in said transactions, the value of which securities is stated at 100,035 *yen*.

The answer admits the partnership in money transactions, but not for the length of time claimed in the petition, and denies any partnership in rice. It denies any indebtedness on the part of defendants, but claims that the plaintiff is owing to defendants the sum of $32.706,19-100, with interest from 31st May, 1875. It also denies that the securities mentioned in the petition were deposited with defendants as securities on joint business, or that they are of the value therein stated, and offers to re-deliver them to plaintiff upon receipt of the amount claimed to be due to the defendants.

The trial began on the 1st day of September, and has occupied the attention of the Court through 52 sittings. Much of the evidence was in the Japanese language, requiring to be interpreted both questions and answers. A large number of the exhibits were also in Japanese, and this, together with the absence of any agreement in writing between the parties, and the conflicting nature of the evidence, rendered the hearing tedious and difficult.

It is of course the duty of the Court to endeavor to reconcile conflicting evidence, when the same can be done, but in this cause there appears no possibility of success in such an effort. Most of the evidence on either side is so entirely contradictory and irreconcilable as to admit of no other treatment, than the utter rejection of one side or the other.

It is admitted and established that a partnership was entered into between the parties in the 7th month of 4th Meiji (September, 1871), to buy and sell money. Plaintiff deposited with defendants $20,000 for use in the business, and defendants were to make all further advances required.

No written agreement was made, and no time fixed for the continuance of the joint business. It was conducted at the *Shosha*, or Japanese exchange by Hashimoto Benzo, a broker, and in the open market by Shincoi, an *employé* of the defendants; and on a few occasions by the Chartered Mercantile Bank and French Bank, at the instigation of defendants.

The moneys drawn out by Benzo, or by agents or messengers of the plaintiff, for use on the exchange, were usually returned to defendants the same day, or the day after, if not used ; and if used, the proceeds were so returned. No proper partnership books were kept, and scarcely any precautions taken to guard against fraud or disagreement.

In fact, the whole business seems to have been conducted on a principle of mutual childlike trust and confidence worthy of the millennium.

Unhappily, the operations resulted in loss, and the partnership was terminated, according to the allegations of the defendants, on the 12th Oct., 1871. The termination was as unceremonious as the commencement of the business—a few informal words sufficing upon both sides.

The accounts such as were kept were not then examined, compared, or adjusted; but on the 22nd of November two messengers from the plaintiff visited the defendants with such books and papers as the plaintiff possessed, and Mr. Irwin, one of the defendants, read from defendants' books, and certain memoranda kept by himself, what purported to be a statement of balances, charges, &c., showing a general result of $200,251.25 in favour of plaintiff, and $239,270.46 against him ; leaving a balance due from the plaintiff to defendants of $38,999,21.

These items so read by Mr. Irwin were taken down in writing by Benzo, one of the messengers from the plaintiff, and the general sums of $239,270.46. and $200,271.45, were entered in Japanese characters in a book (exhibit D.) which Benzo agreed to take to the plaintiff, and recommend to his approval, as a correct statement of the account, and the balance due from him to defendants. This book was afterwards returned to defendants, the entries referred to bearing the half seal of the plaintiff; other entries were then made in the same book, showing payments on the part of the plaintiff, which reduced the balance due by him to the sum of $12,902 46; and this balance of $12,902.46 therein stated was thereafter treated by both parties as the sum due from plaintiff to defendants, upon cessation of the partnership. They also affirm that this balance of $12,902.46 was and is the real balance of the accounts at that time, and represents the actual sum then due to them by the plaintiff. At or about this time, it is claimed by the evidence of the defendants that the plaintiff agreed to bear whatever losses had been sustained in the joint transactions, upon the consideration that advances were thereafter to be made to him by defendants without interest. The proof is clear that such advances were so made by defendants, and no interest charged upon them. They also positively deny any partnership in the rice.

On the other hand, the plaintiff denies that the partnership terminated before the 22nd of November, the date of the entries in book D, and insists that said entries were made at the request of Mr. Irwin, and were to be considered as incomplete and unaccepted statements until affirmed by the production of itemized accounts showing them to be correct. Indeed, he goes farther, and charges that said entries were untrue and fraudulent, and were intended to deceive Mr. Walsh, one of the absent defendants, as to the real state of the accounts.

He also claims that his half seal, stamped upon said entries, is placed there as a tally or mark of identification, and in no way binds him to accept them as correct.

The issues left to the decision of the Court may be stated as follows :—

1st.—Did the partnership terminate on the 12th of October 1871 ?

2nd.—Was a balance of accounts agreed to on the 22nd of November, and a final balance afterwards settled and accepted by both parties as the amount due by Plaintiff to defendants, viz: $12,902.16 ?

3rd.—Is any fraud or mistake shown, sufficient to set aside this agreement, if made, on the 22nd of November ?

4th.—Was the $40,000 loan, made on the 12th of November, repaid ?

5th.—Were the securities described in the petition, deposited with defendants in the partnership transactions, or to secure the repayment of loans made to the Plaintiff ?

6th.—Was there any partnership between Plaintiff and defendants in rice speculations ?

If these issues be decided in favor of the Plaintiff then others necessarily demand adjudication.

After a careful examination of the whole case, the Court is of opinion.

1st.—That the weight of evidence fully establishes the fact that a settlement between the parties took place on the 22nd of November 1871, as alleged by the defendants, and that subsequent payments upon the balance then arrived at reduced the balance due by Plaintiff to Defendants to the sum of $12,902.46, which sum was agreed to and thereafter treated by both parties as the sum actually due by Plaintiff to Defendants, and which sum the Plaintiff thereafter frequently promised to pay defendants.

2nd.—That no fraud or mistake has been shewn to justify the Court in setting aside said settlement and agreement.

3rd.—That the said issues being found in favour of the defendants, the question of the repayment by the plaintiff to the Defendants of the $40,000 borrowed by the plaintiff on the 12th of November 1871, is virtually disposed of, the same having been included in the said settlement.

4th.—That the evidence fully establishes the fact that there was no partnership in rice transactions between the parties, and

5th.—That the securities deposited by the Plaintiff were so deposited as collateral securities on loans made by plaintiff from defendants, and that the latter were entirely justified in depositing them with the Banks, from whom they obtained the moneys required by the Plaintiff.

Under this view of the case it is not considered proper to refer the accounts between the parties to an accountant.

The Court cannot refrain from expressing some surprise that this action should have been brought. Up to last year the evidence justifies the conclusion that the plaintiff acknowledged himself indebted to the defendants, and only when refused the loan of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

$1,000,000 by the defendants did he assume a contrary position and threaten legal proceedings; and the manner in which evidence was sought to be procured by him to sustain his case, and the course pursued by him in reference to his letters produced in evidence, do not commend his evidence to favorable consideration.

It is the judgment of the Court that the plaintiff is indebted to the defendants in the sum of $12,902:46, with interest at 12 per cent per annum from the 31st day of March 1872 to date, amounting to $5,841:11 making the whole amount $18,743:57 and also in the sum of $10,000 with interest at 12 per cent annum from the 31st day of December 1873 to date, amounting to $2,423:02 and commission on said $10,000, at 1¼ per cent amounting to $125:00, making the aggregate indebtedness of plaintiff to defendants $31,291:59; and it is ordered that the defendants deliver to plaintiff the bonds and securities set forth in the petition upon payment to them by the plaintiff of the said amount of $31,291:59 with interest from this date and their proper costs and charges to be ascertained and determined by the Court.

The petition is accordingly dismissed and the plaintiff ordered to pay the costs of Court.

January 7th 1876.

(Signed) THOS. B. VAN BUREN,
U. S. Consul-General.

We concur:—

CHARLES DRAKE, } Assessors.
F. R. WETMORE, }

IN THE U. S. CONSULAR COURT.

Before T. B. Van Buren, Esq., Consul General.

Thursday, 6th Jan., 1876.

Charles Atkinson, first officer of the American barque *Rosita McNeil*, was charged, by the captain, with three offences: 1st, that accused attempted, whilst under the influence of liquor, to run the barque foul of a bring off the Taku bar, at the mouth of the Peiho river; 2nd, that he left the vessel at Nagasaki without leave; 3rd, that, on the evening of the 25th Dec. last, he went on shore without leave, at Yokohama, and did not return for over 48 hours.

Accused pleaded not guilty.

His Honour declined to hear the first two charges, which the captain ought to have brought before the Consul at Nagasaki. He would hear the third charge.

The captain then gave evidence that on the evening of the 25th December last he went on board and was asked by accused for $5.00, which he gave him. Accused then asked for permission to go on board another vessel for a short time, and he did not see him again till the morning of the 28th December. Accused had no leave given him, and his absence had caused him serious inconvenience.

A seaman of the vessel said that accused went on shore on Saturday night (25th December), and did not return till about 7 o'clock on Monday.

Accused said he had nothing to say.

His Honour asked the captain if he was willing to pay the accused a month's extra wages besides what was due to him, and discharge him.

The captain said he was.

An order was made to this effect

Lewis Lawson, an old man, steward of the American ship *Lathley Rich*, charged the captain and second officer of that vessel with threatening him at various times.

His Honour, after listening to a long story, asked the captain if he was willing to pay the complainant what was due to him, and give him a month's extra wages.

The captain said he would be glad to do that, and get rid of the man.

An order was made to that effect, His Honour promising to send complainant to San Francisco by the next steamer.

SIR JOHN LUBBOCK ON ANTS AND BEES.

[The following abstract of Sir John Lubbock's "Observations on Bees and Ants" read before the Linnean Society on the 4th November last, was supplied by him to *The Times*.]

"This is a continuation of my previous papers on the same subject. In them I recorded various experiments tending to show that, in many cases, ants and bees which have found a store of food or of larvæ certainly do not communicate the information to their friends. This unexpected observation was received with so much surprise, and, indeed, was so unexpected to myself, that I determined to repeat the experiments, which I have now done, with however, the same result. To take one as an illustration. I placed an F. flava (the small red ant) to a heap of larvæ, which, as is well known, are fleshy, legless grubs, incapable of motion. I placed them about 2ft. from the entrance to her nest. I then watched her from 11 in the morning till after 7 in the evening during which time she made 86 journeys from the nest to the heap of larvæ, carrying one off each time; but, although she had so much work to do, and though the precious larvæ were lying for so long exposed to so many dangers and to the weather, she brought no other ant to assist her in carrying them off. One of the ants, I observed, in this way carried off, one by one, no less than 187 larvæ in a day. In other instances, on the contrary, the opposite result occurred. I was for some time uncertain, in the latter cases, whether the ants purposely brought friends to their assistance, or whether, as the ants are sociable insects, it merely happened that the one accompanied the other, as it were, by accident. To test this question, I took two ants, and placed them under similar circumstances, the one to a heap of larvæ, the other to a group of two or three; always, however, putting one in place of any that was carried off, and it was quite clear that the ants which were placed to the large group of larvæ brought far more friends to their assistance than those which had apparently only two or three larvæ to move. Of 30 ants which were observed, those placed to a large number of larvæ brought 250 friends, while those placed to two or three larvæ, under similar circumstances, only brought 30.

"One account much relied on as showing the intelligence of ants, has been the following observation made by Mr. Lund, in Brazil.

"Passing one day under a tree which stood almost by itself, he was surprised to hear the leaves falling like rain. On examining the cause of this he found that a number of ants had climbed the tree and were cutting off the leaves, which were then carried away by companions waiting for them below. Of course it might be said that the leaves which dropped fell by accident; in with case they would naturally be carried off by the ants below. It occurred to me, however, that this was an observation which might easily be repeated I placed, therefore, a number of larvæ on a slip of glass, which I suspended by a tape, so that it hung one-third of an inch from the surface of one of my artificial nests; isolating it, however, in such a manner that for an ant to walk to the nest she would be obliged to go 13 feet round. I then placed some black ants (F. nigra) on the glass with the larvæ. Each of them took a larva in the usual way, and then endavoured to go by the quickest way home. They leaned over the glass, and made every effort to reach down, but of course in vain, though the distance was so small that they could all but touch the nest with their antennæ. and even, in one or two cases, succeeded in getting down by stepping on to the back of an ant below. Those, however, which did not meet with any such assistance, gradually, though at first requiring some help from me, found their way round to the nest, and after a short time there was quite a string of ants passing to and fro from the nest to the larvæ, although it would have been so easy for them to throw the larvæ over the edge of the glass, or to go straight home, if they would have faced a drop of, say, one-tenth of an inch. Moreover, I placed some fine mould within half an inch of the glass, so that it would have been easy for the ants, by literally one minute's labour, to have constructed for themselves a stepping stone up to the glass, yet they did not adopt any of these expedients, but for hours together, and by hundreds, continued to make the long journey round. I confess this experiment, which I repeated on several occasions surprised me very much.

"As my previous experiments, which showed that bees did not by any means in all cases bring their friends to share stores of food which they had discovered, have been much questioned by bee-keepers, I have repeated them again.

"No doubt if honey is put in an exposed place, so that it is found by one bee, it is most natural that others should also find their way

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

to it; but this does not, according to my experience, happen if the honey is concealed. For instance, I put a bee to some honey in a flower pot placed on its side, and so arranged that the bee had only a small orifice through which to enter. Under these circumstances, from a quarter to 7 in the morning till a quarter past 7 in the evening, she made 59 journeys, and during the whole of this time only one other bee found her way to the honey.

"I found that bees soon accustomed themselves to look for honey on papers of particular colours. For instance, on September 13th I placed a bee to some honey on a slip of glass on green paper, and after she had made 12 journeys to and from the hive, I put red paper where the green had been, and placed another drop of honey on a green paper, at a distance of about a foot. The bee returned, however, to the honey on the green paper. I then gently moved the green paper, with the bee on it, back to the old place. When the bee had gone, I replaced the green paper by a yellow one, and put the green again a foot off. After the usual interval, she returned again to the green. I repeated the same proceeding, but with orange paper instead of green. She returned again to the green. I now did the same with white paper; she returned again to the green. Again I tried her with blue; she again came to the green. I then reversed the positions of the blue and green papers, but still she returned to the green. I repeated this experiment with other bees, and with the same result, though it seemed to me that in some cases they did not distinguish so clearly between green and blue, as between green and other colours. In other respects they seemed to adhere equally closely to any colour to which were made accustomed.

As regards wasps, my experiments fully confirmed those previously made and justified everything which I have said with reference to their great industry. Indeed, they begin to work earlier in the morning and cease later in the evening than bees, continuing all day with the utmost assiduity. Thus, a wasp which I watched on the 10th of September, worked from 7 in the morning until 7 in the evening without a moment's intermission, during which time she made no less than 94 visits to the honey. As is the case with bees, if a wasp is put to exposed honey, others soon come. To determine this, if possible, I trained a wasp to come to some honey which I placed in a box communicating with the outside of an indiarubber tube six inches in length, and one-third by an inch in diameter. She came to this honey continuously for three days, during which time no other wasp found the honey. As regards colour, I satisfied myself, by experiments like those made with bees, that they are capable of seeing colour, though they appear to be less influenced by it than are bees.

REPORTS.

The Steamship *Malacca* left Hongkong Dec. 27th, at 7 40 a m., experienced light E. wind, with fine weather to Breaker-Point; thence up the Formosa channel to Oosima, moderate monsoon with dull cloudy weather: from Oosima to Port strong N.W. breeze with fine weather. Anchored in Yokohama, Jan. 2nd, 1876, at 11.10 p.m.

The P. M. S. S. *China* reports very severe weather with strong head winds during the entire passage.

The Japanese flag-ship left the port on Thursday afternoon for the Corea.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics and Yarns.—Since the date of our last report business in general continues quiet, and in some instances prices are again lower.

In *Yarns* the demand runs upon 16 24 "*mocks*," and 28 32 best *Water Twist;* in *Grey Shirtings* only a limited business has been done at lower rates. *T. Cloths* are neglected, and *Taffachelass* unsaleable. *Black Velvets* are in moderate enquiry, but no better prices can be obtained.

Grey Shirtings:—				White Shirtings:—			
7 lbs.	38½ yds. 39 in. per pce.	$1.90	to $2.15	60 to 64 reed 40 yds. 35 in. nom. per pce.	2.20	to	2.40
8 lbs.	38½ yds. 44 in. „	2.20	to 2.50	Turkey Reds 24 yds. 30 in. 2¼—3 lb. per lb.	0.75	to	1.02½

				Taffachelass 13 yds, 43 in. nomy.	2.25	to	2.40

Yarns.

No. 16 to 24	per picul	$30.50	to 34.00	No. 38 to 42	per picul	$42.00	to 45.00
No. 28 to 32	per picul	$35.00	to 40.00	Reverse Twist 16-24	„	$35.00	

Woollens.—The customary settlement of accounts amongst natives at the end of each year is the signal for a general suspension of transactions, extending to about the middle of January. No change, therefore, in the position of our market has to be chronicled, nor are settlements of any magnitude reported.

A somewhat better feeling seems, however, to prevail in Tokio, where retail business has been reported unusually brisk during the first days of the new year.

Plain Orleans	40—42 yds. 32 in.	6.25	to 7.80	Figured Mousseline de Laine	30 yds. 30 in.	0.25	to 0.28
Figured Orleans	29—30 yds. 31 in.	4.75	to 5.25	Multicolored „	30 yds. 30 in.	0.35	to 0.40

„ No. 3 Ke-pak	„	5.90	to 6.40	Japan Rice	„	3.25	to 3.30
„ No. 4 Kook-fah	„	5.10	to 5.60	Kerosine Oil	per case	2.25	

EXPORTS.

Silk.—Owing to the circumstances mentioned in our previous report business continued extremely quiet when, on the 4th inst., telegrams advising a somewhat better feeling at home revived the demand. Since then prices for Hanks have advanced $10 to $20; but Oshiu sorts, though they have their full share in the inquiry, remain without change, and our quotations for Hamatski are entirely nominal.

Settlements since the 25th ultimo, are 275 bales of Hanks and 125 of Oshiu sorts, leaving a stock of 1100 bales.

The shipments of the past fortnight are 294 bales, making the total export since the 1st July, 9,635 bales against 7,119 in 1875 for the same period.

The total export from 1st July to 31st December, has been as follows:—

	1875.		1874.
To England	3,629	bales against	3,509
To France	5,694	„ „	3,156
To the United States	53	„ „	115
To Italy	109	„ „	73
	9,485	bales against	6,853

Tea.—Since the termination of New Year holidays our market has been rather languid, and settlements amount to 860 piculs comprising amongst them some parcels of "finest" and "choice," the latter ranging from $42 to $49 per picul.

Common and low grades are rather quiet, and in lack of sailing freight for New York being available, receive but little attention.

Our export from Yokohama to date amounts to sixteen and a quarter million pounds. This will probably be increased to at least eighteen millions prior to March 1st, but then a check in operations may be confidently expected. Kobe still but slightly exceeds five million pounds of direct shipments, and Nagasaki has this season shipped for the United States about 850,000 lbs. The estimated export of twenty-four million pounds for the United States for the season 1875-76, may be considered now as likely to be fully realised.

The *Ukraine*, for New York direct, will have despatch in the course of a few days.

Common	$12.00 to 17.00	Fine	$32.00 to 34.00
Good Common	18.00 to 21.00	Finest	$36.00 to 39.00.
Medium	23.00 to 26.00	Choice	$40.00 upwards
Good Medium	27.00 to 30.00		

EXCHANGE AND BULLION.

Exchange.—The business of the past week has been rather restricted owing to the New Year holidays having interfered with business. Sterling-rates remain steady as last quoted.

Rates close as follows :—

Sterling—Bank 6 months' sight	4s. 0⅞d. to 4s. 1 d.
" Bank Bills on demand	3s. 11⅞d. to 4s. 0 d.

Yokohama, December 29, 1875. d & w. tf.

"Berkeley, Sept 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, Henry Allpass.—To the Proprietors of Norton's Camomile Pills."

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World.

OPINIONS OF THE PRESS ON

MORSONS' PEPSINE PREPARATIONS.

PEPSINE.—Among the results of the application of science to the practice of medicine, none appear to promise more important results than Pepsine, the digestive principle of the gastric juice, which in a purified state, and mixed with some inert vegetable powder, or dissolved in wine, or made into a lozenge forms a valuable medicine. It appears that the use of this important agent is greatly increasing as the knowledge of its effects becomes more widely diffused. A few grains put into a wine-glass with some water forms at once an artificial stomach in which food may be digested, in this way the relative values of different samples of Pepsine may be determined. At a lecture that was delivered a short time ago at the Society of Arts, by Dr. LETHEBY, an experiment of this sort was made, in which large quantities of animal fibrine were digested in bottles, during the lecture, with MORSON'S Pepsine.—Extract from the *Morning Herald* and *Standard* Newspapers.

The rapid popularity Pepsine has acquired among the most eminent members of the medical profession throughout the civilised world, as almost a specific for chronic dyspepsia, is due to the fact that it is the nearest possible production of the active principle of the gastric juice of the stomach. Unfortunately, like all other inventions of a like nature, Pepsine has been not slightly discredited by the spurious manufactures that have been issued from time to time, but when it was know to be the product of of such eminent chemists as MORSONS', of Southampton-row the concurrent testimony of almost every physician in France and England declared it to be the grandest and most perfect cure ever introduced for all diseases of the digestive organs.—*Church Herald.*

It is not too much to say that the introduction of Pepsine into the list of modern therapeutic agents by Dr. CORVISART created a very veritable revolution in the pathology of dyspepsia, and diseases of the digestive organs. Whereas no complaint was so common as chronic indigestion, perhaps the most painful martyrdom to which any one can be subjected, this should now be positively unknown, for as the disease is due to a lack of gastric juice, a dose of Pepsine, which contains the active digestive principle of the digesting juice of the stomach, restores the equilibrium, and effects a cure. Fortunately, too, for its popularity, the preparations of Pepsine, for which we have to thank Messrs. MORSON & SON, are of the most elegant character, enabling it to be administered with the most extreme accuracy, and also in very palatable forms.—*Freeman's.*

One is apt to look with so much suspicion on all proprietary medicines the secret ingredients of which are carefully concealed from the world that it was a relief to find there was no secret about Pepsine. This comparably new and valuable agent is simply the active principle of the gastric juice of the stomach, and as nature is above art or science it is hardly to be wondered at that it has effected the most wonderful cures of what were heretofore supposed to be chronic dyspepsia. The principle underlying the administration of Pepsine, is just this. "Where the stomatch is not strong enough, strengthen it." It is, however, of the last necessity to see that it is properly made, the best guarantee for which is to be found in the presence of the labels issued by Messrs MORSON & SON, of Southampton-Row, these eminent chemists having achieved a deserved reputation for the manufacture of Pepsine, which has completely overshadowed even the original French makers.—*Weekly Register.*

When CORVISART first announced his invention of Pepsine not a few of the faculty were inclined to denounce it as one more added to the already long list of empirical remedies. But by degrees it made its way, and when the preparations of this active principle of the gastric juice of Messrs BOUDAULT, of Paris, made under the personal supervision of the inventor, were supplemented by the improvements introduced by our own eminent chemists, Messrs MORSON & SON, of Southampton-row, all our leading physicians, one after the other, gave in their adhesion to this purely and thoroughly scientific remedy, which seems to have proved a complete specific for the most wearing and trying of "the ills that flesh is heir to"—chronic dyspepsia. Indeed, without arrogating to ourselves any very special medical knowledge, we are able to understand why this grand therapeutic remedy, which contains the active principle of the gastric juice, should prove a perfect remedy for all diseases of the digestive organs which arise from a failure of the gastric juice.—*Court Circular.*

VOL. VII.—No. 3.] YOKOHAMA, SATURDAY, JANUARY, 15, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The week has been an extremely quiet one, but there is naturally much anxiety regarding the probable result of the mission to Corea. If reports may be credited, the Coreans are strongly indisposed to receive the Envoys in any friendly manner.

The cause of the great increase in the estimated return of the Land-tax for the year ending the 30th June next, is commented upon in our article on the Estimates, and some uncertainty is expressed in regard to this cause. Since the article was written, we have been enabled to throw some additional light upon the question and the following information on the subject may be fully relied upon as correct.

The increase in the sum of the Land-tax in the present Estimates over that of previous periods, is by no means attributable to an increase of taxation. Its apparent increase over the estimate for the first half of the year 1875 is caused by the following circumstances:—

1o.—Two-tenths of the Land-tax of 1874 had already been collected before the end of that year.

2°.—An appropriation towards the liquidation of the nobles' allowances was deducted directly from the Land-tax of 1874, without appearing in the statement.

3°.—A sum of *yen* 1,900,000 arising from miscellaneous sources in connection with the Land-tax, and which is included under that head in the present estimates, was formerly given under the heading 'Miscellaneous,' as may be seen in Article 4 of the Financial Statement of 1874.

The main difference between the sum which appears in the Estimates of 1873, and that in the present Estimates, is simply caused by the higher estimated price of rice in the latter. In the former the price was taken at *yen* 3.92, in the latter at *yen* 4.49, the average price of the last three years.

We refer our readers to a very copious and interesting Report on the Mines of Japan, made to H.B.M. Minister, which will be found elsewhere in our columns, from the pen of the Honble F. R. Plunkett, H.B.M. Secretary of Legation. The Reports furnished by the British Secretaries of Legation regarding the commercial and social economy of the countries in which they have been resident, are among the most accurate and valuable contributions placed of late years as materials in the hands of statisticians and economists, and Mr. Plunkett's Report will greatly add to our knowledge of what is certainly a very obscure subject.

The following is extracted from *The World*, a respectable American paper. The writer leaves out of account the question of extra-territoriality jurisdiction, and thus his analogies are all wrong. But there are arguments of great weight for and against the position assumed, and an excellent thesis might be supported on either side, as will be apparent to any one who considers the question attentively.

The naturalization question, with its whys and its wherefores, which has been discussing for sometime past in our columns so cleverly and so fully by our correspondents, "Calvo" and "S. D." threatens to come up in an interesting form in Japan of all places in the world. A Japanese journal called the *Akebono Shimbun*, which we take to be Japanese, perhaps, for *Evening Journal*, announces that a learned Japanese is about removing to this country in order to become naturalized here, that he may afterwards go back to Japan and found a journal in which, as an American citizen, "whom the Japanese Government cannot "oblige to obey their regulations and laws, he may publish every-"thing freely, either, for or against the Government." This is a very pretty project, but if it succeeds in Japan why should it not be applied to the establishment of a free press in Berlin or Paris? That the native press in Japan is no more free now than the native press in Germany or France, appears plainly enough from such facts as the following, which we find in the *Japan Gazette* of October 26, just a month ago:

"Takahashi, chief editor of the *Choya Shimbun*, has been summoned to appear before the police authorities, on account of articles published in his paper of the 3d instant and the 16th ultimo, and has been placed in charge of the district officer."

If American citizenship can be successfully invoked to paralyze the power over the press of the Japanese laws and police, it certainly ought to be equally valid as a protection to Germans or Frenchmen naturalized in America who may think it their duty to go back to their native lands and try conclusions on the subject there with Prince Bismarck or Marshal MacMahon.

We regret to have to record the decease at the General Hospital to which he had recently attached himself, of Dr. James Vanderpool, on the morning of the 14th instant. The deceased was a native of America, of more than ordinary scientific and general attainments, and left that country some few months since on a sailing voyage for the benefit of his health in the ship *James Condis* bound for Japan. The ship was lost, but the crew and passengers were saved and Dr. Vanderpool continued his journey to Yokohama. Subject to acute attacks of intense mental depression, he had accustomed to himself the use of narcotics to produce sleep, and it is presumable that finding the effect of the dose taken on Thursday night to have failed to procure rest while yet affecting the brain, he repeated the dose once, or more often, and with the fatal result which we deplore.

The agent of the Staffordshire Insurance Company has been engaged in investigating the cause of the fire at Mr. Berretta's store, No. 81, but without eliciting any satisfactory explanation. A subsequent examination made by a competent builder tends to show that it did not originate in the fire-places. Incendiarism is suspected, but, as is frequently the case, no direct evidence is forthcoming to substantiate it.

The articles destined for exhibition at the Philadelphia Centennial anniversary, are now on view at Yedo. We shall refer more fully to them next week.

The Macao correspondent of the *Hong Kong Times* has the following:—

The Portuguese Government intends to ratify the rusty treaty with the Peking Government, and to put down at once

Digitized by Google

the blockade of the port of Macao by the customs' myrmidons Senhor Lobo d'Avila is appointed Plenipotentiary to the Court of Peking, and a force of 5,000 men will be placed at his disposal should he think it necessary to employ coercion, when diplomacy fails, to conquer the proverbial Chinese duplicity.

From the "Japan Mail Daily Advertiser."

The robberies and burglaries which have taken place during the past week either reflect very gravely upon the vigilance of the police or betray the presence of a great deal of distress and attendant crime. The house of Mr. Wilkin, on the Bluff, was entered on Saturday night, and the thieves escaped with a clock as booty. The firing of four or five shots from a revolver brought no assistance from the police.

Mayeyama, a prominent member of the Choshiu clan, is said to have disappeared unexpectedly, and has in all probability gone to Kagoshima.

An enquiry has been held by General Van Buren into a a charge of ill-usage brought against the second officer and carpenter of the ship *Lathley Rich* by the crew of that vessel. His Honour has not yet announced his decision.

The *Hochi Shimbun* has learnt that, within the next few days, the various articles to be contributed by Japan to the Centennial Exposition of Philadelphia, will be exhibited at the Palace of Hamagoten for the inspection of their Majesties. It adds that the Foreign Ministers will most probably be invited to attend, and will be entertained on this occasion.

A telegram from Osaka announces the departure of the Envoy for Corea from Kobé on Sunday morning, 9th instant.

The *Choya Shimbun* relates that its editor was summoned to the *Saibansho* on Sunday last, to answer a contravention of the Press-laws and has again been placed under *surveillance*.

Some 680 followers of the late *Daimio* of Hikone have memorialised the Government to be permitted to accompany the Expedition to Corea.

The brother of the King of Loochoo, who is about to take leave of the capital, repaired to the Imperial Palace to bid the Mikado farewell. His Majesty being unwell was unable to see him; but he returns home loaded with many presents of native manufacture.

The officers and teachers of the head-school districts of Japan have held meetings at Kanda, Yedo during the past few days.

We read in the *Nichi Nichi Shimbun* of the arrival of Kuroda at Shimonoseki, on the morning of the 9th instant. He purposed leaving that port on the afternoon of the 11th, but would probably be delayed by the non-arrival of the other vessels.

A party of Chinese, some fifty in number, visited the Imperial Gardens of Fukiagé on the 10th instant.

The Editor of the *Saifu Shimbun* has been summoned to the Saibansho to answer for an infraction of the Press-Laws.

The native newspapers frequently report the formation of whaling companies, whose operations never pass beyond the initial, or paper stage. We observe that another has been inaugurated of late, fated no doubt to share the lot of its predecessors.

At about half past eight o'clock on Thursday evening a fire broke out on the premises of Mr. Beretta, General Store Dealer, No. 81 in the Homura Road. The engines were promptly on the spot and the seat of the fire being discovered to be on the upper storey, it was soon and successfully dealt with. Its origin is unknown. The damage, which is slight, is understood to be covered by insurance in the Stafford Fire Office.

We read in the *Saifu* newspaper that extensive preparations were made at Hamagoten to receive the officers of the Chinese corvette, *Yang Woo*, on the 12th instant. Much to the surprise of the hosts none of the invited presented themselves.

Owing to the continued indisposition of His Majesty he has been unable to visit the collection of Japanese manufactures, curios and *objets d'art* which have been submitted for his inspection at Hamagoten.

Tanegashima, an official of the Home Department, proceeds to Corea in room of Fukuzaki, whose recall has been decided on.

The opening of the *Genrô-in* which, it had been decided, was to take place on Wednesday, 12th instant, has been again postponed.

The brother of the King of Loo Choo with his suite, some twenty in number, returned to the islands yesterday in the *Taiyu Kan*, the steamer presented to Loo Choo by the Japanese Government.

The *Bankoku Shimbun*, a reissue of the former *Nisshin Shinjisshi*, being foreign property has not applied for a license for publication. The officials are, it seems, engaged in investigating their position with regard to the question.

New *Saibansho* are to be created in the *ken* of Kagoshima, Yamaguchi and Kochi.

The meeting of members of the St. Andrew's Society, called for Friday afternoon, has been postponed.

The *Hioron Shimbun* gives publicity to this extraordinary story: We have heard a rumour that there being so many among the people disaffected to the present Government, it was thought wise to obtain the assistance of troops from either England or America to overawe them. But as these auxiliaries were on the point of embarking for Japan, an order, from Parliament or Congress (as the case might be), declared the act illegal and they were not permitted to sail. But we cannot believe this true.

We should think not. And if the *canard* has not been invented by the writer to exhibit in a strong light his good sense in discrediting it our suspicions do him much injustice.

The *Yomiuri Shimbun* having, it seems, originated the report that the Mikado and his Court were to play at *Da Kiu* (polo) in the Castle grounds, has been censured for having disseminated untrue intelligence.

The flags were displayed at half-mast at the several Consulates on Friday in respect to the memory of the late Mr. Eduardo Loureiro. In the course of the forenoon a mass was celebrated at the Catholic Church, which was attended by the late gentleman's friends.

THE ESTIMATES.

THE constant changes of form to which the accounts of the Japanese Imperial revenue and expenditure have been submitted during the last three years, show that the present FINANCE MINISTER is dissatisfied with the old system on which they were kept, and is trying to apply a new and better one to them. As we all know, the practice of publishing any accounts showing the condition of the national finances and obligations, is of very modern adoption, and it may be safely inferred that the method on which the accounts of the nation were kept immediately after the Restoration was extremely rude and inadequate. It could have been little more than the application on a large scale of the unscientific methods adopted in the *hans* of former days, and the probabilities are that this increase of scale itself produced complications unknown in the accounts of the *han*. A simple method of book-keeping suffices for all the wants of a small tradesman, and by means of it he can readily and accurately determine his financial position. A merchant, however, is forced to adopt a more elaborate process, the necessity for which increases with the extent of his transactions; and the efficiency of his book-keeper may be tested by the readiness with which at any moment the condition of any given account may be discovered, and the general position of the business estimated. The latter subject of enquiry, however, becomes more and more difficult as the accounts are more numerous and intricate, and though the work of a book-keeper is not a choice field for the exhibition of genius, it cannot be doubted that some of the qualities which it demands, when this work is on a vast scale, are among the most valuable of the solid intellectual and moral faculties. If a man possesses patience, accuracy, a keen love and sense of order, a mastery of detail, a clear head and great industry—all which qualities are demanded of a book-keeper in charge of weighty accounts—it may fairly be pleaded that he is, in some serious sense, a strong man. He might make a poor ruler of a state, but no ruler, however good, could get on without him, and all really great and strong men who have moved the world by other than purely intellectual means, have been distinguished by the possession of these very qualities. Slovens may, and sometimes do, originate good things; but no sloven ever did, or ever will, make a great master of men. These changes, therefore, in the forms of the Imperial accounts of Japan, are neither to be wondered at nor deprecated, though of course, the sooner some definite and settled, even though not perfect, system is arrived at, the better. When once a good type of form has been attained it should be adhered to, and the various bones of the skeleton can be made and adjusted to it speedily and accurately. The details of the provincial accounts thus rendered uniform, can then be brought into a more manageable shape, and more easily and accurately reduced and marshalled under their appropriate headings in the accounts of the Central Government.

In the Explanatory Note which precedes the Estimates the FINANCE MINISTER explains the latest changes he has made in the form of the accounts, the chief of which is the alteration of the fiscal year from the year of the calendar to that from the 1st July of one year to the 30th of June in the next. This was announced in the Note appended to the Financial Statement of the 20th April last, and was even the cause why it was issued. This Statement was an estimate of the revenue and expenditure for the last half-year of the old system, viz, from January to June 1875; the Estimates we now propose to consider being the first issued under the new system, and extending over the year from the 1st July 1875 to the 30th June 1876. The change was obviously a necessary and advantageous one, for it permitted a nearer approximation than has ever yet been possible to the actual receipts and expenditure during twelve months. Prior to this the expenditure of one year was borne by the revenues of another, at least in part, and this is obviously undesirable. Not, however, that even now a complete account can be rendered. In the third and fourth paragraphs of the first clause of his Explanatory Note, the FINANCE MINISTER shows why this is so, and the means taken to reduce to a *minimum* the objections to it; and he proceeds to state that, at some future time, an account will be given of the actual expenditure and revenue of the year, which will enable us to see how far the estimates have been correctly made and adhered to. All this betokens improvement of system.

After a careful examination of the Budgets of past years, we have come to the conclusion that any close comparison with them of the Estimates of this year may easily lead us greatly astray, for the reasons above stated. The present Estimates have a new point of departure and a new terminus. They do not permit much more than an examination of the separate items of which they consist, and in making this we are assisted by the Explanatory Note attached to them, careful attention to which is very necessary.

In regard to these separate items, a few words seem to be suggested.

We first find that the sum expected from the Land-tax amounts to *yen* 51,500,000, as against *yen* 44,600,000 for the year *ending* December 1874. Although the year differs in the two cases, as we have shewn, it would be interesting to know the reason for this large increase. It must either arise from increased taxation; or from an extraordinary harvest; or from the assessment of the *koku* of rice—the unit of this item—at a higher price than usual. As regards the first cause, we consider it extremely improbable that the increase arises from this source. The land is already enormously taxed. The Government is certainly anxious to conciliate the agricultural classes as a make-weight against the *samurai*, and feels that increased taxation would bring odium upon it from the very quarter on which it must lean for support, either in dealing with the pensions of the *samurai* or in the event of any rising among them. To the second cause the Treasury is certainly indebted. The harvest of last autumn was greatly beyond the average. Though short in some few districts, the total yield was very large, and as the farmer pays so much of his crop, instead of so much for his land, the Government shares with him the profits arising from a bountiful harvest. As regards the estimated value of the *koku* of rice, we have ascertained that it has been taken at 4.49 *yen*, the average price over the Empire during the past three years, so far as careful calculation could establish it. Whether, with an enormous harvest, this average price can be relied on, seems to us at least questionable, and here is the weak point of the Estimates. A considerable export of the Government store of rice has been determined on, and in this manner the market may maintain its position. The Government may not get as much as *yen* 4.49 from its sales, but it will prevent the market rate from declining, and may thus secure its expected revenue. It must not be forgotten, however, that the people, under these circumstances, only derive a very small and indirect benefit from a splendid harvest. They are, of course, saved the payment, in other forms of taxes, of the sums realized to the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Government by the export of its own stores. But all outside the agricultural classes will be losers by the operation, inasmuch as they will have to pay high instead of low prices for their food. The Government is, and must long be, the great operator in grain in this country. Its power in this respect has been reduced of late by the new system of paying the land-tax in money instead of in kind. It will take many years, however, before this system can prevail over the whole Empire. Roads must first be made everywhere, and money must get into circulation by a far greater interchange of the productions of the towns and the country than at present exists in the remoter provincial districts. But this power is still very great, and it will always be used in financial exigencies. Its decline will be very much the measure of the advance of the country in civilization, in more scientific finance, and in freedom of trade—all three very desirable things.

The sum apportioned for the allowances to the nobles and gentry who surrendered their lands, which includes the *samurai's* pensions, is only *yen* 16,340,000, as against *yen* 19,484,000 in 1874. This reduction may be partly accounted for by the progress made with the measure for commuting these allowances and pensions, which has saddled the country with a debt of £2,400,000. It will be observed that a sum of *yen* 5,000,000 has been provided to meet the applications for commutation money made previously to July last year, when the measure was suspended. So early as April 1875 about £1,600,000 had been applied in this manner, and this, with the sum now set apart for the same purpose, somewhat exceeds the total amount of the loan. We have always regarded the measure as an excellent one in principle, and though its terms were hard, it has, as the figures prove, met with much acceptance. It will be observed, too, that the amount derived from the taxes on the uncommuted pensions is rather cruelly large. The *samurai* are certainly under the Government harrow to an unpleasant extent. But assuredly on the solution of this question the future balance of the revenue and expenditure, and the increase of capital in the country, largely depend.

We observe that a loan of *yen* 818,000 to the Mitsu Bishi Company has been made, or provided for, while there is no corresponding item in any capital or loan account, so far as the Statement is concerned. Probably it is included in the large sum of *yen* 12,594,889 stated to be the amount of the loans made by the Government in various quarters.

It is gratifying to see that neither the general debt has increased, nor has the Reserve Fund diminished, though we are inclined to think that the latter contains a larger proportion of paper to gold and silver than it did when the last Budget was issued. Gold has left the country freely, and much of it must have come out of the Treasury reserve. What seems pretty clear is, that it will take a long time before the mass of the Japanese prefer coin to paper. The copper will find its way into quick circulation; but the silver and gold will not. "A man may take his horse to water, but he cannot make him drink unless he list."

Considering how much has been said, and said on fair general grounds, during last year, regarding the financial state of the country, it is a comfort to believe that it is paying its way, reducing its more extended obligations (paper money and foreign debt) and putting a good sum aside for "contingencies"—a sum which will surely be drawn upon. We shall not pretend to believe that all the hopes which these Estimates imply will be entirely realized; even financiers in Europe are sometimes disappointed in this respect. But we accord to them the general confidence we have always given to the Japanese Budget, and this, on the general grounds we have taken from the first. We see that things go on, and though they creak, there is still progress. The suspicion of wholesale misrepresentation seems to us, in matters of this nature, unreasonable. What we are willing to allow is that the more favourable view of things is taken, and that disappointment is always possible. But we find ourselves more justified from year to year in believing that there is a very solid basis of fact in these Statements, and that they fairly represent the condition of the national finances. That the credit of the country has greatly gained by their publication, and that belief in their general accuracy has also increased, cannot be doubted for a moment. If the account, hereafter to be rendered, of the actual revenue and expenditure of the year is found to tally with fair accuracy with the present Estimates, this belief will be increased, and the credit of the country will still further improve. There is no sentiment, or room for it, in finance, and no Finance Minister is so wise in the long run as he who tells the whole truth in regard to the affairs under his charge. This country is expensively governed, but not extravagantly. The expense arises from its cumbrous machinery, its enormous staff of officials, and the corruption and jobbery which this inevitably entails. But no one can say that the Court is extravagant, or that the great Ministers of State are excessively paid. There is not a trace of Turkish or even Egyptian prodigality in their lives and establishments. Anecdotes of their domestic life, such as the gossip of capitals affords, forbid the idea of their being wealthy men, and it is nothing less than fair that this should be known in the European centres where the estimate of the national credit is formed.

We think we express the general opinion when we say that the Estimates are far more favourable than might have been expected, and that the belief in their *bonâ fide* character increases yearly. It will be a true wisdom which justifies this belief by an ever improving system of accounts, and an ever increasing accuracy in them.

The N.-C. Daily News writes:

The Corean question will probably not be left so entirely to the solution of China and Japan, as might at a first glance be supposed; nor even may intervention stop with the good advice of the Foreign Ministers at Peking. The frontier of Russia is now co-terminous with that of Corea on the coast, and it is unlikely that she has fixed on Vladivosiock and Possiet as the southernmost limits which she purposes attaining. She may not object to the Japanese thrashing the Coreans, in retaliation for the insolence of which the latter have been guilty; but it is likely that any attempt at permanent occupation or re-establishing the old claim to tribute, would elicit a very significant hint that Japan was out of place on the mainland. —Apropos of this, we may mention that recent advices from the North speak of 1,200 Russians having penetrated nearly to the frontiers of Shingking, in alleged pursuit of some Corean robbers.

Mr. Mori, the new Japanese Minister, and suite, arrived here on the 12th, per Japan man-of-war *Hurodai*, too late to catch any of the regular steamers to Taku. After an unsuccessful attempt to charter the *Millet*, which had just come in on her way South, the party started for Peking overland, on the 15th. They were accompanied by Mr. Theka, a gentleman who calls himself Vice-Consul for Tientsin, Chefoo, and Newchwang. Two days afterwards, we had a sharp snow storm, accompanied by a strong north-east gale, an event which must have seriously interfered with the progress of their journey. Mr. Mori's determination to press on to Peking at this season of the year, has suggested that there must be some business of importance at the Capital; and rumour points to Corea as the burning question.—*N.-C. Daily News.*

THE ESTIMATES.

NOTIFICATION No. 216.

To *In, Shô Shi, Chô, Fu,* and *Ken.*

The enclosed estimates of Income and Expenditure for the year beginning July 1875 and ending June 1876, having been furnished by Ôkuma Shigenobu, Minister of Finance, they are hereby notified for your information.

SANJÔ SANEYOSHI,
Daijo daijin.

December, 22, 1875.

To SANJÔ SANEYOSHI,
Daijô daijin.

Ôkuma Shigenobu, Minister of Finance, respectfully presents the estimates of Income and Expenditure which he has drawn up for the present year. These estimates are prepared according to the new financial year and embrace the accounts from the 1st July, 1875 till the 30th June 1876. They have been drawn up in a different form from heretofore, and the increased accuracy of the calculations is owing to the fact that the Regulations for Receipts and Payments and the routine of the accounts have gradually become more satisfactory.

With regard to the separate statement in which current expenditure is distinguished from the reserve funds, I wish to observe, as I have stated in the prefatory remarks to the estimates, that it is unnecessary to publish it, and it is only supplied for the sake of comparison. These Tables should have been furnished before July last, but owing to the present year being the commencement of the new system a considerable delay was occasioned by the preliminary investigations, and the expenditure of the various public offices was not finally determined until last month. This was the reason why they have been delayed until to-day.

It is my opinion that any fixed system of finance is difficult to establish and easy to be destroyed, that it is difficult to preserve pure in its springs, and liable to become polluted in its course. Estimates are necessary in order to prevent irregular expenditure, and to strengthen habits of economy. If this object is not attended to, and this evil repressed, the projects of officials will be allowed free scope, their minds will become relaxed, requests will be granted which ought not to be granted, and there will be an increase of expenditure which ought to have been curtailed. If this evil overflowing from above should find its way below, and the amounts fixed here should be exceeded, these tables would be no better than books on a shelf, and in the end no good result would be attained by them. My apprehensions are no doubt excessive, but I have felt bound to state my honest opinion and therefore, in presenting these tables, I have set forth my humble ideas and invite your judgment upon them. It is my hope that they may in some small measure facilitate the work of administration.

(Signed) OKUMA SHIGENOBU,
Minister of Finance.

25th December.

*Explanatory note on the Estimates of Public Revenue and expenditure for the fiscal year ending June 30th, 1876.

1.—Considering that these estimates are based on the new fiscal year, it is deemed necessary to explain, in the first instance, the reasons which caused this reform, and, in the second, the principles on which the estimates of Public Revenue and Expenditure have been framed.

It had been proved that the Revenue and Expenditure for a year cannot be computed within the limits of a calendar year, because, for instance, the receipt of land tax, and the payments of allowances (to nobles, &c.,) can only be accomplished in the year following. Its was consequently found expedient to alter the fiscal year (which had hitherto been the same as the calendar year), and to commence it on the 1st July, and to close it on the 30th June, in order to include all receipts and expenditures.

It will, however, practically be impossible to include within this period all the accounts of the receipts and expenditures for the fiscal year; for, among the various branches of the administration, there may be found, even after this date, some with deficiencies to be made good, or balances to be refunded; whilst it may also occur that a portion of the taxes is not yet collected.

In order to meet this difficulty, it has been found necessary to institute a special account for these arrears, which are kept altogether separated from the account of the current fiscal year, and are contained in what is called the Otsubu (Section B. in the books.)

Whereas the present tables are compiled according to new fiscal year, it has consequently followed that their form differs from that of previous years. It will be found, therefore, that the surplus which was hitherto carried over from the previous estimates and included in the estimate of the current year under the denomination of "Balance from former years," has been omitted; and the Reserve Fund (which formed the main part of the above) is shown at the end, instead of at the head, as was the case hitherto, of the statement, only to show the actual amount laid down in the Reserve Fund; the reason being, that the the accounts being separated into two branches, and the balance referred to being treated by the second branch, so that the expenditures of a year are exclusively borne by the revenues of the same year, it naturally has nothing to do with the present statement. An actual account will, at some other time, show whether the estimates were correct, and, then, the surplus, if any, will be incorporated into the Reserve Fund.

2.—In the present statement, the receipts and expenditures for one fiscal year, from July 1875, to June 1876, are first given, and, then, a statement of the public debt is annexed. The tables I and II of the former statements are here omitted, these being only different forms of the same yearly estimate. With respect to the paper currency also, it has been thought unnecessary to detail it, notwithstanding there are several sorts, namely the new and old; and the total sum only has been shown in connection with the statement of the Public debt; there being no object in mentioning it, except in order to show the amount redeemed.

3.—The receipts and expenditures are all compiled from the detailed returns of the accounts of their respective offices.

4.—In estimating the land tax, there is some uncertainty, inasmuch as the revenue must greatly depend on the harvest of the year, and the price of rice. The figures here mentioned have been taken from the average price of the last three years. Besides this, the taxation reform being now in the course of operation throughout the country, there are some *Kens* in which the new system has already been introduced, while some of them still retain the old system. But all these circumstances have been carefully taken into consideration.

5.—In some of the taxes on fermented productions, postage, and the like, the system of assessment has been altered, and in some, the amount of revenue is increasing every year. In these instances, also, as well as in those mentioned under No. 4, the state of the revenue in preceding periods, and its actual state, have been carefully compared and considered.

6.—The taxes on meritorious service pensions, the sale of stamps and forms for legal acts, and the license fees of advocates and attorneys, commence, the former this year, and the latter from January next. The former have been estimated by the same system as the taxes on the allowances (of nobles etc.) and the latter by the system adopted for the calculation of the tobacco tax.

7.—Besides the mines, there are many public works mentioned in section 8 of Receipts. These have been formed into one section, together with three items placed after the silk reeling manufactory, with which they have a close analogy. They have not been hitherto specially mentioned in previous statements, having been included under the head of general income of their respective departments,

* This translation is, *verbatim*, (with the exception of one or two very slight corrections of construction) one which has been obligingly furnished to us by the Finance Department. It may be profitably compared with an excellent translation which appeard in the *Japan Herald* of the 14th inst. There are two or three slight obscurities here and there in our own version, but we prefer to leave them, thinking, that on the whole, the mastery of the terminology of finance exhibited in the translation, is very creditable to the translator.

Original from UNIVERSITY OF CALIFORNIA

8.—The expenses of several offices have been calculated from their respective returns, in connection with both their present wants and their former actual amount. A general provision for their extraordinary calls upon the treasury has not been made in the statement, because their respective amounts of yearly expenditure having, this time, been more clearly defined, it has become possible to provide for such a demand in the final appropriation; and because it has therefore been determined that, hereafter, the repairing expenses of all sorts and other incidental demands should be met from the total sum appropriated, and that on no account it should be exceeded. The postal and industrial expenses (Internal Department) and the expenses for the paper currency and government bonds, (Treasury Department); both of which had been specially mentioned in previous statements, are also omitted, they being comprised among the general departmental appropriations.

9.—In the sums for the *Fus* and *Kens*, also, ample allowances have been made for unforeseen expenses, though they are not enumerated in detail.

10.—The commutations of the allowances of nobles and their former retainers have been suspended since July, 1875, but those which had been relinquished before the date of the Imperial proclamation must be met. This is the reason why a sum is appropriated for this purpose.

11.—The Contingent Fund is the provision made by way of precaution lest the revenue should fall short of expectation owing to any exigencies.

12.—A yearly contribution of thirty-six thousand *yen* (36,000) is made by His Majesty to the military fund. But, in the present case, the sum has been directly deducted from the appropriation for the Household.

13.—There is an apparent increase in the amount of internal debt, though a certain amount has been redeemed during the last half year. This is caused by the issue of new bonds, both in exchange for paper currency, and on the liquidation of the annual allowances (of nobles, &c.)

14.—The exchange of the new, against old paper money is not completed. But when we look at the parts which have been completed (such as those above one *yen*), there is found a decrease from their original amounts. This is partly owing to a quantity of old currency being drawn in without being replaced by new notes, and partly owing to loss whilst in circulation.

15.—The reserve fund in *Fus* and *Kens*, which are subjoined at the bottom of the statement, are the sums provided for sudden calls in the respective local governments, and which are always kept on hand, being immediately refunded as they are drawn out. There is another sum which consists of loans to the former *Hans*, for industrial and charitable purposes, and which is gradually to come back to the government. Its total amount, also, is given in the same place.

Estimates of receipts and expenditures for the fiscal year ending June 30th, 1876.

SPIRIT OF THE JAPANESE PRESS.

The Estimates.

(Hôchi Shimbun.)

Those who take an interest in our national affairs are sorely troubled about the want of money in the Treasury, and are thinking of all sorts of means by which the misfortunes may be avoided which this state of affairs tends to cause. On reading over the Estimates lately issued by the Finance Department, we find that in the half year from January to June 1875 the revenue exceeded the expenditure by *yen* 19,707,315, and adding this to what remained over from former years, we find that the total is *yen* 38,010,168. The account from July 1875 to July 1876 shows that the revenues exceed the expenditure by *yen* 89,760. We thus see that our yearly revenue exceeds our expenditure, and although the estimates this year show a decrease of surplus on those of last year, there is no indication that the Finance Department is in want of money, and there can be no possible mistakes in the accounts, for they are issued and notified by the Finance Department.

We once heard that there was a Minister of Finance in a certain semi-civilized country not possessing representa-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

tive institutions, who issued accounts from the Treasury and notified them to the people. But they were not such accounts as could be trusted, as the Minister was said to make several accounts at the same time, one for his own use and another to be shewn to the Sovereign and published to the people. In that country the Minister of Finance makes out accounts which are mere calculations of what is to be spent in the future, and never gives minute accounts of what has actually been spent in the past, because it is so obscure that it would be impossible for him to place it before the public. For example, the expenses attending the holding of private meetings by the head officials of various departments were mixed up with the general expenditure. The accounts stated that these meetings were held in the interest of the Government, and certain officials then present said that such and such expenses were required for such and such purposes, and for these money was drawn from the Treasury. When the actual accounts of past expenditure were made out, many obscure items made their appearance, and the Finance Minister would then try and put them to the debit of certain departments. The departments, on the other hand, discovered this, and as the estimates for future expenditure were all incorrect, they did not agree with the accounts of the past expenditure, of which it was thus found very difficult to give any accurate account.

This is the story we heard from a friend of ours in former days. We have forgotten the name of the country, but the facts were so much impressed on our mind that we recall them with perfect ease.

Now if we look into the state of our own affairs, we find that they differ widely from this, for Japan is nothing like a semi-civilized country, and our Finance Minister is a very virtuous man, and nothing like the Minister of whom we have spoken above. We cannot, however, say that there are none among the people who doubt the accounts which he issues. Indeed, we ourselves have some doubts on the subject, though we do not believe that the Finance Minister is apt to make great mistakes. Moreover, we hear that an account of the expenditure of the past is about to be issued, and we hope this will be done as soon as possible, in order that all these doubts may be dispelled. Although we cannot look into the Finance Department, we imagine that the reason why an account of the past expenditure cannot at once be rendered is that the Department is busily engaged in other matters, and because the figures do not agree with the calculations mode for future expenditure. But, in the absence of such accounts, however much we may argue, we cannot rid people of their doubts. If these doubts remain, certain unforeseen misfortunes may fall upon us, and these cannot surely be good for the Government.

Offences against the Press-Laws.*

(Choya Shimbun.)

Toward the end of last year the *Hochi* and the *Akebono Shimbun* published a letter to the effect that———the *Kenrei* in the———*Ken* was in the habit of associating with courtesans and singing girls, which the *Kenrei* denied and brought an action against the two journals in the Saibanseo of Tôkyô. The journals were both adjudged guilty of erolating Articles I. and IV. of the Law of Libel, and were sentenced to imprisonment for one month and a fine of 200 *yen*. Certain officials, however, said that this sentence was unjust, and an appeal against it has been sent to the *Daishinin*, the editors of the two papers being meanwhile placed under the surveillance of the authorities of their district.

In looking into the incriminated numbers of these journals, we found that the *Akebono Shimbun* published the letter in full, omitting no part of it. Mr. ——— denied the charges on the alleged ground that they reflected on his character, and though we shall say nothing touching his guilt, we think the letters were amenable to the laws of libel.

The case of the *Hochi Shimbun*, however, was different. At the beginning of the letter the name of ——— was once mentioned and subsequently rings (○) were used in its place. Whether these rings meant Mr. ——— or not it is for our readers to decide. No one can certainly say that they do. But arguing from the sentences passed on these journals it is obvious that both Mr. ——— and the judges decided that the rings referred to him. Now as the *Hochi Shimbuu* is one of our contemporaries, we are desirous of giving a clear explanation of its innocence, but are prevented from doing so lest we should render ourselves liable to punishment for endeavouring to prove a condemned person innocent.

Let us now examine the reasons why some of the officials deem the sentences unjust and for the appeal made to the *Daishinin* against them.

The judgments already given pronounce that the Editors have violated clauses I and IV of the Law of Libel and are to be punished in such and such a manner. But if we examine the letter we observe that it only speak of the *kenrei* having associated himself with the classes mentioned, and says not a word about him in relation to his official duties. In the Diary of the Shihoshô a memorial may be seen containing a puestion to the following effect :—"Articles II and IV of the Law of Libel state that when an official is slandered in his official capacity, the slanderer shall be punished in such and such a manner. But if the slander is against him in his private capacity, is this to be regarded as a violation of Articles III and V of the Law of Libel ?" This was refirred by the Shikosho to the Government, and was assured in the negative. Now we see that the letter published by these two newspapers only dealt with the private behaviour of the *Kenrei* and had no reference to the discharge of his official duties. The judgment pronounced against the two journals seems, therefore, to be contradictory to the records of the Shikosho, and this must be the reason why it has been decided to refer the case to the *Daishinin*. Should our view he a just one the judgment will most probably be reversed.

But there still remains another point in connection with the case which is obscure to us. The judgments pronounced against the two journals state that the actual charges made against the *Kenrei*, (the charges are here enumerated), were disproved ; and that as such charges are imputations upon his character such and such punishments are awarded. New, of course, acts of this kind cannot be called virtuous, but the laws does not regard them as involving a degradutions of personal honour. Law and morals are distinct things. If a high-placed official acts in this manner and behaves as reckless young men do, of course we cannot except him to govern and *ken* well and a hold his people in proper check [*lit.* keep them in links]. The existence and status of courtesans and singing girls are acknowledged by the law, and there is no statute which forbids an official keeping losse company.* We cannot therefore understand why the statement that he has done so should be regarded as slander. Every one knows that polygamy is wrong and an uncivilized custom. It is even worse than loose associations. But it is permitted by our present laws and there are innumerable officials who have more than one wife. If the newspapers said of any officials that he maintained a number of wives, would it constitute a slander ? If any such statement were publicly though erroneously made, and the mistake acknowledged, in all probability nothing would be done to the editors.

We do not wholly pretend that reflections upon the private morals of men may not be regarded as slander, and that public references to forbidden associations, even if true, may not be regarded as slander. But what was published in the *Hochi Shimbun* was only directed against the manner in which the kenrei associated with certain degraded classes, nad if he did that which is not prohibited by law it only concerus his private morals.

* We publish this translation (having excluded from it the name of the *kenrei* and the *ken* alluded to, although they are given in the original) with a special end in view. That end is, to point out to the Japanese journalists that reflections upon the morals of individuals *in their private capacity* strike at the root of all sound journalism, and would make the press an enormous evil which society should and would immediately sweep away.

It is impossible to conceive a viler and more odious class than would immediately be called into existence were the press to occupy itself in this manner, and any good it might do would be more than a hundred fold counterbalanced by attendant evils of untold magnitude. With the merits of the case as represented in this article we have nothing whatever to do; but we earnestly hope the native press will not err further in this matter.—[Ed. *J.W.M.*]

* The expression in the original is stronger than this and will not bear literal translation.

Original from UNIVERSITY OF CALIFORNIA

If we take away the question of official position, there is no difference between a Prime Minister or a Governor and a fireman. If the newspapers published articles about firemen associating with these degraded classes, would any of them deny the charge and say that it reflected upon their honour? Why then should an official like the *kenrei* of——plead that these unputations affected his character? In matters extional to official position, and as affecting the estimate of private character, there is no difference between a Governor and a fireman.

We do not mean to say that the judgments pronounced against the two newspapers are unjust, and in this way to help them out of their trouble; but we have stated our doubts on the whole subject in erder that the learned may dispel them. Still, we have word a yet to say to Mr.——. You have said that the writng in the *Akebono* and *Hochi Shimbun* reflected on your honour, so that you must be a virtuous gentleman. But if you know that a given act reflects on your honour, and still do it, and then apply to the law to reveuge you on those who made your act public, we say that you are a man who does not know the difference between honour and disgrace, even although mistakes may have been made by the writers in the *Hochi* and *Akebono Shimbun*. But we by no means intend to insimate that Mr.—— is such a person as we have stated.

Rumours—Corea.

(Hioron Shimbun.)

When people heard that Kuroda was to be sent to Corea as an envoy with full powers, they said that the question of peace or war rested with him. But when Inouyé was appointed as second envoy, people, not fully understanding what this should mean, began to make all kinds of conjectures, and rumours of all descriptions began to fly about. Some of these represented what people really thought, while others were circulated for private purposes; but no distinction can be made between them. We will give a few specimens.

"There are some among the higher officials who greatly like Inouyé, and are anxious to place him in some high position in the Government. But as he has been under grave suspicion in relation to the Osarugawa mine affair, and has thereby lost his reputation among the people, his appointment to a high post will cause a great outcry, and thus he has been made the second Corean envoy in order that he might settle the Corean affair, and so restore his damaged reputation."

Others say:—"Kuroda is a man of a bold disposition, and should the Coreans insult him with any show of their pride during the negotiations, he might declare war immediately, and as this would be dangerous, Inouyé, who is of a milder disposition, was appointed to accompany him."

Others again say:—"Okubo has held the reins of Government during the last year, but latterly affairs have fallen into so disturbed a state that war with Corea has become unavoidable. But as Okubo was prominent among those who opposed war with Corea some years ago, he cannot now very well be made its usher, and he has therefore secretly ordered Kawamura, Vice-Minister of the Navy, to prepare for war with Corea, and as Kuroda is on friendly terms with Okubo, he spoke as though his intentions were peaceful, while his real purpose is war. It is for this reason that the vessels of the *Kaitakushi* have been employed in this mission, instead of those of the Navy Department. When Itô heard what was purposed, he determined that it would not do, and, after consulting with Kido, resolved on the appointment of Inouyé as a vice-ambassador, and the reason why Inouyé went to Osaka a few days previous to the departure of Kuroda, was to purchase bribes for the Corean officials."

Oh! in sending an ambassador from our noble Japan, there is no need for this foolish action before hand. We see no good reason for sending two envoys of such different views, and these rumours must surely be false. Should they turn out to be true, we doubt if the honour of this country will be preserved in Corea. The sending of these two envoys must mean that some profound scheme has been made by the Government, and the street rumours are unworthy of belief.

The Case of the *Bankoku Shimbun*.

(Hochi Shimbun.)

The press is an institution which stands between a Government and the people, and by its agency diffuses knowledge. The increase of newspapers is therefore of general benefit, if they are conducted on free and independent principles.

Now the *Bankoku Shimbun* has been established in Tsukiji, and its Editor Mr. Black is a British subject who has previously been connected with the *Nisshin Shinjishi*, so that it appears as if it were a transformation of this paper. We ought to congratulate the public on the establishment of a new contemporary, and should do so if we had no fears as to the object of the promoters in establishing this new journal.

In our leading article of the 20th of last July, we mentioned a rumour which was in circulation, to the effect that the *Nisshin Shinjishi* was forced to remove into the foreign settlement so as to be beyond the jurisdiction of the national laws. Our criticism had the effect of provoking a violent attack, and a denial from the Editor of the *Nisshin Shinjishi* at the time, and he accused us of spreading rumours without foundation.

There apparently was some truth in the above rumour, for although the *Nisshin Shinjishi* may have no connection with the *Bankoku Shimbun*, still it seems strange that Mr. Black, an old employé of that paper, should be its ostensible promoter, and we cannot allow that Mr. Black, a foreigner, can understand matters concerning our country as well as a native of Japan, and it would appear that it is only established to take advantage of his foreign name. It must prove humiliating to our people to read a paper conducted by a foreigner in defiance of our native laws, and we cannot believe that the Government will permit this to be done.

The Newspapers and the Governor of Tsurugaoka *Ken*.

(Hochi Shimbun, January 12th.)

The sentence of the *Saibansho* passed upon the respective Editors of the *Hochi* and *Akebono Shimbun* was to the effect that they should be imprisoned for thirty days and fined a sum of 200 *yen*. But it would seem as though doubts existed as to the propriety of the sentence, since the editors were once more relegated to the charge of their district officers and certain officials interposed, saying they would bring the case before the *Dai Shin In*. The *Akebono Shimbun* being apprehensive lest the decision given against it should prove prejudicial to its circulation, produced as a witness Mori Toyemon, and maintained the accuracy of its statement. Having been assured by an honourable governor that the statement was indeed unfounded, and deeming, moreover, the story of the *geisha* a matter of slight importance, we ourselves resolved to maintain silence and to abstain from further motion in the matter; but on the 10th instant, our editor was summoned to attend at the *Kenji Kioku** and, although unwell, repaired there at once. He was informed that he arrived too late, and was told to return on the morrow.

The Same—A Disgrace to Japan!

(Hochi Shimbun: 13th January.*)*

Our Editor proceeded to the *Kenji-Kioku* yesterday at 10 a.m. He was then apprised that his case had been in due course submitted to the *Daishin-In*, but that upon the representation of the Minister of Justice, that the sentence which had been declared was just and apportioned to the offence, it had confirmed the judgment. 'Therefore,' the officials continued 'you must be prepared to bear the punishment awarded, and we shall deliver you into the charge of the police.' Our Editor and the Editor of the *Akebono Shimbun* waited in the police office and were soon put in the cells. The gaoler enquired if our Editor was *shidzoku* or *heimin* (commoner), and, being told *heimin*, was about to bind him with cords, but his conscience smote him, and in place of tying him like a malefactor he was

* A Sub-department of the *Saibansho*.

content to put a rope round his waist, and remove him to the registering office of the Tokio *Fu*, where he would remain until his hostages† came to take him away.

Alas, that such punishment should be awarded to political offences! This tends to show what our Government is. And so Fujita, our Editor, was taken through the streets like a common criminal, with ropes round his waist and an escort of two prison guards, and the crowds in the streets stared at him as he passed. But he was strong in his own belief, and cared little for the ignominy of his predicament. Ah, what a wide gulf separates the sufferer for a political offence from those who can find satisfaction and enjoyment in associating with a bevy of singing girls!

REPORT ON THE MINES OF JAPAN.

MR. PLUNKETT TO SIR H. PARKES.

Yedo, April 22, 1875.

Sir,—In compliance with a suggestion kindly thrown out by you last summer, I have selected the mines of Japan as the subject of the Report which I have now the honour of laying before you.

There are indeed few questions respecting which more contradictory statements are made; and, although I have taken every pains to sift the information which I have been able to collect, it is impossible, in the present unsurveyed state of the country, to come to any perfectly satisfactory conclusion.

It is certain that in almost every portion of the Empire minerals of various kinds are found, and it is equally certain that in numberless parts of the country mines have been worked with more or less success for centuries.

At present many of these so called mines produce only a few pounds of ore in the course of the year, and the question to be solved is, how far are these ores susceptible of being worked to advantage? Are they really, as is contented by some, mines of untold richness, merely waiting to be brought to light by European capital and science? or are they, as others equally maintain, mere traces of a mineral wealth more apparent than real, and well nigh exhausted by the workings of years?

Some interesting papers on the metallurgy of the Japanese have, as you are aware, been lately published by Dr. Geerts, of Nagasaki; but for most of the more valuable information which I am enabled to communicate, I am indebted to the kindness of Mr. Hochstœtter Godfrey, Chief Government Mining Engineer, who by the special instructions of his Excellency Mr. Ito, the Minister of Public Works, has placed at my disposal a number of papers and returns which have not hitherto been communicated to the public.

Without Mr. Godfrey's assistance I could never have collected the materials necessary for this Report, and I beg here to express openly to him my very best thanks for the courteous attention he has paid to all my inquiries.

My thanks are also due to Mr. Gowland, Chemist and Metallurgist of the Imperial Mint at Osaka, for information respecting some of the mines in that district, as well as to Mr. Aston and Mr. Gubbins, of this Legation, for the assistance they have kindly rendered me.

I shall not at present attempt to do more than give a sketch of the principal mining features of the main Island and the two Southern Islands. Yesso is also said to be rich in mines, but they are so far quite undeveloped, and the principal mining centres of Japan are still south of the Tsugaru Straits.

I shall commence by laying before you two lists, which have been kindly prepared for me by Mr. Godfrey, and are therefore official. The first gives the number of mines working on lease from the Department (no mine can be worked without the special license of Government). The other gives the number of permissions to search for ore which have been granted by the Department.

1st. MINES working by Lease up to 1874.

Total number of mines working for exploration	637

In almost every portion of Japan are found ores of some kind, and there is scarcely a district in which there are not traces of mines having been worked. Most of these, however, are now either abandoned, or are worked in a very slovenly manner. As yet Europeans have exercised but little influence on Japanese mines, and the methods still pursued are, with one or two exceptions, almost the same as those which were used in olden times.

† Special prisons for the accommodation of offenders against the Press-Laws not having been constructed, it is customary to place convicted persons in charge of some private individual—probably a relative—for their term of seclusion, who is held answerable for their safe keeping.—[ED. *J. W. M.*]

Original from UNIVERSITY OF CALIFORNIA

With the one exception of Takashima, mines in this country are still attacked exclusively by adits; for the Japanese never sink a shaft, and as they have nothing more powerful than bamboo pumps for lifting water, it is easily conceivable how soon it gets the upper hand, and how the number of abandoned mines comes to be so large far the natives. Most of the works are of the most paltry description, will not invest much capital in mines, preferring to loan out their money at the high interest usually obtainable. The Japanese burrow for ore wherever they suspect its existence, without system or forethought. A hole is dug in the side of a hill, and, if ore is found, the work goes on; if not, it is soon abandoned, and a fresh hole is dug in some other spot which may seem to give promise of better things. If unsuccessful, this also is soon abandoned; but the two openings thus made, although perhaps not half a ton of ore has ever been extracted from either of them, are called mines, and help to swell the grand lists of mines which are so constantly palmed off upon travellers in the interior, and help to encourage the idea that Japan is a real El Dorado.

I regret, however, to say that a careful analysis of the reports which I have received from various persons practically connected with Japanese mines does not lead me to take so hopeful a view of the subject, and I am brought to the conclusion that rich as Japan undoubtedly is in ores of every kind, she is not yet likely to take a high rank among the mineral-producing countries of the world.

I beg to submit a most interesting table which has been drawn up for me at the Mining Department, showing the total mineral production of Japan for 1874, as far as they can calculate it. I believe it is the first estimate of the kind which has been yet attempted, and the result certainly comes far short of the general ideaof, the annual output.

In this, and all the following tables, where I have reduced foreign money into sterling, I have taken the dollar (Mexican) at 4*s*. 2*d*. and the yen (Japanese dollar) at 4*s*. 1*d*. This is not absolutely accurate, but it is sufficiently so for the purposes of this Report.

ESTIMATE OF MINERAL PRODUCTION OF JAPAN IN 1874.

Mineral.	Total produced.	Price each.	Total Value.	Total Value.
			Yen.	£ *s*. *d*.
Coal... ...	390,000 tons	5 yen	1,950,000	398,125 0 0
Copper ...	3,000 „	300 „	900,000	183,750 0 0
Silver ...	2,600 kwamme*	150 „	390,000	79,625 0 0
Gold ...	100 „	2,500 „	250,000	51,011 13 4
Iron... ...	5,000 tons	30 „	150,000	30,625 0 0
Coal oil ...	575,000 shos†	4 sen	23,000	4,695 16 8
Lead ...	175 tons	115 yen	21,275	4,343 12 11
Tin	7½ „	400 „	3,000	612 10 0
			3,687,275	752,818 12 11

It wil be seen from the above table that the total mineral produce of Japan is only 752,818*l*. 12*s*. 11*d*, of which coal alone represents no less than 398,125*l*., leaving 354,693*l*. 12*s*. 11*d*. to be made up by copper, silver, gold, iron, coal oil, lead and tin. This return does not include sulphur, antimony, quicksilver, salt, &c., and I have not been able to obtain any estimate even of the amount produced; but it is certainly not large. I shall therefore probably not be very far from the truth, if I put the whole mineral production of Japan as not exceeding 800,000*l*. during the past year, and I need not point out how far short this would come of the idea once entertained of the mineral industry of the Empire.

I propose now to examine separately each class of mines, and see how they are at present situated and worked; and, for the sake of clearness, I will divide my Report into six heads, taking the principal minerals according to their relative importance, viz:—

1. Coal mines and coal oil wells.
2. Copper mines.
3. Silver and gold mines.
4. Iron mines.
5. Lead and tin mines.

and then,

6. I shall conclude with a few remarks on the general laws affecting mines, more especially those concerning the employment of foreign assistants, and those prohibiting foreigners from having any interest in mining property.

1. Coal Mines and Coal-Oil Wells.

Coal is found in many parts of Japan, but the principal coal-fields are situated in the neighbourhood of Nagasaki.

The accompanying table shows the total estimated production of coal in 1874. It has been furnished to me by the Imperial Mining Department, and is absolutely correct as regards the output of the mines in Kiushiu; while, as regards the rest of Japan, the estimate has been framed upon a careful comparison of the materials at the disposal of the Department.

Statement of the Production of Coal in Japan in 1874:

	Tons.
Takashima	72,430
Mieke	66,324
Imabuku district	32,667
Taku	22,198
Karatsu	58,288
Hirado	63,160
Rest of Japan, estimated at	74,933
Total	390,000

The total coal production of Japan is thus put down at 390,000 tons, of which no less than 315,067 tons come from the Consular district of Nagasaki.

The annexed estimate of the probable extent of some of the principal coal-fields has also been furnished to me by Mr. Godfrey:—

Takashima	133 acres
Mieke	16 (?) square miles.
Imabuku district	70 „
Taku	36 „
Karatsu „	40 „
Hirado „	120 „

The best developed and most productive of all the Japanese coal mines is undoubtedly in the small Island of Takashima, about ten miles from Nagasaki. It is coal of old formation, and is pronounced to be almost equal to English North-Country coal. It contains only about 8½ per cent of ash, whereas most of the other Japanese coals contain a very much larger proportion; some indeed go as high as 20 per cent. of ash. Up to 1868 this mine produced but a small quantity of coal, owing to the defective system of mining pursued by the natives, viz, working the seam from its highest level, where the coal strata crop up to the surface, and following it downwards in the direction of its dip. In that year Messrs. Glover and Co. obtained a joint lease of the property, in partnership with the Prince of Hizen, and sank a shaft of 150 feet deep on the opposite side of the island where they struck the 8ft. seam. These gentlemen were, however, unfortunately unable to continue the works, and the mine was bought by the Government, who continued to work it until a few months ago, when it was sold to a Japanese Company for the sum of 550,000 yen (112,291*l*. 13*s*. 4*d*.). This gives the Company a lease, rent free, for fifteen years, after the lapse of which a fresh arrangement respecting rent will have to be made. This mine, which in the year 1869 produced only about 35,000 tons, produced in 1874 no less than 72,428 tons of saleable coal, and there is every probability of this output being very much increased under its present management.‡

The total exportation of coal from Nagasaki has indeed increased in a wonderful proportion of late years; for, whereas in 1866 it was only 10,185 tons, and in 1867 36,170 tons, it amounted in 1870 to 56,200 tons; 1871 to 102,700 tons; 1872 to 137,499 tons.

Mr. Consul Flowers, in his Report of March 28th, 1874, speaking about the coal mines of his district observes:—

"Should the Takashima mine ever get exhausted, the supply can be kept up from other mines in the neighbourhood.

"The Island of Koyaki contains many seams of coal, which for a great number of years have been worked intermittently by Japanese from the ourcrops by inclined drifts. The coal was carried up on men's backs in baskets, and the water was raised by means of bamboo pumps, or water-wheels, when in great quantity. There is one seam at Koyaki of very good bituminous coal of five feet, another of seven feet thick, besides minor seams. Several of the mines on this island have been abandoned during the past year on account of not having proper appliances to work them. The coal having been all got from some distance from the outcrop, the raising of water and the maintenance of ventilation by the Japanese method being too difficult and expensive, the output from these mines must steadily decrease, and ultimately disappear, unless some improved European system of working is adopted."

In a previous report of January 31st, 1872, speaking of the increase of the coal trade in 1871, Mr. Consul Flowers also made the following observations, which are equally applicable to the present time, and in which I entirely concur:—

"There is no doubt that this increase will continue in a progres-

* 1 "kwame" equal to 8¼ lbs.

† 1 "sho" equals 1 quarter, 1 pint, and 1 gill.

‡ I hear it is already producing 500 tons a day.

sive ratio each year, as coal mining becomes more thoroughly developed, and looking at the employment this trade must give for shipping, together with its requirements in the way of foreign machinery, it forms a most hopeful feature in the prospects of the commerce of Nagasaki; whilst the revenue the Government will derive from it, and the employment it will afford to labour, makes it equally important and profitable to the Japanese.

"Much, however, might yet be done by the Government to push this trade to its utmost, and its own interests would best be served by doing so at once."

"Should the Japanese Government really wish to develope the resources of their own country, the principal step to be taken is that of encouraging the outlay of more capital in coal-mining.

"This capital will not, I imagine, be found forthcoming from their own subjects. It is, therefore, to their own interest to approve of and assist the investment of foreign capital. This no doubt will be found as soon as the Government itself gives such securities as will induce foreigners to invest money under the soil of Japan."

The district of Karatsu, on the mainland of Kiushiu, north of Nagasaki, furnishes also a very large amount of coal, which, although not equal in quality to the Takashima coal, is far superior to most of that which is found on the main island. That is principally lignite, and of more recent formation; moreover, the large per-centage of ash prevents its being used except for household purposes.

At Shiramisui, for instance, not far north of Yedo, is a coal-field extending about 12 ris (30 miles) long by 3 ris (7½ miles) wide. The mines are situated only a few miles from the sea-coast, but, nevertheless, the carriage by horse or by coolie, for there are no wheel-roads, is so high that the coal is allowed to accumulate during the summer, and is merely brought down in winter when required for household purposes. This coal has a large per-centage of ash, and is of little value either for steamers or for smelting; and as the greater proportion by far of the Japanese use only charcoal in their houses, the demand for this class of coal is trifling in the extreme.

Captain St. John, of Her Majesty's ship "Sylvia," in a paper lately read before the Asiatic Society of Japan, mentions a coal-mine near the small harbour of Katsura, the produce of which is brought down there in boats. He speaks of there being large quantities of this coal for sale, but adds that he took in 50 tons of it for trial, excellent in appearance, which refused to burn; when mixed with some other coal which he had on board, it did fairly well. He describes it as being very hard and heavy, and free from dust.

In the neighbourhood of Niigata are some rich mines of good coal, which is said to be used, not only by the native steamers, but also at the Government gold-mines in the Island of Sado. Laid down at Niigata, it costs about 5 yen (20*s.* 5*d.*) per ton. I cannot, however, hear that much of it is exported, and as the principal mines at Akatani produced only 200 tons last year, I conclude that the total production must be very small. How far these mines might be susceptible of development under better management, is a matter of mere speculation, into which it is not my purpose to enter.

There is, however, little doubt that the want of a suitable harbour at Niigata is the principal cause of the neglect in which these mines are left. Ships being at present unable to cross the bar, have to discharge and take in cargo out at sea, thereby running so much risk, that freights and insurance more than cover any balance of profit there might be in exporting goods thence to another market. If the Japanese Government ever deepen the approaches, which might easily be done, there is no doubt that the rich mineral deposits of the provinces round Niigata will soon be more actively worked than has hitherto been the case.

The following analysis by Mr. Gowland of some specimens of the Japanese coals used in the Copper Refinery and in the various metallurgical operations of the Mint, will be read with interest:—

	1.	2.	3.	4.	5.
Ash...	12·760	6·487	10·595	9·877	9·557
Sulphur	·654	·435	·461	·588	·383

The cost of production of coal varies a good deal, according to places, but I am assured by a competent judge in these matters that it may be put down on an average at 1½ yen (6*s.* 1½*d*) to 2½ yen (10*s.* 3½*d.*) per ton. I have, however, been informed by another gentleman practically concerned in coal-mining, that in one case, at least, it goes as high as 3 yen (12*s.* 3*d.*) per ton. A source of expense peculiar to coal-owners in Japan are the straw bags, holding about 1 picul (133⅓ lbs.). in which the the coal is packed, before it can be moved either on horseback or by coolie.

Coal-oil is found in considerable quantities in the neighbourhood of Niigata. Near Kurakawa, about 80 pits have been sunk, one of which is said to yield daily from 4 to 5 "*to*" of oil (1 "*to*" is equal to about 16 quarts). During the last six months of 1874, the Province of Echigo alone produced no less than 285,983 Japanese "shos" (107,243 gallons), worth 11,439 yen (2,335*l.* 9*s.* 3*d*), of oil. The production of Shinano, Ugo, and Todomi, in coal-oil is small, but the actual amount of it is unknown.

I am assured that the quality of the oil is very good indeed, and it is probable that with judicious management the supply might be greatly increased. At present, this oil is consumed entirely in the localities where it is produced, and there is not enough of it on hand to compete with the American coal-oil in Yedo or Yokohama.

Nagaoka, a town on the Shinanogawa, about 40 miles above Niigata, is the principal depôt of the coal-oil trade, and a small steamer is to run shortly between the two places.

The oil is refined usually by single distillation, 4 "*tos*" raw oil giving 3½ "*tos*" of refined oil. Sulphuric acid is not used, on account of its high price.* From the different stages of distillation three different qualities are obtained.

With reference to the above, I may remark that sulphuric acid might be produced in Japan both cheaply and abundantly; but the Government being able to sell a certain quantity at the present high rate, does not care to increase its stock, although there is no doubt that great commercial advantages would accrue to the country from a larger supply of cheap acid.

2. Copper Mines.

Copper is found in numberless parts of Japan, and is usually of excellent quality. When properly refined, it takes a foremost place amongst the various kinds of commercial copper. It is almost invariably free from the injurious metals, such as antimony and arsenic. The copper ores usually worked in Japan yield from 2½ to 12 per cent. of copper, although richer specimens are also sometimes found.

The annexed list, abridged from Dr. Geerts' report above alluded to, will show the Provinces in which copper is found, and also the class of ore in each separate case; but it must be remembered that most of the so-called mines are exceedingly small, and some of them, indeed, produce scarcely anything at present.

Provinces.	Class of Ore found.
Yechizen	Old and large mines, producing the best copper.
Setsu	Excellent copper, out of copper pyrites.
Sendai	Good copper, out of copper pyrites.
Ugo	Good copper, out of copper glance and copper pyrites; contains silver and gold.
Satsuma, Tamba, Bingo, Kii ...	Out of grey copper ore and pyrites; containing gold.
Iyo	Good copper, out of grey copper ore and copper pyrites.
Hiuga and Awa	Good copper, out of copper pyrites and grey copper ore; contain gold.
Tosa, Bishiu, Mino, Yechiu ...	Good copper, out of copper pyrites; grey copper ore.
Iwami, Yechigo, Omi	Old and large mines; contain gold and silver in considerable quantities.
Sado, Wakasa, Kai, Kaga... ...	Good copper, out of copper pyrites; contain gold.
Tasima...	Good copper; contain silver.
Chikuzen, Iwashiro, Rikushiu Inaba, Hida, Idzumo, Isé Mimasaka, Suwo, Musashi, Kotsuké, Noto, Shimotsuke, Aki, Bungo.	Out of fine copper pyrites; contain some gold.
Bizen, Hiuga	Out of copper pyrites.

I have already stated, on the authority of the Mining Department that the total output of refined copper last year was only 3,000 tons, and yet small as this quantity is, it took probably more than 200 different mines to produce it.

The finest copper mines are considered to be those of Ani in the District of Akita.

The latest returns which I have been able to procure of their annual output are for the year 1872, when it was—

	Piculs.	Tons.
Fine copper	6,647	= 395
Lead	1,773	106
	Kwamme.	Lbs.
Silver	143	1,191

There is little doubt that this production might be greatly increased if a better system were pursued, and foreign machinery introduced. The mines are still worked entirely, it is said, on the old Japanese system, the ore being got at by about three hundred

* *Japan Gazette* of March 25th says that sulphuric acid is now being used.

Original from UNIVERSITY OF CALIFORNIA

different adits, and the present proprietors show as yet no disposition to adopt any improvements.

A singular peculiarity of those Ani mines, is, that while the veins running east to west are rich in copper and poor in lead, exactly the reverse is the case in the veins which run north to south. These latter are rich in lead and poor in copper.

The following is a table of the rates of wages at present paid to the various classes of workmen employed in the Ani mines. It will give a fair idea of the wages usually paid to miners throughout the Empire. The sums mentioned include not only the money paid to each workman, but also the value of the food given to him (usually about 2 lbs. of rice per day, each). It will only be necessary to remember that this is the rate for a northern mine, and that wages are somewhat higher in the south than in the north. A considerable difficulty in the way of getting a perfectly correct idea on this subject arises from the fact that in most mines much of the work is sublet to under-contractors, and there are no means of knowing what wages these men pay to their coolies.

Table of Wages paid at Ani Mines per day.

MEN.

The following account of some copper mines in Yamato has been kindly communicated to me by Mr. Gowland :—

"The only copper mine that I know in the neighbourhood of Osaka, which is being worked vigorously, is situated just within the margin of the mountains in Yamato, about two day's journey distant.

"It may be taken as a specimen of a Japanese mine of the best class, being worked by native methods, producing from 15 to 20 tons of crude metallic copper per month, and giving large profits. Some account of this mine, I think, will be worth considering, as from various circumstances it is doubtful whether European processes would successfully and profitably replace the native methods at present followed. Of course a larger outturn would at once result from the erection of European furnaces and appliances; but a larger investment of capital would be required and the proportionate profits would probably be less.

"The mine is situated in a narrow valley, in the midst of mountains, and at present two passes of nearly 3,000 feet are crossed to gain access to it.

"So narrow is the valley, and so steep the inclination of its sides, that there is no level ground, or ground which could be made so, within nearly half a mile of the mine entrance, upon which European furnaces could be built. All the present dressing-houses, furnaces &c., are perched upon the slopes supported by built up foundations.

"The vein consists of calcspar, quartz, magnetic pyrites, iron pyrites and copper pyrites, the pyritous part varying in width from 18 inches to 3 feet or more, occasionally being split into two veins and often ending abruptly. The vein has but a comparatively slight dip, and is worked by several levels, one lower level being made use of as an adit. No systematic mode or plan of laying out the workings exists, but in whatever direction the orey parts lay, that direction is followed, and those parts only taken out. For a time such a system may pay, but in the end can only result in the ruin of the mine, by rendering the removal of the distant ore difficult or impossible. No attention whatever is paid to the character of the levels with a view to easy 'haulage' or removal of the ore to the surface, a matter of great importance in the management of a mine.

"The levels are driven and the ore removed with the use of gunpowder, the broken down ore being carried to the surface on the backs of men and women.

"The ore on arriving at the surface is broken up with hammers, by hand, the harder and larger pieces being subjected to a preliminary calcination in a large pit about 8 feet deep and 12 feet diameter, with wood for fuel. The object of this calcination is to facilitate the subsequent breaking up of the lumps.

"After remaining in the pit for about five days it is raked out through a hole in the side, and is then seen to be full of cracks and is easily broken. This breaking up by hand labour requires the employment of a large number of men and women, and appears to be a slow and costly operation.

"The ore having been broken up into pieces about the size of walnuts, is placed, with a sufficiency of wood in kilns 5 feet square, with walls rudely built of stone and lined with clay. The calcination lasts fifteen days, but is of a very unsatisfactory character, much of the ore undergoing but slight change in the process.

"The furnace consists of a hemispherical cavity in the ground (1 foot 9 inches in diameter, by 14 inches deep) lined with refractory clay, furnished with two bellows at the back and one in front, also with a thick semicircular lid of clay half covering it.

"The charge weighs about 9 piculs (1,224 lbs. avoirdupois) and is introduced in three parts. The fuel is charcoal.

"The furnace having been repaired and well dried after the 'heat' of the previous day is lighted by introducing some burning embers, together with fresh charcoal, and over this charcoal a third part of the charge of ore is piled, forming a heap; the blast from the bellows behind is started, and soon jets of flame of carbonic oxide make their appearance over the whole surface of the heap, which, gradually melting, subsides into the furnace; the slag is then removed, and another portion of charcoal and of ore piled up as before. When the whole of the charge of 9 piculs has been melted down in this way, the slag is skimmed off, after which the front bellows is brought into action, the blast of air being directed upon the surface of the molten regulus and copper, and a little charcoal added at the side from time to time to keep up the heat. This part of the process is analogous to the 'roasting' of the Welsh method of smelting, and is intended to remove sulphur as sulphurous acid, and so reduce the regulus to metallic copper' In ten hours the charge is worked off, and the copper lifted out in more or less circular cakes by throwing water on its surface and raising the solidified crust with an iron tool.

"The slags produced by the melting down are usually very free from copper, in many cases as much so as European similar slags; they are thrown away. The slag, however, produced during the latter part of the process, when the front bellows is used, is very rich in copper; it is carefully collected and is smelted with the nex day's charge.

"This process has many advantages for a country like Japan, where the means of intercommunication are so bad, and coal is thus unavailable for fuel. Everything required can be made at the mine, and sufficiently refractory clay is found almost everywhere.

"By the native processes above described, copper can be produced in Japan with the investment of less capital and at less cost than probably in any other country in the world."

Having thus laid before you an account of the manner in which copper is procured and prepared in this country, I will next submit an extract from the Report of the Master of the Mint at Osaka for last year, giving the result of various examinations of Japanese copper made by Mr. Gowland :—

"Sulphur, silver, lead, and iron were present in small and varying proportions in every case; in one specimen, however, as will be seen from an accompanying analysis, an extraordinary and abnormal quantity of lead existed.

The whole of the samples were remarkably free from the specially injurious metals, antimony and arsenic, antimony being present in only one specimen, and then only in faint traces, whilst the maxium amount of arsenic only reached ·057 per cent.; and in thirty-one cases (out of thirty-eight tried) it was either absent altogether, or the merest traces only were found.

"The following analysis of a crude copper from Washiu may be taken as fairly representing the average composition of good qualities of Japanese crude copper :—

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"Copper	98·940
Lead	Trace.
Sulphur	·947
Iron	·101
Silver	Trace.
Arsenic	Trace.
Antimony	Absent.
	99·988

"Its composition is thus analogous to that of the purest kinds of unrefined copper of commerce.

"Whilst, as a rule, Japanese copper is exceedingly free from the presence of injurious metals, yet occasionally a sample of low value is met with.

The following analysis of so-called copper from Hishiu is interesting:—

"Copper	58·872
Lead	39·283
Silver	·185
Iron	·083
Sulphur	1·635
Arsenic	Faint trace.
Antimony	Absent.
	100·058"

I must call attention specially to a remark in this Report of Mr. Gowland's, viz., that "Japanese copper when properly selected and refined, should be of high value for electro-telegraphic purposes, where freedom from arsenic and antimony is especially required, these metals, when present, reducing the electro-conductivity to a serious extent."

This is an important fact in the present day, when submarine telegraphy is being pushed to so large an extent, and when the purity of the copper is of such paramount importance.

The question, therefore, of the purity of Japanese copper is of so great interest that I need not apologise for giving another extract on this subject.

Mr. Gowland, while explaining the reasons why Japanese copper wire or copper in other forms is so variable in its physical character, says:—

"The Japanese are unable to produce uniformly by their refining process a pure copper in the technical sense of the term. They can produce a copper as free from foreign metals as we can by our methods of refining and thus far as pure; but they cannot produce a copper which shall uniformly contain just that proportion of cuprous oxide which is absolutely necessary to give maximum toughness, tenacity, ductility, and electro-conductivity, and without which uniform proportion the purest commercial copper is worthless for most purposes. A deficient quantity of cuprous oxide or an excess would equally condemn an otherwise pure commercial copper. The variations in the physical characters of Japanese refined copper, especially in the form of wire, are usually due to excess of cuprous oxide, and not to the presence of foreign metals; the defects, however, produced by the excess of this oxide cannot be remedied by any treatment excepting that of remelting under proper conditions."

Considering the high character given to Japanese copper, it might be expected that a large proportion of it would be exported to foreign countries. Such, indeed, is the case, as will be seen from the accompanying Table which I have compiled from the various Trade Returns of Her Majesty's Consuls.

It must be remembered that the Mining Department value the total output of copper for 1874 at only 900,000 yen (183,750*l.*); and these returns would appear incredible if we did not know that old broken copper from temples, &c., is included in them. In any case, the proportion of exportation to production seems extraordinarily large.

Value of Copper, &c., exported from Japan from 1870 to 1873, according to the Returns of Her Majesty's Consuls.

Year.	Kanagawa.	Hiogo & Osaka.	Nagasaki.	Total in Mexican Dollars.	Total.
	$	$	$	$	£ s. d.
1870	25,250	117,280	1,463	143,993	29,998 10 10
1871	107,471	288,504	20,655	416,630	86,797 18 4
1872	443,378	896,992	12,740	1,353,110	281,897 18 4
1873	206,945	490,025	68,845	765,815	159,545 2 6

N.B.—The Returns for 1874 are not yet complete; but as far as they are made they show a falling off on the exportation of 1873.

Up to the year 1872 the trade in copper was a Government monopoly. There was a provision in the Tariff Convention of June 25, 1866, which was repeated also in the Treaty with Russia of 1867, that copper of Japanese production could only be sold by the Government and by public action. This, however, was abolished in 1872, and the great increase in the exportation of that year was owing principally to the reserves of past years being thus suddenly thrown on the market.

In former times the Dutch factory at Desima used to export annually about 180 tons of copper, which came principally from Osaka.

Osaka has long been, and is still the chief depôt for Japanese copper. Although the best mines are in the northern portion of the main island, the produce is taken usually to Osaka in junks and there sold. It is difficult to understand why this should now be the case, for much time is thus wasted; but the origin of Osaka as the centre of the copper trade arose from the fact of its having been the first place to establish a good refinery.

The principal foreign market for Japanese copper at present is Calcutta. It is supposed to be used there chiefly for household utensils, but I cannot obtain any very satisfactory information on this point.

The present price of Japanese copper at Yokohama is about 19 dollars (3*l.* 19*s.* 2*d.*) per picul. Including freight, insurance, and commission, this would come to about 80*l.* per ton delivered in London.

The following is an estimate of the average cost of producing a ton of Japanese copper according to the present native methods, viz., 190 yen (38*l.* 15*s.* 10*d.*) per ton, of which—

	Per cent.
Cost of ore	... 23
Explorations	... 3
Subsequent treatment of ores, viz:	
Labour	... 46
Material	... 18
Superintendence	... 10
	100

This of course does not include freight to a seaport or other market.

3. Silver and Gold Mines.

Japan possesses both gold and silver although not in large quantities.

As has been already stated, the total production for 1874 was calculated at the Mining Department to be 2,600 kwamme (21,666 lbs.) of silver, and 100 kwamme (833 lbs.) of gold; a small amount, if it be considered that the official list gives the number of mines producing silver at 346, and those producing gold at 89.

The Government possesses silver mines in the Island of Sado off Niigata, at Ikuno in Tajima, and at Kosaka in Rikushiu, all under the direction of foreign engineers. It also works a gold mine at Oogaza in Ugo, under foreign superintendence.

The Sado mines at least would not appear to be a very profitable investment, for I learn from a gentleman who has lately returned from a visit to that island, that although in one year 60,000 yen (12,250*l.*) worth of ore was extracted from the mine, 75,000 yen (15,312*l.*) had to be sent from Yedo in order to meet the working expenses.

Indeed, although much is said about the richness of the gold and silver ores of Japan, I do not believe they are at present of much value; and, as this Report is already growing too long, I will not dilate farther on this part of the subject.

The cost of production, in the native manner of working, is estimated for—

Gold ... 2 yen (8*s.* 2*d.*) per me (58⅓ grains).
Silver ... 96 yen (19*l.* 12*s.*) per kwamme (8⅓ lbs.)

4. Iron Mines.

Proceeding as I have so far done according to the value of last year's production, the next metal to be considered is iron.

The total production was 5,000 tons, and therefore, if we were to take quantity and not value for our standard of comparison, it would come second on the list. Next to coal, iron is the most commonly found of all minerals in Japan.

Iron ore is found in many parts of the country, but the richest mines are in the mountains which run north to Awomori. Besides what exists in the extreme north, the iron ores usually found in Japan are, according to Dr. Geerts,—

"1. Magnetic iron ore, found in large quantities in Harima, Hoki, Satsuma, Idzumo, Wakasa, Iwami, Hiuga, &c. This is the principal ore of the Japanese mining industry.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"2. Specular iron ore, found in Hiuga and other places.

"3. Brown hematite, found in Idzumo, Mutsu, Hiuga, Satsuma, Shinano, Bizen &c.

"4. Clay iron ore, very common.

"5. Stalactitic iron ore, rare.

"6. Iron pyrites, very common."

Of the above ores the first, both in form of sand and lump is the most commonly used in Japanese metallurgy.

The accompanying account of the mode adopted by the natives for smelting the iron ore is also borrowed from Dr. Geerts:—

"After the ore has been selected, it is piled up in heaps with coal and calcined (roasted) in order to expel the water, carbonic acid, sulphur, &c. This calcination makes the ore more porous, and better fitted for the smelting process. This process is done near the places where the ore has been found.

"The calcined ore is smelted in a cylindrical furnace built up with a few hard stones and fireproof clay. The clay is laid in layers till the wall of the furnace has sufficient thickness. The thick bottom of this small furnace has a rounded shape, and a little above the bottom two exactly opposite openings in the wall are made for receiving the tubes of the bellows. Besides, there is a third opening near the bottom, which is closed with a clay stopper, and afterwards is opened to collect the fluid metal in the forms. Now the furnace, previously perfectly dried, is filled with a mixture of coarse powdered calcined ore, charcoal, and some feldspar, clay, or another quartz containing stone. These latter substances are added to act as a flux, and to separate the metallic iron from the impurities which are taken by the slag. Sometimes, but not generally, coal or coke is used as fuel. When the heat produced by the continuous strong stream of air, pressed into the furnace by means of large Chinese bellows worked by four to five workmen, has been sufficient to smelt the ore, the iron will gradually run in a liquid state to the bottom of the furnace, and is cast in sand forms by removing the clay stopper of the lowest opening. The cold metal is sometimes purified by a second smelting in another similar, but smaller furnace, and cast in the desired forms."

Iron being so generally distributed though the country, it is of importance to examine what is being done to develope the output.

An interesting experiment is now being made at Nakakosaka, in the Province of Hitachi, where there is a considerable bed of ironstone, varying from 18 feet to 8 feet in thickness. An English engineer is at present engaged putting up furnaces on the spot for the Japanese owners, and hopes very shortly to be in a position to commence working. The ore is said to be very rich, and merely to require quarrying, as it lies on the surface. This mine has the immense advantage of being situated only a few miles from a navigable river, by which there is direct water communication with Yedo. It is intended to run a road down from the mine to the river, and thus the produce ought to reach a good market at a trifling cost.

I regret being unable to give any more precise information respecting this mine, for the experiment is one of great interest to the future of iron mining in this country; but as yet the works are not completed, and till the experiment has been tested by practical experience, no arguments can be deduced from it.

Another experiment of the same kind is being tried by the Government, at Heigori, in Rikushiu, where there is an abundance of very rich magnetic iron ore. The present mine is situated about 13 English miles § from the port of Kameishi, on the north east coast of the main island, where the anchorage is excellent. It is proposed to run a small tramway, of 2 feet 9 inches wide, from the mine to the smelting works, which would be built on a spot about 2 miles from the sea, and therefore 11 miles from the mine. The line would thence continue on to Kameishi, whence steamers could be regularly despatched to take down the iron to Yokohama, or elsewhere, for sale, and bring back coal from Nagasaki. It may seem odd that, with so many coal mines in the country it should be necessary to send all the way to Nagasaki; but, as I have already explained, no Japanese coals, except those of Kiushiu, can be advantageously used for smelting. It may perhaps turn out that the coal found in the Island of Yesso (at Ishikari and Iwanai) will answer the purpose equally well, in which case, as the distance is so much shorter from Kameishi there than to Nagasaki, it will probably be preferred. There is, however, another circumstance to be taken into consideration, viz., that between Nagasaki and Kameishi the steamers would take cargoes both ways, iron for sale coming down, and coal and stores going up; whereas, if they fetch the coal from Yesso, they would always have to go up in ballast, while other ships would have to be employed to bring down the iron to the southern market. For the present there is plenty of cheap wood to be had in the neighbourhood, which will, of course, be used as long as it lasts; so it will not be necessary to have recourse to coal for a long time yet, and if the Government would only take the trouble of replanting the forests as they are cut down, a continuous supply of fuel might be kept up.

The cost of producing iron at these mines has hitherto been—

	Yen	sen		s.	d.
2 tons of ore, at 1 yen 16 sen ...	2	32	=	9	5
2 tons of charcoal, 2 yen 43 sen ...	4	86		19	10
Labour	0	12		0	6
Superintendence	0	62		2	7
Freight to sea shore	1	08		4	3
Total	9	00		36	9

As yet the annual produce of these mines does not exceed 1,500 tons of pig iron, but Mr. Godfrey expects that when the tramway is finished, and the steamer service with the south is properly organised, he will be able to increase the production immensely. Time will tell how far these expectations will be realised, and in the mean time those interested in Japanese mining will watch the experiment with deep interest.

In the Province of Mutsu are also good copper and lead mines, which might be simultaneously worked; but Government appears as yet uninclined to undertake their exploration, as it would first have to make roads to get at them, and the possible return does not seem a sufficient inducement for facing the certain expense of making roads in such a mountainous country.

5. Lead and Tin Mines.

Lead glance is said to exist in about twenty different provinces, but the annual production of this metal is extremely small (only 185 tons last year). On the other hand, considerable quantities of lead are imported from abroad. In 1873 no less than 84,693 dol. worth (17,644*l.* 7*s.* 6*d.*) were so imported. It seems strange that more use should not be made of the mines known to exist producing this mineral.

For instance, I am assured that there is a fine 4-foot vein in the Hosokura Mine, near Kawaguchi, which is at present barely worked, because the water has got in, and there is not sufficient machinery at hand to pump it out; and also at Hakoosan, a mine which produces only 900 kwamme (a trifle under 3 tons) per annum of lead, the vein is excellent, but there is no ventilation, and the miners cannot work for want of air.

Galena appears to be the lead mineral most commonly made use of in this country, but there are other lead ores also to be found.

I am indebted again to Mr. Gowland for the following interesting description of a lead mine near Lake Biwa, and of the mode of smelting still practised there:—

"The mine is situated in Omi. It is worked by levels driven into the side of the hill, and the water is got rid of by an adit. The levels are driven entirely at random. There are native plans of the mine; but they give no accurate information either as to the direction or extent of the workings. In the harder parts the levels are carried forward with the aid of gunpowder. The vein, which is very wide, dips at a high angle, but is chiefly filled with a blue shaley material, the ore occurring in this usually in thin straggling veins and in 'pockets' very irregularly, associated occasionally with similar veins of calc spar. The country rock is a silicious shale much decomposed and broken up on the surface.

"The ore is galena, intermixed largely with iron ore, magnetic and arsenical pyrites containing also mispickel, and occasionally copper pyrites. The material they were melting at the time of my visit (1873) was of this character, very poor of lead, yielding in the furnace only from 4 to 5 per cent. of metal, from which, however, 8 per cent. of silver is obtained. Occasionally small quantities of a tolerably pure galena were met with. Since my visit they have struck a vein of this richer ore, about 10 inches in thickness, a sample of which I have assayed and found 69 per cent, of lead and 125 oz. 8 dwts. silver per ton of ore.

"Wood is used for fuel in the calcining kilns, and charcoal in the smelting furnaces. The charcoal is that of oak, maple, &c., for although the cryptomeria is the most abundant tree, charcoal made from it is disliked because it is soft and swift burning.

"The calcining kilns are square chambers of 4 feet by 4 feet, and 4 feet deep, open at the top. Their sides are of clay, and usually four or six or more are built side by side in a row.

"At the bottom of the front side of each there is a hole

§ I have just learnt that the iron ore has now been struck at half this distance from the sea.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

which is opened or closed when necessary, according to the rate of the combustion.

"The ore having been previously broken up into small pieces is placed in these in alternate layers with wood. This, the first calcination lasts five days.

"The ore, now only partially calcined, is removed to an adjacent kiln in every respect the the same as the above, and treated in it in the same way and for the same time. Even after this second operation the calcination is but imperfect, the fracture of the pieces often showing unaltered interior.

"The smelting furnace is situated under a rude chimney or hood of wicker work plastered with clay, open on the front side to about the height of 6 feet from the ground, where it is fully 6 feet wide, whilst its back wall screens the men who work the bellows from the heat of the furnace. The bellows, of which there are two, are placed behind the back wall.

"The furnace itself is merely a hole in the ground lined with a refractory clay (an impure kaolin of which there is an inexhaustible quantity in Japan). It is hemispherical in shape, 18 inches in diameter, 12 to 14 inches deep, and almost identical with the furnace used in copper smelting, and, like it, is furnished with a semicircular lid of clay 4 to 5 inches thick. Below the lid, at the back of the furnace, are two holes by which the blast is admitted, the blast being conveyed to these by clay tubes running just below the surface of the ground. The furnace is lined after each day's work, but the lid is only renewed occasionally. A furnace identical with this is used at Osaka at silver refineries for smelting the saturated ash bottoms of their cupelling furnaces.

"The daily charge is 600 lbs. calcined ore, divided into four equal parts; one part being charged into the furnace every hour and a-half, and the whole being worked off in six hours. The furnace having been lighted by introducing a small quantity of ignited charcoal, a quantity of charcoal a little less in volume than the 150 lbs. of ore is filled in, and heaped up above the open half. On the top of this the calcined ore is spread, covering it entirely and uniformly. The heap is then gently patted with a small flat iron tool, and the bellows started gently. Very soon blue jets of ignited carbonic oxide begin to make their appearance, and in a short time are seen to issue from over the whole surface of the pile, the workmen from time to time patting the heap to prevent the formation of hollow places, and keep the jets of flame as uniformly as possible in every part. The heap, gradually becoming less and less in volume, subsides into the furnace cavity, and in about an hour and a-half is thoroughly melted down, consisting then chiefly of slag, with some regulus, a little metal and unconsumed charcoal.

"The unconsumed charcoal is then removed, the slag raked off with a wooden rake, but the regulus and metal are allowed to remain. The slag is usually black, well melted and very clean, it being difficlt to discover any regulus in it.

"Another charge of charcoal is now filled in on top of the regulus and metal, another 150 lbs. of ore spread over it as above described, and the same treatment followed. This is repeated twice more, when the whole 600 lbs will have been treated.

"When the slag from the last melting has been removed, the clay lid of the furnace is taken off, and a little water thrown upon the regulus, which is lifted off in cakes with an iron tool. The metallic lead is then ladled out with a shallow ladle, and poured into a small hollow in the floor near the side of the furnace. The regulus after calcination is mixed with a future charge of calcined ore.

"I had no opportunity of assaying the poor ore treated; but the loss of lead must have been very great.

"The entire charge of 600 lbs. of calcined ore only yielded 25 to 30 lbs. of lead, containing 8 per cent. of silver.

"During the whole process volumes of dense lead 'fume' were given off, and this contained so much arsenic that I am surprised no cases of poisoning had occurred.

"When richer ore is treated, scrap iron is mixed with it, and then the lead and regulus are removed every second 'heat,' that is after 300 lbs. of ore had been melted. The rich ore containing 68 per cent. of lead by assay only yielded 40 per cent. of metal by the above treatment.

"The Japanese method of lead smelting is extremely faulty, and ought to be replaced, as it easily could be, by a more efficient process."

The total production of tin last year having been only 7½ tons, it will not be necessary to tarry very long on this subject.

The only tin mines I can hear of are situated in Bungo and Satsuma, in the Island of Kiushiu, and in Suwo on the main island, but nothing much seems to be known about them. On the other hand, the importation of tin plates into Japan is considerable, and, as it is a trade which has sprung up quite lately it is possible the Japanese may be induced to consider whether it would not be more politic to work their own deposits of tin instead of importing that metal from abroad.

Sulphur is found in Ugo, Echigo, Shinano, Hizen, Mutsu and Osumi. I cannot, however, obtain any estimate of the amount produced, although it is supposed to be considerable. A large quantity of sulphur is annually exported from Awomori to other parts of the Empire.

Quicksilver is found in Hizen and in Rikushiu; but I believe that none of the mines are in work at present. The mine in Rikushiu is said to be a very promising one, but the proprietors seem disinclined to invest any money in it. The quicksilver used in this country comes principally from China. From England 150 lbs. only were imported in 1873.

In connection with the production of metals in Japan, it may not be uninteresting to consider the amount of metals annually imported into the empire. I therefore beg to submit the following Table of the export of metals from London and Liverpool alone to Japan in the years 1872, 1873, and 1874 It is copied from Messrs. James and Shakespeare's Prices Current of January 8, 1875.

TABLE OF EXPORT OF METALS FROM LONDON AND LIVERPOOL TO JAPAN.

Year.	Iron.					Steel.		Copper.	Yellow Metal.		Spelter.	Lead.		Tin plates.	Quicksilver.
	Bar and Bolt.	Sheet.	Hoop.	Rod.	Pig.	British.	Foreign.	Sheet and Sheathing.	Sheet, Sheathing, and Rod.	Nails.		Pig.	Sheet.		
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Boxes.	Lbs.
1872	812	256	226	2,555	120	16	37	...	43	6	63	132	825	2	150
1873	2,131	724	561	3,086	1,196	16	109	5	17	3	5	42	598	2,070	...
1874	2,528	700	105	2,903	1,410	67	49	4	37	4	13	186	507	2,520	...

This Table shows a considerable increase for 1873 and 1874 over 1872 for almost every class of metal, but it is more than probable

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

that is due mainly to the importations of plant, &c., for the new railways, and not to any very much increased demand for metals generally throughout the country.

6. General Remarks.

No regular code of mining laws can really be said to exist applicable to the whole of Japan, although one was prepared and published about two years ago. Since then various local and general ordinances have appeared, and I am assured that on these, and what remains of the law, mining operations in this country are regulated.

There is one point, however, on which these Ordinances leave no doubt, viz., the jealous care with which foreigners have been excluded from all participation in the mining industry of this country.

Foreigners are prohibited both from holding shares in a mine, and from lending money on the security of a mine. Any Japanese mine-owner taking a foreigner into partnership, or giving him a mortgage on his mine, or on the ores raised therefrom, or on the machinery, &c., is liable to have the whole confiscated by the Government.

Foreigners may indeed be employed by Japanese as engineers, &c., to direct the works; but, before signing a contract, the foreigner must write a letter to the Chief Commissioner of the Mining Department in Yedo, stating that he has no share or pecuniary interest whatever in the mine or its produce, and, moreover, that he fully recognizes that, in case of non-payment of his salary, he cannot in any way attach the mine, or any part of the produce or plant, as security for money due to him. If the foreigner does not make such declaration, the contract is illegal, and the Japanese who employs him under the circumstances is liable to punishment.

The right to work mines does not belong to the owner of the soil; for in Japan possession of the surface does not carry with it the right to the mineral wealth below. That belongs by law to the Government, and no ores can ever be extracted without the special permission of the Mining Department. For this permission rent must be paid to the Government, who in return grant leases, usually for fifteen years. These, however, can be renewed, and there is no fee on the sale or the renewal of the lease. No mine can ever be sold without the written consent, of the Minister of Public Works, who before giving such consent, satisfies himself as to the capacity of the new tenant, and under no circumstances can a Japanese mine be transferred to a foreigner.

As a proof of the extent to which the right of the Government to minerals overrides that of the proprietor of the soil, it is only necessary to call attention to the fact that, according to Japanese law if a person who discovers, or suspects the existence of, ores under lands belonging to another person, denounces the fact to Government, he acquires, *ipso facto*, the right to work those ores on lease from the Government, if the surface owner does not choose to do so. His title to this is so complete that, with the consent of the Government, he can dispose of it to whom he chooses (excepting, of course, to a foreigner) in the same manner as any other property.

No general rule can be laid down as to the amount of royalty claimed by the Government; it varies according to the peculiar circumstances of each mine; but there is in addition a fixed universal charge for surface-rent of 1 yen (*1s. 1d.*) per 500 square "*ken*" (2,000 square yards) for all mines except those for iron and coal. On these latter only half that rate is charged, viz., 50 sen (*2s. 1d.*) per 500 square "*ken*." This sum is in addition to the ordinary land tax which would be payable for the lot.

The owners of mines are obliged to send in half-yearly Reports to the Mining Department of the produce of their mines, number of men employed, &c., &c.; but non-compliance with this rule appears to be very general, and I cannot hear of any punishment ever having been awarded for it. An Ordinance has indeed been lately published calling attention to this neglect, and letting mine-owners off the penalties to which they had rendered themselves liable for past negligence in this respect. They are at the same time warned that henceforward the law must be complied with.

An important notification was also published in January last, by which the Government, in order, as is said, to foster and encourage the mining industry of the country, foregoes all payment of royalties, &c., until further notice.

The Law of 1873, which is, to a great extent, founded on the mining laws of Prussia and of Spain, would require for its proper application a far larger number of trained officials than the Japanese Mining Department can as yet dispose of. At present the Department has only twenty-three Europeans in its employment, besides a small number of natives who have commenced studying the modern systems of mining engineering; and yet, with this small scientific staff, it is expected to exercise the most minute supervision over every little detail throughout the three southern islands. This being manifestly impossible, until the staff is very much increased, it would seem a pity to carry centralization to such a point, and it would be wiser to allow greater latitude to individual explorers to carry on their workings as they best can.

Translations, by Mr. Aston, of the Law of 1873, and of the principal Ordinances which have been subsequently published in Yedo, are given in an Appendix to this Report.

A translation by Mr. McClatchie, of an Ordinance respecting the working of mines in the Island of Yesso is also annexed. It has only lately appeared, and would tend to prove that whatever dissatisfaction the present law may be regarded with, it is not likely soon to be altered, as the Government think it worth giving to the Colonization Department the same powers which, in the rest of Japan, are exercised by the Imperial Mining Department at Yedo.

I have now placed before you the chief points which I have been able to gather respecting the mines of Japan; but the question is so vast, and the information even at the disposal of the Mining Department is so incomplete, that I must beg your indulgence for the unsatisfactory nature of this Report.

No geological survey has yet been made, nor do the Government even possess a correct map of the Empire. With the help of Mr. McClatchie, of Her Majesty's Legation, I have endeavoured, by comparison of the best Japanese map with the outline of the English Admiralty charts, to produce a map giving a faint idea of the provinces in which the various minerals are found, and I now annex it to this Report. It is certainly very incomplete, but is the first thing of the kind yet attempted, and must be looked upon only as a sketch. The mines are not always the best or largest, but are those the position of which could be fixed with tolerable accuracy.

In conclusion, I have the honour to state that after careful inquiry, I am led to believe that, although metalliferous ores are found in so many parts of the country, it is extremely doubtful whether there are many of such position, per-centage, and character as would justify the investment of much capital in mining enterprise at present. There are probably some good mines, but I fear they are the exception rather than the rule, and on the whole I believe the mineral wealth of Japan to have been hitherto estimated by the public far beyond its real value. When the country is finally thrown open to foreigners and they are allowed to invest money in mines, there will certainly not be wanting persons ready to venture upon such speculations. Some may, perhaps, be fortunate and strike good veins, but I fear the greater majority will find bitter disappointment, unless they carefully weigh beforehand all the difficulties to be encountered. It is indeed pretty certain that it will be the Japanese, and not the foreigners, who will profit most by the admission of the latter to mining speculations in Japan.

This, however, is no reason why foreigners should be prohibited by law from taking part in mining operations, or even from lending money to Japanese mine owners. Without foreign capital and foreign science, the mines will never be properly worked, and yet it is decidedly to the interest of all parties, in view of the poverty of Japan in exchangeable commodities, that, whatever this source of riches may really be worth, it should at all events be made the most of and developed with the least possible delay.

The object of Japan should be to gain a character for her mineral productions before China enters into competition with her. At present the opportunity still exists, but it is difficult to tell whether it may not soon be lost for ever.

I have, &c.

(Signed) F. R. PLUNKETT.

BRITISH EPISCOPAL CHURCH.

The meeting for the election of office-bearers, &c., took place this afternoon at H. M.'s Consulate. The attendance was very limited.

Mr. R. Robertson took the chair.

Mr. Cargill made a few remarks, pointing out the necessity under the old rules of holding two meetings,—one in December for the reception of the accounts, and one in January for the election of office-bearers. He thought that it would be better to combine these two meetings, as it seemed that all the business could be transacted on the one occasion; and he would propose a resolution to that effect. Another point was, that although the number of the committee elected had been fixed at five, in consequence of the departure of members, it was sometimes reduced much below the original number. There was also sometimes a difficulty in filling up the numbers, whilst at others there were many gentlemen willing to serve. It was, therefore, proposed that a maximum and a mimimum number should be fixed,—six being the maximum number, and three the minimum; and in the event of the number, falling below this latter, owing to the departure, &c., of members, a general meeting should be held to fill the vacancy. Mr. Cargill then proposed the adoption of the following resolution:—

"It is resolved that the third and fourth regulations for the management of the Church affairs, referring to the number of general meetings and the members of the Church Committee, shall be altered to the following effect:—

"3. One general meeting of the British residents is to be held in each year, at such place as the Committee may appoint.

"The Committee will summons these meetings by giving public notice thereof, seven days at least before the day of meeting.

"4. The meeting must be held early in the year, and at that meeting a Committee should be appointed to superintend the temporal affairs of the Church. This Committee is to consist of not less than three, and not more than six officers.

"These officers are to be elected by a majority of the votes of persons present at such meetings."

This was seconded by Mr. A. Wylie.

Mr. A. Winstanley threw out a suggestion that six would be found an awkward number, and that the vacancies should be filled up as they occurred by the remaining members of the Committee.

After a little conversation, the original resolutions were carried *nem. con.*

The meeting then proceeded to the election of office-bearers.

Mr. A. Winstanley proposed that the following gentlemen should be requested to act as a Church Committee for the ensuing year:—Messrs. Cargill, Ness, James, Keswick, J. M. Smith, and R. Robertson; and that Mr. James should be requested to continue to act as Treasurer.

Mr. James having signified his assent, the resolution was seconded by Mr. Wilkin, and carried.

Mr. Robertson suggested that some arrangement should be made regarding a quorum at the general meeting. Under the old rules, the Consul, if nobody attended, could *ex officio* appoint a committee to carry on the affairs of the church; but he thought that now some rule should be made as to the number necessary to contitute a general meeting.

The subject was discussed, as also the fixing of a quorum at the committee meetings. It was, however, judged that this latter should be fixed by the committee itself, and Mr Cargill proposed, and Mr Rickett seconded the following resolution:—

"That in lieu of clause 8, the following new rule be substituted, viz.:

"That whenever seven or more members do not assemble at the time and place appointed, the meeting do stand adjourned to the same day and hour of the week following, and so from week to week until a quorum of not less than seven shall be present.

"The members of the retiring committee to continue in office until a new committee shall be elected."

This was carried.

Mr. Wylie threw out a suggestion of the desirability of having weekly collections. There was a large balance due to the Treasurer, and there were many who did not contribute to the church; whilst by making these small collections every Sunday, not only would those who cannot afford to pay $10 be enabled to contribute, but a considerable sum might be annually realised.

The idea was favorably received by all present, and was left to the decision of the committee.

The usual vote of thanks to the Chairman closed the proceedings.

Correspondence.

THE CUSTOMS' WHARF.

To the Editor of the "Japan Weekly Mail."

Sir.—I would call the attention of the Custom House authorities to the dilapidated condition of the Custom House wharf.

To facilitate the landing of cargo, the authorities some time since erected an iron crane, the foundation of which gave way shortly afterwards, and the crane has been useless ever since. One of the firms engaged in landing cargo offered to maintain it in good order if the Customs authorities would first repair it, but the authorities prefer to see a "dummy" rather than machinery employed for the purpose it was intended.

The wooden derrick, which is the only other means of landing heavy weights, is in a chronic state of inefficiency, and has had to be repaired at the private expense of persons anxious to land or ship their cargo.

The wooden jetties are falling to ruin, and their supports, as they get out of order, remain to the imminent danger of boats discharging. Surely this matter is worthy of attention.

Yours faithfully,

J.

INQUEST.

An inquest was held this morning, at 11 o'clock at the Yokohama, General Hospital, by General Thos. B. Van Buren, U. S. Consul-General; and H. Allen, jun., and H. M. Roberts, jurors, to inquire into the death of Dr. James Vanderpool, deceased, who was found dead in his bed at the Yokohama General Hospital on the morning of the 14th January, 1876.

Niels Nicholayson sworn: I am steward of the Hospital. The deceased was admitted into the Hospital on the 3rd December last; as he recovered, he took an interest in the cases here, and assisted. I thought he was in good health all along, up to within a week or ten days, when I fancied he was under the influence of drink. I did not remark anything to the doctor about it, as it was slight. On the 12th instant, I think, I sent a message to Drs. Massais and Eldridge to call at the Hospital, and take notice of it. On the evening of the 13th instant, I heard deceased return to the Hospital abour 11 o'clock, but did not see him. He went direct to his room, and I heard no more of him till the next morning, about 20 minutes past 9 o'clock, when the Japanese servant reported to me that he was dead. I went to his room, and he must have been dead for some hours. I at once sent for Dr. Eldridge.

W. Brett, sworn: I am a druggist. I have known deceased for three months, and have frequently supplied him with medicines. I knew he was a physician; he used to write prescriptions both for himself and for others. He came to my place on the 13th inst., about a quarter to 7 p.m., as far as I can recollect. He said nothing particular; he said he might set up in the East, but not in Yokohama, as business was so bad. He wrote a prescription, and handed it to my clerk to prepare. My clerk called my attention to the large quantity of chloral that was ordered in it, and I said, "Doctor, what quantity of chloral do you require in this mixture?" He said, "2½ oz.; have not you as much in stock?" I replied that I could supply him with as many pounds. He said, "No, I only want 2½ oz." Of the opium mixture, I told him, I could only supply half. I said, "Shall I send these up the hill for you, Doctor?" He said, "No; I am just going up to the Hospital, and will leave these half way." He said the medicines were for a friend of his. He did not say anything about what the matter was with him. The prescriptions were prepared, and he took them away. I handed the prescription to Dr. Eldridge when he called to inquire what deceased had ordered. The chloral mixture contained 4 scruples of the bromide of potassium, 2½ oz. chloral hydrate, ½ oz. syrup of orange peel, ½ drachm oil of cinnamon, and 4 oz. of water. This was put in a 6 ounce bottle, and made rather more than 5 fluid ounces when all mixed together. We supplied half the quantity ordered of the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

opium mixture. It contained 2 ounces of tincture of opium, and half a drachm of tincture of capsicum. We supplied him with the same thing on the 4th of January. He took the medicines and left my place.

Dr S. Eldridge, sworn; I am one of the physicians attached to the Hospital. I have known deceased since the end of last July. I was called in to attend him professionally; he was suffering from intense nervous depression. Since that period I have known him quite intimately. He was admitted twice to the Hospital,—last in the early part of December; he was subject to periodical attacks of nervous depression at irregular intervals, during which he was accustomed to resort to stimulants. During the intervals of attacks, so far as I knew, he used no stimulants. At these times his system would bear a very large amount of narcotics, and he was accustomed to take them in enormous doses. On the evening of the 13th January, shortly before 7 o'clock, he called at my office, as he was often accustomed to do. I had been waiting for an opportunity to speak to him. I spoke to him as kindly and delicately as possible, telling him that I knew he was at the beginning of one of his attacks or paroxysms of dissipation, or whatever you like to call it. He acknowledged it, but said he had been drinking very little, which, from his appearance and conversation, I believe. He said that he must stop drinking, or he would soon be in a very bad condition; he thanked me very warmly for what he called my friendly remonstrance, saying he had been hoping for several days that I would speak to him, and that he hoped that what I had said to him would stop him on his wrong course. We then conversed generally for a few minutes. He told me that he thought he should leave the Hospital very soon and take rooms either at the International or Oriental Hotel. He then left me, promising to return to the Hospital, and not drink any more. About 10 o'clock next morning (14th inst.,) I called at the Hospital, and was informed of his death by the steward. On entering his room I found that he had been dead for a period not less than three hours. He was in the position of peaceful slumber, but there was marked lividity of the lips, face, and certain portions of the body. I at once examined the articles upon his table and found two preparations, apparently freshly put up; one of which I took to contain laudanum, the other hydrate of chloral. A wine glass containing a few drops of fluid was standing by the mixture containing chloral. These two bottles and this glass [on the table during the inquest] I at once sealed up for examination. The appearance of the body was that usual in cases of narcotic poisoning. The bottles bearing the label of Mr Brett, I called on Mr Brett, and was shown deceased's prescriptions. They were in his handwriting, bearing his initials. They were written with a peculiar red chalk pencil, corresponding with one he had shown to me the previous evening, as a new purchase. To the best of my knowledge the prescriptions are the same as those described by Mr Brett in his evidence. (Two prescriptions on one piece of paper produced. I then proceeded to make a chemical examination of the contents of the bottles which I had removed from deceased's table. I first examined the mixture containing laudanum. As the smell and taste of laudanum are so characteristic I did not examine it chemically, but I measured it and found it contained 1 ounce 5 drachms. The bottle that appeared to contain choral I tested chemically, and found that the mixture in it contained a very large per centage of chloral. I measured the contents of the bottle, and found that there were four ounces in it. One tea-spoon-full would been a safe dose of that mixture. The few drops in the wine glass I also tested, and found them to be the same mixture as that in the chloral bottle. If the bottle originally contained about 5 ounces, and deceased had taken one ounce, he would have taken a dose that would have been fatal in a very large proportion of cases. There is nothing to show that he took the mixture in single or separate doses. The amount that is missing from the bottle would be almost inevitably fatal if taken in connection with the amount of laudanum mixture that has been removed from the other bottle.

Dr. E. Massais, sworn: I am one of the physicians attached to the Hospital. I was present when Dr. Eldridge saw the body of deceased. I heard his description of the appearance of the body, and it is correct. The amount missing from the bottle containing the chloral mixture would be a fatal dose. If the dose of the laudanum mixture, that is missing from the other bottle was also taken the two together would certainly be fatal.

W. Brett, re-called: I recognise the prescriptions; they are the ones I made up for deceased. The two bottles of medicine now shown to me are the ones I gave to deceased.

L. Bonnat, sworn: I know deceased, Yesterday evening, shortly before 7 o'clock, he came to my place, and asked how much I would charge for board and lodging. I told him I would charge $70 per month, Deceased took dinner at my hotel that evening. He said he would send me an answer the next day or the day after about his coming to board and lodge at the hotel. He drank a little claret at his dinner, and afterwards had two drinks.

The following is the verdict:—

We, the jurors, duly sworn to enquire and decide as to the cause of the death of Dr. James Vanderpool, deceased, do find from the evidence that he came to his death on the morning of the 14th instant, from over-doses of hydrate of choral and laudanum, taken during the night of the 13th inst., administered by himself, from preparations made from his own prescriptions. We also find that the prescriptions were perfectly safe if the mixtures should be taken in proper doses known to physicians.

Yokohama, January 15th, 1875.

THOS. B. VAN BUREN,
U. S. Consul-General.

Law Report.

IN H.B.M.'S PROVINCIAL COURT.

Before C. W. GOODWIN, Esq., Assistant-Judge.

Thursday, 11th January, 1876.

HERBERT and AUGUSTA ST. GEORGE *vs.* JAMES and EMMA LOCKYER.

This was a claim for for the sum of $3,000, for five years' salary at the rate of $50 per month, for services rendered.

The following gentlemen were sworn in as a jury:—Messrs. Stewart, Talbot, A. Mitchell, W. H. Smith, and A. Plummer.

Mr Dickins appeared for the plaintiffs, Mr Ness for the male defendant, and Mr Lowder for Mrs Lockyer.

Mr Dickins having opened the case on behalf of the plaintiff, called

Mrs St. George, sworn and examined: I am Mrs Lockyer's sister. I arrived in Japan in 1865 with Mrs Lockyer. I resided in the Camp with her. Mr Lockyer was a sergeant. Shortly afterwards I went to Mr. McKechnie's store. My salary was $20 per month. Mrs Lockyer received my $20. I was there about 15 months. Soon afterwards Mrs Lockyer and Mrs Vincent commenced business. That lasted from 1867 to 1869. Mrs Lockyer then paid off all that was due to Mr Lindau, and she and Mrs Vincent then divided the stock equally. Her reason for dissolving was that Mrs Vincent did no work, and only gave security for the goods. She said she would prefer taking me as a partner instead of Mrs Vincent. I assisted in the store, and Mrs. Vincent did no work. She said I should have an equal share of the profits. Mrs Vincent was away. Many times she said that I should share the profits. I believe she possessed about $1,500 before she went into business with Mrs Vincent. That partly belonged to her, and partly to Mr. Lockyer. She wished to keep the capital out of the business, to be used if they went home. I was daily there, and gave general assistance in the store. There was no wirtten agreement between us, only a verbal arrangement that I should have an equal share of the profits of the business. The business was at first carried on at No. 59, under the name of E. Lockyer & Co., up to 1872; then under the name of A. Ellis, up to March, 1874, when the fire took place, and the house was burnt down. We then opened at No. 80; but there was not any name put up, and the business was carried on there until October, 1874, when it was disposed of to Mrs Smith. While the business was carried on between me and my sister, the property was not insured. I advised Mrs Lockyer to insure. She did not think it necessary. After the fire, Mrs Lockyer said that I should not be a loser, I should have my share just the same. She said she was very sorry that she had not insured. Up to a short time previous to the fire the money in the bank was in my name, but she then requested me to transfer it to her name. She did not give any reason. I wished to keep back my share. Mrs Lockyer promised that she'd return me my share if I gave it over. I asked my friend's advice on the subject.

Mr. Ness objected to the relevancy of this evidence; but Mr. Dickins contended that it was corroborative evidence.

His Honor said that this was only evidence of conversations with others.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

After a long discussion, it was settled that the answer should be taken down.

I did not follow the advice my friends gave me. I trusted to Mrs Lockyer's word. She assured me she would return me my proper share of the money, but I did not like to turn it all over. She seemed very much hurt at my doubting her word, and said she could not cheat me of the money, as she was my partner. After a great deal of persuasion I gave the money up, not having the least doubt but that I should get my share. I was present at some of the conversations with Mrs Smith. We lived in the same house for 15 days while the negotiations were going on. I took part in the conversations, being equally concerned. Mrs Lockyer told Mrs Smith that I was an equal partner, and that of every dollar she had, half was mine. After the transfer of the business, Mrs Lockyer agreed that I should have one-fourth of the amount. The total amount was $16,000. I took one-fourth, because Mrs Lockyer had two children, and she thought that they should have a share also, their father being absent. Mr. Lockyer was away about two years and a quarter, and he returned last year. After his return he asked me what Mrs. Lockyer was going to give me. I said I did not know; she had promised me one-fourth, but she had not given me anything. He said that he would see that I got not less than $4,000.

To the Jury: When the transfer was made to Mrs. Smith I don't know if my name appeared on the deed. After the transfer, I lived with my sister at Yedo. I asked repeatedly for my share. Mrs. Lockyer said it was the same in her name as in mine. The money was in the Oriental Bank. She said if she gave me my share I might go home, and she did not want to be left alone. She gave no other reason. While residing in Yedo she gave me a $1,000 bill; but she took it back again. She said if I went home that was all I should get now. During my stay with my sister, I gave her general attendance in the store, and assisted in the house; I attended to customers, and took in the accounts &c. The day-book was kept by those who made the sales. Mrs Lockyer wrote the business letters. I did part of the needlework, and Mrs Lockyer part. She was often unable to conduct the business, and then I did it. Sometimes she was unable to conduct the business for a long time together. When she was sick, I looked after the house and children. There were three house servants kept, but at Tskidji there was only one. Business letters coming from Europe sometimes came to "E. Lockyer & Co.," sometimes to "A. Ellis." (Parcel produced addressed "Messrs. Lockyer & Ellis.") This came about two months ago.

Mr Ness objected to the reception of this evidence, and suggested that for all that was known, it might have been sent out at the instance of the plaintiff.

Mr Dickins contended that it showed at least that there was a general rumour or impression that there was such a firm.

His Honor ruled that it could not be received, and Mr Dickins' exception to this ruling was noted.

Examination continued: I was married to Mr St. George on the 3rd July, 1875. I had been engaged for about 6 months previously. She did not object at first. She objected about a week before the marriage took place. She wished to have it put off, because she did not want to be left alone, and because she objected to Mr St. George. She was not living with her husband. She had lived apart since he went home in March, 1872. When he came back, he remained in Yokohama, and she in Yedo. On the Thursday before the marriage Mr. Lockyer was in Yedo, at Mrs. Lockyer's house. I had been in Yokohama, and when I came back he was there. Mr and Mrs. Lockyer and Mr St. George and myself were present. Mr. Lockyer said, in her presence, that she had agreed to give me $4,000; then he said I got her to agree to give me that. He said he had come up purposely. I asked him to do so Mrs. Lockyer raised no objection. After the marriage, Mr Lockyer told me to take no legal proceedings, and he would see that I got it. He repeated this very often. I came to your office in September, with Mr St. George and Mr Lockyer. I saw Mr Gibson, afterwards I saw you. Mr. St. George explained to Mr. Gibson about the affair in presence of Mr. Lockyer, who agreed to everything that was said, and he said that he would assist me to get it. I don't recollect anything further that took place. Mr Lockyer said that at the least I should get a salary of $50 per month. The first salary proposed by Mr. Gibson was $75 per month. It was reduced because Mr. Lockyer thought $75 too much, Mr. Lockyer did not make any objection to being made a party to the suit. I never carried on any business in Yokohama as a milliner entirely on my own account. I am not Mr Lockyer's adopted child, nor have I ever received any parental care. I have no reason to be satisfied with the care Mrs. Lockyer took of me. I left England against my parent's wish because Mrs. Lockyer wanted me to come out with her.

Court adjourned till 1 p.m.

Court re-assembled at 1 p.m.

Mrs St. George's examination continued: In addition to the $500 of mine, she (Mrs Lockyer) sold a pony and trap of mine for $275. I had a little money at Hongkong, and she kept it.

Cross-examined by Mr Lowder: I am 21 years old. I have lived with Mrs Lockyer since 1863. I do not recollect my age at that time. I first entered Mrs Lockyer's service in 1869. That was in the month of April. We had an agreement that I was to receive an equal share of the business. I did not put any money into the business. Mrs Lockyer gave me the trap about 18 months before the fire. Mr. Lockyer gave me the pony before he went home. With the exception of clothing, that was the only present I ever received. The piano was not mine, it was put in the house. Mrs. Lockyer supplied me with clothing, but not with pocket-money. A lady at Hongkong gave me the money I had there. Mrs. Lockyer did not state any any particular salary that I was to receive. Mr Lockyer, before he went home, spoke about the salary. Mrs. Lockyer's capital after the fire was about $13,000. I ought to have received a half share. Mrs. Lockyer offered a quarter of that, and I accepted it after some hesitation. After the transfer of the business to Mrs Smith, Mrs Lockyer had $16,000 capital. Mr Lockyer went away on 1st January, 1872. I believe she and Mr Lockyer did not agree, and she wanted him to go away. Lockyer was not a partner of mine. I never objected to the price that Mrs. Smith paid for the business. I asked Mrs. Lockyer to insure the goods. I was very anxious that the business should be insured; I insisted upon it; but Mrs. Lockyer would not allow it. After the fire, I went and lived with my sister in Yedo; I did not pay her for my board and lodging. I used to draw cheques sometimes, but they were always in connection with the business. Mrs. Lockyer gave me a bank bill for $1,000, in Tskidji, Tokio; she took it back from me. This was a kind of stealing. I served in the shop when Mr. Vincent and Mrs Lockyer were in partnership. I thought the partnership would make up for it.

To Mr. Ness: I was about nine years of age in 1863. I did not run away from my parents; I left against the wish of my mother. I did not reach my sister in a penniless condition. I did not pay my passage to Japan. The captain of Lockyer's company paid my passage. I am not sure if I paid my passage. I had not earned a single half-penny up to the time I left my mother's. Mr Lockyer took me from my mother. I was very young at this time. I was away from Mrs. Lockyer for about 15 months at Hongkong. I came to Yokohama at Mrs. Lockyer's request. Sometime after I arrived, I asked my sister to let me go home. Mrs Lockyer supplied me with dress, but it was of a very inferior quality. She did not give me any education. I should have done better, if I had stayed at home. My father was a musician and kept a farm. I never received any salary. I claim as an employé in the store. The agreement was made in our place of business. My duties were not specified. I can't say within two years when this agreement was made. Mrs. Lockyer supplied me with board and lodging and clothes all the time I was with her. I was a partner up to 1874. I never thought it necessary to consult Mr Lockyer. Mrs Lockyer promised me a fourth share of the money when the business was disposed of. I don't recollect her agreeing to pay me a salary.

Re-examined by Mr. Dickins. The agreement was that I should be remunerated with a half share of the profits. I agreed to take a fourth of the money as Mrs. Lockyer lost so much by the fire. I asked for wages as a reward for my services. I never received any money. No one advised me to sue for wages. I thought $50 per month little enough. Mrs. Lockyer never paid a cent for my education, nor did she teach me herself. I don't suppose it (my food, lodging and clothes) cost Mrs Lockyer above $10 00 a month. Mr. Lockyer did not educate me nor act in a parentul manner towards me. Mr. Lockyer was unable at times to exercise proper care over her own children. Mrs Lockyer was quite indifferent to me. She was at times unable to take care of herself. I had to take care of her at times. Mrs Lockyer's children were neglected. Mrs. Lockyer was very unkind to me. She did not seem to be able to take care of her children, even when not intoxicated. Mrs. Lockyer wished me to come to Japan with her as a companion. I came against the wish of my mother, but I did not run away from home. During the passage I slept in

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the cabin with some other ladies We first went to India; we stopped about four months. We then went to China, and from China here. Whilst I was at school at Hongkong, Mrs Lockyer did not pay for me. Mr. Lockyer told me he would see that I got the money without taking legal proceedings.

H. Vincent, sworn:—I was formerly in the 20th regiment. I know defendants. I knew them before I came out here I came out from England in 1863. It was first arranged that Mrs Lockyer should adopt the child in order that she might come in the troop ship. This was over-ruled by the colonel, and she was ordered to return to her mother. By the influence of the officers it was arranged that she should come out as a maid-servant in the cabin. The regiment came up to Yokohama. The women were left, but came up afterwards. I remember entering into partnership with Mrs Lockyer. Mrs. Lockyer told me she had $1,000 herself and that her sister had $500 00. Mrs Lockyer put no capital in this business which lasted till the 31st March 1869. Mrs. Lockyer said she was going to start in business with her sister. During the time I was in business with Mrs. Lockyer Miss Ellis may have assisted. Mrs. Lockyer and Miss Ellis carried on the business up to the time of the fire and after it. I have heard frequently from Mrs. Lockyer that her sister was an equal partner with her. I remember the marriage of Miss Ellis with Mr. St. George. Mrs Lockyer did not want the marriage to take place. I have seen Miss Ellis' name on bills and on the door.

Cross-examined by Mr. Lowder:—Miss Ellis was with the officers' wives on board the troop ship. Mrs Lockyer put no capital in the business. I did not put any in either. When Mrs Lockyer separated her business from mine she had $5,000 worth of stock, and $847 in money. I heard Mrs. Lockyer say that she could not expect her sister to continue working for nothing, and that she would have to reward her. She said she would take her sister as a partner. It did not inconvenience me at all because Mrs. Lockyer left my business. I sold what goods I had left. Mrs. Lockyer told me she would sooner give Miss Ellis $4,000 rather than that she should marry Mr. St. George.

To Mr. Ness:—I do not know if Miss Ellis brought any capital into the firm after I left it. I do not know if any partnership existed between Miss Ellis and Mrs Lockyer. There was a sign-board with "Miss Ellis" upon it. It was not put up immediately I retired. I never heard Mrs. Lockyer say that a partnership existed between her and Mrs. St. George. Mrs. Lockyer said that her offer of $4,000 was on the condition that Miss Ellis would go home and not marry Mr. St. George. Mrs. St. George came to me at No. 85 and told me that her sister was not behaving well to her.

Re-examined by Mr Dickins.—Miss Ellis complained to me about her sister treating her ill; she asked me my advice. She told me she had a cheque on the Oriental Bank for $13,000 and asked me if she would be justified in taking a share. I told her I thought if she took $5,000 it would be a fair thing, but I asked her to consult Mr Kirby who was a practical man.

The Court here adjourned to-day, at 10 a.m.

Wednesday, 12th January, 1876.

Court re-assembled at 10 a.m.

Mr Dickins called—

Mrs. Sarah Smith, milliner, sworn: I took the business over in October, 1874. The negotiations that led to the taking over of that business were conducted with Mrs. Lockyer and Miss Ellis. Mrs Lockyer proposed that I should take over the goods in stock and those to arrive. In every case Miss Ellis was with Mrs. Lockyer. I never saw Mrs. Lockyer alone; they both came together, and consulted one another. Mrs. Lockyer and Miss Ellis together went over the goods, and determined the prices. I was very busy at the time, and trusted entirely to them. Mrs. Lockyer said that of every dollar she had one-half belonged to Miss Ellis; that Miss Ellis was her right hand, and that she could do nothing without her; that she was very sorry the insurance had not been effected, as the fire made Miss Ellis' share less.

Cross-examined by Mr Lowder: I never saw Mr Lockyer about this business.

To Mr Ness: I considered Miss Ellis a partner. I knew nothing of Miss Ellis' and Mrs Lockyer's private affairs, but they seemed to be affectionate. It did not strike me as being anything unusual that they should come together. Both of them said they were equally interested. The first interview took place in my dining room, at about 7 o'clock at night. I objected to take Miss Ellis into partnership. The goods were brought to my house, and measured. Mrs Lockyer volunteered the statement that Miss Ellis was entitled to one-half of every dollar she had, &c., &c. A deed of transfer was prepared. My husband was in Cheshire's office, and know something about such documents. I am friendlywith Mrs St. George. I am not friendly, except in business. I have good reason not to be friendly with Mrs Lockyer, and she knows it.

Re-examined by Mr Dickins: The two sisters acted together in the matter of the transfer.

To Mr Lowder (through the Court). I have $1,500 of Mrs Lockyer's at 12 per cent., and $1,000 due next month. I had in all from the first $4 000 and odd. Miss Ellis has never received a penny of that, interest or capital. I should be satisfied to give the $1,000 I owe to Mrs Lockyer, or to either of the sisters, if it was right. I would much rather Miss Ellis had it.

To a Juror: I should think that Miss Ellis' services were worth $75 a month, and board and lodging. Her services were invaluable.

Mrs F. S. M. Pearson, sworn: I am acquainted with the business of a milliner and dressmaker very well. I know the parties to this suit. I knew the two sisters slightly in 1867, and more particularly in 1869. I knew Miss Ellis and Mrs. Lockyer during the time Mrs. Vincent carried on the business. I recollect Miss Ellis being behind the counter, and serving in the shop, and assisting. I was not very frequently in the house but when I was there I saw Miss Ellis in the shop. I considered the two sisters carried on business together, Miss Ellis had a good deal. The very fullest confidence was reposed in Miss Ellis by Mrs Lockyer. I have seen Miss Ellis effect sales in the store, and go to the Custom House and clear goods. Miss Ellis took entire charge of the store during the illness of Mrs Lockyer. Mrs Lockyer was frequently ill and unable to take charge of the business, and at such times Miss Ellis took entire charge. Mrs Lockyer asked me early in 1873 to assist her sister in the business during her (Mrs Lockyer's) absence in England. I could not, as I had accepted an engagement to teach in a Japanese school. Mrs Lockyer went to England to buy goods, leaving her sister in charge. Miss Ellis' services were worth at the least $50.00 a month, independent of her board and lodging. I always considered Miss Ellis a partner.

Cross examined by Mr Ness: I always looked upon Miss Ellis as a partner, because they consulted together. Miss Ellis always told me that she was a partner. I considered she was a partner up to the end of the time, and never changed my mind on the subject. Miss Ellis told me in June, 1874, that she was afraid she would not get her proper share from her sister. I know Miss Ellis did not draw any salary. I knew she worked in the store, and I concluded from that that she was a partner. From what Miss Ellis told me, I believed that Mrs Lockyer would go into a fainting fit if this claim was pressed between 1874 and 1876. I thought Mrs Lockyer was suffering from heart disease. I think that that is the reason this claim was not brought before. I am very friendly with Mrs St. George. I have had no correspondence with Mrs Lockyer since her sister's marriage. I should say we were not on good terms. I have been on visiting terms with the family; I knew all the details of the household. I never heard of any agreement between Miss Ellis and Mrs Lockyer.

Re-examined by Mr Dickins: I was asked before the petition was drawn up if $50 a month was a proper remuneration.

S. J. Elder, sworn: I am assistant accountant of the Oriental Bank Corporation. I remember a sum of money being transferred from Miss Ellis to another name in 1874. This was done on the 20th February, 1874. The sum was about $8,000. The money was deposited in 1873 at 12 months' interest.

Cross-examinad by Mr Lowder: I should not feel justified in paying any of this money to Miss Ellis. It was passed to another name at the date mentioned.

Thomas James Smith, sworn: I am the husband of Mrs. Smith: I remember the time of the transfer; it was effected by an agreement. Miss Ellis' name does not appear in it. It was handed to me to copy. Mrs. Lockyer has one copy of the transfer, and the Court the other. I went to Hakodate, and on my return my wife told me she had purchased the stock of Mrs. Lockyer. I told her I thought she was very silly for doing it. She said it was to be taken over from both of them (Miss Ellis and Mrs. Lockyer). I asked why Miss Ellis' name did not appear in the document? I asked that question to have things straightforward. My impression was that the stock was being taken over from both of them. Mrs. Lockyer said Augusta was quite agreeable, and that it would be all right.

Cross-examined by Mr Lowder: I never had any conversation with Mr Lockyer about the affair.

To Mr Ness: I have always had Mrs Lockyer's receipts for

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

any money that I paid her. I considered Miss Ellis and Mrs Lockyer as having equal shares in the business. I understood this from my wife and Mrs Lockyer. I hardly knew them before the time of the transfer. I wish I had never seen Mrs Lockyer. To a certain extent, I was taken advantage of by Mrs Lockyer. She told some untruths about the condition of part of the stock.

Re-examined by Mr Dickins: I do not know anything about the private affairs of the two sisters.

Herbert St. George, sworn: I am a teacher of English. I was engaged to Miss Ellis in December, 1874. I communicated the fact to Mrs. Lockyer before speaking to Miss Ellis. She said she had nothing to do with it, and that her sister could do as she liked. We were married on the 3rd July, 1875. During the first half of 1875 Mrs Lockyer did not object to our approaching marriage. Miss Ellis and I had some tiffs at times, and Mrs Lockyer acted as peace-maker One day I asked Miss Ellis if she would like a drive. She said "yes," and I said I would bring the carriage on the following day. When I got to Mrs Lockyer's house I only found Mrs Lockyer's children, who said Mrs Lockyer and Miss Ellis had gone to my house. I went there, and found they were not there. Mrs. Lockyer explained afterwards that it was all her fault, and that I must not blame Miss Ellis at all. I was very angry about the affair. I remember the fire at 60 and 61. I was in the house at the time. On the Saturday following I saw Mrs. Lockyer at M. Orny's store, which was opposite. She was looking over some of the goods that had been saved. She said she had been earnestly requested by her sister to insure, and that it was her (Mrs. Lockyer's) fault that the goods were not insured, and that she would take care her sister did not suffer by the loss. Mrs. Lockyer put down her loss at about $25,000. Mrs. Lockyer first objected to our marriage a few days before it took place. She told me that she was selfish enough to own that she wanted to keep her sister always, and that she (Mrs. Lockyer) hoped Miss Ellis would never marry. I knew of another reason as well, but Mrs. Lockyer did not tell me it.

Mr Dickins wanted the reason given.

Mr Lowder objected to this.

Witness: I am sure Mrs Lockyer wanted her sister to marry another man. He was constantly in the house, and annoying my future wife with his attentions. He made her presents. Mrs Lockyer came to my house a fortnight after I was married. I would not allow her to come in, but spoke to her on the verandah. I taxed her with what my wife had told me, and she said, "It requires a little explanation." I said, "I should rather think it does." I taxed her with allowing this man to pay attention to my future wife,—he being a married man, with a family at home. Mrs Lockyer said he intended to get a divorce, and then he would have married Miss Ellis. I then forbid Mrs Lockyer to ever hold any communication with my wife. Mrs Lockyer then asked my wife if that was her wish, and she said "Yes." I asked Mrs Lockyer why she had been to the Vice-Consul at Yedo, to make a false complaint? She told the Vice-Consul that her sister had taken things away—stolen them,—and wanted a warrant, but did not get it. Mr Dohmen wrote to me to return the goods. Mrs Lockyer denied that she had appplied for a warrant, and begged to be forgiven, as she was mad on that day, and did not know what she was doing; nothing was stolen. I took the boxes to Mrs. Lockyer's house in Tskidji, but she was not there. I wrote and told her that the boxes were at my house, and that she might come up and inspect them. If she did not come up by a certain time, no notice would be taken of her appeal to H. B. M.'s Vice-Consul. (Letter read.) Mrs. Lockyer never came to inspect the boxes. I had conversations with Mr Lockyer about my wife's share of the business. Mr Lockyer said he had persuaded his wife to give Miss Ellis $4,000. This conversation was renewed in the railway station. He said, "Don't sue; if you sue, you must sue through me." Two months afterwards I wrote to Mr Lockyer, and told him it was high time something was done in the matter, and that if he did not stir in the matter I should. (Letter read, also the reply of Mr. Lockyer, who expressed annoyance that he had been written to on the subject) I saw Mr Lockyer afterwards, and went with him to Mr Marks. Mr Lockyer went in alone, and on coming out he told me Mr Marks had said that he would not stir in the matter unless he was paid $200 down. Mr Lockyer would not find the money. From there we went to Mr Dickins' office; I, my wife, and Mr Lockyer went there. We saw Mr Gibson. Mr Dickins afterwards came in. I said I thought it would be better for my wife to sue Mrs Lockyer for a fixed salary,—say $75 per month. Mr Dickins said that it did not matter if we sued for $500 per month, for we should not get more than we sued for. Mr Lockyer objected to $75 per month as being too high, and suggested $50 per month.

The Court here adjourned till 1.30 p.m.

On re-assembling,

Witness continued:—Mr Lockyer asked you about getting control of his wife's money and the children. You replied that you would think over it. Mr Lockyer said he did not think that their mother was capable of taking care of her children, who were running about wild. I received the two telegrams you show me from Mr Lockyer. Mr Lockyer did not express any disinclination to be sued. It was explained to him. I recognize the hand-writing of the letter you show me. It is Mrs. Lockyer's. (read). (Another letter produced and read. It was from Mr Lockyer to Mr St. George in regard to the children.) It is false that I do not possess property worth $500 and that I am heavily in debt. I have had a conversation with Mr Lockyer about this. I asked him about the statement he had made to Mr Lowder to this effect. Mr Lockyer said he had been round the town and that he found I owed $8.

Cross-examined by Mr Lowder:—None of the quarrels I had with Miss Ellis before my marriage were about money. I was not in a position at one time to marry Miss Ellis because I had not enough money. I was in debt about $200.00. I asked Mrs Lockyer's permission in regard to marrying Miss Ellis because she was the elder sister. Mr Lockyer mentioned the sum of $4,000; I did not. I only talked of a fixed remuneration.

To Mr Ness:—My wife never told me that she was a servant of Mrs Lockyer. She told me she was an assistant in the shop An assistant is a servant. My wife told me she assisted Mrs Lockyer as an equal partner. She conveyed the idea to my mind that she had been a partner and not a servant. I consider that she was a partner not servant, but I consider in this case that she can claim as a servant. If a partner cannot claim her share she can sue for wages for her services.

Mr Dickins objected to all the questions of Mr Ness as being leading, and put to confuse the witness. A great discussion followed but His Honour allowed Mr Ness to continue.

Witness:—I believed my wife to be a partner up to the end of the business. My wife said that she was to have half the profits of the business; I suppose she meant from 1869. Mrs Lockyer said that her sister should not lose from her negligence in not insuring. I inferred from this that Miss Ellis had something to do with the business. I did not expect to receive a dowry with my wife. I did not think all along that I should receive money with Miss Ellis when I married her. I thought she was entitled to something. Before my marriage I heard that Miss Ellis had been refused anything by her sister and that her sister was going to sue her. I did not interfere because my wife asked me not to. (Letter from witness to Mr Lockyer read dated, 19th September, 1875.)

Mr Lockyer objected to our marriage. She said "I object to your marrying Augusta." I did not care a rap for the objection I saw Mr Lockyer soon after his return. I understood that he was at variance with his wife.

Re-examined by Mr Dickins:—I got an answer to my letter of the 19th September, 1875, I gave it to Mr Gibson. Mr Lockyer said in it that he had received my letter, and that he wanted keep his promise.

Mr Dickins announced that, closed his case for the plaintiffs.

Mr Lowder said he had a motion to make, and that was that the case against his client be dismissed, as Mrs Lockyer had carried on the business on her own account and there was no evidence to show that Mr Lockyer had anything to do with it.

Mr Dickins resisted this motion. Husband and wife must be sued together. There was nothing to show that they were judicially separated, and they stood in the ordinary relations of man and wife. After much discussion His Honour declined to grant the motion.

Mr Lowder then called

J. Lockyer, sworn.—The 2nd paragraph in the petition is untrue. I have not promised to remunerate Mrs St. George for services rendered to my wife.

Cross examined by Mr Dickins:—I am an old soldier, so far as you say in all senses of the word. I am not a teetotaller. I married my wife out of love. There was very little property in the question. I quarrel with my wife; probably shall quarrel again. I have not lived all the time with my wife. I came to Japan the last time in the month of March last year. I went to Mr Mark's office to try and get possession of my children and the money. I would sooner have the children, but would like both. I told Mrs. St. George to

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

take the children as it would be the last place that Mrs. Lockyer would look for them in. I do not believe that I ever told Mr Crittenden that I would see justice done to Mrs. St. George. I did not tell Mr Esdale that I had offered Mrs St. George $3,000 to compromise this matter. I should like her to receive about $3,000; I told her and Mr St. George so.

The Court here adjourned till 10 a.m. to-day.

Thursday, 13th January, 1876.

Mr Dickins continued his cross-examination of J. Lockyer, sworn: I knew my wife and Mr Vincent carried on business in 1869, and I did not object. I do not remember if I objected to her using the $1,500 in the business. I was always of opinion that the business was mine from 1869 to 1874. I assisted in the business, making out bills, &c. What money I had went to support the house. I have taken proceedings against my wife, to assert my right to the property. I proposed a compromise. It has been agreed to by the counsel for both parties.

His Honour said a compromise had been entered into instead of a judgment.

Witness: I do not know if the compromise is in writing. I know the nature of the written compromise. I instructed my counsel to accept it. I have not seen it.

Mr Dickins called for the production of this compromise.

The opposite side did not object, and it was produced and read.

Witness: The sum of $1,000 mentioned in the compromise to be paid to me, I have not received.

Mr Dickins: Then it is void.

Mr Lowder: It has been paid to me.

Witness: I have always thought that Mrs. St. George ought to get something; but as she has gone to law, she must abide by the result. I know the amount of money in the Oriental Bank in the name of my wife; it is somewhere about $15,000. I have never been separated from my wife by any process of law. I was in England from 1872 to 1874. If Miss Ellis carried on business during this time on her own account, she did it to injure me,—in fact, to keep from me what belonged to me. I understand it to be, that when the money was put in the bank in Miss Ellis' name it was done to keep it from me. $4,000 were lent on mortgage to Driscoll, $1,500 to Mr Smith, some was in the possession of Mr Ness, and the rest in the Oriental Bank. I went to St. George's house to see if he was worth $500. I did not make the statement to my counsel that St. George was heavily in debt. My counsel must have misunderstood me. I am not able to pay $500. I have not received the $1,000 from my wife; I may receive it. Miss Ellis ran away from home; Mrs. Lockyer took some of my money to enable her to run away. I first knew about this two or three months ago. I paid Miss Ellis' passage money to the captain of the ship. £12 was paid by the captain of my company. I had to repay it again. The child was smuggled on board,—I suppose by Mrs Lockyer. From India to Hongkong her food only was charged to me, and the same to Yokohama. I took my case from Mr Ness; he never charged me anything. If Mr Ness is acting for Mrs Lockyer, he is acting in a certain way for me. I have no doubt that the jury will give a proper verdict. When I left the court yesterday, I do not remember my wife calling me a "great fool" for making certain admissions.

This closed the case for defendants.

Mr Lowder then summed up for Mr Lockyer.

Mr Dickins claimed the right to address the jury last. Mr Ness, however, contested this and His Honour decided in his favor.

Mr Dickins then addressed the jury in favour of plaintiffs, Mr Ness replying for Mrs Lockyer.

His Honour summed up the case to the jury, who retired and returned and a verdict as follows:—

We find,—1st, That the defendant, Emma Lockyer, did on several occasions, promise substantial remuneration in the shape of business profits to the plaintiff, Augusta St. George, in consideration of valuable services rendered by her to the said defendant's business.

2nd, That the said defendant, James Lockyer, approved of the promise made by his wife.

3rd, That the sum claimed from the defendants is reasonable.

ONE OR TWO BLUNDERS.

(Saturday Review.)

Mr. Ward Hunt has cheerfully acknowledged that "there may have been one or two blunders" in his department, and it is only too evident that the possibilities of blundering in that quarter are very far from being exhausted. It would be difficult, for example, to imagine a more egregious blunder than Mr. Hunt's attempt to make light of a series of grave disasters. That human beings are universally liable to error is one of the commonest lessons of life. The wisest men will at times make mistakes, and sometime very strange and serious ones. But the difference between a wise man and a foolish one is that, when the former has made a mistake, he knows it, and knows also what should be done to make the best of it, while the other plods on in hopeless self-stultification. It is now quite clear that all the painful experience and instruction of the last few months have been entirely thrown away upon Mr. Hunt, and that, in the fatuity of his imbecile self-confidence, he is quite capable of repeating the errors which he has already committed, should any fresh opportunities be offered. Mr. Hunt apparently knows very little of the depth of feeling—or superstition, he would perhaps be disposed to call it in his jocular way—with which his countrymen regard this branch of our national defences. Yet he might have read in the preamble of the Naval Discipline Act the solemn proclamation by the mouth of Parliament that on "the "government of the Navy, under the good providence of God, the "wealth, the safety, and strength of the Kingdom chiefly depend." It is not with a shrug of the shoulders and the effrontery of a smile that the wrath of a country is to be turned away when it sees its most vital interests jeopardized by a weak and blundering administration; and so Mr. Hunt will probably discover. The Lord Mayor was perhaps in some degree responsible for striking a false note at the Guildhall. When anything goes wrong with a ship, it must necessarily be, in the opinion of the Lord Mayor, the fault not of men, but of the elements. "No man can command the winds and waves, "nor is it possible when a sudden fog arises to devise the means of "getting out of it always with success." There is hardly anything which a Lord Mayor, after dinner on his first day of office, may not say with impunity; but what can be more dangerous than that the head of the navy should countenance such a lesson to the service? It simply means, if it means anything, that naval officers may be as supine and careless as they please, because whenever anything goes wrong they can always throw the blame upon the elements. It is the business of seamen to cope with winds and waves, and if they fail they must show that they took all possible precautions. A fog is not an exceptional phenomenon on our coasts; and it is quite clear that in the recent instance the Real-Admiral and the captains of the squadron generally were either ignorant or negligent of the proper precautions to be taken in such a case, and that the Board of Admiralty, instead of laying down plain rules for the future, has muddled the matter worse than ever, and given the strongest encouragement to commanding officers to evade their natural responsibilities. If Mr. Hunt had had the faintest conception of the elementary principles of discipline, he would at once have caught at this slip of the Lord Mayor's, in order to mark how completely he felt it to be at variance with a sound view of seamanship. He not only omitted to do so, but he took up another hint of his host's, and remarked that, as no lives had been lost in the *Vanguard*, there was reason for congratulation. It may be admitted that the mere loss of the ship is no ruinous disaster for a country like ours; but the serious part of the matter was not the sinking of the *Vanguard*, but the way in which she came to be sunk, and the apprehension which is suggested by the disclosures of the court-martial that another such disaster or worse may happen any day.

It may be very well on a festive occasion to prefer "the bright side" of things, but what ground is there for Mr. Hunt's assurance that, "whenever the occasion may arise, the duty which the navy "has to discharge will be performed, as heretofore, to the satisfac-"tion of the country"? Immediately after the late court-martial the *Iron Duke* ran into the flag-ship of the presiding Admiral, and, though no great harm was done, that was only part of the accident. The "bright side of an unfortunate event" may be supposed to be that it furnishes a warning for the future, and leads to errors being corrected. The logical effect, however, of the Admiralty Minute on the *Vanguard* is to justify a dangerous rate of speed in critical circumstances, and to establish the precedent that an admiral in command who avoids giving orders as to what shall be done may expect, if anything goes wrong, to be screened, while the punishment will fall on his subordinates. It is true, no doubt, that the Admiralty possess an arbitrary power of revising the sentence of a court-martial, and adopting or rejecting, or otherwise qualifying,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

any parts of it, according to its own discretion; but in this case the error was committed of passing a final and sweeping judgment on the strength of a partial inquiry. In fact, in punishing Lieutenant Evans without trial, the Admiralty appears to have broken the law; for the 92nd Section of the Naval Discipline Act, which provides that, when no specific charge is made against any one, all the officers and crew of a ship may be tried together and summoned to give evidence, also enacts that no officer or seaman shall be obliged to give evidence which may tend to criminate himself. Lieutenant Evans was examined without having the usual "friend" at his side, and without any warning that he was practically on his trial. There is a beautiful simplicity in Mr. Hunt's way of minimizing misfortunes. Among other reasons for congratulation derived from the loss of "the *Vanguard* is the proof of the destructiveness of the *Iron Duke*, "which did all that she was intended to do, except, of course (*sic*), "that the ship which she struck was our own property, and not "that of an enemy." But surely the value of a destructive weapon must depend, not merely on its destructiveness in itself, but on the use which is made of that destructiveness for the defence of the country. What was wanted in this case was a lesson to those concerned that ironclads ought to be managed with greater caution; but, instead of this, the carelessness of the Admiral and the general laxity and ineptitude on board the ships are hushed up, and express approval is given of reckless speed and shirking of duty. Mr. Hunt naturally does not share the opinion, which he should remember is not confined to the lay public, that the administration of the "navy is in a state of paralysis, and manifests the existence of great "incompetence and recklessness." He also fails to see that this "paralysing influence is mainly due to his own obtuseness in not being able even now to discover the flagrant errors into which he and his Board have fallen. There is no subject, he says, on which more erroneous opinions are likely to be formed than that of squadron sailing, and indeed this has been strikingly exemplified in Rear-Admiral Tarleton's injudicious orders, and the Admiralty's equally confusing Minute, which certainly does not afford any assistance in unravelling the mystery, but, on the contrary, deepens and complicates it. Again, Mr. Hunt pleads that, if he had acted in accordance with the popular impressions with regard to this subject, he would have done an act of great injustice. But nobody asked him to act on popular impressions. All that has been said is that the Rear-Admiral and Captain Hickley ought to have had an opportunity of defending themselves in a formal manner before a properly constituted court, instead of being absolved from serious charges which were fully supported by *primâ facie* evidence. It has never been suggested that the Admiralty should have taken upon itself to punish those officers off hand, but only that it ought not to have arrested the ordinary course of justice, and stifled inquiry. The impression that the Admiralty is weak on this point is strengthened by the fact that no official notice has been taken of the conduct of the officers of the *Alberta*, though compensation is being paid to the sufferers from the collision in which they were concerned.

It is possible that on a more suitable occasion Mr. Hunt may be able in some degree to correct this inappropriate and illogical defence; but there cannot be a greater delusion than to fancy that public indignation will be appeased by pooh-poohing grave calamities. The passage in which the Premier, in a subsequent speech at Guildhall, spoke of the national strength which would be derived in any emergency from the support of a confiding and contented people, supplies perhaps the most significant commentary on the mischief which is gathering at the Admiralty. Mr. Hunt has at least done an important public service in removing all doubt as to his own hopeless incapacity to comprehend the momentous responsibilities of his position; and there can be no confidence or contentment unless a change is made. The continued administration of the navy by a Minister who can speak as Mr. Ward Hunt speaks of such a disaster as the sinking of the *Vanguard* is nothing less than a public danger.

Shipping Intelligence.

ARRIVALS.

REPORTS.

The Steamship *Belgic* reports: Left Hongkong January 1st, at 3.30 p.m., thence to Lat. 27° N. 124° E. long. had strong N.E. monsoon, with high sea. 5th and 6th inst., experienced fresh southerly winds and rainy. 7th to this port, moderate to strong W. to N.W. winds and fine weather. Arrived and anchored at 7.30 p.m, 8th January. Passed on the 7th at 3 p.m., the barque *Willard*, *Mudgett* of Stockton U.S. bound West, 55 miles S.W. of Oo-sima.

The *Burmese* reports: dropped one blade of her screw in Van Diemans Straits and another while entering the shipping here, and had to be towed to an anchorage.

She experienced strong head winds during the most part of the passage.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS,—To the Proprietors of NORTON'S CAMOMILE PILLS."

August 1st, 1875. 26 alt.

THE BEST INVESTMENT OF THE DAY FOR A SMALL OUTLAY.

And where there is no previous knowledge of the business required, is a Lemonade, Ginger Beer, and Soda Water Machine, as the public taste is so much on the increase for Aerated Drinks. The book of 90 pages of illustrations and information forwarded free.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics and Yarns.—A moderate general demand exists for Cotton goods and Yarns, but prices have not improved. Taffachelas continue to be unsaleable.

Grey Shirtings:—					
7 lbs.	38½ yds.	39 in.	per pce....	$1.90	to $2.20
8 lbs.	38½ yds.	44 in.	„ ...	2.20	to 2.50
8 lbs. 4 to 8 lbs.	38½ „	39 in.	„ ...	2.20	to 2.50
9 lbs.	38½ „	44 in.	„ ...	2.55	to 2.95

White Shirtings:—					
60 to 64 reed	40 yds.	35 in.	nom. per pce....	2.20	to 2.40
Turkey Reds	24 yds.	30 in.	2¼—3 lb. per lb...	0.75	to 1.02½
Black Velvets	... ...			8.50	to 9.50
English Drills	15 lb.	40 yds,	30 in....	3.25	to 3.40
Taffachelas	12 yds,	43 in....	nomy.	2.25	to 2.40

Yarns.

No. 16 to 24	... ...	per picul...	$30.50	to	34.00
No. 28 to 32	... ...	per picul...	$35.00	to	40.00
No. 38 to 42	... ...	per picul...	$42.00	to	45.00
Reverse Twist	... 16-24 ...	„ ..	$34.25		

Woollens.—Only a very small business has been transacted since our last report, and dealings have been confined to *Mousselines de Laine*, more especially plain, while Bradford goods show as yet no sign of revival.

Plain Orleans	... ...	40—42 yds.	32 in....	6.25	to 7.80
Figured Orleans	... ...	29—30 yds.	31 in....	4.75	to 5.25

Japan Rice	... ...	„ ...		3.25	to 3.30
Kerosine Oil	....	... per case ...		2.25	

EXPORTS.

Silk.—Since the 8th instant, arrivals are 60 bales, and deliveries 191 piculs.—Business is much hampered by the increasing pretensions of the Japanese, and there are few buyers in the market.

We leave our last quotations unaltered, with the remark that prices are not only firm but decidedly tending upwards.

A parcel of very good filature silk has been sold at $525.

Tea.—Rather more activity has to be noticed in our market, settlements during the past week amounting to nearly 3,000 piculs.

Prices shew little, if any change from those previously ruling, but the tone of the market is rather firmer.

The *Ukraine* sailed on the 13th instant, for New York direct, and the *Rona* has since been advertised to follow. She will, however, in all probability be the last ship of the season.

Common	... ...	...$12.00	to	17.00	
Good Common	... ...	... 18.00	to	21.00	
Medium	... ...	... 23.00	to	26.00	
Good Medium	... ...	... 27.00	to	30.00	

Fine	... ...	... $32.00	to	34.00	
Finest	... ...	... $36.00	to	39.00.	
Choice	... ...	... $40.00	upwards		

EXCHANGE AND BULLION.

Exchange.—There has been a moderate business doing both in Bank Bills and Private Paper at a slight reduction on previous rates for sterling, but at a considerable fall on last quotations for franc Bills.

Rates close as follows:—

STERLING—Bank 6 months' sight	.....	4s.	0⅝d.
„ Bank Bills on demand	.....	3s.	11½d.
„ Private 6 months' sight	.....	4s.	1⅛d. to 4s. 1¼d.

THE GREATEST

WONDER OF MODERN TIMES!
HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!
HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

May 17th, 1873.

Our CLIMAX COOKING & PARAGON HEATING STOVES, in six sizes, will be found extremely useful in every household, being always ready for use, and saving time and money, coals, trouble of lighting fire, dust, and refuse.

Our HURRICANE LANTERNS are absolutely wind-proof and safe; simple in construction, and give a splendid white and steady light. They are the most serviceable Lanterns for use in Stables, Farms, Gardens, Boats, Cellars, &c.

Having been exclusively engaged in the production of Lamps for many years, the reputation which we have established for our manufactures in America, Australia, China, India, & all other Foreign Markets, enables us to satisfy the requirements of every buyer; our assortment being large & complete in every branch. For brilliancy of light, simplicity and durability of construction, our Lamps cannot be excelled; whilst the style, finish, & decorations are exquisite, & generally much admired. We therefore can confidently invite the attention of all Importers, & in recommending to you the above course, we point to our prospective mutual advantage. Catalogues, containing more than 1,000 Patterns sent free of charge.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 4.] YOKOHAMA, SATURDAY, JANUARY, 22, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

On Sunday, the 16th instant, a farewell dinner was given at Hamagoten to Mr. L. Verny, Director of the Arsenal of Yokoska, whose term of office expires shortly, and to Dr. Savatier prior to his return to France on his promotion to the rank of "Medécin Principal" in the French Navy. They were received by Sanjo, *Daijin*, Kawamura the Minister and Ijoin the Vice-Minister of Marine, Admirals Ito and Akamatsz, Totake the Japanese Governor of the Arsenal, and Mr. Dubousquet who had kindly consented on this occasion to act as interpreter to his countrymen. Madame Verny and Madame Savatier were also invited, and, had they not been prevented by illness from attending, would have been met by the wife of Sanjo, *Daijin*, and other ladies of rank. During the dinner two documents were handed severally to Mr. Verny and Dr. Savatier, one thanking them in the most flattering terms for the services they had rendered to this country during a period of service of ten years, the other conferring on them the newly created order. Handsome presents were also offered to them, the usual toasts were exchanged, and the ceremony terminated in a visit to the adjoining rooms where the works of art intended for the Philadelphia Exhibition were on view.

In the course of conversation, Sanjo, *Daijin*, alluding in flattering terms to the work recently published by Dr. Savatier, on the *Flora* of Japan, expressed a hope that he might soon welcome him back to this country to complete his researches in that vast and interesting field of study. We may add, that, when leaving the Arsenal, Dr. Savatier was accompanied to the pier by the mayor of Yokoska and a deputation from the small village in which his kind acts among the sick and needy will be long and gratefully remembered.

Monsieur Verny, whose presence in Yokoska is still urgently needed, will not leave until the return of M. Thibaudier, who we understand, remains permanently as adviser to the Japanese authorities and supervisor of the foreign element in the Arsenal.

The display of the collection of Japanese manufactures which had been prepared for exhibition at the Philadelphia Centennial Exposition was brought to a close on Wednesday last at Hamagoten, where, for several days previously, it had been open to inspection. It is understood to have been specially prepared for exhibition in America and for subsequent sale in that country, and in view therefore of their destiny the type of the greater number of objects may have been expected to show the impress of a foreign direction or the influence of foreign tastes. But while these are sufficiently manifest, more especially in the exhibits of porcelain-ware, the innovation is characterised by a modest simplicity in design and a prudent and chary use of foreign pigments, which—however hateful to the eye of the connoisseur—recommend the productions to the average purchaser whose taste is formed upon the current forms of European art. We have not had, however, as yet to deplore those excesses which too frequently wound the eye of the dweller in Yedo in the adaptation of our domestic architecture by Japanese householders, where a wall of sky blue relieved by green jalousies, or a brown door picked out with scarlet, suggest a somewhat vivid taste which time will, we trust, correct. The lacquer-ware, which is chiefly of Yedo manufacture, and in almost every case new, forms, we may presume, the chief feature of the collection. The objects are various in design, and show, in their manufacture, much patient execution and good taste in ornamentation. But while the knowlege of this art can scarcely be said to be lost, it is vain to look for those supreme exemplars of skill and workmanship which characterised the highly-wrought *chefs d'œuvre* of former times in the workshops of to-day. The artist of a bygone period worked less for the gold than the smiles of his patron *daimio* and the satisfaction of his own artistic conscience. The measure of remuneration is no longer the same. The workman toils quickly, impelled by the wants of the hour and the haste to grow rich, and copies the designs which a starved imagination forbids his inventing. The producer of to-day is but a mechanic. The designs of the bronzes, chiefly from Kaga but many of Yedo manufacture, are in many cases free and spirited, and exhibit excellent workmanship in their execution. Many of them are profusely ornamented with gold and silver, and represent intrinsically a large sum irrespective of their artistic value. The porcelain comprises choice specimens from the Kioto and Satsuma potteries, chiefly, as we have said, modern, and exhibiting very definitely traces of a later taste in design and colouring. There are specimens also from Hizen and Yedo manufacturers which are extremely creditable, and we venture to think that this portion of the collection will not prove the least interesting to its visitors.

In another department the silk industry is illustrated in all its stages. Embroidery of admirable workmanship, paper, leather, arms and various other manufactures, some of them comprising articles of foreign model, bear witness to the industrial activity of the Empire and to the technical skill of its artisans.

We should wish to speak at greater length of this interesting collection, but the field of Japanese art is limited, and the ground has been more than once gone over in our pages. It is sufficient to say that it fitly represents the art manufactures of this country at the present day, and can scarcely fail to heighten in a sensible degee the attractions of the approaching Exposition.

The appointment of Chen-lai-sun and Yung-wing as Envoys from the Chinese to the American Government is gazetted. They have been raised to the third rank. Yung-wing is already residing in America where he married an American lady, and Chen is at present at Peking, his family being in America—where he has lived for some years and where his children have been educated.

By the latest advices from Peking we learn that the Chinese Government are sending an embassy to Corea. The mission would leave in all probability about the beginning of January, but as it has to travel overland *viâ* Moukden, it will take at least two months at this season of the year to reach the Corean capital. The avowed object of the mission is to convey the Emperor's approval of the nomination of the son of the King of Corea as his father's successor, an approval which was solicited by a mission sent to Peking by the Corean King in September last. It is noticeable that more care has been taken in the selection of the members of this mission than in the case of the envoys nominated to England and America, one of the high officials of the court being appointed as its head, a member of the Hanlin college (presumedly a Manchu). It must not be forgotten than the present dynasty of China springs from that part of Manchuria adjacent to Corea, and must therefore feel a peculiar interest in the Corean question. But it is clear that the Japanese mission will have reached the capital long before that sent by China, and the first news the Chinese Government will receive from Corea will probably be by way of Japan.

By the *Genkai-maru* we have news from Peking to the 16th December. The arrival of Mr. Mori was looked forward to with much interest, but as he would not reach the capital much before China new year, a considerable time must elapse before his negotiations begin. Mr. Mori had charge of the ratified Peruvian treaty which he was conveying to the Peruvian Chargé d'Affairs at Peking.

The Viceroy of Szechuen has memorialised the Peking Government for permission to make a forced contribution from the richer portion of the inhabitants of his province, as the revenue is insufficient to meet the provincial expenditure. The Viceroy of Szechuen is not alone in this respect, for the columns of the *Peking Gazette* show a similar condition of affairs existing in every province of the Empire. Taking this fact with the almost complete annihilation of the Kashgar contingent and other impending difficulties, it points clearly to a crisis in China. Representing as England does directly and indirectly a trade of the estimated value of $250,000,000, she must watch the course of events with vigilance.

The Kobé Regatta Club has forwarded an invitation to the Yokohama Rowing Club to compete at their approaching spring regatta. It is understood that arrangements will be made to send a crew there.

Miss Jenny Claus announces that she will give a farewell Concert in the Gaiety Theatre on Tuesday evening next, the 25th instant. The Concert is under the special patronage of Lady Parkes, Mrs. Bingham, Madame de Struve and several of the ladies of Yokohama.

From the "Japan Mail Daily Advertiser."

In reference to the publication of the *Bankoku Shimbun* we learn that its editor, Mr. J. R. Black, holds a license from the *Mombusho* to print and publish a newspaper in the Japanese idiom. This was granted to him four years since and is not known to have been revoked.

The *Nichi Nichi* has the following on this subject: Mr. Black appeared at the Saibansho for the purpose of answering certain enquiries as to his journal. He assured the officials that it was, unquestionably, his own property.

Hino, the former editor of the *Nisshin Shinjisshi*, was also under examination at the Saibansho on the 14th instant. At the close of the enquiry he was ordered to abstain from affording any assistance to Mr. Black in his present publication.

We are informed by the Agent of the Great Northern Telegraph Company that communication between Shanghai and Nagasaki is now re-established.

The *Akebono Shimbun* says that at a Meeting of the "Free Speech Society" in Tsidji an address was given in Japanese by the Revd. Mr. Verbeck.

Forty officials of the Tôkiô *Fu* were dismissed on the 14th instant.

The *Nichi Nichi Shimbun* says that a medal of merit was awarded at the Vienna Exhibition in last December to a description of *saké* known as *mirin* (a liqueur) made at Nagareyama.

The *Hioron Shimbun* gives the following startling intelligence, said to have been received by telegraph. Mayebara has left Choshiu and, it is rumoured, has gone to Satsuma. His force of 1,000 men joined to the 50,000 followers of Saigo may effect some good for Japan.

The *Choya Shimbun* writes:

We have already referred to the house of one of the *Sangi* having been surreptitiously entered a few nights ago. We have since been informed that his life was in great peril, though he fortunately escaped. The police are understood to have Kido, Ito and Okubo under their special protection. A few students of Kagoshima and Shirakawa *Ken* have been arrested on suspicion.

Kido is said to have recovered from his indisposition on learning that Inouyé was appointed Vice-Ambassador to Corea.

General Saigo, we read in the *Hochi Shimbun*, has received the appointment of Vice-Commissioner to the Philadelphia Exhibition. The articles will be sent from Japan about the end of February.

The *Hioron Shimbun* understands that an official from each department was called to the *Daijokuan* on the 28th of last month. They were informed that the greatest correctness in their yearly statements would be on this occasion required from them, as any inaccuracy would draw down upon their departments the unfavourable comments of the newspapers.

The Messageries Maritimes steamship *Tanais*, with European mails to the 5th December, left Hongkong for this port on the 17th instant.

The *Choya Shimbun*, referring to the ferment caused by the publication of the *Bankoku* newspaper, gives the rumour that the former office of the *Nisshin Shinjisshi* has been prohibited from publishing it.

Mr. Mack, chief-officer of the British ship *Parmenio*, was found dead in his cabin on Sunday morning last, having expired apparently suddenly. On *post mortem* examination by Dr. Wheeler, the cause of death proved to be the bursting of an aneurism of the abdominal aorta.

Intelligence has been received at Tokio that the mission despatched to Corea had arrived at Tsushima, and had again left for the Corean Capital.

The Government has determined, it would seem, to put down the *Bankoku Shimbun* with a high hand. Not only has its publication been formally protested against, and, it is said—we know not with what truth—the assistance of the British Minister invoked to this end, but the street vendors will meet with every obstruction and, it is rumoured, even subject themselves to arrest. The *Nichi Nichi*, writing on the subject, says that a person whom they had detailed to visit its office and report upon the proceedings of the journal found only a few coolies there. On further enquiry he was informed that four of Mr. Black's *employés* had been summoned to their respective police-offices, and there ordered to abstain from affording him any assistance in the production of his newspaper. The Post Office refuses to receive it.

The former residence of the *daimio* of Kaga at Itabashi, Yedo is about to be converted into a gunpowder-mill for the War Department.

A sub-department of the War Office has been formed at Shimonoseki, in order to facilitate the transaction of business in connection with Corea.

Yamagata, Minister for War, left Yokohama by the *Costa Rica*, yesterday for the South.

According to the *Hochi Shimbun* the Tokio *Fu* has requested the assistance of the British Consul at Yedo to suppress the objectionable *Bankoku Shimbun*. The reply may be imagined. But it was pointed out that the publication of slander would render its editor subject to punishment, and that redress in such case could promptly be obtained.

The *Nichi Nichi* relates the arrived at Fusan in Corea of the Japanese Envoy and Vice-Envoy. They sailed from Tzushima on the 15th instant at 7 a.m. and arrived in port at 4 p.m. on the same afternoon. The fleet consisted of eight steam-vessels.

Another complication is reported by the *Hochi Shimbun*. The game of billiards, or rather the modification of the game played by the Japanese, has been interdicted in Osaka in consequence of the gambling to which it it gave rise. Driven out, however, from the native district, the gamblers have taken refuge in the Foreign Settlement, where, under the protection of the owners' names, they are able to continue their play without molestation.

It was reported on Wednesday, in Yedo, that an influential member of the Satsuma clan has been arrested for conspiracy against the life of one of the leading members of the Cabinet belonging to the same clan.

There is a rumour afloat—in which, however, we should be dininclined to place any faith—that the Government, finding itself so much embarrassed by the newspaper press, has determined to put a stop to the publication of all journals for the present.

The *Choya Shimbun* alludes to a project for settling the island of Yezo with Chinese immigrants. Okamoto, an official of the Government resident in China, has been applied to to procure immigrants. As yet, however, only about ten Chinese have volunteered. It is understood that the hardy natives of Northern China are chiefly in request.

The Revd. G. Cochran delivered a lecture yesterday evening at the Gaiety Theatre in connection with the Young Men's Christian Association. Sir Harry Parkes occupied the Chair. Mr. Cochran took for his subject "An unchallenged Evidence of the truth of Christianity." This he affirmed to be its power over the lives of men, the conviction it produces in their minds, and the influence it exercises over their hearts. He illustrated this by short historical sketches of the lives of several eminent Christians, embracing St. Paul, Augustine, Wilberforce, Jonathan Edwards, John Wesley and Chalmers, and made many biographical references with the same end in view. From the power of Christianity to produce such characters, and their intense conviction of what they felt to be its realities, Mr. Cochran deduced the conclusion of the truth of the Bible and the religion whose doctrines and records it contains. The lecture, which was impressive and eloquent, and was delivered with great vigour and ease, was listened to with the greatest attention by a numerous audience. At its termination Sir Harry Parkes warmly expressed the satisfaction with which every one must have heard the lecture, thanked Mr. Cochran in the name of the audience, and concluded a short but earnest address with an expression of hope that he would take steps to have the lecture published.

An illustration of the severity with which the Japanese Government intends to visit breaches of the press laws is furnished by the case of Kato, the editor of the *Saifu Shimbun*, who has been condemned by the Court to a punishment of three years' imprisonment. As his seclusion, however, will not debar him from the exercise of his pen, and his journal—a new publication—may be expected to profit largely by the fame of his martyrdom, it may be doubted whether the mode of punishment is the best adapted to the end in view. Mr. Kato feels, not improbably, that he is not paying too highly for his advertisement.

THE *BANKOKU-SHIMBUN*.

THE Japanese Government will do well to move with some care and circumspection in the matter of the *Bankoku Shimbun*. It is a delicate case; one which may easily be settled, we are disposed to think, if handled with discretion, but which will give trouble if treated from unsound or narrow ground.

Let the case be put in an abstract form, thus:—A is a British subject residing in Japan under the protection of a treaty which makes him amenable to the laws of Great Britain, and only to those laws. He thinks that a newspaper published in the Japanese language will prove a profitable enterprise, he purchases the necessary plant, engages translators, assistants, compositors and workmen, sets up his presses in one of the foreign concessions, and issues his journal. The freedom in respect of the expression of opinion guaranteed to him by the laws of his own country is practically absolute. But, in Japan, the Press is subject to control. It is forbidden—unwisely and unjustly as we have recently contended—to criticize any law; and this prohibition would apply, most probably, to reflections on the state religion. Generally speaking, however, we believe that press control is necessary in the present condition of this nation, and have fully and repeatedly given our reasons for thinking so. Is A, under these circumstances, to make his journal the possible channel for the dissemination of opinions subversive of the constitution and polity of this Empire, in defiance of its laws, and to the prejudice of the cause of good government? Is it to be tolerated that, in virtue of a clause in our treaties intended for wholly other purposes, he should be protected in undermining the laws, beliefs and traditions on which the very constitution of society in this country rests?

The question demands a careful answer, which certainly does not lie on the surface.

First, its speculative side must be shortly considered. And here it might be contended that as the improvement and progress made by this country during the past sixteen years have been brought about by external causes, which have admitted of a great admixture of good and evil, its future advance will probably depend upon the continued existence and operation of similar causes of an equally mixed character. It has modified its laws. Why? Because they were inconsistent with a nation in this advancing condition. Its old religious beliefs are visibly, perhaps rapidly, crumbling away. Why? Because they have been brought into contact with opinions which acted upon them as destructive solvents. Its form of government has changed. Why? Because its old form was incompatible with the new relations to other forces and conditions upon which it has entered. All this speculative writers foresaw fifteen years ago. Will any one be found to contend that there is no need of vital and organic change in the laws, the social and moral condition of this country, before it can realize some of the more advanced aspirations of its leading men even at this moment; and how much more advanced will these aspirations be twenty years hence, if all goes well? Yet it is certain that all this advance has come about owing to the play of 'subversive' opinions. And who is to be the judge of what are and what are not subversive opinions? The Japanese? How can they tell whether they may not be resisting some of the most wholesome and beneficial opinions which could be offered them? Ourselves?—that is, of course, foreigners. Apart from all other questions, the idea is monstrous that we should constitute ourselves judges, except from a purely speculative and critical point of view of what is,

or is not, fitting in relation to the polity of another nation. The thing is impossible.

In his own country an Englishman might assail its form of government, its religion, laws, or social economy, to almost any extent he pleased. He might preach principles which, if applied in practice, would abolish the Monarchy, the Church, the laws under which property is protected, under which family life is kept sacred, and, shortly, under which our whole polity has become, and is, what it is. He might gain thousands or tens of thousands of readers, and might write with so much force, eloquence, animation and logical precision as to convince these readers that the constitution under which they lived was the worst, the most corrupt, unjust and wicked which human ingenuity ever formed for making the few rich and powerful, and keeping the many poor and weak. Nor need he be a bad man to do this. Let any one read PLATO's *Republic*, or Sir THOMAS MORE's *Utopia*, and he will see that two of the best and wisest men who ever lived constructed their ideal form of government on a basis from which the institution of property, as the possession of the individual, was entirely eliminated, under the conviction that it is the cause of all the evils which afflict society. The Pantisocracy of SOUTHEY and COLERIDGE, the doctrines of OWEN and FOURRIER, and even the actual practice of the early Christians, exhibit the same views in regard to property; and looking to the facts of life, the wealth of the few and the little happiness it brings them on the one side, and, on the other, the misery, vice, degradation and poverty of the many—a condition of things inseparable from the economy of the wisest and best governed existing states—it is easy for a good man to believe, and, in his opinion, his imperative duty to contend, that the benevolent purposes of a loving Creator are absolutely frustrated at present, and will remain so, by the wickedness and rapacity of the few who are in all countries the depositaries of power, so long as the institution of private property exists. It is perhaps as well to say—so perverse and inconsequent are some readers—that these views seem to us utterly inapplicable to the known constitution of human nature. But very wise and good men have thought that human nature itself might be greatly modified for the better by the application to society of laws radically different from those of any existing polity, nor are we at all prepared to contend that this is not so.

But various phases of opinion may be reflected by newspapers. Some American Missionaries at Kobe are engaged in the publication of a journal which, with secular matter of a useful nature, will certainly combine more or less religious teaching, distinctively coloured with the Christian theology and breathing the Christian ethics in every line. So far as we know, the Government has, with equal liberality and good sense, shewn no disposition to interfere with the project. But nothing can be clearer than that the teaching of such a journal will be subversive of old beliefs and destructive of old foundations. That it will replace these with something much better, we fully admit, and that the best interests of the Government and the nation—judged even from the lowest grounds of political expediency—will be subserved by the continued publication of the journal, admits of no doubt whatever. It will inculcate obedience to authority, the active and passive virtues, filial obedience and piety, honesty, purity of life and even of thought. It will replace ethics which at their very best are narrow and egoistical, which are most incomplete as regards the Family, and scarcely possess a trace of what we call the claims of Humanity, by an ethical code which is not alone individual but social, and in its majestic and loving comprehensiveness teaches the brotherhood of all men and the fatherhood of GOD. Our firm belief is that the acceptance of the religion taught by CHRIST has become a political necessity in this country, and that the worthy men engaged in the project of editing this journal at Kobe will be found among the best allies of this Government. But the clauses in our treaties which protect them in their labours would equally protect a journal devoted to the destruction of all religion and subversive of the principles of good government. As matters stand at present, one can claim as much protection as the other.

Second: the practical side must be considered. Our own laws, as we have said, guarantee us practically an almost entire freedom from press control, and every believer in constitutional government holds this liberty very dear. The question of language goes for nothing. If a man choose to put his ideas into Chinese or Japanese or Turkish, there is no law to forbid his doing so, and we fail to see how, under extra-territoriality jurisdiction clauses, he can be prevented from publishing in any one of these languages, in the Empire of which it is the vernacular, anything which he could write in English. But does it not seem, is it not in fact, monstrous, that any one should claim the protection afforded by these clauses to violate in a foreign country laws which are not only the laws of that country, but which many of us believe, ourselves among the number, to be mainly just, and necessary for its well-being and good government? The fundamental idea contemplated in the making of a treaty between two nations is, that it should operate for the equal good of both, and, when it fails to do this, adjustments of it are demanded by every principle on which justice is based. We would have no narrow or sentimental views taken of what this 'justice' demands and dictates. But, assuredly, the Christian conscience may be trusted in this matter, and the Japanese need have no fear that any one of the Christian countries would wrong them on this head. They will do well, however, to remember that a large spirit of liberty inheres in the very constitution of the western secular mind; that it contemplates, provides for, and encourages a wide dissimilarity and divergence of opinion; and that it not only believes, but has demonstrated, that freedom is the root, and its growth the outcome and measure, of all vigorous and noble life among men and nations. If well-founded representations are made to the British, or any other, Minister, that any one of the subjects or citizens of the State he represents is engaged in the promulgation of doctrines or opinions which, from a practical point of view—for this is how it would be dealt with—have a tendency to subvert order, or to destroy the friendly relations existing between the two nations, that Minister would be equally bound and willing to take some steps which would prevent such acts. If, on the one hand, he stands as sentinel over the rights of his nationals, he is equally the guardian of those principles of amity and justice which his Sovereign or Ruler regards as the bases of the relations existing between the country he governs and that to which his Minister is accredited.

If the Japanese wish to deal with this matter successfully, they will not do it by petty repressive measures which interfere between the subjects of an alien state and such of their own subjects as may be hired by him on his lawful business—admitting for a moment some difficulty in giving a definition of the word 'lawful' acceptable to both sides. This might involve them in unpleasant dis-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

cussions and plausible claims. Both may be avoided by letting the newspaper take its chance as a commercial speculation, and not interfering with it unless it publishes matter which constitutes a valid ground for diplomatic intervention. But our readers must see that although we have shewn some of the difficulties which interference involves, our opinion is decided that the Japanese, and they alone, ought to be the judges of what should, and what should not be published in this Empire. They might judge most unwisely for themselves, but this has nothing to do with the question.

But does not all this seem to point to the necessity for some understanding between the Japanese Government and the Representatives of the Treaty Powers, which will place the whole question on a reasonable and satisfactory basis? The difficulties of arriving at it are undoubtedly very great. But surely they are not insuperable. And is not the question one of the very first importance?

THE MINES OF JAPAN.

MR. PLUNKETT'S Report to H. B. M. MINISTER on the mines of Japan, published in these columns last week, is by far the most complete paper on this important subject ever yet laid before the public. The materials it embraces have been gathered from many and authoritative sources, it has been carefully compiled, arranged with due regard to order and clearness, and forms a very valuable contribution to the economical statistics of the Empire. That we should have allowed it to appear without making some few remarks upon it was due to a desire to place before our readers last week the fullest and most accurate information we could obtain regarding the Estimates, which had the prior claim in point of time and urgency—a plea which we trust will not be without weight either with the public or the author of the paper we propose now shortly to consider.

The first point which must strike the reader of MR. PLUNKETT'S Report is the vast disparity between the number of mines now being worked and the quantity of mineral produced from them; and when we further reflect that of the total production of last year, valued at £752,818, six coal mines alone gave a yield of the value of £398,125—or more than half the value of the total mineral production of the year—the conclusion is forced upon us that either this country possesses far smaller mineral resources than is usually supposed, or that the processes employed here in mining are miserably defective. Taking the total number of mines at 1856, and deducting these six, we find that the remainder only yield an average yearly value of £190. Mr. PLUNKETT shows, however, that what is dignified by the name of a mine, and ranks as such in the official enumeration, is often little more than a hole dug in a hill-side, from which a ton or so of ore is extracted at greater expense than gives any promise of profitable working, and which is soon abandoned for another attempt equally, but not more, remunerative.

The list of mines given in this Report reveals a great variety of very valuable mineral deposits. Besides the gold and silver mines from which, if we recollect rightly, Dr. GEERTS says not much more can be expected, and the mines of the more useful metals, there are deposits of petroleum, cobalt, salt, alum, various marbles, agate, amethyst, rock crystal, plumbago and antimony. But, of course, these products—except perhaps petroleum—are the mere redundancies of a prodigal Nature, and must not be allowed to divert attention from the true sources in which the future wealth of this country must be partly sought. These are its coal, iron and copper deposits, the former only now beginning to contribute towards this wealth, the latter, although worked for many centuries, yet still rich and practically inexhaustible.

Regarding the former, the island of Kiusiu seems to contain the most important deposits, which have, so far, been worked with the greatest success at Takashima. The output from this mine is at this moment about 500 tons a day, though there are good reasons for believing that an exceptional strain is just now being put upon the works. We see no reason, however, why it cannot be maintained. If a ready market for all of it cannot be found in this country, the great steam traffic on the China coast or the Yang-tsze-kiang would make but light of it. Nor indeed does there seem any good reason why Japan should not supply the whole of the East with fuel—at least as far as India, if not even India. Its average cost, according to Mr. PLUNKETT, may be put down at 6s. 5½d. per ton—at the pit's mouth we presume—and this low price ought to ensure the command of the market for some thousands of miles westward. Whether the straw-bag, in which the coal is packed, and which is said to be a source of expense peculiar to Japanese coal-owners, is in any sense an eternal necessity dictated by a severe sense of propriety in the mineral, is a question beyond our power of solution. Either there is in other countries an equivalent expense, in which case the Japanese coal is not exceptionally burdened for the means by which it is rendered portable, or the coal-owners can devise some expedient to dispense with it.

Advancing to the 2nd section of Mr. PLUNKETT'S Report we come to the Copper Mines, in connection with which it may not be forgotten that Dr. GEERTS, in his instructive paper on this subject laid before the Asiatic Society, said that much as these mines had been worked, there was abundant evidence that the country possessed vast untouched deposits of this metal. Mr. GOWLAND'S account of the mines in Yamato, embodied in the Report, is interesting as tending to show that it is doubtful whether European processes of working them and smelting the ore, would prove more profitable than the native methods. He admits, indeed, that a larger outturn would result from the erection of European furnaces and the use of our appliances, but thinks also that the profits on the working would be proportionately less. On the other hand, he shows that the absence of scientific method in extracting the ore threatens the speedy ruin of mines which, if more methodically worked, might long remain profitable. Science is economy in the long run; but it is expensive, and there is so little spare capital in the country that we can hardly wonder that improvement is slow.

In view of the exceptionally excellent quality of Japanese copper and its applicability to purposes of submarine telegraphy, the richness of the copper deposits, and the large profits which accrue from working them, this industry does not seem as vigorously pushed as the interests of the country demand.

The Gold and Silver mines may be passed over. They are but poor at best, and unless rich they rarely pay for working. Individuals may and do make fortunes at this work, just as curates may become bishops. But the chances are many to one against them. It is a well known fact that the gold produced in Australia during the last twenty years has never paid the cost of extracting it, much as the immigration it caused has benefited the country. The Sado mines are as little profitable, according to Mr.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

PLUNKETT, for in one year they produced gold to the value of £12,250, while £15,312 was sent to pay the expense of extracting it. Whether Governments on this side of the world grow rich by processes which would beggar individuals on the other side, is a question somehow connected with the longitude; but on general grounds we should gravely doubt it.

Passing on to the Iron mines, it is clear that ore of an exceptionally fine quality abounds in the country, but owing to many of those causes which have retarded its progress in other directions—the want of roads, capital, scientific appliances, &c—the iron industry is now only in its infancy. The total quantity produced last year was only 5,000 tons, so that 7,500 tons had to be imported from abroad, though Mr. PLUNKETT suspects that this demand was due rather to the wants of the Government for railways and other purposes, than to any increased use of the metal throughout the country. From a calculation of the cost at which iron may be manufactured at the mines at, or near, Kameishi,—for a rich deposit of ore has lately been struck nearer the sea than the old mines—it is clear that no imported iron could compete with the native production made and brought to market under moderately favourable conditions. Unfortunately, the coal hitherto used at Kameishi has had to be imported from Nagasaki; but if the Ishikari or Iwanai deposits of Yezo are found suitable for smelting purposes, the cost of production may be considerably reduced.

The account given in this Report of the Lead and Tin mines is as interesting as the other portions of it, and adds to the weight of evidence proving how insufficient and unsatisfactory are the mining processes at present pursued in the country.

But it is in the 'General Remarks' made by Mr. PLUNKETT that we find the most valuable and interesting part of his Report, because they condense into a small space reflections suggested by a great deal of information derived from the best sources and sifted with great care. It is clear that no great extension of the mining industry of the country can be hoped for under the present laws regulating it. Some small progress is being made here and there, and this will continue to increase slowly. But it will remain small so long as foreigners are excluded from investing their capital in mining speculations. "Without foreign capital and foreign science," says Mr. PLUNKETT, "the mines will never be properly worked, and yet it is decidedly to the interest of all parties, in view of the poverty of Japan in exchangeable commodities, that, whatever this source of riches may really be worth, it should at all events be made the most of and developed with the least possible delay. The object of Japan should be to gain a character for her mineral productions before China enters into competition with her. At present the opportunity still exists, but it is difficult to tell whether it may not soon be lost for ever." These words may fitly attract the serious attention of the Government, and demand full consideration in the broadest light.

The articles intended for Philadelphia were again exhibited on Sunday and Monday at the Palace at Hamagoten. A large number of visitors, almost exclusively Japanese sub-officials, were present yesterday.

The *Akebono Shimbun* has heard that there were arms of the value of 70,000 *yen* on board the *Osaka Maru* when she went down. Their value is generally supposed to be much greater.

FOURTH REPORT OF THE POSTMASTER GENERAL.

THE change in the fiscal year made by the FINANCE MINISTER, the purpose of which was explained last week, has of course been carried through all the departments of the administration, and the POSTMASTER-GENERAL has published the Report of his department up to the 30th of June last. Thus it is on this occasion, like the estimates published on the 20th April last, an account of only a half-year's working. Future Reports will summarise the history of an entire year.

It is impossible not to regard the publication of these Reports with satisfaction, and we wish all the departments which involve new forms of enterprise in this country would adopt the same means of letting the public know what progress they are making. Why not a Railway and a Telegraph Report? It may be very untrue, and we dare say it is, but the public is apt to suspect that there is nothing to be very proud of in a department when it issues no report of its yearly work. These papers are good because they form milestones on the road of progress, and often spur slow or indolent men into vigour and activity. They enable observers to mark the direction and speed of advance. They necessitate keeping up the pace or showing good reasons for slackening it. They keep public interest alive in new enterprises, and carry with them an air of work, intention and progression. They enable those who believe in a cause to put them forward as evidences of their belief and to gainsay objectors, and though they do not always reveal everything—which by rights, however, they should do—they make departments vigilant in order to avoid errors which subject them to public criticism.

Now, all these things are done by the Report before us, which records the progress of one of the most flourishing of new Japanese enterprises—for practically it is quite new—made during the half year ending the 30th June 1875. In the early history of a department like a post-office, which has been formed rather to anticipate and encourage the public wants, than to provide for wants actually existing, there is always a tendency in the expenditures to exceed the revenues. And accordingly we find that the expenditure of the department exceeds its revenue by 23.3 per cent, a fact not in the least to its present discredit, but which should disappear in the course of time. Although in the early stages of postal reform the balance will generally be on the wrong side, there is no reason why a government should not regard its post-office as a good source of revenue, provided it finds that the business of the office thrives well under its tariff. The cause of post-offices is the cause of education, of advancing commerce, of more closely interwoven national and domestic life, of advancing intelligence, of stronger emotions and more satisfaction for them. But some small proportion of all these things is not unrelated to that luxury which is always a fair subject for taxation; and where revenue is so hard to come by, and every dictate of sound policy points to the reduction of one huge tax, which is not only the main stand-by of the Government, but is certainly of a precarious nature, there is no reason why the post-office should not be regarded as a future source of income to the state. It is only right, however, to say that this cannot be the case for many years yet in Japan, during which time the Finance Minister will have to make regular provision for expenditure on this account.

As the whole Report of the POSTMASTER-GENERAL has already been placed before the public through other channels, we shall not trouble our readers with all the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

statistics. Some of them, however, may be recorded here as worthy of note.

The increase of letters, newspapers, books, patterns &c. carried in 1875 is 23.3 per cent over those carried in 1874, and 13.3 per cent over those in 1873. The increase in newspapers alone is 40 per cent over 1874, and 615 per cent over those carried in 1873.

The mileage of mail routes in operation within the Empire shows an increase of 98.1 per cent over that of 1873.

During the half-year of the Report 205 new Post-offices, 86 stamp agencies and 27 street letter boxes were established, and there are now 3,449 post-offices, 703 stamp agencies and 573 street letter-boxes in the country, besides 83 branch offices established in large cities for special purposes.

The Depredation and Loss-list is as follows, nor, in view of all the circumstances of the case, does it seem excessive, especially seeing how many of the lost letters were found and restored.

The number of letters stolen during the half year was 6,305. Of these, 5,633 were regained and have been delivered intact; 280 were broken and defaced so that they could not be returned, and 292 were actually lost. Of the latter number 9 contained currency to the amount of Yen 39.37, of which Yen 36.50 were restored, the person who stole them having confessed and returned the money. The balance Yen 2.87 was lost. Eighty-two (82) letters were lost in the course of delivery or transmission. Of these 71 were regained and delivered, and 11 were actually lost. One hundred and sixty-nine letters were carelessly detained by letter carriers, but were after, some delay, delivered to their addresses.

Of course the POST-MASTER GENERAL refers to the fact that England and France have not thrown themselves into the postal arms of Japan with that affectionate confidence which characterised the artless action of America in the same matter. The simple fact is that these two nations have a hatred and dread of 'hugger-mugger,' and the Americans here may thank their good fortune that the reticence complained of has been a sharp and powerful spur to the Japanese to bring their Post-office to its present efficient condition. We all know that the divine right of kings was in their eyes a right "to govern wrong," and the POSTMASTER-GENERAL complains here that privileges, which certainly would have been used in a similar manner, have been taken and withheld from the Japanese by these two wicked sisters. We do not wish to be discourteous, and if there were any pretty equivalent for the word 'stuff,' or any gold-leaf in which we could wrap it without certainly subtracting from its value, we would gladly use it. But there is not. Without sufficient evidence that the Japanese could manage a Post-office in all its branches, these two countries would not, on any theory of procedure known to them, have been justified in entrusting to them so delicate and weighty a duty as the management of the inward and outward mails of their subjects in this country. All this tight-rope dancing of America to the piping of Japan, is very pretty and gracious and pastoral. But it is not business. Look at a letter which appears this very week in our columns showing how Mr. FISH's pliant, but fallacious, doctrines work. It is England for the most part which has to do the unpleasant and invidious task in the East of paring down oriental illusions to western common sense and practical every-day working bearings—a task for which she is abused by everyone. We have argued that the time has come when the Japanese may claim to have proved that they can, with the assistance of foreign experts, manage their Post-office with such efficiency as guarantees to foreigners the requisite security that their mails will be properly managed. But as to any abstract right to that which would inevitably have involved intolerable practical wrong, we deny the slightest foundation for it. The measure of the power to discharge such a duty is the measure of the right to undertake it, and until the existence of this power was proved, it would have been insanity to admit the claim referred to.

But we do not wish to make the Japanese out of humour at the end of an article which records the solid progress of an important department of their administration, or to betray any such humour ourselves. The hope we have expressed before, that they might soon gain their point in this matter, we now repeat, because they seem to have qualified themselves for the duties it imposes. The compliment which the POSTMASTER-GENERAL pays in his Report to Mr. BRYAN we believe to be thoroughly well deserved, and it is very largely owing to his assiduity and activity that the claim urged by the Japanese to manage the foreign mails is now endorsed—as we think it generally is—by the foreigners resident in Japan.

SPIRIT OF THE JAPANESE PRESS.

SUMMARY OF THE YEAR 1875.

("Niehi Nichi Shimbun" of January 4th, 6th and 7th 1876)

To day, for the first time in 1876, we resume our pen, and whilst we record our opinions on the various discussions (of last year) we must not fail to be guided in our present and future policy by reviewing tha nature of the changes made by the Government during the whole of 1875.

We have enjoyed the advantages of the actual working of the Postal Convention with America from 1st January 1875. Owing to America, indifferent to the vacillation of England and France, having consented to the Postal Convention, we have been freely enabled to carry on correspondence at home and abroad by means of Japanese Postage stamps. We must say that this is a most important step towards enabling our countrymen to acquire equal power with foreigners. At the commencement of its working it seems that there were foreigners who scoffed at the undertaking as being a mistake, but as soon as its advantages were made apparent this style of argument was silenced, and the justice of it was universally admitted. As the advantages of the Japanese Post are known to every one we will not detain our readers by useless talking. Because Yeki-Tei Riyô (General Post Office) transacts such important business, the Government, on the 20th November, raised it to a first class Department. We must say that the immense prosperity to which the Post Office has risen in the course of a few years is due to the ability and labours of Mayeshima Mitsu, its superintendent.

The most important things in which this Post Office is concerned are the steamers which carry the Mails across the seas. The Kwaiso Kaisha and Yubin Kisen Kaisha were first established, but the actual power over the coast and foreign services was chiefly in the hands of the P. M. S.S. Co's steamers. On the 13th January the Japanese Government gave the Mitsu Bishi Company four steamers as a subsidy, and the Company, having commenced to run steamers once a week between Yokohama and Shanghai, clashed with the P. M. S. S. Co. In September the Mitsu Bishi Co. was increased by fourteen Government vessels and 250,000 *riyos*, which caused the journies to and fro on the Japanese coast to become more frequent. At this time the P. M. S. S. Co. and Mitsu Bishi Co., for the sake of emulation, reduced the fares and freight and each company showed a desire to ruin the other. Previous to this the P. M. S. S. Co. intended to sell the Japanese Government the line between Yokohama and Shanghai, and arrangements were opened, but for some reason the time was postponed, and in October it was sold at an adequate price to the Mitsu Bishi Co. Of course the money for which the P. M. S. S. Co. sold the line was lent to the Mitsu Bishi Co. by the Japanese Government. (The proof is that, in the estimates for 1876 there appears a

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

loan of 800,000 *yen* to the Mitsu Bishi Co.) Accordingly even the conveyance of English and French mails between Yokohama and Shanghai is entrusted to the Mitsu Bishi Co. Not only has the power over the coast service been recovered, but it will be a great step in the future towards extending the convention to the conveyance of mails of foreign countries.

The complications arising out of the Formosan Expedition were brought to an end in 1874, but as its origin was mixed up with Loochoo there must have been important documents connected with it last year. The Japanese Government, in the 1st instant, kindly aided the relations of the unfortunate Loochooans who had fallen into the poisonous clutches of the Formosans, and having sent a steamer to the *han* of Loochoo they shewed a considerable amount of kindness. But Loochoo, according to old custom, kept faith with the two countries to which she was subject, Japan and China, and sent tribute to the Emperor of China and received the announcement on white paper of the death of the old Emperor and that on red paper of the accession of the present Emperor. The Japanese Government despatched the Naimu Daijô, Matsuda Michiyuki, to Loochoo to give notice of the proclamation relating to the abolishment of the custom of her being subject to both countries, to the revision of official regulations, the inspection of the laws, and the stationing of troops in Loochoo. Whereupon, the Loochooans were divided in opinion, and without coming to any decision they accepted the proclamation in its entirety. But Shimbô, the son of the King, was lately sent to Yedo and made a grievous petition that the old arrangement should not be changed. According to the street rumours the Government openly told them that they certainly would not accede to their pitiful petition. But last year we were unable to learn the facts. If we carefully review the various arguments, men of ability in the best societies are firm in saying that the best plan for the Government is for the present to leave the Loochoo *han* as it is, since the advantages gained by interfering with it would not counterbalance the loss of labour and money.

Assemblies were held at Osaka in January last year. As these Assemblies were formed in fact of two or three influential men and distinguished samurai who had retired from office, they were not likely to influence the prosperity or downfall of the country, but if we investigate the real truth the changes made by the Government last year had their origin in these assemblies. At that time the two Sangi Okubo and Ito went westwards on public business and sojourned at Osaka. Mr. Inouye also starting from Tokio, Mr. Itagaki from Kochi and Mr. Kido from Yamaguchi, met at Osaka for a short time. If we look at the result of their transactions, there must have been some (other) influential men among those who met together who persuaded them to proceed to Osaka. Now the attention of every one is directed to *samurai* of distinction whether they be in office or in retirement. Though these five men differed in station of life, their popularity sufficed to enable them to stir up men's minds. Their arguments were strong enough to make changes in the Government. How can it be said that these Assemblies, private though they were, had no concern in Government reforms? Much less could they have affected the Government if they had been originated at the spur of the moment and not long previously. It was owing to the result of the proceedings of these Assemblies that Kido and Itagaki were again appointed to office. After this the Genrôin and Daishinin having been established by the illustrious Imperial Edict of the 10th April, they petitioned for the establishment of a Constitutional Government. When politicians were deliberating as to what constitution should be given to the Genrôin, the *Hôseikiyoku was newly created within the Sei-in, shortly after the organization of the Genrôin. On the 5th July when the Emperor proceeded to the Genrôin to perform the opening ceremony, we heard that the subject of determining the powers of officials was only discussed, and we failed to notice that it displayed the real character of a deliberative assembly. In August the house was closed on account of the hot weather; the debates ceased and it seemed that it was intended to do nothing more last year. Meanwhile the only business the Government did was to determine that men of the rank of Kuazoku should be members of the Genrôin, to order the commencement of a building for the Genrôin and to appoint two Kanji.

With reference to the administration of justice the Japanese Government on the 22nd February permitted the public hearing of plaints. The duties &c. of officials in the Daishinin as well as in all the Courts were determined, and Supreme Courts were established at Yedo, Osaka, Nagasaki and Fukushima (this will afterwards be moved to Miyagi); regulations for deciding cases in circuit courts were framed and a mode of procedure for people bringing cases and petitions was determined. Finally in September five minor Courts were established in Yedo, and a distinction was made between directing the friendly settlement of disputes, and regular legal proceedings.

Now and then there were persons who were not satisfied with the judgments given, but we must say, if we look at all the departments of law, that during last year great advancement has been made in legal powers. The proclamation relating to the establishment of Courts in Kagoshima, Yamaguchi and Kochi, came out in the early part of December, but their working will be seen this year.

If we review the finances we must say that, as far as monetary matters go, 1875 has been a period of poverty throughout Japan. Owing to the bankruptcy of Messrs. Ono & Co. in November, 1874, Mitani, Shimada and Enomoto, well known merchants in Yedo, failed in succession afterwards. There was no advantageous circulation of capital, and although branches of the Suitôriyo† were established at Osaka, Kokura and Sendai they were only beneficial for the exchange of Government money.

Among the taxes on commerce established by the Government the most noticeable were the revised tax on the manufacture of wine and the tax on tobacco. By an edict of March 24th the office for the revision of land-taxes was instituted in connection with both the Home office and Treasury with the object of revising the taxes throughout the country this year.

Silk-worms' eggs which form an article of export having been burnt in Yokohama in 1874, a determination was come to, and the regulations of a company for the production of silk-worms' eggs were issued in February, and the rules of an office where the members of the guild met were arranged. Accordingly the production of inferior eggs was prevented and the quantity for export was previously determined, but in the autumn and winter of last year the price of silk-worms' eggs in the Yokohama market was unusually low. Again a great loss was felt in this trade and the distress was very similar to that in 1874. The quantity of tea exported last year exceeded that in 1874.

As the export of coin was very great in the beginning of spring, politicians gave their whole attention to this subject. As to the cause of this—because foreign silver had its own way in the Japanese market, a design was formed to repress the foreign dollar by increasing the weight of the silver *yen* and coining a trade dollar. But as in the amount of imports and exports the imports were large, and the exports small, it was found impossible in business to prohibit the export of coin.

Nothing was done last year in the matter of the Revision of the Treaties for which we had been previously waiting, but foreign intercourse in the main was extremely friendly and we must confess that since the signing of the Treaties we have not had more quiet times. (We make an exception in the case of China and Corea.) The British and French troops who had been stationed in Yokohama for over ten years had been from time to time reduced in number, but, the flags of both their countries still waving on the heights, it seemed just as if a detachment of troops had been planted on their own territory, and there could not but be an appearance of our independent country's renown being as it were somewhat damaged. But our intercourse with foreign powers being fully ripened, the whole of the troops of both countries were withdrawn from Yokohama at the close of February 1875. If we look at this carefully from the point of our desiring to place Japan on an equal footing with other

* Office for upholding the integrity of the law.

† Office for the peceipt of taxes.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

powers, how important a matter is this withdrawal of foreign troops!

The discussions on the boundaries of Saghalin which had frequently arisen between Russia and Japan for the last twenty years were brought to a close by the Treaty signed at St. Petersburg on the 7th May 1875, whereby the exchange of the Kurile Islands for Saghalin was made. Some people will argue that this transfer was wrong, but, if we rely upon the majority of arguments, it appears that this settlement is a sure means of warding off future misfortune. We must say that the ratification of this Treaty is an especial proof of the ability displayed by the Minister Enomoto in his foreign dealings.

Complications arose some years ago with Peru owing to the coolies who were brought in the *Maria Luz*, because she was carrying on a traffic in slaves, and the case having finally been submitted to the Emperor of Russia for arbitration, it was settled, by his decision on the 24th May, that the Japanese Government, in their action, in that matter, were not responsible to Peru, and we therefore maintained our national credit.

The limits of religious toleration were greatly widened last year. At first when the Daikiyôin, for the union of the Shintô and various Buddhist sects, was established, believers in different tenets were assembled, and in order to create a uniform religion it was desired to found three articles to be taken as the standard of religion, but it was found that these articles were not instruments for transmitting religious belief. The priests of the Shinshu sect therefore earnestly desired to separate themselves from the Daikiyôin, where but a nominally uniform worship was practised. This was called the secession of the Shinshu sect. The Japanese Government having noted in detail the good and evil of this mixed establishment (Daikiyôin) abolished it by edict on the 2nd of May. After this, on the 23rd of the same month, the prohibition against cremation was withdrawn. As the burial service was one of the ceremonies of religion, people were allowed to bury their dead in what way they liked, provided they did not transgress moral laws.

Now that the Christian Religion is not distinctly forbidden by law it appears to be tacitly acknowledged that any one may follow it at his pleasure. Persons in the first stations of life have now come to believe in this religion, and the number of believers in the Protestant, Catholic and Greek sects is daily on the increase. As spectators of this we are glad that so long as the believers in this religion do not violate the laws of the country, the Japanese Government do not swerve from the great principle of reluctance to interfere with it.

Included in a branch of the Nichirenshu is a branch called Fujiu fusei. In July a priest named Nisshô asked permission of the Government to bring it into prominence. It is said that under the Tokugawa rule this Fujiu fusei sect was prohibited as practising evil doctrines. The priests of this branch of the Nichirenshu considered it bad and often memorialized the Kiyôbusho, but neither permission nor prohibition has yet been been accorded. This will be settled this year.

The eighteen Kurile Islands which were received in exchange for Saghalin which was transferred to Russia, are attached to the Hokkaido and placed under the jurisdiction of the Kaitakushi. The Kaitakushi have worked with considerable diligence to make the Hokkaido prosperous, but owing to southerners, when sent to a cold northern district, suffering from the climate, we are extremely sorry that success proportionate to the labour is not yet visible. If we look at the present condition of the Hokkaido it seems that there is some likelihood of its becoming a colony. How is this? The Kaitakushi, by making a law whereby soldiers must cultivate the ground, by determining the amount of taxes on Imports and Exports, and by superintending the telegraph line of the Hokkaido, appears to be distinct from the Government of Japan. When the assembly of local officials was held last year the head of the Kaitakushi did not take his seat with the others. Consequently the people are more and more impressed with the belief that the Hokkaidô resembles the territory of a colony, as its Government differs from that of the *Fu* and *Ken*. We believe that as the land is extensive and people few and everything in its infancy, that this state of things has unavoidably come about.

With reference to the various discussions in the Tsuruoka *ken* (the former Shonai *han* and afterwards the Sakata *ken*), after the memorial of Mori Toyemon of the said *ken* had appeared in the papers in May 1875 a general discussion arose on its merits. Discussions were held everywhere and the popular commotion was great. Because the Genrôin sent Numama Moriichi, a Gondai Shoki, to Tsuruoka to examine Mori, the people waited with outstretched necks to see what course the Government would pursue. After this, from the time Numama returned to Yedo until now, the Government has done nothing, and people have been disappointed in their expectations. Street reports state that Numama, when he went to the Sakata *ken*, had no authority from Government to enquire into the matter and that therefore it is a subject for government enquiry. Also that the new regulation of the Genroin, whereby it only receives memorials touching laws and sends those touching plaints to the offices whose duty it is to investigate them, took its origin from this affair. It is also said that the Government intend to put a stop to the power of the Genroin examining memorials. We were not able last year to obtain any certain proof as to which report was true or which doubtful. The editors of the *Hochi* and *Akebono* papers were accused during December of having calumniated the *Kenrei* of Tsuruoka, Mishima Michitsune, and punished with one month's imprisonment and 200 *riyos* fine in accordance with the 4th clause of the 1st Article of the Law of Libel.

The Assembly of Local officials commenced on 20th June and concluded on 17th July. In accordance with the edict of May, the heads of the *Fu* and *Ken* as well as their Representatives met together for twenty days in a temporary parliament held in the hall of Honguanji in Asakusa, Tokiô. On account of the smallnes of the place the newspaper writers were not permitted to be present and listen, but fortunately we were able to obtain particulars of what was done from the daily minutes of the Assembly printed by Government. The subjects to be decided on were local police regulations, construction of dykes, taxes on roads and bridges, regulations for the assembly of *Kucho* and *Kocho* in the various *Fu* and *Ken*. When the Japanese Government were first framing laws for popular assemblies, the *Chiji* and *Kenrei* were asked whether popular assemblies elected by suffrage should be established or assemblies of the *Kucho* and *Kocho*, and the majority decided that an assembly of *Kucho* and *Kocho* would be the best? Those whose minds are bent on restoring power to the people are by no means in favour of the determination come to. At the close of the Parliament the Japanese Government divided the duties and land taxes into two divisions—old provincial taxes and *Fu* and *Ken* taxes (August 8). Local inspectorates of police were established (October 28).

The reform of the administration in these important matters is the result produced by this parliament. The rules for the assembling of the *Kucho* and *Kocho* had been sent in to the Government, but they had not been adopted during last year. Moreover we heard a report that town and village assemblies elected by vote had been established by this parliament, but we do not know at present how the matter will turn out.

On the 28th June 1875, the *Daijô Daijin*, Sanjo Saneyoshi, issued a proclamation about the Law of Libel and the Press-Laws to the people of the Empire of Japan. We must say that the working of these laws will be one of the most important matters when one comes to write the history of the progress of Japan in future years. Moreover the issue of these laws first distinguished the Government as an enlightened one. Politicians have never ceased from clamorously arguing for and against these laws. Supposing they have not been the means of repressing the heat of discussions, we do not care to mention the amount of injury they have done to public newspapers, as people have seen this for half a year.

By an order of the 30th June, the Government also forbade officials to write about business with which they were entrusted, and have it printed in the newspapers. We are of opinion that this caused the stoppage of the newspaper which had been published for two or three years by the Minrokusha, a company of well known *samurai*. On the 3rd September, the Government revised the regulations

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

relative to publishing books. On the 12th September, it prohibited the publication in newspapers of public correspondence relating to the business of the various departments and, on the 28th October, prohibited the sale of immoral books, which transgressed Articles XII and XIV of the Press regulations of the 31st August 1876. As the above Law of Libel and Press-Laws are made for our benefit and that of other newspaper companies and are so important that they cannot for a moment be disregarded, we extracted the passages which we could not understand and having affixed our seals to them, made enquiries at the Naimusho, but the latter office returned our paper of questions saying that it was not their business to give explanations. As Narushima Riuhoku, the head of the *Chôya Shimbun*, had formed the idea of writing a history of recent events, he made enquiries about it, but he also had his questions returned by the Government as they said that it was not their duty to explain the laws in detail to their subjects. Accordingly proprietors of papers were driven to interpret these deep and terse laws according their own ideas, and they caused trouble to the laws courts by unwittingly transgressing them and there was no end to imprisonment and fines. How sad it is in these glorious times to have to live as it were suffering from the merciless blasts of an autumn wind!

During the greater part of last year the Government was earnestly petitioned in the matter of the Shizoku surrendering their incomes, but this was prohibited for a time by an edict of the 14th July. After this, in Sept., the Government paid the incomes of Kuazoku and Shizoku in money instead of rice, and on the 10th November drew up temporary regulations. On the 9th December the Government revised the income tax and on the same day levied a tax on honorary incomes. Discussions on the subject of feeding Kuazoku and Shizoku who gave nothing in return, were universal. Persons who looked at the present state of the finances discussed the subject of reducing incomes and the mode of dealing with Kuazoku and Shizoku.

Was not the payment of incomes in money and the revision of the income tax the best course for the Government to pursue in dealing with them? We heard previously that the Government thought of paying incomes in Government debentures, but we did not notice that this was done last year.

As the Government managed matters connected with the various *ken* well, we need make no particular mention of these. Only on September 5th the Miyodo *ken* was divided and Kagawa *ken* established. On August 21st, the Sakata *ken* was changed into the Tsuruoka *ken*. On November 22nd, Midzusawa *kencho* was moved to Ichinoseki and the name change to the Iwai *ken*. On December 10th, the Oda *ken* was abolished and made one with the Okayama *ken*.

The resignations of the Sadaijin, Shimadzu Hisamitsu, and the Sangi Itagaki Taisuke, were accepted October 27th. According to popular report, before this, after the assemblies at Osaka, it was intended, in order to divide the legislative from the executive power, to prevent the Sangi performing the double duties of heads of Departments and members of the Cabinet. Although the Genrôin had been established, the *Sei-in* established the Hôsei Kiyoku, and having assembled distinguished men of learning made them members of it. This department is really concerned with laws and is a necessary department, but persons who are unacquainted with the real intentions of the Government think that they have instituted this office as a check upon the *Genroin*, and that the Government cannot help disliking to divide the legislative from the executive power. These two Sangi petitioned for this division to be made. Parties for and against this appeared in the Cabinet in October. These parties clashed more and more with each other, and at last they sent in a strong memorial to the Emperor about the *Daijin*. At this time people were in a fever, not knowing what changes would take place in the Cabinet, nor what new laws the Government would create. The resignations of the two *Sangi* appear to have arisen from the discussion on the division of the double power of the *Sangi*, but people had nothing trustworthy to rely upon. Persons of ability will probably know the reason.

On the evening of the 28th September, the Government received information by telegraph from Nagasaki that the *Unyôkan* had been fired upon by the Coreans in the Bay of Kôkwa. People in town and country were agitated and there were strong signs of the discussion on a Corean expedition, which had died out, breaking out again. Fortunately persons in the best society were decidedly of opinion that war would be a mistake, and we strongly argued in favour of leaving the Corean business alone. As this was just the time of the discussion about the double power of the *Sangi*, it was thought that this intelligence would at once cause a change in the Cabinet. The Japanese Government did not at once decide on a Corean Expedition, but as they could not completely set the matter aside they at last decided upon sending a Commissioner. As the *Sangi* Kido Takamasa sent in a memorial in the early part of October, it was thought that he would be appointed Commissioner, but we heard that owing to his old illness having broken out, shortly after this he was still being nursed in his room. Kuroda Kiôtaka was appointed High Commissioner and ordered to proceed to Corea with ships of war and settle the matter. On the 27th December Inouyé Kaoru, formerly *Okura Taiyu*, was suddenly promoted to be a member of *Genroin* and was made Vice High Commissioner. 'Mori Arinori, *Guaimu Shôyu*, was appointed Resident Minister at Peking, and set sail from Shinagawa, but the mouth of the river at Tientsin being frozen over, he anchored at Chefoo and proceeded overland to Peking, (He will arrive there on the 20th instant). The Corean mission, however, made preparations for starting irrespective of Mr. Mori's negotiations and sailed on the 28th December and was soon followed by Kuroda. The particulars of the Corean negotiations will certainly form an important matter in the history of this year.

A Talk about the Press-Laws.

(Choya Shimbun.)

A few days since I was regaling myself quietly in a pleasant tea-house, and just at the moment I was about to leave, I heard some loud talking in the adjoining room, which attracted my attention and induced me to tarry and play the listener for a few moments longer. The party consisted apparently of a certain professor of Chinese, who, with a few of his pupils, was enjoying himself over some right good *saké*, and was then expressing himself for their edification, loudly and in sounding phrases. "You must never, my dear friends," I heard the old man say, "you must never be foolish "enough to become newspaper writers. Since the "issue of the press-laws, not long since, do we hear "of anything but punishments being laid upon "the editors—now fine and now imprisonment? And yet, "see how incurably careless the foolish fellows seem! "Since New Year's Day—only some fourteen days ago— "Fujita of the *Hochi*, Hasegawa of the *Akebono*, Kato of "the *Saifú*, Suyehira and Narashima of the *Choya*, and "even a British subject, Black of the *Bankoku Shimbun*, "have all been summoned to the courts to answer for "their sins, and accepting this as a criterion of what may "yet occur, there will be hundreds of such cases during the "year. No, no, my friends, this will never do. Be supple "and soft; praise the powers that be and study how to "please them, and then you may hope to become heads "of departments in due season. And, when New Year's "Day comes round, you will be prepared with a panegyric "on your chiefs and on our Government, and all will be "well with you. But never, I repeat, soil yourselves with "such vile things as newspapers. I esteem the press-"laws as highly as I esteem the doctrines of the great "sages. Pray let me hear your ideas on the subject."

Then I heard one of the pupils reply, "I venture, my dear "sir, to doubt the correctness of your judgment. For my "part, I am more inclined to think these laws like the "*mankintan** made at Toyoma in Yetchiu, for it is of un-"paralleled fame." "Not so," struck in one of his fellow pupils, "say rather, like the mines of California, since "plenty of gold is got out of them." Another said, "They "are for all the world like the childrens' ghost stories: the

* A medicine of considerable repute but little efficacy.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"tale gets more terrible as it approaches the end"; and one sitting next him declared that they "reminded him of "Shotaku Taishi's fortune-tellers' book, which is so difficult "to understand that we must content ourselves with looking "at it." "Rather," said a stout fellow, "like a play-house "tragedy; let the stage run with blood, no one is a whit "the worse for it." "Or like the golden rule; for they are "likely to last for ever" said another. "I quite disagree "with you," squeaked a little man who was seated in the corner, "I think them just like a party of poor students "bent upon a 'spree.' They care little whether they "have money enough or not, and are not over much disap- "pointed, even though their spree should not come off "at all."

"Gentlemen, gentlemen, order, pray," shouted the old man through the rattling din of words. "Whether it "'comes off' or not, it has no connection with the press- "laws, but with the law of libel. Your comparisons are "indeed almost insulting, for although you do not directly "attack the law, you seem to find matter for your wit in it. "The law is not a toy to be played with, let me tell "you——"

The professor said these words in a tone so menacing and sonorous that I began to tremble with fright, and so, hastily, and with apprehensive steps, I slunk away from the noisy hostelry without waiting to hear the end of the disputation.

The Movements of Enouyé.

(Hioron Shimbun.)

It behoves the high officials of a country to be very circumspect in circumstances of even comparative unimportance if they wish to avoid the misinterpretation of their conduct and all manner of idle conjectures. If, for example, the people observe the residence of a high official surrounded by men in foreign dress, they jump to the conclusion that the police have sent been there to protect it, or should they see some carriages before his door they at once assume that a consultation is in progress, that the country is in jeopardy, and in fact create all sorts of idle and unfounded rumours.

Nothing has perplexed the *quidnuncs* more than the late visit of Enouyé to Osaka, previous to his joining Kuroda at Kobé with the view of proceeding with him to Corea, some of them alleging that he went there to buy presents for the Corean king. This, of course, is incredible, for it is neither the office of an envoy to purchase presents, nor is there any special reason for selecting Osaka for this purpose. Others have it that Enouyé is a keen man of business, and as the declaration of war would be followed by an immediate advance in the price of food, his object in visiting the south has been to make arrangements for rice operations. Finally, it is said that he meditates business in addition to his ambassadorial functions, and has proceeded to Osaka to purchase suitable "trade" for the Coreans.

Now, we can believe none of this. Our laws prohibit officials from engaging in traffic, and although means are found of evading the restriction by undertaking business under a borrowed name, an ambassador is hardly likely to enter the market openly to purchase rice for his individual profit. The probability is that people have been waiting to learn the decision in the Ozaruzawa mine case, which was given shortly before Enouyé received his appointment. Had it been our case we should probably have received a sentence of two years imprisonment with hard labour, but as Enouyé is the person in question he has only been fined thirty *yen*.

Our own opinion is that he has gone to Osaka for the purpose of saying farewell to his friends, in case he should not meet with them again. What think you?

The Advancement of Civilisation.

(Nichi Nichi Shimbun.)

The advancement of a country is promoted not only by the encouragement and protection afforded by its Government, but by the industry of its citizens. However liberal the ideas of the people, they can have no scope for growth if they are ruled over by a tyrannical Government, nor on the other hand can a Government which desires to enlighten the popular mind and promote the arts of civilisation hope to succeed if the people fail to respect it, or to lend it that moral support by which alone its aims can be successfully accomplished.

Looking to the present state of our country we find the population divided into three classes, the highest of which, the *Kuadzoku*, though trifling in number, are, with few exceptions, devoting themselves to enlarging the material happiness and welfare of their fellows.

The middle class, *Shidzoku*, possess an external coating of civilization, which is promising enough to the eye, but proves to be deceptive. They are absolutely without enlightenment as a class, dissipated and luxurious. Many of them, ignorant of the low ebb of our national treasury, are urging the prosecution of war. Theirs is merely the veneer of civilization.

It is difficult to describe the condition of the lowest class, or *heimin*, of which our nation is most largely composed. They are sunk in wretched poverty, careless to advance themselves, and as they are slavishly obedient to the dictates of their rulers—be these just or cruel—they are indifferent alike to all forms of Government and care little whether they stand or fall. They either fail to apprehend that the Government is truly their own or pretend to think so; they do not identify themselves with it; and when soldiers are wanted for the defence of our common country they endeavour to evade service by all sorts of trick and artifice. It thus happens that how solicitous soever the Government and the upper class may be for the substantial advancement of the nation, it is vain to indulge a hope that under present conditions this should be possible of accomplishment.

Each one of us has his share of our common duty to advance our country's interests laid upon him, and it behoves him to bear it. But in the actual condition of mind in which we see most of those around us, who shall say how soon we may fall beneath the yoke of some European or American power?

We entreat our thirty-three millions of fellow countrymen to aid in the good work of progress.

NOTES TAKEN DURING A VISIT TO OKINAWA SHIMA—LOOCHOO ISLANDS.

By R. Henry Brunton, Esq.

Read before the Asiatic Society of Japan, on the 19th January, 1876.

Among the first papers read before the Asiatic Society was one by Mr. E. Satow, of H. B. M. Legation, upon the Loochoo Islands. The following notes may be considered as affording a little supplementary information, which was procured during a couple of days' visit to these Islands.

We left Kagosima in the S.S. *Thabor*, on the evening of the 9th December, and proceeded so as to pass to the westward of the chain of islands which extends in a south-westerly direction from Cape Chichakoff (Satanomisaki) to the north end of Formosa—the Loochoo islands forming part of the chain. On the evening of the 10th we passed, at a distance of about thirty miles, Ôshima, which is one of the Loochooan group, and is inhabited by people of similar kindred, but which is under the authority of the Kagoshima *ken* and does not form a part of the territory of the King of Loochoo. It was on this island that a sugar refinery was erected by the Prince of Satsuma with the assistance of the Messrs. Glover of Nagasaki, in 1867. This did not prove successful financially and, I understand, the machinery has since been removed to Ozaka. Ôshima possesses an excellent harbour which is sheltered in every direction and the trade between it and Kagoshima, in certain seasons, is very considerable.

We arrived off Nafa on the afternoon of the 11th December. During the voyage we experienced N. W. winds of no great violence—and this wind continued with us more or less until our return. The monsoon whose direction is N. E. on the China coast, is therefore changed in direction in this locality.

Nafa is on the western shore of Okinawa Shima; it is a town of probably five or six thousand inhabitants, and is supposed to be the port for the capital of the island,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

which is situated about three miles inland. The distance from Kagoshima to Nafa by the track we came is about 400 miles. The harbour at Nafu can hardly be considered fit for vessels to make any extensive use of. There is only a very slight indentation in the coast line, which there runs about N. E. and S. W., and the only protection to vessels is afforded by coral reefs which partially surround a basin. Some of these come quite to the surface of the water and their position may generally be distinguished by the surf breaking on them; others, however, are at distances of 3 feet and 6 feet and 12 feet below the surface, and nothing is visible which marks the position of these latter. And, as they seem to exist at the entrances to the anchorage as well as in the anchorage itself they form a most formidable danger. The strong N. W. wind which blew during one day that the vessel lay at Nafa cut off all communication between the ship and the shore, and a heavy swell came rolling in to the anchorage which rendered our position a most uncomfortable and, to some extent, a precarious one. We knew that we were surrounded by perfectly precipitous coral reefs, some of which were within a few hundred yards of us, and had any fracture occurred to the moorings which held the ship as she plunged and heaved, we should, in a few minutes, in all probability, have been driven against one of these. In a creek on the southern side of the town there is a depth of water of from 2 or 3 fathoms. Small steamers might find shelter here, and three or four large junks were lying in it at the time of our visit. But for vessels of over 300 or 400 tons, it is not available, and Nafa cannot in any way be considered suitable for a commercial port.

When we arrived at Nafa, the fact of our being in a country in which the people were very different from those whom we had just left, became at once apparent. Several boats came off to the ship, but instead of being the tidy-looking, swift, and picturesque craft which we are accustomed to in Japan, they were canoes, made out of one log of wood, and very similar in shape and appearance to those at Aden. They were propelled by two men, one in the bow and another in the stern, by means of paddles. The only other boats which we saw were square clumsy looking boyes which were also propelled by paddles. The sea-going junks, however, which make voyages to Foochow and Kagoshima are strongly constructed, and are of the same shape and build as the ordinary Chinese junk. They are decorated with an eye on each bow and by a red ball on a white ground on the stern. This, we were informed, however was merely a decoration, and in no way an emblem that the vessels were under Japanese colours.

The town of Nafa is built on a piece of level ground adjoining the sea coast, while the capital, Shiuri, is built on a series of small hills. The latter is a straggling scattered town, and it would be very difficult to form any estimate of its population. From the summits of some of the hills good views can be obtained of the surrounding country, which appeared to be in the highest state of cultivation. And from its gentle undulations, with small streams winding through the valleys, its rich herbage and avenues of trees, it afforded a very close resemblance to some phases of English scenery.

The streets in the towns present a most desolate appearance. On each side of these is a blank stone wall of about 10 or 12 feet high, with openings in them here and there sufficiently wide to admit of access to the houses which are behind. Every house is surrounded by a wall, and from the street they convey the impression of being prisons rather than ordinary dwellings.

The streets are also paved with blocks of stone. These have very irregular surfaces which render walking over them most uncomfortable. It was observed that in front of the dwellings of those of high station, or in front of temples and other places of importance, that the roads were laid perfectly smooth, with broken stones bound by clay in much the same system as is used on macadamised roads. The people therefore, are perfectly aware of what smooth roads are, and it is to be regretted that they did not more largely adopt these. The high road from Nafa to Shiuri is 30 or 40 feet wide and is lined with trees on each side. It is laid throughout its entire width and for the whole length of the road with these blocks of stone. This represents an immense amount of labour and, while not convenient for pedestrians, ihas the advantage of being everlating.

The houses of the well-to-do classes are situated in a yard which is surrounded by a wall ten feet high, as has been already mentioned. They are similar to the ordinary Japanese houses with raised floors laid with mats, and sliding screens of paper. They are built of wood and present no peculiar differences from the Japanese style of construction. The roofs are laid with tiles, which, however, are quite different in shape to the Japanese tiles. Over the joint between two concave tiles, a convex one is laid, and these are all semi-circular in cross section. The tiles are made at Nafa and are red in colour. They appeared of good quality. The houses of the poorer classes are of a very primitive character. The roof is covered by a thick thatch, and is supported by four corner uprights about five feet high. The walls consist of sheets of a species of netting made of small bamboo, which contain between them a thickness of about six inches of straw. This encloses the whole sides of the house, a width of about two feet being left in one side as an entrance. There is no flooring in the houses of any description, and there is generally laid over the mud inside a mat on which the inmates lie or sit. We found that a pig was generally attached to each of these houses and that pork is very largely consumed by the inhabitants of the island. In each house also there is a weaving loom, and the dresses of the people are all woven by themselves in their own houses.

There are no shops in Loochoo, and when anything is required to be purchased it may be brought by the dealer to the house of the buyer. There is, however, in each town a market place where various commodities are exposed for sale. These principally consist of the general food of the people, which is sweet potatoes, pork and a few fish. There were large quantities of Japanese tea which we were told the Loochooans were very fond of, and which they drank after the fashion of the Japanese. Satsuma tobacco was also observed in some quantity, and several bundles of English cotton twist. The market stalls are all presided over by women, who are evidently entrusted with the commercial operations of the island. The only money in use is copper cash, but the natives did not refuse the silver of some of our party who purchased a few things. Some of the women in the market were young, but the great proportion were elderly. The practice of tatooing the backs of the hands of the women was to be seen here; the younger ones had a few marks only, while the hands of the elderly ones were covered down to the nails. That the Loochooan married woman are kept in such seclusion as is related by Mr. Satow, namely, that they are not allowed to have any communication whatever with the small portion of the outer world, may be true of the higher classes. We had no opportunity of testing this, but that it cannot be correct as regards the lower classes there can be little doubt. We observed numbers of women of all ages engaged in all manner of occupations, going about and conversing with as much freedom and self-assurance as is customary in any part of the world, and it is only reasonable to suppose some of these must have been married.

Loochoo has been visited by various foreign vessels at different periods. H.M. ships *Alceste* and *Lyra*, then on a cruise in Chinese waters, came to Nafa in the year 1815. And Captain Basil Hall has described the Island in his narrative of the voyage of these vessels. They remained at Nafa for some months and were refitted there, and the officers and crews experienced the greatest courtesy and civility from the natives. Commodore Perry also called here on his way to Japan with the U.S. squadron, but his experiences of the Loochooans were not so favourable as those of Captain Basil Hall.

A little distance out of Nafa under some fine old fir trees are quite a number of graves of Europeans. Each grave has placed over it a block of stone work, about the same size as an ordinary grave and three feet high. On the top of this there are, on most of the graves, stones let into the masonry, which have inscriptions cut on them. From these we observed that two or three Catholic priests had been buried there, as also four men who had belonged to the American squadron. One inscription was over the grave of an English sailor of the *Alceste*, and it bore tes-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

timony to the good feeling existing between the English and the inhabitants at that time. It mentioned that the memorial had been erected by the "King and inhabitants of this most hospitable island."

The people are of a timid and most inoffensive nature, and all our experiences of them shew them to be kindly disposed to strangers. Their treatment of two survivors from the wreck of an English brig which came ashore on the island some years ago, was so considerate and so highly appreciated by the home authorities, that a gun vessel was despatched to offer the thanks of the English Government, and to present to the King a gold watch in recognition of the kindness shewn to them by him and his people.

On the sides of most of the small hills in the neighbourhood of Nafa are the tombs of the inhabitants. They are built of stone into the sides of the hills. Their top resembles a horse-shoe in shape, and in front there is the opening into the interior which is built and cemented up so as to be air-tight. The roof is made of plaster and is flat, and the appearance of a number of these tombs on the sides of the different hills has a very picturesque effect. The method of burial is to leave the corpse in the tomb for about three years until it is entirely decayed, the tomb is then opened, the bones are collected and kept in an urn as a relic by the family. While walking in the neighbourhood of the tombs we observed one open. A temporary mat shed was erected in front of it and sounds of the most violent grief proceeded from the interior. This, we understood, was on the occasion of the re-opening of the tomb for dis-interment when the relatives meet to witness the last rite performed upon the remains of the deceased. Mr. Satow mentions that this ceremony has been discontinued and that the people are buried in the same way as Japanese are; but I have reasons for thinking that this is only partially true, and that it is still adhered to by certain classes of the population.

There is abundant evidence that the whole island of Okusawa is of coral formation, and it, in all probability, affords an interesting example of a coral island which has been, since the formation of the coral, subjected to volcanic upheaval. On a hill about two hundred feet above the level of the sea the exposed rock was distinctly of coral and, in many places further inshore, coral was observed. The stone used in the buildings, walls and also in paving the roads was also undoubtedly coral, but it had, of course, lost to a great extent its characteristic appearance by wear and exposure. The whole country is low and undulating, no hill being above 400 or 500 feet high, so that the upheaval to which it has probably been subjected has not been of an extremely violent nature. Coral reefs rising to about the surface of the water surround it on every side. These generally enclose a central space of deep water. The passage through these at Nafa, as is customary in other coral islands, is opposite the mouth of a fresh water stream. The island is subjected to frequent shocks of earthquake, showing further that it is not yet far removed from volcanic action.

The climate is one which is of a sufficiently genial character to allow the vegetation to be green throughout the whole year. In the winter months some cold days are experienced, but snow or ice is unknown. The thermometer, during our stay in the month of December, was as high as 73° Fah. in the shade, and the sun was sufficiently powerful to necessitate our return to thinner apparel, sun-helmets and umbrellas.

The product which we observed as chiefly cultivated was the sweet potato. It is the principal food of the people, patches of paddy land were seen here and there, but they were not of any great extent. The rice is grown at various seasons of the year as it suits the convenience of the farmers. We saw some which had just been planted and which was expected to be reaped in March or April. The climate will admit of two crops being produced in the year, but the people, with sensible prudence, do not tax the productive properties of the land to so great an extent. Many groves of sugar-cane were observed. Oranges of a peculiar aromatic flavour grow on the island, but not in large quantities, and fruit of any kind appears scarce. The sago palm is cultivated in large quantities, and the sides of all the hills which are not otherwise occupied are covered with it. The whole island is in the highest state of cultivation, and in this respect will bear a favorable comparison with any part of Japan. The farming implements in use seemed to be precisely similar to those used in Japan.

There are many ponies on the island. They are from 10 to 10½ hands high and are well-shaped little animals. Some of our party who rode on them gave excellent accounts of their spirit and paces. They resemble the Manila breed of pony, or may possibly be a cross between it and the China breed.

A few cocoa nut trees were seen but they do not bear fruit. Small quantities of tea and tobacco are also grown.

The trees on the island are all of small size, and wood is not plentiful. A few teak trees were seen, but the natives do not consider that they produce a valuable timber and consequently pay them no attention. From our own observation the wood in them would be small and full of knots. A hard timber named *Kómon*, and a soft wood named *Fuchitsuba*, are grown on the island and were observed in the temples and other erections. But a great part of the wood in use is the ordinary Japanese wood which is imported from the Kagoshima.

Owing to the scarcity of wood stone has entered much more extensively into the building operations of the people than it has in Japan. The execution of the mason work is also infinitely superior to anything to be seen in Japan. The Loochooans seemed to have grasped the principle of giving strength to mason work by friction between the beds of adjacent stones. The joints are therefore made with truth, and although the stones are generally of the most diverse shapes, they fit into each other with perfect accuracy, unlike Japanese masonry the stones in which are only kept in place by a bearing on each other of a few inches wide on their outer edge. The walls which surround the dwellings and which line the streets are all built in this way. The material in them is small, and in a few cases we observed that lime mortar had been used in the joints.

All the bridges, on the roads, which we observed were built of stone. The openings in them are spanned by means of arches in the form of an ellipse. So far as the eye can judge they are almost perfectly elliptical. This form of arch is also to be seen over all gateways and other openings. There are also a few arches of the form of a segment of a circle, but the elliptical arch is, by far, the most common. Some of these are of exceedingly small rise and are ingeniously constructed. They are however faulty in so far that the arch stones are placed lengthways along the entrados of the arch, instead of the joints radiating from the centre. They are therefore but ill calculated to bear the strains which come upon them. The bridges have well constructed piers and abutments and are furnished with stone parapets. The insides of these are ornamented with elaborate carvings and designs, which are chiefly of Chinese origin. The Loochooans admit having received their notions of building from China, and those familiar with that country will probably see great resemblances to Chinese erections in all that exists in Loochoo; but there are also, without doubt, evidences of some departure from Chinese methods and of original ideas on the part of these islanders.

The castle which is the residence of the King is situated in about the centre of Shinri and on an eminence about 500 feet above the level of the sea. The dwellings, in which the king resides, are placed near the summit of the eminence. They are of the ordinary type of wooden buildings and are of considerable extent. They are built in a square, enclosing a court about seventy yards wide. This court is laid out in paths with different coloured tiles. Opposite the entrance is the largest building, which was shut up at the time of our visit—on the left and right being smaller buildings which are used as the residences of the court officials, as reception chambers, and for other purposes. Surrounding these buildings but at lower elevations, on the sides of the hill, are very extensive revêtment walls, some of which are 60 or 80 feet high and 14 or 15 feet thick. These walls, which must sustain an enormous pressure from the earth behind them are built in plan, in the form of a series of inverted arches. This seems an ingenious and excellent expedient for assisting the strength of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

such walls, and a principle something similar to it is adopted in large retaining walls in Europe. The pointed part of the wall, from which two arches spring, is ornamented by a peculiar and graceful curve. Cactus in profusion grows along the tops of the walls and they are covered on the outside with various creepers. To enter the castle it is necessary to pass through three gateways of very heavy mason work, the openings through which are spanned by elliptical arches. The castle cannot be called fortified, though its position and the existence of the high walls already mentioned would render it safe against capture except from an attack furnished with modern appliances. The object in constructing it has no doubt been been to make it a stronghold capable of resisting any enemy known to the people. The king seems to take but little active part in the Government of the country and had not been visible to any stranger for some years.

The country altogether presents a strange admixture of Chinese with Japanese ways and customs. The inscriptions which are to be seen on the various monumental stones placed in the streets are written in Chinese. Many are quotations from Confucius and other Chinese classics, while others go so far as to represent the country as part of China. The principles of building have been partly borrowed from China. The tombs and manner of burial are to some extent after the Chinese fashion, and the general appearance of the towns gives evidence of the existence of a close intimacy with China. But the language on the other hand is Japanese. It is not precisely similar to the Japanese now spoken, but it is believed to be as nearly as possible similar to the language spoken some centuries ago, many words of which have become obsolete. While a great part of what was said by the Loochooans was understood by the Japanese, many words used by them were recognized as belonging to the old Japanese vernacular but which are now never heard. The more frequent intercourse with Japan has led to a familiarity with Japanese ways and the use of Japanese produce.

There were no Chinese on the island, and we heard of only one Japanese merchant who was resident there. There are three or four Japanese officials living at Nafa who have been probably sent there for the purposes of the Government.

A tax of 8,200 *kokus* of rice is levied by the Japanese government from the Loochooans. It is paid in sugar, that being the most valuable produce of the Island. Certain articles are also sent to China each year, but these consist merely of complimentary offerings and small presents. Communication is kept up between Loochoo and Foochow by means of large junks.

The Island is between four and five hundred square miles in area, and it is said to have a population of 150,000. This is at the rate of three hundred to the square mile, a thickness of population so great as to be hardly conceivable.

The people are burdened with the maintenance of a large class of idlers who like the *Samurai* in Japan live upon hereditary privileges granted them by the government. These men are called *Daimios* and may be seen lounging about in every street. The lower classes are an industrious, docile, timid but extremely civil set of people. Their education is confined to Chinese, and only one book of Chinese classics is taught in the schools or, in fact, is known among them. They have little or no communication with the outside world. They produce on the island what is sufficient for their own wants and would probably be best satisfied in being left alone. But this is not to be their fate. The Japanese Government have taken over the active control of the country. It has been formed into a *Han*. A Mitsu Bishi mail steamer now visits it once every alternate month, and the Loochooans have probably experienced the last of that quiet and peaceful retirement which the geographical position of their country has heretofore afforded them, and for which their natures seem so well adapted.

YOKOHAMA FIRE BRIGADE.

The annual general meeting of the Yokohama Fire Brigade was held yesterday afternoon, at half-past 3 o'clock, in the Chamber of Commerce Rooms.

The following gentlemen were present: Messrs. J. Leckie, Davis, Glennie, Dodds, H. Allen, Jr., G. Farley, Jr., McMahon, A. J. Wilkin, D. J. Cruickshank, McPherson, J. G. Walsh, W. H. Smith, E. Abbott, E. S. Benson, Wm. Bourne, and N. P. Kingdon.

Mr. A. J. Wilkin took the Chair and announced that it was the Annual General Meeting. He would call upon the Secretary to read the minutes of the last meeting.

Mr. J. Leckie, the Honorary Secretary and Treasurer having read the minutes as desired, which were approved and passed, read the following

REPORT.

The Committee of the Yokohama Fire Brigade beg to submit their annual report, and accounts of the Honorary Secretary and Treasurer for the year 1875.

The subscriptions collected during the past year show no decrease on those of 1874. The working expenses of the Brigade have been slightly smaller than in 1874, being $1,545:27 against $1,658:05.

At the General Meeting held on 20th January, it was left to your Committee to decide whether it would be better to purchase a new steam engine or another hand engine. As the hand engines belonging to the Brigade are still in good order, and with careful inspection will last some time yet, the decision of the Committee was not in favour of purchasing an engine, but of increasing the water supply to the settlement for use at fires. They have now the pleasure to state that another fire well has been constructed between lots 73 and 74, dimensions of which are similar to that sunk last year, and the amount of water 17,000 gallons.

Through the kindness and courtesy of Mr. Center a fine foreign fire-bell has been presented to the Brigade, the Committee supplying him with a Japanese one in its place. The new bell has been erected over the Brigade lot in place of the old one which was found inefficient.

The Committee have much pleasure in stating that, during the past year, fires have been less frequent than for years past, two only having occurred in the foreign settlement, and they take this opportunity of thanking the other fire companies of Yokohama for able assistance rendered on such occasions.

The following is a list of fires during the years:

February 6th, at Homura—destroying a portion of the native villages of Homura and Amanuma.

July 20th, at No. 31, Foreign Concession; Ship Chandler's store.

Aug. 7th at No. 44, Foreign Concession; destroying the "Japan Hotel" and a few Chinese houses; also a portion of lot 45, inhabited by Chinese.

The Committee have further much pleasure in testifying to the satisfactory manner in which the superintendent, Mr. Davis, has discharged the duties of his post.

In conclusion, the Committee, consisting of Messrs. Benson, Dodds, and Leckie, (Mr. Fraser having left the Settlement,) beg to tender their resignation; and they venture to express the hope that the community of Yokohama will continue to afford its cordial support to the Brigade, as has hitherto been the case.

For the Commitee,

JOHN LECKIE,
Hon. Sec and. Treasurer.

31st Dec., 1875.

Original from UNIVERSITY OF CALIFORNIA

Mr. H. Allen Jr. moved that the reports and accounts as read be passed.

Mr. Mcpherson begged to second this.

The Chairman then put the resolution to the meeting and it was carried unanimously. He said the next business was the election of a committee, the resent one having tendered its resignation.

Mr. W. H. Smith said that although the Committee in their report had tendered their resignation, yet the accounts showed such a favourable balance under their management that he would ask them to take upon themselves the arduous duties for another year. It would be a great boon to Yokohama.

The Chairman said that two members of the Committee had left Yokohama.

Mr. Smith said he would propose in their place Messrs: Glennie and McRitchie.

Mr. McPherson begged to second this.

A vote of thanks was then passed to the Committee, (who agreed to serve for another year, with the addition of Messrs: Glennie and McRitchie to fill up the vacancies of those who had left), for their labours during the past year.

Mr. J. G. Walsh proposed that the large American hand engine be taken over by the Brigade on payment of the balance due to Mr. Allen, Jr., of a little over $500.00.

This was put to the meeting; but Mr. McPherson said he thought the purchase of engines came within the province of the Committee. He thought the engine was remarkably cheap.

Mr. Kingdon begged to second Mr. Walsh's proposal that the engine be taken over, If it were lost to the Fire Brigade and passed into the hands of the Japanese it would be a serious thing.

Mr. Dodds said that the old Committee had had this proposal under consideration before. They had had a trial of the engine and found that the suction hose was inefficient. Then again, the Japanese were not tall enough to work it properly at fires. The Committee had thought it better to save money, and buy another steam fire engine.

Mr. Walsh said that in regard to the suction hose of the American engine being out of order, the expenditure of $30 or $40 would put all to rights; or a new suction hose could be bought for $90 or $100. The engine had cost over $3,000 and was still in very good order. It had rendered great service here. In regard to the Japanese not being able to work it, he thought a light planking might be put round the engine on which the coolies could stand.

Mr. Benson thought the matter had better be settled at a general meeting and not left to the Committee.

Mr. McMahon said he fully endorsed what Mr. Kingdon had said about the advisability of taking the engine over. It would be a serious matter to lose it.

Mr. W. H. Smith desired to hear the list of subscriptions read. He thought that with the exception of the Insurance Companies, and some firms who gave yearly donations, not so much had been collected from others as might have been.

The Honorary Secretary then read the list.

The Chairman asked if, in the event of the American engine being bought by the Yokohama Fire Brigade, it would be likely to bring any additional subscriptions?

Mr. Allen replied that it would.

Mr. Walsh then handed in his resolution in writing to the Chairman.

Mr. Dodds proposed as an amendment, That in view of the expense, the proposal be referred to the Committee for decision.

Mr. McPherson begged to second this.

The Chairman then put the amendment to the meeting and it was lost, only five voting for it.

Mr. Walsh's resolution was then put and carried by a show of hands.

The Meeting passed a vote of thanks to the local authorities for the assistance rendered at fires, also to Mr. McRitchie for a very excellent map of the settlement he had prepared and presented to the Brigade, showing the fire wells and other supplies of water.

The Meeting then separated.

Correspondence.

AMERICAN LAW IN JAPAN.

To the Editor of the "Japan Weekly Mail."

Sir,—I have been reading the decision of the American Consular Court in the case of the "People of the U. S. *versus* John Middleton," and I confess, that, as I am no lawyer, it has puzzled me very considerably. If some of your readers who are learned in the law will kindly assist me out of my difficulties, I shall feel very grateful.

I find it stated in this judgment that persons coming to Japan "from countries having such treaties (*i.e.* treaties with Japan) are exempt from obedience to Japanese law only in so far as said treaties expressly define such exemption." It is not clear why the Court should have thought it necessary to include within the scope of its remarks countries the governments of which are well known emphatically to repudiate this principle. But let that pass. The exemptions from Japanese law specially mentioned in the treaties are very few and unimportant, the principal one being that relating to religion, so that practically this amounts to saying that American citizens in Japan are subject to Japanese law. If this be really so, how is it that we have never heard of any convictions under it, or of civil cases being tried according to it in American Courts? But perhaps it is only for the future that it is intended to apply this principle. In that case, it strikes me that some unforeseen difficulties will arise. Is it intended, for instance, to punish American citizens who may become editors or proprietors of newspapers in Japan, or who criticise the laws or institutions of Japan, or who break any other of the numerous prohibitions of the Press-Laws? Are American Courts prepared to put down with a strong hand such offences as whist playing for ten cent points, speculating in rice, or tying a horse with a halter more than three feet in length? Billiards are at present prohibited in Osaka and Kobe. Has the American Consul been instructed to send to durance vile the criminals who may be detected in the commission of the offence of a game at pool?

These are only a few out of a multitude of cases where it would be obviously absurd to apply Japanese law to American citizens, and I therefore concluded that the judgment of the Court in Mr. Middleton's case must surely not intend this. It is true that one passage in it suggests a way out of the difficulty. If the plea that the accused "had no knowledge of the existence of the law" is accepted as valid, an acquittal would in many cases follow. But not only does this not meet every case, but it seems rather a doubtful principle in itself, and is just one of those things I should like to have cleared up for me.

The correspondence between Mr. Bingham and his government, however, points out a much more certain, and, in one sense, a more satisfactory mode of rescuing the American citizen from the clutches of Japanese law. I quote the passage. The authority is that of Mr. Fish himself.

"Citizens of the United States resident in Japan are "expected and required to observe and obey such laws (*i.e.*— "laws made by Japanese authorities) in the same manner and "to the same extent that the like obligations rest upon the "subjects of that empire. In regard to the enforcement of "these laws, and the imposition of penalties for their infrac- "tion, citizens of the United States have secured to them "by the provisions of existing treaties, the right of being "tried in the Consular Courts of their own nation establish- "ed in Japan, and according to the mode prescribed by the "laws of the United States, and are protected from the "infliction of other penalties than those prescribed or warrant- "ed by the laws of their own country."

This amounts to saying that Americans may be found guilty of offences against Japanese law, but the procedure and penalties shall be those of American Law. Let us see how this would work. Supposing, for instance, that an American editor in Japan publishes an attack upon monarchy as an effete and antiquated institution. This is a very grave offence against Japanese law, and no conscientious jury could hesitate for a moment to bring him in guilty. It would then be the duty of the judge to condemn the offender to such penalties

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

as are "prescribed or warranted by the laws" of America. What the penalties of American law for such an offence are need not be stated.

The absurdity of such a position is too obvious. The inevitable result would be that only offences against those Japanese laws which coincide with American law could be punished by an American Court, and whether it is worth while to describe this as requiring American citizens to observe the laws of Japan seems doubtful. Indeed I cannot suppose that this can be the real intention of the American Government. It is too like the language of the sisters in Macbeth

> That palter with us in a double sense,
> That keep the word of promise to our ear,
> And break it to our hope.

to be accepted as the genuine intentions of the government of a great nation. At the same time, I cannot for the life of me discover what else it can mean. If any of your readers will kindly aid me in my perplexity, they will confer a favor on

Yours obediently,

R.

[We have on two occasions recently adverted to the difficulties involved in Mr. Fish's *dictum* on this subject, and the above letter places them in a fair light. In his desire to reduce the hardships incidental to extra-territoriality jurisdiction to a *minimum*, he places both the Japanese and American citizens in an absolutely false position. On any extended application of it Mr. Fish's principle will assuredly break down, and this is the only true test of its soundness or unsoundness.—ED. *J.W.M.*]

THE LATE FIRE.

TO THE EDITOR OF THE *Japan Weekly Mail.*

Yokohama, January 17th, 1876.

SIR,—Referring to the paragraph contained in your Weekly issue of Saturday's date respecting the late fire at Building No. 81, Foreign settlement, I should, out of justice to its occupants, be glad if you will be good enough to insert in your issue of to-morrow, that the fire appears to have broken out in a room above Mr. Berretta's store, but not in the store itself where no goods were burned; and that, from all investigations I have made, I can find not the slightest suspicion of incendiarism attaching to the inmates of the building, and that while the origin of the fire is, and is I fear likely to remain, a mystery, perhaps a Japanese who was seen escaping from the burning premises, might, had he been caught, have given the best elucidation of it.

I am, Sir,
Your obedient Servant,
E. L. B. McMAHON,
Agent, Staffordshire Fire Insurance Co.

[We feel pleasure in publishing Mr. MacMahon's statement that the fire did not break out or burn in Mr. Berretta's Store, but in the upper premises. In the absence of legal enquiry into the cause of fires suspicion frequently arises, and there appears ample ground for it in this case, as stated in our Weekly issue; but there is not the smallest reason for connecting Mr. Berretta's name with any such suspicion..—ED. *J.W.M.*]

Law Report.

IN H. B. M.'s PROVINCIAL COURT.

Before C. W. GOODWIN, Esq., Assistant Judge.

Thursday, 20th January, 1875.

RAUD *v.* KIRKWOOD.

This was a petition praying that defendant might be compelled to execute the conditions of a lease of No. 149, and that the Court would declare that it was binding on defendant, and order him to execute it in all its articles.

Defendant, by his answer, denied there being any lease, and stated that it was only an agreement, and that he had frequently offered to to enter into a lease in accordance with the terms of such agreement, but that plaintiff had refused to execute one.

Mr. Kirkwood asked, before the commencement of the case, that the petition might be amended by stating what the particular thing was that plaintiffs demanded should be carried out,—whether they wished him to enter into a lease, or to execute certain repairs, &c.

Plaintiff contended that it having been decided in the French Consular Court that the present agreement was binding on him as a lease, he had a right to demand that its conditions should be carried out.

His Honour said that it was competent to the Court to declare the position of the parties with respect to the lease in question.

Mr. Kirkwood said that this was not asked for by the petition; all it claimed was the performance of certain conditions. The document in question was only an agreement to make a lease, and he could not be sued on it.

Mr. Zembsch, for plaintiff, said he asked that, the lease having been declared by the French Court binding on the plaintiff, His Honour might declare that it was equally binding on defendant.

His Honour said that Mr. Kirkwood having sued on this agreement, and accepted Mr. Raud as a tenant, he had adopted it, although it could not be construed into a lease for four years.

Mr Kirkwood then demurred to the petition, on the fact that there were no grounds for the relief sought.

His Honour suggested that it would be better to settle certain issues as to the questions put before him for his opinion.

Mr. Kirkwood said that in that case he should withdraw from the Court, and apply for his costs up to date, as it was of no use to bring him before the Court for the sake of getting its opinion. The opinion of the Court was not binding at all unless it was referred by the consent of both parties.

His Honour pointed out to the plaintiff that it was not usual in English law to simply ask the Court for an opinion on an agreement, but the proper course was for plaintiffs to prove that they had sustained damages by the non-fulfilment of the agreement, and then to sue for them.

A long argument took place, Mr. Kirkwood citing authorities to prove that the agreement was not binding on him.

His Honour said that the case was brought before him in a very peculiar manner, and all he could do was to declare that the agreement was not binding for four years, but was simply an agreement for a yearly tenancy, terminable by either side giving six months' notice; but both parties were bound from year to year by the terms of this agreement.

Mr. Kirkwood said that was not what was claimed by the petition, and he should ask that it be dismissed.

Plaintiff contended that the simple question before the Court was as to whether the lease was binding on defendant, or not.

His Honour said that according to English law it was not binding as a lease for four years, but simply as a yearly tenancy agreement.

The petition was therefore dismissed without costs.

M. LEMOINNE ON BRITISH POLICY IN THE EAST.

(The Times.)

M. John Lemoinne, whose article we make no excuse for reprinting in the original, fancies he displays a knowledge of this country by habitually assuming that its foreign policy is dictated by motives so cynically selfish that they would scarcely suffice for the management of a huckster's stall; and his last exercise in this line is perhaps his best. We have deserted Turkey, he tells us, merely because she can no longer pay her English Bondholders, and because the construction of the Suez Canal frees us from all dependence on the integrity of the Ottoman Empire for the safety of our road to India. Our foreign policy is pure selfishness from beginning to end; when England herself is safe, she cares not what may become of every other country. Were we inclined to retort in the same spirit, we should say that the sin for which M. Lemoinne rates England is the very sin which has made France the greatest mischief-maker in Europe for the last two hundred years. But we shall certainly not take so vulgar a view of the French character as to insinuate that meanly selfish motives dictated all or any of the expeditions by which Louis XIV., the First Empire, the Monarchy of the Restoration, the Second Republic, and the Second Empire kept undimmed the glory of *la grandeur Francaise*. Great nations never act in the spirit of pedlars or bravoes. When M. Lemoinne says this country is habitually guided by a cynical selfishness as transparent as it is contemptible, we do not feel the slightest irritation. Our only wonder is that a clever man should know the facts of recent English history passably well and yet be as ignorant of England as the lightest of the literary triflers who minister to the Parisian craving for gossip. It is difficult to describe in terms of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

courtesy how ridiculous his renderings of our motives seem to ourselves; but he must pardon us for saying that they betray the provincialism of the Parisian boulevards. When he speaks of our Statesmen as if each were a Machiavelli, he does them too much intellectual honour, for most of them have as much simplicity of mind as the plainest of Englishmen. It is true that they did not make this country take the side of France when she fought with Germany, although France fought by the side of England in the Crimean War; and M. Lemoinne seems to think that refusal our crowning sin. But the simple, vulgar, insular, English explanation of our conduct is that we happened to think Germany right and France wrong. That belief convicts us, it seems, of being at the beck and call of Prussia. We showed how Prussian we were a few months ago, during the "scare," when we thought France so right and Germany so wrong that we permitted ourselves to use language which peaceful nations do not employ except when they put aside the calculations of self-interest.

The charge that our conception of the Eastern Question has been radically changed by the Sultan's inability to pay his English creditors has the misfortune to be incorrect. A slight study of our State papers would show that the change began soon after the Crimean War. We had allowed ourselves to believe that Turkey could be reformed into a State which would last long enough to save Europe from the greatest war of this century. That was a mistake, and it was soon discovered. The Turks went from bad to worse, and our Ministers and Ambassadors plainly warned them what must be the end of reckless extravagance and misrule. The Pashas soon learnt that they could no longer rely on a repetition of the Crimean War, and, after a time, the more farsighted of them transferred their hopes to Russia. Hence General Ignatieff has for years filled some such place in Constantinople as that which was once occupied by Lord Stratford de Redcliffe. Meanwhile, little was said in this country about Turkey, for the simple reason that, in the absence of any dangerous agitation in the East, she is not an inviting subject. But, when the people of Herzegovina were driven to rebellion by intolerable oppression, it was instantly seen that a change had come over our ideas of the future of Turkey. That rising brought to light slumbering contempt for the promises by which we had once been misled, absolute unbelief in the possibility of Turkish reform, and a healthy detestation of Mahomedan tyranny. From this country came the first descriptions and denunciations of Ottoman rule in Herzegovina, and also the first proposal to put the Province under the protection of Austria. We startled the Continent by advocating that settlement long before the Porte broke faith with its creditors. But of course the act of bankruptcy greatly quickened the feeling of this country; it has had precisely the same effect in France; and both we and the French would have betrayed a lack of common sense if we had not been influenced by such an index of the future. There is always hope for a nation which pays its way, because it thus shows that it is honest and able to manage its own affairs. But there can be no hope for a nation which borrows more than two hundred millions in twenty years, has nothing to show for it at the end of the time, and has all the while been paying the interest due to one set of creditors with money advanced by another. The inability of Turkey to pay her debts set the seal of confirmation on the belief that she had flung away her last chance of life. No doubt, as M. Lemoinne reminds us, we attached the less value to the maintenance of her power after the construction of the Suez Canal had given us a short cut to India. But this fact simply means that we attach pre-eminent importance to the possession of India, and we rule that Empire quite as much for the good of its people as for the sake of our own power. Rather than allow our hold on India to be menaced by a partition of Turkey, it was quite right that we should protect her from Russia; but the measure of the danger was the measure of the duty, and both are now gone. The weak point of our communications now lies in Egypt, but M. Lemoinne deceives himself by the fancy that we intend to seize the territories of the Khédive. Our intentions are expressed by the fact that our Government has bought a fourth of the shares of the Suez Canal, and thus has acquired the power of preventing it from passing into hostile hands. That fact is worth a hundred theories. The meaning of it is that we are determined to prevent the Canal from being held by any other State, and the way in which we shall continue to treat Egypt will absolutely depend on the designs of other Powers. Such a precaution would be altogether different from the seizure of Belgium by France. That would be wanton aggression, and nothing else; but if Holland, Hanover, Denmark, and Sweden belonged to France, if we commanded the sea, and if France's only road to those possessions lay through Belgium, as our route to India lies through Egypt, she would have a right to risk everything rather than allow Belgium to fall into the hands of an enemy. We say precisely the same thing of Egypt.

But the question of practical importance at the present time is what is to be done with Bosnia and Herzegovina. Again M. Lemoinne meets us with a sneer at the selfishness of the motives which have led us to propose that those Provinces should be occupied by Austria. We favour Austria, he says, because she has no Asiatic views, and, consequently, will not menace our communications with the East. Quite true; and if it is selfishness to trust a Power that is not aggressive rather than one that is, self-defence is the chief of national crimes, and folly the chief of virtues. It is quite true that Austria would run some risk by adding a large Slav element to her population; but sooner or later, she must run that risk in any case, and she might as well do so now as later. Nothing can prevent Turkey from losing such Provinces as Bosnia or Herzegovina; they will drop off in a few months, or, at most, in a few years. If the Austrian Empire is so loosely knit together that it cannot bear the addition of another Slavonic nationality, there are evil days before it. Either Austria or Russia must protect any Provinces which the Porte may be unable to manage. But Austria could not permit Bosnia or Herzegovina to fall into other hands than her own. She must either accept new responsibilities in the direction of Turkey, or allow herself to be hemmed in between Germany and Russia, and fixed as if in an ever-tightening vice. The Austrians do not need to be told that such a compression would bring the beginning of the end to the great Hapsburg Monarchy. They cannot too soon begin to face responsibilities which are bound up with the possibilities of their natural existence. We do not mean, of course, that they should occupy the disturbed Provinces without the consent of the other great Powers. That would be war, and the necessity of the moment is not war, but police. With the consent of the other States, Austria could send an army which would put an end to a wasting conflict and indescribable misery; she could keep down by main force the fanaticism alike of the Christian peasants and the Mahomedan landlords; and then the Great Powers could take a leisurely survey of a situation dangerous to the whole of Europe. But it is almost a matter of course that diplomacy should say its last word before the movement of a foreign army could become a matter of practical arrangement, and a joint Note of the Great powers has yet to be laid before the Sultan. All the published versions of it are guesses, for it has not yet been fully drawn up, and it may not reach this country for two or three weeks. It may also do little more than call for guarantees of a just Government in Herzegovina; but as the Sultan can give none, such a demand can be only the first pressure of a tightening grasp, and, however the Powers may wish to reach some ground of acquiescence in Turkish rule, the magnitude of the evil and the danger will force them to go further and further to maintain European peace.

The following is the article by M. John Lemoinne in yesterday's *Journal des Débats*, on which *The Times* comments :—

"Nous ne pouvons nous lasser d'admirer, nous ne pouvons presque nous empêcher d'envier, le rare cynisme avec lequel l'Angleterre continue son évolution sur la question d'Orient. L'ancienne protectrice jurée et patentée de l'indépendance, de la souveraineté et l'intégrité de l'Empire Ottoman est aujourd'hui la plus ardente à en demander tous les jours le démembrement, et nous assisterons à cet etonnant spectacle de la Russie protégeant à son tour le Grand-Turc contre l'impatience des Anglais. La 'catastrophe financière' a ouvert les yeux de nos voisins d'une façon miraculeuse.

"'Comment en un plomb vil l'or pur s'est-il changé?' voilá la seule question qu'ils s'adressent; c'est ce qui est devenu la vraie question d'Orient.

"Tous les matins nous voyons donc la presse anglaise revenir à la rescousse, et jamais ceux qui, comme nous, ont dans tous les temps refusé de croire à la légende turque, ne l'ont déchirée avec autant de violence. Cette violence est méme telle qu'elle dépasse non seulement toutes les bornes, mais aussi le but qu'elle voudrait atteindre.

"Aprés avoir catégoriquement déclaré que la Turquie n'est ni en état ni en mesure de rétablir ou de maintenir l'ordre et la paix dans ses provinces insurgées, les Anglais demandent maintenant que ces provinces soient immédiatement, et sans désemparer, occupées militairement par une des puissances, et ils assignent cette fonction à l'Autriche. Il y a, sur cette proposition sommaire et radicale, quelques observations á présenter.

"D'abord, le but de l'Angleterre est trés clair. Elle aime mieux que cette opération soit faite par l'Autriche que par la Russie. Son cauchemar éternel, soit à Constantinople, soit en Perse, ou dans l'Asie centrale, ou dans l'Inde, c'est naturellement la Russie,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

L'Autriche ne lui inspire point les mêmes inquiétudes. Elle sait que l'Autriche n'a aucunes visées sur l'Asie, et, au besoin, elle se résignerait à la voir prendre en Turquie, fût-ce même à Constantinople, la place que rêve toujours la Russie.

"Mais est-il bien certain que l'Autriche, de son côté, consente à se charger de cette besogne et à remplir le rôle de gendarmerie européenne? Pourquoi, dans l'intérêt de l'Angleterre, irait-elle compromettre ses relations avec sa puissante voisine, la Russie? Ceux qui ont fait pour l'Angleterre la guerre de Crimée savent quel fond il faut faire sur sa reconnaissance dès que ses intérêts n'en sont plus. D'autre part, il faut se rendre compte de la situation intérieure de l'Autriche. Ici on reconnait, dans les suggestions de l'Angleterre, l'inspiration allemande, et il ne faut plus être surpris de voir cette politique propagée avec une passion subite et exagérée par le principal organe du gouvernement Prussien en Angleterre.

"Il y a longtemps que le grand-chancelier allemand a dit que le centre de gravité de l'Empire d'Autriche devait être transporté de Vienne à Pesth. Les plus vieilles Provinces de la monarchie Autrichienne, celles qui en sont le fondement et le berceau, sont encore des provinces allemandes. Or la Prusse veut être seule maîtresse en Allemagne.

"C'est pourquoi tout ce qui pousse l'Autriche du côté de l'Orient la détache de l'Allemagne. Plus l'Autriche absorbera dans son empire les populations, plus les provinces allemandes, se voyant menacées dans leur antique suprématie, se tourneront vers l'agglomération du Nord qui les appelle et leur tend les bras. C'est là un danger capital pour l'Autriche.

"Il y a une autre difficulté. L'empire d'Autriche est aujourd'hui constitué sur le principe du dualisme; il s'appelle l'empire Austro-Hongrois. L'élément Magyare, qui balance l'élément Allemand, a lui-même à lutter contre l'élément Slave dans l'empire; et plus le nombre des Slaves s'augmenterait, plus la suprématie de la Hongrie serait menacée. C'est pourquoi on rencontre, dans le gouvernement Autrichien actuel, plutot de mauvaises que de bonnes dispositions à l'égard des provinces Turques insurgées.

"Il peut être indifférent à l'Angleterre, qui est devenue Prussienne, que les provinces Allemandes de l'Autriche rejoignent la grande Confédération du Nord; mais c'est une affaire principale et vitale pour la Monarchie Autrichienne. Il ne faut donc pas croire que l'expédition militaire que l'on veut mettre sur les bras de l'Autriche soit chose si facile et si simple.

"Ce qui est facile, par exemple, et tout à fait simple, c'est le raisonnement des Anglais, sous le double point de vue de la politique et de la morale. Ils disent, 'Apres tout, nous faisons notre deuil de la Turquie; advienne que pourra de l'intégrité de l'Empire Ottoman. Une seule chose nous interesse—notre libre communication avec l'Inde. Or nous avons maintenant ce quo nous n'avions pas il y a vingt ans, du temps de la guerre de Crimée: nous avions pas le canal de Suez. Nous avions fait, il est vrai, tout ce que nous pouvions pour en empêcher l'exécution, mais il s'est trouvé un entêté Francais pour le faire; prenons-en notre parti, et surtout prenons le canal. Si l'on mord dans l'Empire Ottoman, notre morceau est tout choisi; nous mettons la main sur l'Egypte.'"

"Cela se dit et s'écriten Angleterre tous les jours, sous toutes les formes. Si cette morale politique entre dans le Code international, nous ne voyons pas ce qui empêcherait de la développer et de l'appliquer encore ailleurs. Pourquoi, par exemple, la France ne dirait-elle pas:—'J'ai perdu deux de mes plus belles Provinces, et un dédommagement ne me déplairait pas. Puisque chacun choisit son morceau, la Russie Constantinople, l'Angleterre l'Egypte, pourquoi ne prendrions-nous pas la Belgique? Elle a voulu autrefois se donner à nous et nous regagnerions avec elle ce que nous avons perdu, d'autant plus agréablement que l'Allemagne verrait dans cette extension, vers le nord l'abandon de toutes prétentions vers l'est.' Et en effet, la Prusse se dirait à son tour:—"Puisque tout le monde me donne l'exemple, ou plutôt suit le mien, pourquoi ne ferais-je pas comme tout le monde? La Russie prend Constantinople, l'Angleterre l'Egypte, la France la Belgique; nous, nous n'avons pas assez d'issues sur la mer, et nous n'avons pas de colonies. La Hollande a tout ce que nous n'avons pas; il y a longtemps que nous y pensions, voici l'occasion.' Et c'est ainsi qu'on refait la carte du monde at la morale des peuples."

We learn from the *Choya Shimbun* that some thirty persons from Satsuma, Awamori, Aichi and Kiôto have been arrested by the police in Yedo on suspicion.

MOUKDEN AND COREA.

[From Correspondent *Celestial Empire*]

29th November, 1875.

The forces which came from Tientsin to attack the robber-bands of Manchuria started in due course from the port of Newchwang for Moukden When half way they were divided, one portion marching (rather, driving) to Moukden, while the other wheeled round and marched south to Kushan. The Moukden contingent joined the cavalry which had come overland and both marched to Fung-whang-chung, the most eastern city of Manchuria, and famed during the wars between the Coreans and Tang-wang. S.E. by E. from Fung-whang-chung and the village called 'Border Gate,' commonly known as 'Corean Gate,' and 90 *li* distant from the latter, is the recently formed Chinese village of Sha-ho-tsu, on the banks of the Yaloo, or as the natives call it the 'Middle' river, and where the Corean Gate stream falls into the Yaloo. South of and distant from Sha-ho-tsu, 90 *li* is what was the stronghold of the robbers Tung-kou-tsu. At this Sha-ho-tsu, the Moukden contingent piched camp. They are distant from Kushan a good deal over a hundred *li*; and Kushan was S. W. from Tung-kou-tsu 140 *li*. Thus the Imperialists threatened the robber-stockade from two sides, the favourite Manchu plan by which they gained so many victories over the Ming; for they had no Napoleon to oppose them and annihilate one portion before the other came up. A Chinese gunboat attacked the stockade from the Yaloo river. The robbers had come to regard the troops of the Eight Banners with a contempt which boded ill for the latter, but the news of the foreign-drilled Tientsin men threw them into consternation, and it needed only one unimportant brush to cause them to decamp. "They fled away to the deserts about Kirin," said an inferior Tientsin officer, "because there were only troops of "the Eight Banners there." In those northern districts there was, about two months ago, a conflict in which, according to Moukden reports, sixty soldiers and two hundred robbers were slain. There has been no further report, so that the robbers have probably received their quietus. From the spirit of these Tientsin men, many of whom are Honan men, we believe the Manchu troops would have little chance against them. Doubtless those in power believe the same, and that Li Hung-chang has risen too high to hold him fast. There are now a thousand of these men in Fung-whang-chung where they are to remain "all winter and possibly for three years." They drill daily. A body of 2,000 Mongol soldiers from the Amoor is stationed at Sha-ho-tsu. And the old neutral territory is transformed into Chinese soil, the Government surveyors having measured it with their taxing chains. The Coreans will for a few years more come to the 'Gate;' but Sha-ho-tsu is the mart of the future. The people persist in saying that the Chinese gunboat got up to Sha-ho-tsu. If so, then, foreign gunboats could get up to Yi-chow, the Corean city. Via this city the Manchus marched without difficulty to the Corean Capital and took it twice; the first time when they were a weak but lively little company, with headquarters at Lao-chung. It seems to me that this is the proper point of attack. A force could be easily landed opposite Kushan and march with little opposition to the capital along the high road, there being only one considerable city on the way and all attempts at defence being concentrated on the south, where the worse than useless attempts of the French and Americans were made. The Coreans believe that their country has been attacked only because foreigners desired to despoil them of it; and that the several expeditions have not made renewed attacks only because the foreign countries were so terribly frightened at the results of the former attacks. "Our country is very poor," they say, and we believe them; "why then attack us?—ha! ha! we will not be defeated." Laughter at their presumption toned down the boasts of some, but it was pleasant to see the bold, manly fearless air of others. Western prestige is at its lowest ebb. The Chinese, in Manchuria at least, feel its influence and reason precisely as above. We have heard the boys on the streets crying out "A Corean! A "Corean!" to terrify the foreigner. And a friend of ours said to a Corean in our presence, "The Chinaman is "afraid of the foreigner and the foreigner of the Corean"! In mingling and talking with Coreans however they do not assume the proud position to which they are entitled, but still, in their manner, acknowledge their own inferiority. What the results would be of another expedition similar to the former it is difficult to estimate. Of one thing we might be sure—that the succeeding Chinese war would be ten times more costly in men and money, and that the wisdom of any power warring with China would be to espouse the cause of some claimant to the throne. It was from the Coreans we first heard of the Japanese expedition. It too was an attack by 'foreigners'; and their

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

withdrawal was, to the Coreans, proof of defeat For the Japanese they express the greatest contempt. "Pshaw! Japan! What is "Japan? Japan pays us tribute: there are now in our capital Japan- "ese hostages renewed every year or half year, and redeemed on "the payment of ransom. These are in lieu of so many skins "of men which for long the Japanese delivered us as tribute. "About 300 years ago a large army of Japanese landed on our "shores. Our men were at first terrified by the new arms which "vomited fire and smoke and made a dreadful noise; but not a man "of that army returned to his native land. We used those arms, "and from us the Ming learned their use." Such was the Corean account of the origin of cannon in this part of the world. The Manchus forgot many campaigns with the Ming before they manufactured their first cannon, the 'Great General'; and took many cities before one is mentioned on the walls of which were cannon and firearms, which preserved the town. So that if the Jesuits in Peking first made cannon here many years before, they must have been used elsewhere than against the Manchus, for a cannon is never mentioned among the spoils. The Corean story is so far probable. The Coreans were positive in their assertions that foreigners of all countries, French, English, etc, living on their northern border, entered their country, had several fights and retreated If so, then the Russians are on the move. At first acquaintance the Coreans know nothing about anything. By-and-bye they know a good deal; among other things they knew about the murder of the French priests, and said "How can we become "believers when they are all losing their heads?" Women and girls crying to the executioner, "Be quick, the sooner our heads are off "the sooner in Heaven," and they lay bare their necks to the sword. Whether this is general or whether there were only a few slain to terrify the rest it is difficult to ascertain. But no man's head is safe in Corea, hence the poor people are ten times greater deceivers and liars than the Chinese. They will not commit themselves on the most trifling affairs. The despotism of China is perfect liberty to that of Corea. Their King pays tribute—not without reason. What say the Corean people? "We dare not "rebel, for troops would pour in from China to repress any move- "ment of the people." Would there were an expedition with a wise head to free this people from this most despotic and arbitrary government on the face of the earth! Up till within a few years ago a traffic, though illegal, was permitted between the shores of the Yaloo; Chinese boats laden with copper cash crossing to the opposite shore and returning with Corean silver, exchange making it profitable for all concerned; the Corean cash being as heavy as four of the Chinese, but large and small each counted one The Chinese, were not content with merchandise, however, but entered Corean houses and misbehaved. The Coreans rose upon the next arrival of boats and murdered every man; but didn't send back boat or cash. A hundred robbers from Tung-kou-tsu crossed over to try their luck. Two hundred armed men met them, and not a robber recrossed. At the Corean Gate, Coreans, representing Tls. 5,000 debts to the Chinese merchants payable last spring, failed to put in an appearance. Those doing business for them of course know nothing about them, and the Chinamen dare only wistfully look across the river.

DRAPER'S SCIENCE AND RELIGION.*

(The Nation.)

Some twelve years ago, Dr. Draper published a bulky volume entitled 'A History of the Intellectual Dovelopment of Europe,' in which his professed purpose was to show that nations or races pass through certain definable epochs of development, analogous to the periods of infancy, childhood, youth, manhood, and old age in individuals. But while announced with due formality, the carrying out of the argument was left for the most part to the headings and running-titles of the several chapters, while in the text the author peacefully meandered along down the stream of time, giving us a succession of pleasant though somewhat threadbare anecdotes, as well as a superabundance of detached and fragmentary opinions on divers historical events, having apparently quite forgotten that he had started with a thesis to prove. In the arrangement of his "running heads," some points were sufficiently curious to require a word of explanation, as, for example, when the early ages of Christianity were at one time labelled as an epoch of progress and at another time as an epoch of decrepitude. But the argument and the contents never got so far *en rapport* with each other as to clear up such point as this. On the contrary, each kept on the even tenor of its way without much regard to the other. From the titles of the chapters one was led to expect some comprehensive theory of European civilization continuously expounded. But the text merely showed a great quantity of superficial and second-hand information; serving to illustrate the mental idiosyncrasies of the author. Among these idiosyncrasies might be noted a total incapacity to understand the part played by Rome in the work of civilization, a singular lack of appreciation of the political and philosophical achievements of Greece under Athenian leadership, a strong hostility to the Catholic Church, a curious disposition to overrate semi-barbarous or abortive civilization, such as those of the old Asiatic and Native American communities, at the expense of Europe, and, above all an undiscriminating admiration for everything, great or small, that has ever worn the garb of Islam or been associated with the career of the Saracens. The discovery that in some respects the Mussulmans of the Middle Ages were more highly cultivated than their Christian contemporaries, has made such an impression on Dr. Draper's mind that it seems to be as hard for him to get rid of it as it was for Mr. Dick to keep the execution of Charles I, out of his 'Memorial.' Even in an essay on the 'Civil Policy of America,' the turbaned sage figures quite prominently; and it is needless to add that he reappears, as large as life, when the subject of discussion is the attitude of science toward religion.

Speaking briefly with regard to this matter, we may freely admit that the work done by the Arabs, in scientific enquiry as well as in the making of events, was very considerable. It was a work, too, the value of which is not commonly appreciated in the accounts of European history written for the general reader, and we have no disposition to find fault with Dr. Draper for describing it with enthusiasm The philosophers of Bagdad and Cordova did excellent service in keeping alive the traditions of Greek physical enquiry at a time when Christian thinkers were too exclusively occupied with transcendental speculations in theology and logic. In some departments, as in chemistry and astronomy, they made original discoveries of considerable value; and, if we turn from abstract knowledge to the arts of life, it cannot be denied that the mediæval Mussulmans had reached a higher plane of material comfort than their Christian contemporaries. In short, the work of all kinds done by these people would furnish the judicious advocate of the claims of the Semitic race with materials for a pleasing and instructive picture; Dr. Draper, however, errs, though no doubt unintentionally, by so presenting the case as to leave upon the reader's mind the impression that all this scientific and practical achievement was the work of Islamism, and that the Mohammedan civilization was a higher type than the Christian. It is with an apparent feeling of regret that he looks upon the ousting of the Moors from dominion in Spain; but this is a mistaken view. As regards the first point, it is a patent fact that scientific enquiry was conducted at the cost of as much theological obloquy in the Mohammedan as in the Christian world. It is true there was more actual tolerance of heresy on the part of Moslem governments than was customary in Europe in those days, but this is a superficial fact, which does not indicate any superiority in Moslem popular sentiment. The caliphate or emirate was a truly absolute despotism, such as the Papacy has never been, and the conduct of a sceptical emir in encouraging scientific enquiry goes but little way toward proving anything like a general prevalence of tolerance or of free-thinking. And this brings us to the second point—that Mohammedan civilization was, on the whole, rather a skin-deep affair. It was superficial because of that extreme severance between government and people which has never existed in European nations within historic times, but which has always existed among the principal races that have professed Moslemism. Nowhere in the Mohammedan world has there ever been what we call a national life, and nowhere do we find in its records any trace of such an intellectual impulse, thrilling through every fibre of the people and begetting prodigious achievements in art, poetry, and philosophy, as was awakened in Europe in the thirteenth century and again in the fifteenth. Under the peculiar form of unlimited material and spiritual despotism exemplified in the caliphate, a few men may discover gases or comment on Aristotle, but no general movement toward political progress or philosophical enquiry is possible. Such a society is rigid and inorganic at bottom, whatever scanty signs of flexibility and life it may show at the surface. There is no better illustration of this, when well considered, than the fact that Moorish civilization remained, politically and intellectually, a mere excrescence in Spain, after having been fastened down over half the country for nearly eight centuries.

But we are in danger of forgetting our main theme, as Dr. Draper seems to do, while we linger with him over these interesting

* 'History of the Conflict between Religion and Science. By John William Draper, M.D., LL.D.' Fourth edition. New York: D. Appleton & Co. 1875, 12mo, pp. xxii, 373. (International Scientific Series, XII.)

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

wayside topics. We may perhaps be excused, however, if we have not yet made any very explicit allusion to the 'Conflict between Religion and Science,' because this work seems to be in the main a repetition *en petit* of the 'Intellectual Development of Europe,' and what we have said will apply as well to one as to the other. In the little book, as in the big one, we hear a great deal about the Arabs, and something about Columbus and Galileo, who made men accept sundry truths in the teeth of clerical opposition; and, as before, we float gently down the current of history without being over well-informed as to the precise didactic purpose of our voyage. Here, indeed, even over-headings and running titles do not materially help us, for though we are supposed to be witnessing, or mayhap assisting in, a perenial conflict between "science" and "religion," we are nowhere enlightened as to what the cause or character of this conflict is, nor are we enabled to get a good look at either of the parties to the strife. With regard to "religion" especially are we left in the dark. What this dreadful thing is toward which "science" is always playing the part of the Herakles towards the Lernæan Hydra, we are left to gather from the course of the narrative. Yet, in a book with any valid claim to clearsightedness, one would think such a point as this ought to receive very explicit preliminary treatment.

The course of the narrative, however, leaves us in little doubt as to what Dr. Draper means by a conflict between science and religion. When he enlarges on the trite story of Galileo and alludes to the more modern quarrel between the Church and the geologists, and does this in the belief that he is thereby illustrating an antagonism between religion and science, it is obvious that he identifies the cause of the anti-geologists and the persecutors of Galileo with the cause of religion. The word "religion" is to him a symbol which stands for unenlightened bigotry or narrow-minded unwillingness to look facts in the face. Such a conception of religion is common enough, and happily a great deal has been done to strengthen it by the very persons to whom the interests of religion are presumed to be a professional care. It is nevertheless a very superficial conception, and no book which is vitiated by it can have much philosophic value. It is simply the crude impression which, in minds unaccustomed to analysis, is left by the fact that theologians and other persons interested in religion are usually alarmed at new scientific truths, and resist them with emotions so highly wrought that they are not only incapable of estimating evidence, but often also have their moral sense, impaired, and fight with foul means when fair ones fail. If we reflect carefully on this class of phenomena, we shall see that something beside mere pride of opinion is involved in the struggle. At the bottom of changing theological beliefs there lies something which men perennially value, and for the sake of which they cling to the beliefs as long as possible. That which they value is not itself a matter of belief, but it is a matter of conduct; it is the searching after goodness—after a higher life than the mere satisfaction of individual desires. All animals seek for fulness of life; but in civilized man this craving has acquired a moral significance, and has become a spiritual aspiration; and this emotional tendency, more or less strong in the human race, we call religious feeling or religion. Viewed in this light, religion is not only something that mankind is never to get rid of, but it is incomparably the most noble as well as the most useful attribute of humanity.

Now, this emotional prompting toward completeness of life requires, of course, that conduct should be guided as far as possible, in accordance with a true theory of the relations of man to the world in which he lives. Hence, at any given era the religious feeling will always be found enlisted in behalf of some theory of the universe. At any time, whatever may be their shortcomings in practice, religious men will aim at doing right according to their conceptions of the order of the world. If men's conceptions of the order of nature remained constant, no apparent conflict between their religious feelings and their knowledge need ever arise. But with the first advance in our knowledge of nature the case is altered. New and strange theories are naturally regarded with fear and dislike by persons who have always been accustomed to find the sanction and justification of their emotional prompting towards righteousness in old familiar theories which the new ones are seeking to supplant. Such persons oppose the new doctrine because their engrained mental habits compel them to believe that its establishment will in some way lower men's standard of life, and makes them less careful of their spiritual welfare. This is the case, at all events, when theologians oppose scientific conclusions on religious grounds, and not simply from mental dulness or rigidity. And, in so far as it is religious feeling which thus prompts resistance to scientific innovation it may be said, with some appearance of truth, that there is a conflict between religion and science.

But there must always be two parties to a quarrel, and our statement has to be modified as soon as we consider what the scientific innovator impugns. It is not the emotional prompting towards righteousness, it is not the yearning to live *im Guten, Ganzen, Wahren*, that he seeks to weaken; quite likely he has all this as much at heart as the theologian who vituperates him. Nor is it true that his discoveries, in spite of him, tend to destroy this all-important mental attitude. It would be ridiculous to say that the fate of religious feeling is really involved in the fate of grotesque cosmogonies and theosophies framed in the infancy of men's knowledge of nature; for history shows us quite the contrary. Religious feeling has survived the heliocentric theory and the discoveries of geologists; and it will be none the worse for the establishment of Darwinism. It is the merest truism to say that religion strikes its roots deeper down into human nature than speculative opinion, and is accordingly independent of any particular set of beliefs. Since, then, the scientific innovator does not, either voluntarily or involuntarily, attack religion, it follows that there can be no such "conflict" as that of which Dr. Draper has undertaken to write the history. The contest is between one phase of science and another; between the more crude knowledge of yesterday and the less crude knowledge of to-day. The contest, indeed, as presented in history, is simply the measure of the difficulty which men find in exchanging old views for new ones. All along, the practical question has been, whether we should passively acquiesce in the crude generalizations of our ancestors or venture actively to revise them. But as for the religious sentiment, the perennial struggle in which it has been engaged has not been with scientific enquiry, but with the selfish propensities whose tendency is to make men lead the lives of brutes.

The time is at hand when the interests of religion can no longer be supposed to be subserved by obstinate adherence to crude speculations bequeathed to us from pre-scientific antiquity. One good result of the doctrine of evolution, which is now gaining sway in all departments of thought, is the lesson that all our opinions must be held subject to continual revision, and that with none of them can our religious interests be regarded as irretrievably implicated. To any one who has once learned this lesson, a book like Dr. Draper's can be neither interesting nor useful. He who has not learned it can derive little benefit from a work which in its very title keeps open an old and baneful source of error and confusion.

Shipping Intelligence.

ARRIVALS.

Jan. 16, *Hafrofjrod*, Norwegian barque, Meyer, 479, from New York, July 26, Kerosene, to E. Fischer & Co.

Jan. 16, *Edward James*, American barque, Forbes, 528, from Nagasaki, Jan 9, Coal, to P. M. S. S. Co

Jan. 16, *Sumida Maru*, Japanese steamer, Gerloch, 690, from Hakodate, Jan. 14, General, to M. B. Co.

Jan. 19, *Albuera*, British barque, Harris, 774, from London, Sept. 2, General, to Van Oordt & Co.

Jan. 19, *Amanda*, German schooner, Harms, 225, from Takow, Dec. 29, Sugar, to F. Knoblauch.

Jan, 20, *Tokio Maru*, Japanese steamer, Dunn, from Shanghai and ports, Jan. 13, Mails and General, to M. B. Co.

DEPARTURES.

Jan. 15, *Flying Spur*, British barque, Croot, 735, for Kobe, General, despatched by Wilkin & Robison.

Jan. 15, *Cathaya*, British ship, Morgan, 790, for Kobe, General, despatched by Carroll & Co.

Jan. 17, *Wm. Van Name*, American barque, Adams, 466, for Nagasaki, Ballast, despatched by Captain.

Jan. 17, *Rositta McNiel*, American barque, Brown, 611, for Nagasaki, Ballast, despatched by Captain.

Jan. 18, *Menzaleh*, French steamer, Pasqualini, 1,008 for Hongkong, Mails and General, despatched by M. M. Co.

Jan. 19, *Genkai Maru*, Japanese steamer, Conner, 1,917, for Shanghai and ports, Mails and General, despatched by M. B. Co.

Jan. 19, *Nagoya Maru*, Japanese steamer, Young, 1,914 tons, for Shanghai, mails and general, despatched by M. B. Co.

Jan. *Askold*. Russian frigate, Captain Tartoff, 1,800, for Kobe and the South.

PASSENGERS.

Per Steamship *Menzaleh* for Hongkong.—Mr. and Madame Savatier, 2 children and servant, Messrs. Jacobs, J. A. Sitwell, Frederick Foules, and A Sing.

Per Steamship *Tokio-Maru*, from Shanghai.—Messrs. Tada, J. A Potter, Ooba, M. A. Pitman, Heise, Longford and C. B. Bernard, 110 Japanese, 12 Chinese and 1 European in steerage.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Per Steamship *Genkai Maru* for Shanghai and ports.—Mr and Mrs. Okura, and family, Mr. and Mrs. Roper, Messrs. Maieda, Okamoto, Rappard, E. C. Kirby, Nachtigal, Blundell, Boejoe, Takahashi, Shimaji, Edo and Wilson, and 84 Japanese and 1 foreigner in the steerage.

CARGOES.

Per Steamship *Menzaleh* for Hongkong.—

Silk for France	265 bales.
England	86 „
Total	351 bales.

Per Steam-ship *Tokio-Maru*, from Shanghai.—

Treasure, value	$181,150

REPORTS.

The *Formosa* was towed up to Shinagawa yesterday, to load rice for San Francisco.

The *Nagoya Maru* proceeds direct to Shanghai, to be docked and repaired, there being no dock room at Yokoska for the next two months.

The *Albuera* reports: After sailing from London experienced light and variable winds and calms down Channel and into the N. E trades, which were reached in 25 degrees North Latitude. Crossing the Equator September 28th, in 22 degrees 30 minutes W., met with moderate S. E. trades, after losing which had variable and and strong winds to the parallel of the Cape, which was crossed October 24th, in 40 degrees South. The Easting was run down in 39 degrees South and the N. W. Cape of Australia was passed November 22nd. Attempting to come up through the Strait of Lonbock, found very strong irregular currents, with numerous eddies, making the vessel almost unmanageable.

A Dutch ship in company was observed in the evening about 8 p.m. to strike and suddenly disappear; her lights, that had been plainly seen going suddenly out, after which the sea was seen going over her mast heads and no signal was heard but a whistle. The captain remained as near the wreck as was safe till next morning when it was observed that the main and mizen masts were gone, the foremast and part of fore topmast and jib boom standing, with the lower topsail still set, poop and forecastle gone, but no signs of any of the crew or any boats remaining. The *Albuera* afterwards bore up for Bali Strait, which was passed in safety. Passed through Pitt and Gillolo passages in company with American ship *Mary Whetridge*, for Shanghai. She reported an American barque in Ombay passage from New York December 5th, 166 days out, and an English barque for Hong Kong.—Passed Pelews, January 1st, and entered the gulf of Yedo on the 16th, 137 days from the Channel. During the voyage, an able seaman, Henry Hall, aged about 34, died of consumption on the 1st of November, in the Indian Ocean. The deceased was a native of Berwick on Tweed.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics and Yarns.—During the closing week we have only a moderate business to report, but prices have not given way and are much the same as reported in our last issue.

Grey Shirtings :—				White Shirtings:—			
7 lbs.	38½ yds. 39 in. per pce....	$1.90 to	$2.20	60 to 64 reed 40 yds. 35 in. nom. per pce....	2.20 to	2.40
8 lbs.	38½ yds. 44 in. „ ...	2.20 to	2.50	Turkey Reds 24 yds. 30 in. 2¼—3 lb. per lb...	0.75 to	1.02½
8 lbs. 4 to 8 lbs.	38½ „ 39 in. „ ...	2.20 to	2.50	Black Velvets	8.50 to	9.50
9 lbs.	38½ „ 44 in. „ ...	2.55 to	2.95	English Drills 15 lb. 40 yds, 30 in....	3.25 to	3.40
				Taffachelass 12 yds, 43 in.... nomy.	2.25 to	2.40

Yarns.

No. 16 to 24 ... ...per picul...	$30.50 to	34.00	No. 38 to 42... ... ...per picul...	$42.00 to	45.00
No. 28 to 32 ... ...per picul...	$35.00 to	40.00	Reverse Twist ... 16-24 ... „ ...$34.25		

Woollens.—Business in this staple continues exceedingly dull, plain *Mousselines de Laine* alone forming an exception; notwithstanding large shipments coming forward they are readily saleable at former rates. Black *Italian Cloth* and Black *Plain Orleans*, both in better qualities, are the only articles of Bradford manufacture that attract attention. Their out-turn however is far from giving satisfaction to importers. In fancy Woollens nothing whatever is doing.

Plain Orleans	40—42 yds. 32 in....	6.50 to	8.00	Figured Mousseline de Laine..	30 yds. 30 in...	0.25 to	0.28
Figured Orleans	29—30 yds. 31 in....	4.75 to	5.25	Multicolored „	...30 yds. 30 in...	0.35 to	0.40
Chimagoro	30 yds. 30 in....	5.25 to	5.75	Cloth, all wool plain or fancy..	48 in. to 52 in...	0.80 to	1.20
Italian Cloth	—30 yds. 32 in....	0.25 to	0.33	Presidents	...54 in. to 56 in...	0.60 to	0.70
Camlet Cords	29—30 yds. 32 in....	6.25 to	7.25	Pilots	...54 in. to 56 in...	0.40 to	0.45
Camlets Asstd.	56—58 yds. 31 in....	18.50 to	19.00	Union	.. 54 in. to 56 in...	0.40 to	0.65
Lastings, Japan...	22—30 yds. 32 in....	13.00 to	14.50	Blankets, scarlet & green 7 to 8 lbs...	per lb...	0.40 to	0.41
Plain Mousseline de Laine	—30 yds. 30 in,...	0.19 to	0.20½				

Sugar.—The *Amanda* arrived on the 19th instant, bringing 4,900 bags of Takao Sugar which are reported to be sold at $3.47½, thus establishing a lower range of prices. Three cargoes are said to be on the way.

Kerosene Oil is quotable at $2.20 per case *nominal*.

Sugar:—Formosa in bag ... ...per picul....	3.30 to	3.60	China No. 5 Kong-fun ... ...per picul ...	4.10 to	4.60
in Basket ... ... „ ...	3.25 to	3.50	„ No. 6 E-pak ... ... „ ...	3.60 to	3.90

„ No. 2 Ching-pak ... ... „ ...	6.40 to	6.80	Daitong... ... ... „ ...	2.80 to	3.00
„ No. 3 Ke-pak ... ... „ ...	5.70 to	6.20	Japan Rice ... ... „ ...	3.25 to	3.30
„ No. 4 Kook-fah... ... ... „ ...	5.00 to	5.50	Kerosine Oil..... ... ... per case ...	2.20	nom.

EXPORTS.

Silk.—Much uneasiness, which there is good reason to hope will not prove of long duration, has been created by advices just wired from Lyons. There are very few buyers in the market, and prices, which went on stiffening at the beginning of the week, have very nearly receded to our quotations of 10th instant.

Since the 8th instant, arrivals are 120 bales, and deliveries 400 piculs, much of which has, during the last few days, been rejected after inspection. The stock is decreasing, and good Hanks are becoming scarce.

We quote:

	At Exchange 4s. 1½ in London.	*At Exchange 5.22 at 6 m.s. in Lyons.*		*At Exchange 4s. 1½ in London.*	*At Exchange 5.22 at 6 m.s. in Lyons*

Medium No. 2½	...$400 to 420	15s. 2d. to 15s. 11d. frs. 42 to 44			

Tea.—The activity noticed in our last has continued throughout the week. Settlements of fully 4,000 piculs have to be reported, and although natives have in most cases been willing, rather than miss the opportunity of doing business, to accept current rates, in many instances they have asked and obtained higher prices.

The cause of this activity is difficult to determine, as the most recent telegrams from New York are far from encouraging. Some of our more sanguine buyers, however, are probably hoping that when the large stocks at present held in New York are moved off we may see somewhat enhanced values.

Choice Teas have been enquired for, but there are literally none on offer.

Common	...$14.00 to	18.00	Fine	...$32.00 to	34.00
Good Common	... 19.00 to	22.00	Finest	...$37.00 to	40.00.
Medium	... 24.00 to	26.00	Choice	None.	
Good Medium	... 28.00 to	30.00			

EXCHANGE AND BULLION.

Exchange.—With the exception of some small settlements of Bank Paper the business of the past week has been almost nil.

Rates close as follows :—

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

May 17th, 1873. 6m.

THE BEST INVESTMENT OF THE DAY FOR A SMALL OUTLAY.

And where there is no previous knowledge of the business required, is a Lemonade, Ginger Beer, and Soda Water Machine, as the public taste is so much on the increase for Aerated Drinks. The book of 90 pages of illustrations and information forwarded free.

THE

Japan Weekly Mail

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 5.] YOKOHAMA, SATURDAY, JANUARY, 29, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The work of the week has all been thrown out by a snow-storm of unusual severity. It began on Wednesday night and continued with but slight intermission until Friday morning when about eight or nine inches had fallen in sheltered places. But it was accompained with a high wind, and the snow drifted to great depths in various localities round the settlement. There are spots on the race-course where it lies fully seven feet deep, and doubtless there are far heavier drifts in other places. Friday was bright but cold, and though the snow thawed in the sun, it remained but very slightly touched in the shade. To-day the storm has begun again, and the clouds look so full of snow that it may easily last all night. If so, locomotion, difficult yesterday, will be almost impossible to-morrow, and the settlement will be in a terrible state for some days—rendered all the worse by the coolies of each house shovelling the snow in great masses on to the gutters of the streets and thus clogging them up. If every householder will forbid this the evil will be considerably diminished. So far as we know there has been no snow-balling match worthy of the occasion, which is imperial.

Regarding Corean affairs we can add nothing to the following, which appeared in our daily issue of this morning.

The news regarding Corea is of a contradictory character. On the one hand it is said that preparations are being made to reinforce the squadron already dispatched; and, on the other, that the Coreans are both overawed by the appearance which the Japanese have made, and impressed with the desire shewn so far that war should be avoided if possible. The despatches of the envoys have been received and forwarded to the Capital.

In reference to the *Shichi Jichi Zappo*, a paper published under the auspices of the American Missionaries at Kobe, to which we alluded in our leading columns last week, we are informed that the legal responsibility for the paper rests with two Japanese who have received due permission from the Government to publish it, and it is therefore under Government control. This fact disturbs the analogy we imagined to exist between the *Bunkoku Shimbun* and the paper in question, but is a significant fact in itself of high importance.

Madlle. Jenny Claus gave a final Concert at the Gaiety Theatre on Tuesday evening last, prior to her departure for America, and drew a large and appreciative audience. The programme was as varied as is compatible with amateur assistance, the burden of sustaining the interest of the evening falling—where it could best be borne—on the accomplished lady herself. The music she selected was calculated to test the variety of her powers, she conquered every phase of its difficulties, and exhibited every one of its beauties, as mistress of all. Her playing of Vieuxtemps *Sonata appassionata* was very admirable,—full of power, intelligence and sensibility. The music is that of a good careful writer, with a perfect knowledge of the instrument for which he writes. But it is not great music, and it is in great music that Madlle. Claus is heard at her best. And therefore it is that we impatiently pass over minor yet effective details of her concert, the claims of each of which were fully acknowledged, and come to the three movements of the great Mendelssohn Sonata which she played earlier in the month at her concert in Tokio, and of which we wrote at greater length in our notice of that performance. The *Allegretto Scherzando* is more serious than most of Mendelssohn's music of the same kind, though it will bear, we think, being played *slightly* faster than it was taken on Tuesday. The *Chorale* which follows it impresses the hearer more deeply the oftener it is heard. Mendelssohn's mind was profoundly religious, full of reverence—a quality inseparable from minds of the highest order—and of that noble awe which is unmixed with fear. And in this *Chorale* and the recitative which floats upon or moves above it, we see all this lofty quality of the composer's mind. We can pay Miss Claus no higher compliment than by saying that in nothing has she proved her powers as an artist more certainly than in her delivery of this recitative. In nothing has she made so fine an effect. In the hands of an inferior player it means absolutely nothing, and we will defy any one to understand the intention of the composer under such conditions. More even than this. A fine executant, wanting the necessary insight into the full meaning of the movement, may easily fail in interpreting it. Had we to teach a pupil to render it as we think it should be rendered, we should lay aside the instruments and close the music books, and read to him or her, in such manner as to discover their full beauty and intention, some of the later chapters of the Prophet Isaiah. Except under the active influence of the religious emotions this movement can never be worthily and properly played, and we are convinced it could be made the test of an artist, success or failure under which would permit of an unerring inference being made regarding the character of his mind and the value of his playing, estimated by the highest standards.

But we must forbear. Miss Claus has already more than once tempted us into writing more than our space and the time at our disposal quite justify. It remains therefore for us to bid her farewell and wish her every success in her career. With many of us she leaves recollections which will inseparably associate some of the works of the great masters with her name; and if these gifted men are more to us even than they formerly were, if we see more deeply into their souls than we did before, and have been enabled to estimate more truly the grandeur and wealth of their inspirations, we owe it—and most gratefully acknowledge the debt—to the gifted lady who has come among us as their interpreter.

We called the attention of the native press some time back to the frequency of assasination in this country—a crime wonderfully rare in China—and to the desirability of a strong expression of disapproval of the crime, intended to reach the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

public mind. It is gratifying to see that some of the Tokio newspapers have taken up the subject, and our columns this week prove that the *Choya Shimbun* has been prominent in the matter, though we have no translation of the article referred to in the correspondence of that journal. The writer of the letter which we publish ingeniously tacks an argument for the greater freedom of the Press on to his protest against assasination, and urges that the one cannot expected to cease until the other is granted. We do not quite like the spirit of bargaining which appears in his contention. Though signs of discontent in a people will never be ignored by prudent statesmen, the freedom of the press must be won on its own merits, and on the conviction that the people can be trusted with so large a liberty. That they can be thus trusted at present, we do not for a moment believe; and the discontent which expresses itself by assasination does not appear to be of a nature to demand concessions implying great trust in the political *morale* of a people. It is, however, a good sign that the Press is protesting against the crime.

Mr. Goodwin's decision in the case Malcolm, Wilcox & Co. *v.* J. D. Caroll & Co. has naturally been the theme of abundant discussion in the settlement, and, if upheld on appeal, will have important consequences, if only in impressing on the mercantile community their actual position as consignees of goods in which they have no actual proprietary interest. The case is of too important a nature to justify anything less than very careful consideration of its bearings, and time does not admit of our giving this to it in our present issue. The Judge's ruling seems to be completely in accordance with the law bearing on the case. Cap. III of Act 18 and 19 Victoria provides, "That every consignee of goods named in a bill of lading, and every endorsee of a bill of lading, *to whom the property in the goods therein mentioned shall pass upon or by reason of such consignment or endorsement*, shall have transferred to and vested in him all rights of suit, and be subject to the same liabilities in respect of such goods, as if the contract contained in the bill of lading had been made with himself." Now the evidence of the Plaintiffs was clear and unmistakeable that they had *no ownership* in the goods in respect of which the suit was brought. It appears to us most unfortunate for the parties to the suit that the issue which terminated in the non-suit should have been raised, for it must surely tend to protract litigation over a claim which the defendants had no desire to dispute on its general merits. But the point of ownership being raised, and the plaintiffs having disclaimed all proprietary rights in the goods, the grounds for a non-suit seem impregnable. It will be better, however, to reserve all comment on the case until next week.

We publish elsewhere the comments of the *Saturday Review* on the purchase by England of the Khedive's shares in the Suez Canal Company. We deem it right, however, to draw attention to an inaccuracy in its statement that the Khedive "selected England as the customer to whom he would give the first choice, because he wished to lean politically on England," as likely to give rise to false reasoning. It is on the contrary, obvious from a letter written to M. Rolland by M. Dervieu that England promptly embraced the opportunity which France had previously declined, and that the Khedive did not seek English capital until he had failed to supply his wants in France, and that he did the best he could to place the shares in that country and not elsewhere.

M. Dervieu explains the course of negotiations thus:—

The refusal of this business was sent to me on November 12 by the house of A. Dervieu and Co., to whom the Finance Minister had given only 48 hours for consideration. The conditions were the payment of 92,000,000f. in three instalments, and the reception of 10 per cent. from the Egyptian Government for the 19 years during which the shares are alienated. The Government offered the revenues of Port Said as a guarantee for this annuity. The next day, November 13, A. Dervieu and Co. telegraphed to me that the Minister would consent to raise the annuity to 11 per cent. After having assured the support of several financial notabilities at Paris, I submitted this operation alone to the group which was treating for the conversion of the floating debt, asking it to join in the scheme. I considered it as a confraternal duty not to leave it in ignorance of the refusal offered to me. My proposal was listened to, debated, and rejected. I then asked that Egypt should give me more time for the refusal, which was graciously granted till the 14th of November. I did not succeed better with the other financial groups whom I addressed on the subject. As you have said, as fast as I obtained adhesions those of the eve fell off. On the 10th of November Messrs Dervieu and Co. telegraphed that his Highness the Khedive would not sell his shares, that he only desired an advance of 85,000,000f. for three months, guaranteed by the deposit of his shares, and the transfer of 15 per cent. of the subsidy which the Suez Company allot to the Egyptian Government. If at the end of three months repayment was not made, the pledge became the property of the lenders. Dervieu and Co. announced that they signed a contract 'firm' on these conditions, reserving only the ratification of the financial groups which I was to establish at Paris. I did not fail to see the difference between the first and second proposals, but I did not the less try to find support at Paris. The time for ratification expired on Friday last, the 26th of November, at 12 p m. A telegram telling me that the English Government had bought the shares arrived in Paris the day before. Thursday, the 25th of November, Dervieu and Co., not having received the ratification which they expected, thought it right to withdraw before the respite granted to them had expired. I confine myself to telling you these facts.

We observe that the French Ministry promises a lengthy communication on the subject in the form of a "yellow book."

We observe in the China newspapers that Li Hang Chang has forwarded his preliminary report to the Central Government from Yunnan Foo. He would seem to palliate, if not wholly to excuse, the conduct of the local officials of Manwyne, on the plea that they acted on the presumption that Margary was heading an aggressive party on his return journey, and that in their terror of black troops, they endeavoured to check a further advance by assassinating the supposed leader. This is a view of the question which is not likely to be shared by the British Commissioners, and as Li Hang Chang stands committed to it by the etiquette of Chinese officialism, there is much reason to apprehend that an adjustment of the difficulty is not likely to result.

We are indebted to Messrs. Kelly & Co., for copies of several American newspapers received by the *City of Peking*.

From the "Japan Mail Daily Advertiser."

The *Akebono Shimbun* has heard that there were arms of the value of 70,000 *yen* on board the *Osaka Maru* when she went down. Their value is generally supposed to be much greater.

The *Akebono Shimbun* publishes the following statement: It is rumoured that Mr. Williams, who left this country upon the expiration of his agreement with our Government last year, is now in London. He is engaged in selling Japanese Government bonds and has already disposed of several millions worth. The order, it is alleged, was given secretly to Mr. Williams by the Government.

The *Hochi Shimbun* has been informed that a French instructor in the art of war, and some men who were formerly attached to the Tokugawa family, have begun to hold meetings at a tea-house on the Sumidagawa in Yedo. The purpose of these meetings is not explained, but it is intended, it would seem, to continue them from month to month.

The unfortunate editor of the *Saifû Shimbun* has, it seems, been incarcerated in the prison of the *Shihosho* in place of being handed over to the safe keeping of some member of his family, as has been hitherto usual. His relatives have memorialised the Ministers to allow him to serve his term of seclusion in the residence of one of his relations.

If we may believe the *Hochi Shimbun*, a system of *espionnage* exists in the newspaper offices in the interests of the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

government, which is thus kept acquainted with the policy of the conductors of the press.

The Editor of the *Hioron Shimbun* has been called upon to answer for the publication of an article in a recent issue which advocates the overthrow of despotic governments. He was further charged with circulating unfounded reports as to attempts upon the life of Ito, *Sangi*.

A newspaper named the *Makoto Shimbun* was published for the first time, in Yedo on Saturday last.

Mr. Black has memorialised the *Sei In* in reference to the impediments to which he has been subjected in the publication of the *Bankoku Shimbun*.

So far as we have been able to discover three cases only of small-pox have occurred in Yokohama. In one instance, which terminated fatally in the Hospital a few days since, the patient was brought in from the South, and this has been the only case admitted. The epidemic is commonly supposed to appear with special malignity every fourth year. The severe visitation of last winter was not unexpected.

A meeting of *Daijin* and *Sangi* was held at the Imperial Palace on Saturday last. It is said that the Corean affairs formed the chief subject of discussion.

The festival of the *Shokousha* will take place at Kudan in Yedo on the 27th 28th 29th instant. There will be horse racing, wrestling and other amusements.

Miss Claus gave her final Concert at the Gaiety Theatre last evening, assisted by a few amateurs. The house was well filled and the gratification which the exquisite playing of the skilled *artiste* called forth was frequently and warmly acknowledged in the course of the entertainment. Mr. Black and an amateur vocalist sang some songs and ballads with taste and good effect.

The following occurs in the *Japan Herald* of last evening:—

The *Echo* mentions a rumour that Kuroda has sent for a reinforcement of two battalions of infantry, and that Yamagata has refused to comply with this demand, on the ground that any warlike measures belong to the War Department. Hence is said to have arisen a dispute between that Minister and that of Foreign Affairs.

It is highly improbable that this statement should be well founded, Yamagata having only left Yedo on the 19th instant, or three days after the Special Envoys had sailed from Tsushima for the Corean capital. An additional reason for discrediting this statement may be found in the harmony of views on this subject which is known to exist between the Minister of War and the Envoys.

Further dismissals of officials continue to be made by the authorities of the Tokei *Fu*. On the 24th instant sixty officers of the lower rank were discharged.

The *Saifu Shimbun* has heard a strange report of an extensive exodus from the capital of the followers of the former Daimio of Aidzu. Some 1,500 of these, it would seem, comprising officers in the Imperial Army and Navy, policemen and merchants have quitted the capital and have returned to their native province. The report, however, does not state the object of their migration homeward.

From a telegram received from Nagasaki, it would appear that the Corean envoys left Fusan on the 22nd or 23rd inst They would arrive at Kokwa presumably on the 25th.

It is intended to build a large hall for exhibitions, &c., at Uyeno shortly.

The *Hochi Shimbun* is informed that an important message has been received from Corea. It would appear that on hearing the representations which Hirotz, the Japanese Commissioner, was charged to make on behalf of his Government, the local authorities denied all knowledge of the nationality of the vessel on which their forts had fired. But they promised to communicate the representations of the Commissioner to their King without delay.

The *Nichi Nichi* has been informed that the foreign proprietor of the *Bankoku Shimbun* has referred the question of the legality of its publication to the British Representative, and that a conference with the Foreign Office will no doubt follow. It also adds that the former manager of the *Nisshin Shinjisshi* has been examined at the Saibansho with the view to ascertain if the property in that journal has passed in good faith to Mr. Black.

Some doubt as to whether Shimadzu Saburo has gone southward would seem to exist in Yedo. The *Hochi Shimbun* has good reason to believe that he is still in Yedo and residing at his house in Hamacho. His departure for Nagasaki a few weeks since was certainly authoritatively stated

At about five o'clock yesterday afternoon the barometer reached its lowest point (29.84) and the snow storm, which had continued almost without intermission for some eighteen hours, ceased. It is supposed to be the heaviest fall of snow experienced here for the last seven years.

A smart shock of earthquake was experienced at 4 o'clock this morning—(Friday).

A telegraph wire has been laid between the Imperial Palace at Yedo and the chief police-station of the Capital.

The *Saifu Shimbun* mentions the case of a person living in Shiba who has been discovered in the possession of a large number of rabbits, upon which he had not paid the annual assessment. He was fined 70 *yen* and ordered to pay a tax of 35 *yen* or one *yen* each upon the rabbits found on his premises.

The Police have arrested some fifty persons in the Capital, who are charged with advocating the rights of the people too strenuously.

Reports from the country, so far as communications are open, indicate that the recent heavy fall of snow has been very generally experienced. The telegraph wires on the Southern line are said to be out of order, and a slight interruption to traffic occurred on the Yedo railway yesterday forenoon. Later in the day a thaw set in. The barometer has risen three-tenths since yesterday and the thaw is arrested.

The Honourable F. R. Plunkett, British Secretary of Legation at Yedo has been instructed to proced to Washington, where he will succeed Mr. R. G. Watson.

The Japanese papers notice the fact of the first shipment of rice being now loaded on the *Parmenio*, lying at Shinagawa.

IMPERIAL GOVERNMENT RAILWAYS.

YOKOHAMA STATION.

Statement of Traffic Receipts, for the week ending Sunday, 16th January, 1876.

Passengers, Parcels, &c.	$5,233.76

NATURAL SCIENCE IN JAPAN.

SO few are the votaries of natural science in Japan that the departure of Dr. SAVATIER, for many years past medical officer in charge of the Yokoska docks and arsenal, cannot but be regarded as a serious misfortune by all who take any intelligent interest in the natural history of this country. To the inquisitive intelligence of the present day the phenomena and laws of nature afford motives for observation and reflection of daily increasing importance. The life of man is a constant struggle with the forces around him, and his existence is simply the sum of the resultants of the various energies within and without him. Hence the incalculable importance of a close and accurate investigation and coordination of all natural phenomena. We know that human life is one long duel with nature, one long struggle between the powers in us and the powers out of us, upon success or failure in which much of our happiness or misery turns. External nature is a variously composite problem, vast beyond measure, important beyond possibility of exaggeration. No complete solution of this problem can be hoped for; we shall never probably be able even to state it in entirety. We can at the most expect to arrive at a more or less approximative solution of some of the innumerable phases it presents to us. Upon the degree of this approximation, our material, and—with almost equal certainty—our moral progress depends. In the vastness of our ignorance it is impossible to decide upon the relative importance of the various sequences of phenomena with which we come into contact. But, so far as the immediate future at least is concerned, there can be no doubt that Biology,—using the term in the wide sense in which it is commonly employed by the scientific men of the day—is the most important department of concrete philosophical research. Biology is simply the science of life: having, for subject, the statical and dynamical phenomena presented by certain compounds of carbon, hydrogen, nitrogen and oxygen; and, for object, their classification into properly related groups and their resumption under those general expressions termed laws. The distinction formerly so sharply drawn between animal and vegetable life is unscientific. The question whether Bactriæ, Vibriones and Diatoms are animals or plants becomes daily of less importance. The former are not produced from the latter any more than monkeys are born of oxen; and the various phenomena of life, whether we call them vegetable or animal, are simply points in the branchage of the stemless tree of animated existence.

Any serious worker then in this vast field of inquiry is worthy of encouragement and admiration. The true philosopher disdains no fact, however humble it may appear to be. To him Nature speaks her difficult language often more intelligibly in the whisper of unbrilliant and commonplace phenomena than when she uses the louder tone of some awe-inspiring or wonder-waking occurrence. A russet-hued sedge, a mud-born weed, an unobtrusive hedge-flower often affords a key to her mysteries which we seek in vain in the more imposing forest tree or more brilliant tropical bloom. A common dandelion, with its intricate *involucre*, its curiously packed head of minute flowers, its delicately divided *stigma*, its *achene* with its persistent feathery *calyx*, is more interesting to the true lover of nature than many a gorgeous hot-house exotic. Nay, it seems likely that we must look to an attentive study of such so-called low forms as lichens, *marchantiæ*, mosses, and the exquisitely beautiful microscopic plants of which the ooze on sodden leaves and sticks and damp stones, and the mould and mildew on various objects, consist, for a solution of the great problem of life, rather than hope for it from an examination of the more striking phenomena of the animal or vegetable world.

Our space forbids us to pursue this theme further. But these observations have been suggested by the departure from amongst us of so patient and intelligent an investigator in Biological science as the accomplished author of the '*Enumeratio Plantarum in Japonia sponté crescentium*' which we reviewed some months back. Since the days of THUNBERG no such good work has been done in the Botany of Japan as that effected by Dr. SAVATIER and his collaborator. The meagre descriptions of THUNBERG sufficed for a period anterior to the development of the natural system of classification, but the more exact science of the present day requires an accuracy of observation, a wealth of learning and a breadth of scientific conception, altogether undreamed of in the last century. That these indispensable qualities are possessed in a high degree by Dr. SAVATIER will be evident to any one who should care, even cursorily, to glance through the '*Enumeratio*,' which need not shrink from comparison with any similar work on the Botany of any country. But he has left no successor, and, for some time, botanical science will be at a standstill in a country than which none presents more points of interest to a Botanist. This is the more to be regretted in that the task which Dr. SAVATIER set himself, and which he has thus far so admirably executed, is only half accomplished. The whole of the monocotyledonous plants, the grasses, sedges, ferns, lilies, orchids, &c.,—the least known and most interesting section of the Flora of Japan,—remain to be studied; and the author of the '*Enumeratio*' had proposed to himself to pass another year in this country, freed from official ties, for the purpose of completing the task which his recall has forced him to abandon. Dr. SAVATIER is a surgeon in the French navy,—lately, we are glad to be able to say, promoted to the rank of 'médecin principal,'—and the intelligent perseverance which has enabled him, amid the arduous duties of his profession—rendered doubly arduous by the exigencies of naval duty—to attain the high position awarded him by scientific Botanists, reflects no small honour upon the eminent service to which he belongs. HUXLEY and HOOKER are similar examples in our own navy—both these celebrated biologists began life as Assistant Surgeons—of a successful pursuit of the study of natural science under disadvantageous circumstances. Dr. SAVATIER alone can worthily complete the task he has begun, and we earnestly hope that the department upon which his labours have cast such lustre will put no obstacle in the way of his attaining the legitimate ambition we believe him to entertain, of bringing the work he has undertaken to a satisfactory conclusion. We venture to say, indeed, it were well that the French Government should assist, so far as circumstances may render it possible, so eminent a servant in reaping for himself and his country the full honour of his patient and long-continued researches.

It is interesting to state that in addition to the presents bestowed upon Dr. SAVATIER by the Japanese Government, he received the high and, we believe, unique honour of an address from the mayor of the village in the vicinity of which he resided, thanking him in the name of the villagers for the professional attention, ever kindly and readily bestowed, many of them had experienced at his hands, and wishing him all happiness and prosperity in the future. We mention this fact as showing that the botanist did not neglect to avail himself of his high privilege as a physician to relieve those who came to him in pain or sickness, and because it is always pleasant to record an act of merited gratitude.

SPIRIT OF THE JAPANESE PRESS.

Influence of Government upon Popular Morals.

(Hochi Shimbun.)

It appears to us within the power of a government to elevate or degrade the character of a people. In saying this we foresee the probability that both officials and people will exclaim: "Character is a thing which has neither colour nor form, which can neither be seen nor touched, and, be a government never so powerful, it surely cannot elevate or degrade character as it can deal with ranks, pensions and salaries." But if we examine into the nature of government and that of men, we imagine that the reader will not be long in coming to the conclusion that the power we have mentioned does belong to a government, and we therefore entreat attention to the following.

It is lamentable, yet not the less true, that this power exists in governments, although we shall admit that a government, however powerful, does not actually hold it as part of any stated prerogative. But circumstances may be such, that the people in whose hands this power naturally rests cast it away from themselves and transfer it to a government. In investigating the causes of this we must first enquire into the character of the people. The direction in which the minds of the people are turned is towards the government, and what they most desire is to become officials. This must be based on some reason, which appears to us as follows.

In all ages Asiatics have thought that the highest honour to which a man could aspire was that of becoming an official, and that no respectable man could follow any other avocation. Every other occupation was regarded as mean, and when any one was made an official, he and all others thought he was promoted to high honour. There were none who did not desire to become officials, and this desire was as strong as that of a hungry wolf for prey. Such has been the custom among these nations, and although we have become somewhat more enlightened of late, only very few of us have yet been converted to the idea that becoming officials was not the sole source of honour to man. So deeply does custom influence them that they cannot shake off this feeling, and this is the first reason.

From ancient times our education may be said to have consisted solely of moral philosophy and politics, and as the study of politics is intended as a preliminary to official life, those who have pursued our course of education could not apply their knowledge to practice unless they become officials, and this is the reason why all our learned men desire office—a desire which remains strong to this very day. Although some among them may now study foreign books, it is generally such as treat of politics, and when they are occasionally found studying other works, it is mostly with a view to qualify themselves for official life. This may be called the second reason.

The spirit of feudalism still remains in the hearts of our countrymen, and it is among the *Shidzoku* alone that the spirit of indifference to official occupation is to be found. The *Heimin* class are not wanting in the desire to become officials, a life to which they are attracted by the power and honour attaching to it. But they have no great confidence in their own ability, and therefore betray no great desire for office. The *Shidzoku* ought by this time to be occupying themselves in commerce, but the strong traditions which they have inherited from remote ages militate against their employing themselves as merchants or tradesmen, and the only thing they can succeed in is official occupation. Thus they are found plentifully in official life; and this may be called the third reason.

Those who occupy official posts spend their money in a reckless manner, without any regard to their station in life. Speaking generally, the official class consists of men who could not become merchants, tradesmen or farmers, and who would be incapable of protecting even their own property, if they had any. It is merely by good fortune that they become officials and receive salaries, which, however, they spend in luxuries or on their dress. They drive about in comfortable carriages, and then return to their elegant residences. The salaries of the worst of them do not suffice for the expense of their degrading dissipation. This is the ordinary state of affairs with the official class, and as they could not gain their living at any other calling, they are compelled to keep up appearances in order to maintain their positions, although in so doing they may lose their characters.

Some among us who discuss political questions say that we are governed by a despotic oligarchy, while others say that we have an absolute monarchy; some call it one thing, some another. Let them call it what they may, there is no escape from the fact that it is arbitrary. In despotism there is no limit to the power of the Sovereign or of certain officials; arbitrary will is the sole law: and this being the case the Sovereign or the higher officials can appoint or discharge any number of officials exactly as they please, not caring one iota whether they do their duty in office or not. When the mind of the people is in this state, and the constitution of the government such as we have described it, what influence will this government exercise upon the minds of the people? Surely it will be that the power of building up character, which the people have allowed to pass away from their own hands, will be found in the hands of the government.

If the government were strictly just in bestowing appointments, and both the people and the officials knew that ability to discharge certain duties was the sole condition on which appointments were made, all questions of favouritism and dislike being set aside, men would soon see that sycophancy was a useless game, their desire for official occupation would gradually diminish, they would enlarge the horizon of their faculties, and their characters would assuredly be also raised.

But if the government abuses its unlimited powers, and cares nothing for the virtues and morals of those who are appointed to office; if it unjustly distributes rewards and punishments, having regard to men's persons and not to their qualifications and deeds; we may be certain that all this will demoralize the character of the people. Men will fasten their eyes solely on some powerful official, and pronounce for war or peace as he may desire, and in spite of their own opinions to the contrary. If this official said that certain oppressions were good for the people, his follower would say that they are very good, when in reality his own conscience would pronounce for freedom, his sole anxiety being to please this official.

A wise man said: The worst consequence which arises from the abuse of power by an unlimited sovereign is the degradation of the morals and characters of the people he rules. Unlimited power produces sycophancy, and therefore no nation should permit of its existence." Again it has been said: "Be the condition of a person never so low, if he has not arrived at it by his own act, his character need not necessarily suffer, for it may have arisen solely from his insufficient knowledge. But if he has voluntarily brought himself to this low condition, he has lost both moral sense and character, and leaves a dark and evil track behind him." These words seem to us perfectly true.

Our present Government is a wise one, and we do not imagine that it would abuse its unlimited powers and scatter misery among the people. But it is impossible to say that there shall be no such fate for us in the future. This it is which sends a cold tremor through us and well nigh petrifies us.

The Rank and pensions of the nobles.

(Akebono Shimbun.)

The majority of those who discuss the *Kadzoku* question urge that their rank and pensions should be immediately abolished, for the country is at this moment in a state of great agitation, the Treasury is empty, and, under these circumstances, there can be no sufficient reason for giving to the *kadzoku* allowances which must come from the hard labour of the agricultural classes. Moreover, the *kadzoku* do nothing for the land, and as the four classes now enjoy equal rights, there is no reason for maintaining the rank of the nobles. Men are even coming to look down upon them with scorn and call them dogs and cats. Is it not too disrespectful to speak of them thus? Their forefathers in the olden days did noble deeds for the country, and even the Mikado himself respects them. Ought words of contumely to be held towards those whom even the Mikado respects?

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Our own opinion is that their pensions should be abolished, but their rank and dignity ought not to be stripped from them, for if the barrier between the Imperial family and the people be abolished, the people may demand the abolition of the Imperial rank also. When the *kadzoku* gave up their estates and their retainers, they did it in the spirit of patriotism, thinking that by thus doing the new foundations of government might be the more soundly laid, and by no means with the expectation of receiving their pensions. But the Government of its own good will granted them one tenth of their former revenues by way of allowance, and created them *kadzoku*, adding rank to their other dignities, and this was done as a recompense for the former deeds of their noble ancestry. But if, out of their own large generosity, they gave up their vast domains, without the expectation of receiving anything in return, we cannot think it consistent that they should be fretting about the one tenth which they now receive.

We have lately heard that some of the *kadzoku* are discussing whether they should not surrender their pensions to Government, thinking that the time has come for them to do so. This shows that they appreciate the liberality of the Government in granting them the enjoyment of these pensions. No doubt when the people hear of this they will declare that the *kadzoku* have acted rightly, so that we see no reason for urging a course which would entail starvation on them and the abolition of their rank. We have said before that they are men whom even the Mikado himself respects. Let them follow out the dictates of their own generous natures, and they will surely do nothing unjust. Let them give up their pensions; but do not let them be deprived of their rank, for this would endanger the permanence of the Imperial office itself.*

Reciprocal Duties.

(Hioron Shimbun.)

Heaven made all men alike and endowed them with equal rights which ought never to be taken from them. Man, therefore, should promote his own hapiness to the utmost extent and maintain his rights. When people, however, are uncivilized, and their minds have been neither socially nor morally enlightened, the powerful and wealthy are apt to persecute the weak and strip them of the rights with which they were endowed by Heaven, and this disposition requires to be checked. For this reason governments were instituted, and their chief duty is to maintain equal rights among the people in order to promote their happiness.

It cannot be said, however, that there are no governments which are haughty, which issue notifications in a language which the people cannot understand,* which suppress the free expression of opinion, and impede in various ways the advance of the people's happiness. Such governments frustrate the very objects for which they exist, and may fitly be called tyrannies, as they neglect their principal duty. The people who live under them must unite and get back all the rights with which they were originally endowed by Heaven, and in doing this it is sometimes necessary to overthrow a tyrannical government and establish another upon freer principles.

At the time of the declaration of their independence the Americans said that it was the duty of a people to overthrow tyrannical governments and establish freer forms of rule, and, at the time of their great Revolution, the French said that a government which deprived the people of their liberties should be overthrown; and that it was the duty of the people to do it.

Thus those who obey the commands of the Government, whether just or unjust, are not doing that duty which is imposed on them as men, and thus they act contrary to the will of Heaven.

Now, the Japanese Government is relaxing its former oppressive character, and is gradually conceding larger rights to the people with a view of increasing their happiness. The Japanese people have, therefore, great prospects before them. What we have written has been suggested by the possibility that some day a despotic person might arise and tamper with the happiness of the people, who, in that case, ought to know their duty beforehand. Were we to obey such a man we should be traitors to our duty.

* Perhaps the writer of this ill-considered article will undertake to show how rank which is to remain of any value as a political force, is to be maintained without wealth. Poor aristocracies bring aristocracy into contempt, and a powerful class of nobles is often an admirable guarantee for the liberties of the people. In England this has been eminently the case.—[*Ed. J. M. W.*]

* We presume that this irritating practice still continues. It appears a stupid union of pedantry and arrogance.—[*Ed. J. W. M.*]

Assassination.

(Correspondence from the "Choya Shimbun.")

I have read the leading article in the *Choya Shimbun* arguing that assassination is a barbarous custom, and stating that it is a crime held in horror by the civilized nations. The argument is so perfect as to defy criticism, and were it read by those who enter the houses of Ministers at night with drawn swords, it might prove to them the enormity of their crime and lead them to better ways.

And, now, looking to the growing enlightenment of our country, such crimes ought to cease. Yet is there a cause why these customs linger among us, and I will shortly try to show what it is. Assassinations have their rise in the accumulation of discontents, and these again spring from the fact that the people have no access to the mind of the Government and of their Sovereign. The higher officials of this country consist, of course, of very intelligent personages, the laws they issue are very just, and the people ought for every reason to be satisfied with them. But, as the world is wide, and men are many, there are some who deem these laws unjust and attempt to assassinate those who frame them; for, although they may be desirous of laying their views at the foot of the Throne, and of pointing out what is amiss, there is no road open for them to do so. And though they may desire to do this by means of the newspapers, the law hangs over their heads and represses their words. And, thus, though they cry to heaven or earth, they get no reply, their discontents gradually accumulate, and though they may acknowledge to themselves the guilt of assassination, they incur it in order to vent these discontents. This is the true reason why our advance in enlightenment has not yet cast out the demon of assassination. If we desire it to cease, and if the *Daijin* and *Sanghi* would sleep in safety with their gates open, Representative Institutions must be established, and a Free Press permitted. When the ideas of the people freely reach the Government, and the laws are made in accordance with the national will, all will be well. But if this be not done, the *Daijin* and *Sanghi* will not be able to enjoy their nightly sleep, let the police guard them never so carefully.

The Same.

(Hioron Shimbun.)

We heard a few days ago that some unknown persons entered the house of Mr. Ito, who saved himself from assassination by concealment. But they, thinking that he had escaped, searched the premises for him carefully, and, failing to find their intended victim, left the place. From that night four policemen have kept guard over the house. Assassinations have set in, while the Press has been restricted, and Mr. Ito is puzzled. In countries like Formosa the laws prevent such acts, and we should advise the officials of the *Se-in* to translate and promulgate them. If, on the other hand, there are no such laws, the only dependence must be on the policeman's club. Yet this again possesses a power which produces recoil, and this does harm. It is said that Kido and Okubo have to take special care of themselves. This horrid crime should be rooted out.

THE RATIONALE OF ENGLAND'S ATTITUDE TOWARD CHINA.

We have been requested to give insertion to the following article, which comes from the pen of one of the most experienced living observers of the relations between China and the Western powers. We should do no service to the views it embodies by adding any remarks of our own, and our readers will not fail to remark the breadth and stability of those foundations upon which the writer wishes to see the intercourse of the West with China preserved.

"Tray, Blanche and Sweetheart—see! they back at me"

We may imagine was the soliloquy of Sir Thomas Wade on taking his departure again for Peking to pursue the arduous career of duty for yet another winter; and as we have no reason to think that his is one of those natures that thrive on "bitter-cup," we may suppose his sense of well-deserving tinctured by the coldness of a halting appreciation. Happily, a more just recognition of his deserts by the Government he has so long served, followed him closely.

And now, Sir, it seems to me time to take stock of the armoury before any more poisoned, or ill-poised and underweighted arrows are discharged against an impenetrable shield; lest the rebound harms the over-confident marksmen themselves.

Writing at the period of the rupture of 1856, I declared:—"Hitherto England has fought the battle of "civilization single-handed in China, if we limit the sense of this phrase to open hostilities:"—and I proceeded to counsel the cooperation of the other two Treaty Powers of that day—France and America—in the impending revision of the then existing relations.

France responded effectually to the invitation given by England; but America held herself aloof from the demonstration of force that preceded negotiations:—yet reaped, in common with Russia, full participation in the results of the applied pressure.

Thenceforward there were four Western Powers in presence at Peking, constituting a common accord *vis-a-vis* the Government of China. Yet, undeniably, England enjoyed a superior prestige derived from the exercise of her power in the first and second wars, as well as from her paramount commercial interests.

It was in this condition of relations at Peking that the cooperative policy assumed shape and consistency in the hands of Sir Frederick Bruce and Mr. Burlingame. The watchword of these two Ministers was *Stability of Rule by the Imperial Government*; and we know that the tenacity of the adherence of the former to it, extended to direct and persistant hostility to the Taepings. In that I could not accord him my sympathy; but he had the aid as well as the sympathy of others beside the majority of his own countrymen.

Such being the watchword of England as against the domestic foes of the Manchu dynasty, its correlative was the independence of China in her external relations also. This was the only logical position of the Representatives of England and America. Consequently, whenever any question of policy, or of procedure affecting policy, arose, it was met by Sir Frederick Bruce with a clear enunciation of the principle of China's sovereign and independent rights. One citation upon this point will suffice, as it is emphatic. Thus, in April 1863, in writing of the proper construing of the Treaties as to the mode of levying the *lekin* tax upon goods, he said:—"Her Majesty's Government will "not agree to any system which does not respect the ter- "ritorial rights of the Chinese Government and its ex- "clusive jurisdiction over its own subjects. The exclusive "jurisdiction of China over Chinese and of each Foreign "Nation over its own subjects, is the foundation on which "the international relations of China with the outer "world is based."

Thus, England and America, acting in intimate concert, in imposing restraints upon themselves, correspondingly imposed them upon all the other Western Powers: And therein saw their compensation in the consequent stability of Chinese rule and assured inviolability of Chinese territory.

In the light of this consistent policy, we see that the most trenchant lunges at Sir Thomas Wade are aside the mark:—namely, those pointed by the assumption of his competency to effect single-handed changes affecting the bases of treaties. Meantime, the pressure Sir T. Wade brought to bear has compelled the promulgation of decrees of a decidedly ameliorative influence upon intercourse and greatly enlarging accessibility to the various Government Boads:—so that another—hitherto-strongly-barred—door door of exclusiveness is now open to himself and other Ministers through which to press for Reform; while provision is already made for salutary changes to be based upon the Report forthcoming from the Inspector-General of Maritime Customs. Surely this is a sensible laying of proper foundations for change with a timorous and conservative Government.

But as to what was *the real, self-imposed, and logical attitude of England toward China* at the inception of the grave question of this year; and to what we are to attribute any seeming or real divergence of views between the two Governments, I have first to point out that it results, logically, from the preceding exposition that England cannot lapse from the position she voluntarily assumed in conjunction with others, or violate the principle in the adoption of which she virtually constituted herself a joint Protectress of the independence of China.

Putting aside the political and moral obligations imposing steadfastness, it would ill-beseem a leading Christian nation to breach an international compact that initiated the adhesion of a Pagan empire to the comity of nations, however halting in practice that adherence may be; least of all beseeming in England, the political Monitress whose persuasions wrought the marvel of change.

But, apart from these paramount considerations, it is neither wise nor expedient, from a purely selfish point of view, for England to lapse from her chosen elevated position.

The lives of great nations are long. The love or the hate of great peoples is tenacious. There follow the career of China the mighty shadows of an ancient greatness—a remote past. Shall we doubt that these will inspire hopes projected into the distant future?

Is there, then, no value in the friendship of this most numerous, apt, thrifty and industrious of people? No dread of its enmity, fed in the future day of its power by a legacy of past wrongs and an accumulation of traditional hate?

One would infer that reflections such as these were the scorn of not a few of the public writers of the day.

But dropping to the level of mere present expediency and material concern,—how astray are the blind leading the blind who cannot or will not see that the Chinese Trade Guilds of the present,—though based on the customs of the past,—are infused with an *amour propre*, as well as a covetous selfishness, that gathers new force and intensity from every act of unfriendliness—every utterance of contempt—every unjust accusation; and that the cumulative force of an offended personal and national sentiment may not expend itself in retaliatory fostering of native industries and maritime enterprizes in the future!

Some writers treat of the subject with an assumption of superior morality, a spirit of hauteur, and a spice of rancor;—claiming the right of domination and dictation:—Thus totally ignoring the implication of correlative duties.

Granted the superiority and magnify it, if they will: what then? Why, simply, that it implies extraordinary duties; the logical implication cannot be escaped, that the more real, the greater the superiority, the more binding are the correlative duties of England. Most writers regard the question simply as of present concernment, or limit their scope of vision to a not-distant future; the more-generally-taken point of view being, in fact, that of present expediency. But that is not the point of view of the conscience of a great people. Nay, is it—in the light of our preceding reflections—the point of view of prudent statesmanship? Certainly it is not that of the student of history. For he casts his horoscope beyond the immediate future;—and the question that looms upon his horizon is not that of present material resources, or scientific appliances, or political alliances; but the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

supreme question of the mutual dependence of nations as conducing to fraternal regard and ultimate unity.

And we may cherish the hope,—nay, the assured conviction, that England will know how to make her choice of future policy. The more she weeps for her son that is slain, the deeper will her eyes penetrate the future, and the more clearly reveal her mission.

She will look beyond the incident and explore the cause. Therein she will discover the origin of the divergence between peoples who alike put great value upon human life; and in consonance with the genius of her people, the application of a frank and manly and generous policy will heal the wound in a manner conducive to future amity. I repeat that England is the political Monitress of China. Shall she not, then, aspire to the loftier attributes of a moral exemplar? It is to this exalted position that her conscience impels her. Hence she remonstrates with—she does not fight—China. Neither under the lead of a humanitarian like Gladstone, or that of a philosophical statesman like Disraeli, will she declare war against China:—And a Salisbury would be strangely wanting in the prudent astuteness of the Cecil of Elizabeth's reign if he ventured on such a course, especially with the reinforcement of it that his insight into the affairs of India affords.

COSMOPOLITAN.

Canton, December 15th, 1875.

ON THE ARROW POISON IN USE AMONG THE AINOS OF YEZO.

By STUART ELDRIDGE, Esq., M.D.

Read before the Asiatic Society of Japan on the 19th January, 1876.

The study of poisons has revealed the somewhat singular fact that certain of these deleterious agents produce a lethal effect only when introduced directly in the blood, being nearly or totally harmless when taken by the stomach.

Of this class of poisons snake venom may be taken as the type, for it has long been indisputably proved that while an infinitesimal quantity of serpent venom when injected in the blood or in any way placed beneath the skin will speedily be fatal, a large quantity may be swallowed without inconvenience. It is chiefly poisons of this class which are at present used for the preparation of poisoned weapons by the various savage tribes employing such means of offence.

Poisoned weapons are generally missiles, such as throwing spears or arrows, and the wide geographical range of their use may be inferred from the following brief mention of some of the best known instances of their employment.

The natives of Java, Borneo and Celebes make use of a poison extracted from the juice of the Upas tree, two species of the Upas being employed U. antiar, and U. tinte. The poison consists essentially of the inspissated sap of these plants, that obtained from U. tinte being the most active. The action of these poisons has been investigated by Rumphius,* Leschenault,† Magendie, Delille, Brodie,‡ Horsfield,‖ Pelletier and Caventou, § Mulder,¶ Kölliker * and Hammond.†

The Bushmen of South Africa employ two kinds of Arrow poisons. That which is in common use for the chase is a mixture of snake venom with the juice of the root of a poisonous Amaryllis (Haemanthus Toxicaria), while the second, which is in especial favor for war, is derived from a larva known as the N'gwaa or K'aa, which appears to be closely allied in structure and properties to the poisonous potato bug of Colorado (Doryphora Decemlineata). For the small amount of information which we possess on the subject of these African poisons we are chiefly indebted to Doctor Livingstone and Mr. Baines.

The Indians, at least some of the tribes, who range over the great plains of North America, make use of an arrow poison prepared by exciting the rattlesnake (Crotalus) to bestow its venom repeatedly upon a piece of raw liver. This liver is then buried until decomposition has taken place when it is smeared upon the arrows. The effect of this poison, like those of the bite of the reptile from which it is derived, appear to be neither uniform nor certainly fatal, but the subject still lacks investigation.

By far the best known and most interesting of the Arrow poisons in use is the *curare* or *woorari* of the tribes about the Amazon and Orinoco. Many varieties of this poison are known, such as *corroral*, *vao*, and *ticunas*, but all appear to be closely related both in composition and effects. *Woorari* of the Amazon may be taken as the type of the class; the essential elements of this are the juice of a species of Strychnos, snake venom and the crushed bodies of several species of poisonous ants and spiders.

From the fact that *woorari* produces certain very interesting physiological phenomena, its effects have been more thoroughly studied than those of either of the before mentioned poisons. To enumerate all who have investigated this subject would be tedious and beyond the purpose of this paper. I will instance Boussingault,‡ Pelletier,‖ Bernard,§ Cogswell,¶ Virchow,* Brainard,† Hammond ‡ and Du Cazal.‖

The Goorkhas and other tribes inhabiting the flanks of the Himalayas make use of the root of the Aconitum ferox for poisoning their weapons. The prepared poison is known as *Bikh* or *Bish*, and its action as described appears to be identical with that of the subject of this paper.

Pereira, as quoted by Wallich, (Plantae Asiaticae Rariores, Vol. 1, p. 35, Tab. 41) gives the following experiments upon this poison.

"One grain of the alcoholic extract introduced into the peritoneal cavity of a rabbit began to produce its effects in two minutes; death took place in nine minutes and a-half. In a second experiment of a similar kind, the effects commenced in two minutes and a half and death was produced in eleven minutes. Two grains introduced into the jugular vein of a good-sized, strong dog produced convulsions in one minute, and death in three minutes. One grain introduced into the cellular tissue of the back of a rabbit began to affect the system at the end of six minutes, and produced death in fifteen minutes. A rabbit was made to swallow three grains of the extract; no effect was produced except that the animal continued chewing for several hours, as if ruminating, and which probably arose from the local action of the poison on the mouth and throat." The effects were (as detailed) tried in several ways, and in every case, except that in which the poison was given by the mouth, the effects were very similar, "namely, difficulty of breathing, weakness, subsequent paralysis, and death apparently from asphyxia."

The root of an allied species, Aconitum Japonicum, is is said to be used in Northern China as an arrow poison,§ but I have been unable to find any details in reference to its preparation or effects.

All these poisons produce their effect much more quickly and certainly when inoculated than when ingested, while some of them are absolutely harmless when taken into the stomach. The list of weapon poisons might be much extended, but enough have been noticed to serve for purposes of comparison.

Now the intention of poisoned weapons will be best subserved by the use of poisons which act in such a manner as quickly to incapacitate the wounded man or animal for resistance or flight, and it is remarkable that all the known weapon poisons, with, perhaps, the exception of the N'gwaa of the Bushmen, produce among their earliest effects a paralysis of voluntary motion. The *woorari* possesses this power in an especial degree. We shall see further on that the arrow poison of the Ainos, is no exception to this general rule.

Another important requisite when weapon poisons are employed for purposes of the chase is that the poison shall not render the flesh of animals slain by it unfit for consumption as food. The Aino arrow poison does not fully meet this requirement, as we shall see hereafter, and in this respect differs from most other agents of its kind.

I regret that my knowledge of the derivation and mode of preparation of the arrow poison of the Ainos is as yet incomplete. Savage tribes invariably surround the preparation of medicinal or poisonous agents by mystery and superstition. The secret methods employed are known to but few of the tribe and the knowledge is generally hereditary. Although the existence and chief properties of the *woorari* poison have been more or less familiar to Europeans since the time of Raleigh, its exact composition and mode of preparation is still but uncertainly known. It is therefore not strange that definite information in regard to the Aino poison should still be wanting. The following statements, are however undoubtedly correct. The active ingredient of the Aino poison is derived from the roots of one or more species of Aconitum. The dried and imperfect specimens of the plant which I have seen appear to be A. ferox and A. Japonicum, known as among the most poisonous species. The root is prepared by maceration and pounding till it forms a pulp: this is mixed with other ingredients which I have been unable to identify, but which are probably inert, and the resulting mass is buried for a time in the earth. On removal from the earth, the poison appears as a stiff dark reddish-brown paste through which fragments of woody fibre are distributed. The poison when applied to the arrow, is mixed with a certain proportion of animal fat, an addition which would seem likely to render it less efficient, as the fatty matter would cause it to be less soluble in the blood. The poison is applied to the arrow in considerable quantity, such arrows as I have seen being charged with about ten grains each.

The arrows used are constructed in three parts. The point, or head, is either of bone or bamboo; when of the latter it is so cut that the hard silicious cortex of the cane forms the edge and point. The head is flattened upon one side and rounded upon the other. This head, of about an inch and one-half in length is slightly fastened by a lashing of bark to a fusiform piece of bone or deer horn of about four inches in length; this bone or horn is again lashed by strips of bark to a shaft of wood or bamboo of about thirteen inches long, the butt of which is furnished with a triple feather.

It is on the flattened surface of the arrowhead that the poison is applied by moulding it into a smooth, rounded elevation, having its long axis parallel with that of the arrow, (see drawing.) The Ainos employ their poisoned arrows chiefly for the destruction of the bear, an animal abounding in Yezo and attaining there a large size. A short and by no means powerful bow, furnished with a poisoned arrow, is adjusted in such a way as to command one of the usual run-ways of the animal to be taken. By a simple mechanism the bow is so arranged that on striking a cord which is stretched across the path, the detent is liberated and the arrow inflicts a slight wound. More than a slight wound the weakness and rudeness of the apparatus render almost impossible. It is probable, however, that the slight lashings of the arrow head frequently give way, allowing the poison-charged portion of the weapon to remain in the wound. The Ainos assert that after having been wounded the bear is always found dead within a very short distance. These set bows are so common in some parts of the forest of Yezo as to render travel rather dangerous.

As I have been able to obtain but a very small quantity of the poison, I have made but few experiments as to its composition and physiological action.

The chemical examination was undertaken under the justifiable suspicion that the active principle of the poison, is that usual in plants of the genus from which it is derived, namely, aconitine. Fifteen grains of the crude poison treated by boiling alcohol, ammonia, ether, and sulphuric acid, yielded 8 10 of a grain of a yellowish-white, amorphous material, a portion of which was dissolved in water acidulated with hydrochloric acid, and tested as follows.

With solution of caustic potass, a dirty white flocculent precipitate, insoluble in excess of the reagent but soluble in acetic acid.

With solution of chloride of gold, a yellow amorphous precipitate, sparingly soluble in hydrochloric acid.

With double solution of iodine and iodide of potassium, a red-brown amorphous precipitate, changed by addition of a solution of caustic potass into a white amorphous mass.

Now all of these tests are in themselves fallible, as certain other alkaloids behave in exactly the same manner, there remained the physiological test as a confirmation. When applied to the tongue, aconitine, even in very minute quantity, produces an acrid taste, immediately followed by a peculiar sense of tingling and numbness. The extracted material before-mentioned gave this sensation. I feel justified, therefore, in believing that the active principle of the poison is aconitine.

Five experiments were made to determine the physiological action of the poison.

Experiment I.

A medium-sized dog of the larger Japanese breed received beneath the skin of the foreleg ½ grains of the poison, rubbed up with a small quantity of glycerine. In two minutes the animal seemed to experience uneasy sensations in the region of the inoculation, while both pulse and respiration diminished in frequency one third. In five minutes there was unsteadiness of gait and almost total loss of ordinary sensation, as shown by the insensibility of the animal to pricking or pinching; pulse and respiration still less frequent than before. In seven minutes the animal fell over in a slight convulsion, respiration and pulse irregular as well as slow. After remaining in the recumbent posture for ten minutes, during which time there was slow improvement in pulse and respiration with gradual return of sensibility of the skin, the dog rose, moving stiffly and awkwardly, but gradually recovered, the following day being as well as usual, save a slight irritation about the wound by which the poison was inserted.

Experiment II.

A large dog of Japanese breed received beneath the skin of the foreleg one and one-half grain of the poison mixed, as before, with glycerine. He was then allowed to go, but had run a distance of but about two hundred feet when his legs appeared to give way, and he fell over convulsed, breathing slowly, laboriously and irregularly, motion of heart slow and almost imperceptible; these symptoms gradually becoming more marked until, in five minutes from the reception of the poison, the dog was dead.

Experiment III.

A dog similar to that which was the subject of the second experiment received beneath the skin of the abdomen two grains of the poison mixed with glycerine. In two minutes the dog fell over exhibiting the same phenomena as to pulse and respiration as did the two preceding animals, and in four minutes and a-half from the reception of the poison the animal was dead.

Experiment IV.

A dog similar to those before employed for experiment, received by the stomach, together with a small quantity of rice, two grains of the poison. In ten minutes he seemed uneasy, and the pulse and respiration became for a time a trifle slower than normal; no further inconvenience appeared to be experienced by the animal.

Experiment V.

To the same dog a few days later, five grains of the poison together with a little rice, were administered by the stomach. In six minutes the dog whined and laid down, the pulse and respiration remaining unaffected till the expiration of fifteen minutes, when they became slightly slower than normal. In thirty minutes the dog had a convulsion in which he died.

The effects of the poison as shown by the foregoing experiments quite agree with those produced by the Himalayan poison examined by Pereira, as well as with those known to be produced by the official preparations of aconite when similarly employed. And it seems probable therefore that the Aino poison is practically identical with that used in Northern India and China.

From the comparatively large quantity of the Aino poison which was found necessary to produce fatal effects,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

I am induced to think that it is much less virulent than most other poisons employed for like purposes. Nevertheless, when used in quantities as large as those employed by the Ainos, it is quite competent to produce the results which they claim for it.

That the Ainos are able to eat the flesh of animals poisoned in the manner described is probably simply due to the fact, that in any single part of the animal's body the amount of poison is insufficient to produce perceptible effects upon the individual eating it. Beside which, the hunter invariably takes the precaution of cutting away a considerable quantity of the flesh about the wound in which the poison was received.

Such of the Ainos as I have questioned upon the subject state that they know of no antidote to the effects of the poison, and that, when accidentally or intentionally wounded by a poisoned weapon, the only safety is in instant and thorough excision of the wounded part.

IS IT POETRY? OR, IS IT PETULANCE?

This is the question which one of a dispassionate temper can hardly help asking as he observes the singularly impassioned manner in which many of our "advanced thinkers" express themselves when speaking or writing about the forces of *Nature*.

We all understand—though we may not approve—the language of the nursery when "our boy" comes roaring to his mother or nurse with a red bump on his forehead, and she tells him to go and whip the "naughty chair" against which he has struck his "precious little head."

And when the fervid imagination of the poet makes him speak of the "cruel sword" or the "pitiless storm," we take no exception to the figure of speech which intimate association of ideas makes so effective in touching the feelings.

But when men undertake to be *philosophical*, and claim to deal with the problems of creation and providence, we do not expect to find them using the inaccurate, though fervid phraseology of the nurse-maid or the lyrist. We look for something calm, distinct and clear, as accurate as arithmetic and as unimpassioned as logic.

What do we find, however? "Vindictive Nature"—"The Justice of Nature"—"Inexorable Laws"—"The absolute recklessness of cosmic forces"—"Cold, cruel, inexorable Nature"—"Relentless operation of Law"—and a score of similar phrases constantly recurring in the writings of those who first deify, and then revile, what they call "Nature:" first, get up a personification (after the manner of the poets;) then, endow it with moral qualities, (contrary to fact) and finally, speak resentfully and petulantly concerning it, as if they had a standing grievance against the existing order of things. Now, we submit, this is not philosophy. It may be associated with some fine writing and even with vigorous thought; it may bear the semblance of an earnest search for "the greatest good of the greatest number;" it may be combined with much logical acuteness and many charming elements of character; but—we repeat—it is not philosophy: nay, it is not truth; neither does it tend to a fuller knowledge of "the reality of things." On the contrary, it is confusing and disturbing; a hindrance, not the less real because, like the efficacy of the magnet, it is hidden; or, like the perturbations of the atmosphere, unmanageable.

What do we think of an impatient machinist, who frets (and most probably swears also) because of the *friction* between two parts of his engine? Would he dispense with friction as a principle? It must either be, or not be; and any one who thinks a moment can see what would become of machinery, and all other material combinations, if universal slipperiness were the rule!

As before remarked, we can make allowance for such phases of feeling in the child, the nurse, the poet, and the inconsiderate or impulsive; but we feel warranted in "ruling out" of the field of argument, or of serious consideration, things of this kind which find their way, not at all infrequently, into the utterances of men who undertake to be the guides of other men's thoughts, and the framers of their philosophies.

The Laws of Nature, as we call them, must be fixed in their operation; or else chance must reign; and as to which we ourselves would choose, if we had the option, there can be but one opinion.

Being fixed, then, it is for us to put ourselves in the way of deriving benefit from their reliable operation, and to avoid receiving injury therefrom. There can be no cruelty in Nature; there may be much ignorance and folly in ourselves.

E. W. S.

[We must really beg our Correspondent's pardon for asking whether he seriously thinks he will advance his cause by stating, illustrating and pleading it in this way. In the first place he actually seems to regard Poetry as a *quasi* fictitious thing, instead of about the truest and most real thing among man's works. Let us take some rough definition of poetry—one which will do for working purposes, and which will suit one side as well as the other—and call it Reason expressed in the language of Feeling. (We have no better one at hand, and shall be delighted if he will furnish us with one more to his mind.) In view of the reality of these two elements in man's nature, and their inseparable union, is he prepared to say he will work with Reason alone, or with Feeling alone? Of course, he did not imagine he was undervaluing or sneering at poetry; but, equally of course, this is what he really does. When a writer brackets in one sentence "the nurse-maid and the lyrist," we may be forgiven for doubting his qualifications for estimating poetry at its true value. We claim that so long as man feels, he will associate feeling and reason in the task of analysing these cosmic forces, the play of which upon him seems so absolutely reckless. Does E. W. S. imagine that we can contemplate the destruction of seventy thousand persons in three minutes, as was the case in the earthquake in Lisbon, many tens of thousands, as was the case here twenty years ago, the repeated destruction of the city of Antioch with nearly the whole of its population, the famines in which millions perish by the most terrible form of death, the pestilences which sweep off myriads, or the typhoons which yearly slay their thousands, and that our feelings have nothing to say to such catastrophes? Then were we machines, and should have given up that human heart which feels and loves, and without which this earth would be a den of wild beasts. We must bring in E.W.S's last paragraph here. Speaking of Nature's laws, he says, "Being fixed, then, it is for us to put ourselves in the way of deriving benefit from their reliable operation, *and to avoid receiving injury therefrom.* There can be no cruelty in nature; there may be much ignorance and folly in ourselves." Avoid receiving injury therefrom! How are we to avoid the falling beam, the sinking ship, the engulfed city, the disease which carries off our child, the malady which makes life one protracted martyrdom? The poet is right, not wrong, when he speaks of the "pitiless storm" and the "cruel sword." It is the prose which is wrong in excluding the adjectives. The words benevolence and love are unmeaning if they mean aught elsewhere than that which they convey to our minds. Is love here hate elsewhere? Is benevolence here heartlessness elsewhere? If so let us know it, and the use of these words must be confined to earth and the movements of man's heart. It is monstrous that they should "palter with us in a double sense."

Of "Vindictive Nature" we have never said one word. The expression involves a positive and hideous quality in Nature. All that we have ever said is that there is an absolute recklessness of the cosmic forces in their play

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

upon man's life. This is the purely negative quality of insensibility. Blank atheism would be a thousand times better than the belief in a "Vindictive Nature," the very thought of which is intolerable even for a moment.

And why should it be petulance—a poor, mean emotion—which finds perplexities in this apparent indifference of nature to man's feelings? Why not reason? our ultimate court of appeal, as E. W. S. must know as a reader of Butler. We contend most emphatically that it is reason which suggests these problems and insists that they are problems. What petulance is there about Mill? Does E. W. S. think that one man is only as good as another man, one mind only as good as another mind, in matters of opinion? that minds count as noses count in numbering a crowd? The old Egyptians were wiser when they reckoned the vote of a prophet as counting for ten thousand against the units of the mob.

E. W. S. never states the real problem, which is, How is this insensibility in nature—the instrument through which God works—compatible with love and benevolence? This is what we have called the perplexity of perplexities. Our correspondent of a few weeks back honestly admitted this, and said he could not explain it. But he did not ignore it, as E. W. S. does when he says that "we are to avoid receiving injury" from these laws of Nature, as if the child were in fault when he is caught in the burning house. Is not this giving us stones for bread, and scorpions for eggs? *Do not let us ignore the facts.* No good can possibly come of this, and a theology which insists on doing so is irrational. It is painful to read our correspondent's protest. Why all these useless and futile sneers about poetry and petulance and fine writing, and so on? Does he think that this is the way to deal with the dayly and nightly problems of moderately intelligent men, who feel deeply, and think as well as they can, be this better or worse?

Does not the true answer lie in this direction? Faith abolished that old Greek philosophy the resultant of which was mere total scepticism, and Faith is still destined to bear Religion aloft to the end of time. It is an irresolvable, ultimate faculty in our intellectual or spiritual constitution; it was awakened in the fulness of time; and it is destined to hold its own position by the side of Reason and Science so long as man lasts on the earth. If this is not the direction in which the key to the problem lies, we know not where to look for it. But if we care at all for what is true, do not let us say there is no such problem.—Ed. *J. W. M.*]

The financial position of the Government of Japan, compared with that of many other Governments which public opinion allows to hold their heads high in the world, is not really a bad one. We have already given one reason why we consider the figures of the Finance Minister may be taken as roughly correct in round numbers, and allowing for favorable exaggerations on both sides of the account, we think there is no sufficient ground for doubting that the actual indebtednees of the Government, including its paper in circulation, is less than three times its annual income. The true weakness of the Government is that under its present system of political economy, it is almost impossible for it to materially increase its revenue without driving the cultivators of the soil into revolution. The food producing classes groan under the heaviest taxation which they can be got to endure, in order to support one of every twenty-six of the population of the Empire in idleness; while the country has no accumulated capital of its own to invest in developing its sources so as to bring in wealth from abroad and the Government will allow no foreign capital to be used for the purpose.—*Hiogo News.*

OUR NEIGHBOURHOOD.

Dear Sir,—An event which has filled us all with gloom and sorrow has lately happened in Our Neighbourhood. One and all of us, old and young, rich and poor—alas, that the latter class should be so numerous in our community!—go about our daily work with a load around our hearts and faces full of grief, for a certain little Barber who carried on his business in the Main Street of our Village, and who had endeared himself to everyone by his kindly ways and his cheery manners, is no more. Where'er he went amongst us he was welcome, for he carried light and gladness with him, were the weather never so dark and cloudy. The old folks sought his counsel in their troubles and never found their trust misplaced, for he had a ready wit which helped him through all difficulties, and such a sympathising way about him when consulted, that the load of care was lightened e'er he heard the story out, for he seemed to take a portion of the burden on himself. What a stock of ancient lore he had! How pleasantly he used to tell a tale! Was he ever at a loss for a rejoinder? How proud of him we felt when we heard him argue with an adversary! How he flashed and sparkled on him till he dazzled every listener, and confounded his opponent! Yes, yes, that the old ones miss him sadly is too true. The world is changed, they say, and they are weary of it; their turn for rest is coming, and it cannot come too soon. They'd as lief be laid to sleep at once, for things are out of joint, and their thread of life is tangled and shocks and jars them in the reeling. Our little people likewise mourn for his decease. They also loved him dearly, for he was at heart himself a child and understood their ways.

Our troubles will seem perhaps of little moment to such as you, Sir, who live in the great world beyond our narrow circle, and of which we heard a deal some time ago from a travelled jackanapes who thought to settle down amongst us, but of which we ourselves have seen nothing. And, indeed, we have no desire that way; for the fashion of our faces and the plainness of our garments—not to mention a certain sluggishness of speech and intellect with the which we are said to be affected—would be out of place beyond our moss-encrusted village, where all is dull and uneventful in comparison. To us, however, whose chronicles are all "small beer," and our lives a simple round "month in month out," to whom so much as the kittening of the silk-mercer's long tailed cat is food for gossip, and the whisper of a smile upon the maccaroni woman's face a nine days wonder, our loss is indeed a great and irreparable one. Who now shall lighten with his humour the pangs of being shaved—no trifling consideration, be it said, when we shave our heads and chins according to the good old fashion?—who cheer the down hearted? who repair our broken friendships? Ah me! he was our oracle, and his knowledge—all the more extraordinary that he was born and bred amongst us—was believed to be prodigious. He was the link, moreover, which bound us to old times, and helped us to despise the new. But he is gone, and with him ancient things are going too. Already have we guardians of our peaceful hamlet, dressed in wondrous garments, stern of countenance and rudely mannered, who turn to ridicule our watchmen with the jingling staves—poor souls! but who, for all their mirth, have suited all our needs that way for many centuries. There are other signs amongst us, too, of further changes, which we try to keep at bay by pretending not to see them and never talking of them. But what avails it? All things have their day; he has had his, and doubtless ours is near at hand.

He was found at two of the clock on the morning of the 11th day of this first month of 9th Meiji, lying dead upon a snow drift, in the Main Street near the *saké* shop. Lying stark and stiff upon the frozen snow, with his arms stretched out at right angles from his body, and one wooden clog—by which perchance he was tripped up—a little distance off. A smile was on his waggish countenance, and his tongue was in his cheek, as though he had cracked a joke with Death before he took his leave of life. It was his wife who first gave form to that ill-natured rumour that, from signs which were about him, it might be reasonably surmised that he had lately parted from right jovial company. At least so the maccaroni woman says, "A vinous odour" were the words she heard her use, and

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

a *villainously* vinous odour, too, to boot. Well, well! a kindlier soul would have put the matter in a different light. That wife of his was always noted for a scold. She has a clumsy tongue, untrained to courtesies, not inapt at a rude unsculptured sort of speech perhaps, but strangely ignorant of ornament. She led him such a life, the neighbours say; she used to rail at him when living; what wonder if she found it difficult to break the habit when he died! Supposing, however, after all, there was an evidence that he had lately kissed the wine-cup; what then? Was it not the joyous New Year's time, when the face of a man should be merry and his heart glad? He had been supping with the tapster, too, and it were ungracious in him to refuse hospitality so importunate as everybody knows his to be, not to mention the irresistible nature of a certain "*saké* of three virtues," from which so insinuating an invitation issues forth when it is warmed that none but a churl would refuse to sip it. However all this may be, one fact alone's beyond dispute: the little man is dead, and we shall never see his like again!

Why, it seems but yesterday that he was seen by all the neighbours, marching down the street in all his bravery, with a word and smile for all he met,—with so much sunshine in them that the very snow seemed inclined to thaw before him, and the sky was not by half so cloudy where he was. But all is over now, and from his funeral pyre the sunshine which he carried with him would seem to have returned to the sun from whence it came, for gloom and darkness, ever since that sad event, have brooded over the hearts of many.

AN OLD NEIGHBOUR.

ASIATIC SOCIETY OF JAPAN.

A General Meeting of the above Society was held in the Grand Hotel on Wednesday, the 19th January. The chair was taken by the President, the Rev. S. R. Brown, D.D.

The minutes of the last meeting were read and confirmed, and the following new members announced:—Messrs. A. Hamao, F. M. Jonas, Geo. B. Williams, Gregory, J. Perry, H. S. Munroe, N. Wakayama, Rev. W. E. Parsons, and Dr. H. Faulds.

Mr. Henderson then proceeded to read a paper prepared by R. H. Brunton, Esq. entitled "Notes taken during a visit to the Loochoo Islands."

Dr. Brown congratulated the members of the Society upon the opportunity that had been give them to listen to Mr. Brunton's paper. He said they had before been favoured with a paper on the Loochoo Islands by Mr. Satow, which deservedly attracted attention on account of the limited sources of information within the reach of foreigners respecting those islands and their inhabitants. The paper just read was a valuable supplement to Mr. Satow's, Mr. Brunton's notes being those of an intelligent observer taken on the spot. It was not strange that in some points the views of Mr. Brunton should differ from those of his predecessor. Navigators of earlier times had give to the world but meagre and inaccurate accounts of those islands. Mr. Satow's opinion that the language of the Loochooans differs little from Japanese, seems to be confirmed by Mr. Brunton, with the remarkable addition that the dialect spoken there was spoken in Japan some centuries ago. It is an interesting question how this fact is to be accounted for, and its further investigation might furnish an important link in the history of linguistic changes in the language of Japan. If it be true that there are no books written in Japanese in the Loochoo islands, but only in Chinese, this fact in any other country except Japan and its outlying dependencies would be considered an anomalous one, for, among the Japanese as wel as those islanders, there has been, and now is, a predominant disposition to favor a mongrel exotic literature rather than to improve the vernacular and make it the language of books. Those islands which have been supposed by many to be of volcanic origin, are now found to be of a corraline formation, by some force lifted out of the sea. And thus we are gradually coming to a more accurate knowledge of that hitherto secluded portion of the Pacific islands.

Dr. Eldridge then read his paper on "The Arrow Poison of the Ainos."

On its conclusion Dr. Brown said, he was sure that the Society appreciated its obligations to Dr. Eldridge, its author, for it treated of a subject which probably no one else had been able to investigate and therefore was refreshing by its very novelty, and gave a pleasing variety to the Society's proceedings. He regretted that he was not able to offer any remarks on the subject, so entirely aside from his own line of study, while it was important as a contribution to our information respecting an aboriginal race that is fast disappearing before the advances of a stronger one. He hoped the professional gentlemen present would favour the society with remarks on the topic.

After a few remarks from Dr. Hepburn, Sir Harry Parkes supported the President's opinion of the value of Dr. Eldridge's paper, which possessed much novelty and interest, and was a most welcome contribution to the Society's proceedings. He also commended the industry of Mr. Brunton in collecting during a brief visit of only two days so much information respecting the Loochoo Islanders. This little country and its people presented a most interesting study in many respects. Their language, customs and mode of Government were deserving of close research, and it would be important to ascertain beyond doubt, whether, as was alleged, they had no native literature, but were wholly dependent on that of China. While their civilization partook strongly of a Chinese type, the race was doubtless identical with the Japanese people and their language was a dialect of that of Japan. On this point he was able to give the meeting the opinion of Mr. Aston, which he had kindly furnished in the following note:

The language of Loochoo is plainly nothing more than a dialect of Japanese. It is, however, a very strongly marked one, and the differences are certainly not less than those between Lowland Scottish and English. Without some little practice, the services of an interpreter are very acceptable even to the Japanese themselves.

The following specimen of Loochooan will give some idea of the extent to which it differs from Japanese. It is copied from an inscription in front of a temple dedicated to the worship of the former kings of Loochoo, and was the only example of written Loochooan seen during a stay of two days.

Anji mo gesu mo koma ni te oreru hoshi. Anji is the name of an office, here put generally for all officials; *gesu* is Japanese, and means 'vulgar'; *koma* is Loochooan for *koko*, here; *oreru* is Loochooan for *oriru*, to get down. The sentence means 'Both officials and common people must dismount at this place.'

Except *are*, he or it, the pronouns in ordinary use differ from the present Japanese pronouns. The words for 'you' are *onjo*, *i.e.* honourable place; *na*, a word for you, common in the old Japanese poetry, but now obsolete for hundreds of years, and *ya*. 'I' is, *wan*, evidently a form of the Japanese *ware*.

These are not the only words obsolete in Japan which are still in use in Loochoo. Japan itself is called by them *Yamato*.

Both native and Chinese words present many differences with Japanese in the vowels with which they are pronounced. *Kiseru*, a pipe for instance, in Loochooan *kishiri*; *hitotsŭ*, one is *fūtéchi*; *futetsu*, two, is *futachi*; *nijiu*, twenty, is *nijō*.

A letter change which is not easily reconciled with the laws of letter change known in European languages is the substitution in Loochooan in some words of *ch* where the Japanese word has *k*. In this way *hachi maki* has become in Loochooan *hachi machi*. The word Loochoo itself is an instance of this change, *Loochoo* being the native form, *Riu kiu* the Japanese.

YOKOHAMA CHAMBER OF COMMERCE.

The Annual Meeting of the Chamber of Commerce was held this afternoon. There were present Messrs. Dodds, Willcox, A. Winstanley, Wilkin, Barlow, Vouillemont, Milsom, Rickett, Blakeway, Bolmida, Van der Pot, De la Camp, Evers, D'Illanger, Thurburn, Fischer, W. J. Cruickshank, and Dunlop.

Mr. A. Winstanley took the chair, and stated that it was the Annual Meeting, called in accordance with the notice which had been published, and then called on the Secretary to read the minutes of last meeting. This was done, and they were then confirmed.

The Secretary then read the following report and accounts for the past year.

REPORT.

During the last year few matters of commercial importance have been brought before the Chamber and its proceedings offer but little subject for comment.

It is, however, a matter for congratulation that financially the position of the Chamber has improved, for while in 1874 the expenditure was $8,266.12 and the revenue $7,087.40, the deficit only being met by the accumulated savings of former years, the accounts now brought before you shew an expenditure of $6,124.26 against revenue of $6,395.80. This result has been obtained by a diminution in the expense for Telegrams and a considerable saving in other expenditure.

The issue of circulars has, however, considerably decreased, and great care is still requisite to enable the Chamber to pay its current expenses.

The circular has been thrown open to non-members and the revenue from this source has about equalled anticipations.

Telegrams.—In accordance with the resolution carried at last General Meeting the expenditure has been kept to the sum then agreed upon, and although the reduction is considerable it has been effected without impairing the usefulness of the telegram, which appears still to be very reliable. The new rules recently adopted at the Telegraph Conference may, however, considerably affect the cost of the telegram hereafter.

Drawbacks.—The Committee have had under their consideration this important question, as will be seen from the report of a Special Committee and Correspondence attached hereto. The matter has been brought before the Ministers of Treaty Powers, and it is to be hoped that the Japanese authorities may, at any rate, be induced to agree to a mixed commission to discuss a subject which affects in such a material way the trade of Japan.

Japanese proposed for membership.—During the year a Japanese was proposed for membership, and though it appeared to the Committee there was nothing actually in the Rules to prevent his being ballotted for, the feeling was that "as the Chamber has been formed to promote the interests of foreign trade it would be undesirable for Japanese to be admitted to its membership." The proposer subsequently withdrew the name.

Hatoba accomodation.—Some minor improvements have been effected at the western Hatoba, but the erection of a new shed, which was promised, has not yet been carried out.

The Harbour works and pier referred to in the last Report as being in contemplation seem to have been altogether abandoned.

Counterfeit Trade-Marks.—In September last the Board of Consuls addressed the Chamber on the subject, and the Committee having considered it fully, resolved "That the address from the Board of Consuls be acknowledged to the effect that, while the Committee deplore the grievance, they feel themselves quite powerless to do anything towards abating it, but can only suggest that the Government of Japan might pass some law prohibiting the manufacture of spurious trade-marks." The Chamber subsequently made enquiries amongst some of those persons whose trade was likely to be affected by the large sale of counterfeit goods, but as the interest displayed was not very strong, and no further communication was received from the Consular Board, the matter as far as the Chamber is concerned has been allowed to drop.

Storage of Kerosene.—The proposed new rules for the Government Godown at Nakamura have been forwarded to the Chamber, but they do not appear to have been officially adopted. It is to be hoped that some early settlement of this long-pending difficulty may be made, and thus discourage the storage of Kerosene in the foreign settlement.

Export of Rice.—A notification was issued in March last declaring the export free from the 1st April, but owing to the high prices ruling apparently but little benefit has resulted from the trade being again thrown open.

Statistics of Trade.—The figures attached to this Report and already supplied to members shew an increase in the value of staple Imports and a decrease in Exports as compared with last year. The quantities, however, of both Tea and Silk exported are in excess of the previous period, and the falling off in value is accounted for by the fact of prices having been lower. As regards stocks of goods these figures are still capable of improvement, and their correctness rests entirely with members, the Committee having done all in their power to render the information reliable.

YOKOHAMA GENERAL CHAMBER OF COMMERCE.

STATEMENT OF RECEIPTS AND EXPENDITURE FOR THE YEAR 1875.

RECEIPTS.

Amount on Fixed Deposit with The Oriental Bank for twelve months, due 11th Febr. 1875	1,000.00	
12 months Interest on Do. @ 6 % per annum...	60.00	1,060.00
Amount on Fixed Deposit with The Oriental Bank for six months, due 1st Aug. 1875...	1,000.00	
6 months Interest on Do. @ 4 % per annum...	20.00	1,020.00
Subscriptions from Members for 1875. 45 @ $50	2,250.00	
Do. additional on account of telegrams 45 @ $30	1,350.00	3,600.00
Circulars sold to Members, to 31st December 25,227 @ 10 cents	2,522.70	
Subscriptions from Non-members for Circulars	179.80	2,702.50
Reports, Statistics of Trade, &c. sold, to 31st December		13.30
		$8,395.80

DEPENDENCY TO CREDIT.

Cash on hand, $375.29

EXPENDITURE.

Balance from last account	$896.25
Rent for twelve months	660.00
Secretary's salary for twelve months	1,800.00
Interpreter's salary for one month	20.00
Cost of printing circulars	1,130.19
General printing, advertising, & subscriptions to local newspapers	365.22
Furniture and Stationery	24.72
Office Boys' wages, Postages and Sundries	203.51
Shroffage	91.89
Amount expended on Telegrams	1,725.44
" on Books	51.09
Premium for Fire Insurance on Furniture, &c., $1,500, at 3 per cent	45.00
Subscription to Yokohama Gas Works	7.20
	$7,020.51

DEPOSIT.

Amount on Fixed Deposit with the Oriental Bank for 6 months, due 1st August 1875	1,000.00

BALANCE.

Cash on hand	375.29
	$8,395.80

Examined and found correct, 21st January 1876.

Original from UNIVERSITY OF CALIFORNIA

In answer to Mr. Wilkin, the Chairman said that the sale of circulars showed a falling off of some 5,400.

Mr. Rickett proposed, and Mr. Fisher seconded the adoption of the Report and Accounts, which was agreed to unanimously.

The meeting then proceeded to the election of officers for the ensuing year, when Mr. A. Winstanley was re-elected as Chairman, Mr. Wilkin as Vice-Chairman, and Messrs. Blakeway, D'Iffanger, Evers, Dodds, Barlow, Wilson, and Van der Pot as members of the Committee.

Messrs. Vouillemont and Thurburn were requested to continue to act as auditors.

The Chairman then proceeded to lay before the meeting a proposed alteration of Rule 14. This rule specified that the General Meeting should be held in the first week of January in each year. It was proposed to alter this to the effect that the General Meeting should take place during the month of January, as it was found impossible to get the report and accounts ready within the time allowed.

This proposition was agreed to unanimously.

The Chairman then called the attention of the meeting to the remark in the report as to the cost of the telegrams. It was not proposed to alter it at present, but as under the new Telegraphic Convention, the cost of telegrams would be increased, it was proposed that the committee should have the power, if necessary, of curtailing the telegrams by the omission of certain quotations, which would reduce the telegram by three words, and it was left to the meeting, whether they would give the committee power to curtail this, if necessary, or whether a meeting should be called for the purpose of doing so.

Mr. Wilkin, whilst agreeing with the proposed cutting out of the quotations for camphor, wax, &c., thought that the quotations for silk should be retained.

Mr. Fischer, on the contrary, thought that the quotations for camphor, wax, &c., should be retained, as without that the telegram would simply contain the quotations of yarns and shirtings.

Mr. Barlow suggested that the decision was a very difficult one, as some members wanted one thing, and others something else, and as there was no immediate decision required, he thought that it would be better to leave the question in the hands of the Committee.

The Chairman agreed with this. They had at any rate for the present sufficient funds to continue as at present. The desire of the Committee was to give as much information in the telegram as possible, and he hoped that their funds might enable them to continue it in its present form.

This closed the regular Meeting, but before separating The Chairman said that the members of the Chamber were of course aware that during the past year the whole of the coast carrying trade, and that between this port and Shanghai had fallen into the hands of the Japanese Company called the Mitsu Bishi Company. This Chamber had no information whatever regarding the constitution or financial position of the Company, further than it is supposed to receive Government support. The members of the Chamber were no doubt familiar with the form of bill of lading issued by the Company. It was not intended here to discuss the difficult conditions attached thereto, but the Chamber would point out clause 10, which says that all claims of the nature of general average shall be construed, adjusted, and settled in accordance with the practice recognized by Lloyd's Association in London; but whose construction is to be taken in such cases, is only a matter of surmise; whether it should be the opinion of foreign advisers, or a Japanese court. There can be little doubt that all claims against the Company, resisted by them, must be tried before a Japanese court, and it can only be presumed that such cases would be decided entirely by the opinion of the court, not by any code of laws, for it was generally believed that the Japanese have no laws bearing upon cases that may now arise from the greatly altered condition of their mercantile marine. The matter was well worthy of consideration by the Chamber, and it was suggested that any information that could be given to the Chamber on the subject would be of great use to the mercantile community.

The meeting then adjourned.

Correspondence.

THE LATE DR. von WILLEMOES-SUHM.

To the Editor of the "Japan Weekly Mail."

Sir,—*Nature* for December 2nd, 1875, contains a letter from Professor Wyville Thomson, of H. M. S. *Challenger*, giving an account of the last illness of the late Dr. Rudolf von Willemoes-Suhm. I cannot but think that it will afford some consolation to the many English and German friends of the eminent man whose loss science has now to deplore, to know the high estimation in which he was held by his chief, and the deep regret which the premature termination to so high-promising a career has caused to those best qualified to appreciate what it might have become. I therefore send you the number of *Nature* referred to in the hope that you may find space for the insertion of Professor Thomson's letter.

Yours, &c.,

F. V. DICKINS.

It is with the deepest regret that I have to intimate the death of Dr. Rudolf von Willemoes-Suhm, at sea, on our passage from Hawaii to Tahiti. He had not been in his usual robust health for some months, having suffered occasionally from indolent boils on different parts of the body. On Sept. 6 he applied to the surgeon for advice. He had had a rather severe shivering fit the day before, and an inflamed spot on the face began to show symptoms of erysipelas. Swelling and inflammation of the face increased during the next week; it extended over the forehead; and the fever and delirium attending erysipelas became more pronounced. On the morning of Sept. 13 he sank into a state of collapse, and died at three o'clock in the afternoon.

This sad occurrence has of course thrown a heavy gloom over our little party. From the commencement of the voyage Dr. v. Willemoes-Suhm devoted himself with unremitting industry and zeal, and in the best possible spirit, to the objects of this expedition. He has already published, in connection with our work, a paper in the *Annals and Magazine of Natural History*, "On a terrestrial Nemertine from Bermudas;" a long paper in Linnean Proceedings, on the deep-sea Crustacea of the cruise; "On the development of *Umbellularia*," in the *Annals and Magazine*; "On the Development of *Lepas fascicularis*," a paper sent to the Royal Society from Honolulu; and the notes on Crustacea which have been incorporated from time to time in my letters and reports. He has also written some interesting letters to Prof. von Siebold, describing the general zoological results of the cruise, which have been published in the *Zeitschrift für Wissenschaftliche Zoologie*. He leaves a fine series of drawings, with full descriptions, chiefly illustrating the development of surface Crustacea. For example, the development of species of the genera *Euphausia Sergestes*, and *Amphion* is traced through all its stages. He leaves also an ample official journal in two large volumes. The loss of his valuable assistance in working up the final results of the expedition must, I fear, seriously affect their completeness.

Rudolf von Willemoes-Suhm was a native of Schleswig-Holstein; his family now reside in the neighbourhood of Rendsburg, where his father holds a high official appointment. He was about twenty-eight years of age when he died. He studied in the Universities of Göttingen and Bonn; he showed very early a strong taste for natural history in all its branches, and when quite a boy he published papers on the habits of European birds. Shortly after he left the University, he was appointed Privat-Docent in Zoology in the University of Munich, where he was associated with Prof. von Siebold, with whom he was extremely intimate, and whose place he frequently took in the lecture-room when the professor was prevented from teaching by indisposition. In 1868 he visited Italy and made zoological observations at Spezzia. In the summer of 1870 he made a series of observations on various marine animals, *Halicryptus Balanoglossus*, &c., which formed the subject of his thesis on being appointed Privat-Docent in Munich.

In the summer of 1872 he went to the Faeroe Islands. He published some of the results of his investigations there in *Nature* and elsewhere, but unfortunately a large series of zoological drawings which represented the greater part of his work was lost *in transitu*. It was from the accident of his calling upon me in Edinburgh, on his return from Faeroe, while there was still a vacancy on the staff of the *Challenger*, that he joined the expedition.

Among the more important of his publications are—

"Helminthologische Notizen," I. (Zeitschrift fur Wissenschaftliche Zoologie, Bd. xix., 3 Heft.)

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"Helminthologische Notizen," II. (Ibid. Bd. xx., 1 Heft.)

"Zur Entwickelung von *Schistocephalus dimorphus*" (Ibid. Bd. xix., 3 Heft.)

"Biologische Beobachtungen über Niedere Thiere" (Leipzig, W. Engelmann, 1871) contain: "On a young calcareous sponge;" "On the development of an appendiculate Distoma;" "On *Balanoglossus kupferi*;" "On *Halicryptus spinulosus*;" "On *Priapulus caudatus*;" "On the development of some Polychæte Annelids, *Etone Terebella*, and *Spirorbis*;" "On the natural history of *Polystoma intergerimum* and *P. ocellatum*."

Dr. von Willemoes-Suhm was a man of unusual acquirements and culture; besides having a wide and accurate knowledge of the literature of natural science, he was a good classical scholar, and could converse with perfect fluency in English, French, German, Danish, and Italian; and could read with ease nearly all the modern European languages. He made some strong friendships among his colleagues, and his acknowledged ability and his manner and address, which were eminently those of a polished gentleman and man of the world, won for him universal respect and esteem.

Altogether I looked upon Rudolf von Willemoes-Suhm as a young man of the very highest promise, perfectly certain, had he lived, to have achieved a distinguished position in his profession, and I look upon his untimely death as a serious loss not only to the expedition in which he took so important a part, but also to the younger generation of scientific men among whom he was steadily preparing himself to become a leader.

C. Wyville Thomson.

H.M.S. *Challenger*, Tahiti, Oct. 1.

Law Report.

IN H. B. M.'S PROVINCIAL COURT.

Before C. W. Goodwin, Esq., Assistant Judge.

Monday, 24th January, 1876.

Wm. Rangan *vs.* Mitchell, Cope & Co.

Mr. Montague Kirkwood appeared for plaintiff; defendants conducted their own case.

This was a claim for $150, being the alleged value of certain goods, including damages, sent in for sale by plaintiff to defendants.

Mr. Kirkwood briefly opened his case, saying that defendants acknowledged the receipt of the goods, but stated in their answer that they had been stolen. He would first call the plaintiff.

Wm. Raugan, who deposed that last summer he gave the goods to defendants to sell. The goods consisted of jewellery (some watches, pins, &c., &c.). [list of goods produced.] The prices in the list were those he gave for the articles. He considered them less than the value of the articles. He wrote many letters to defendants, asking for account sales; at last he was informed that the goods had been stolen.

Cross-examined by Mr. Mitchell: He did not say that though he had put a limit on the goods, that he might take a lower price if an offer was made. He would not at any time have taken $60 for the lot. He did not know direct that defendants' premises had been broken into by thieves till two or three months after it had happened. He was in defendants' place the Monday after the robbery, but was not told that his property had been stolen.

Re-examined by Mr. Kirkwood: Defendants did not tell him they had been robbed till after he wrote for account sales.

J. Winstanley, sworn:—Occasionally he had had jewellery for sale. He did not care about it. He should think that the auctioneer's safe was the proper place to keep it in.

Cross-examined by Mr. Mitchell:—He had had a case of robbery at his place. (Witness related it, but it did not bear on this case).

Mr. Kirkwood announced that this closed his case for plaintiff.

Mr. Mitchell, after briefly stating the facts of his case, was sworn, and deposed that he received the goods in question. The jewellery was put in the small safe, which every night was put in a larger one to guard it from fire. In June last year his premises were broken into by thieves. The night before he placed the small safe in the large one. In the morning the big safe was found open and the small one was gone. The big safe was not locked. The leather cases of the watches were left on the floor, also the case of a necklace that belonged to himself. Three silk umbrellas were also stolen and some minor articles. He at once communicated the affair to the Saibansho, but nothing came of it. On the Monday after the robbery Mr. Rangan's man, Baker, came and was shown how the premises had been opened, and he was requested to tell Mr. Rangan that his watches and things were gone. Mr. Rangan came to his place sometimes and he (witness) told him, that he did not know, if he was liable for the value of the stolen things, but that he was willing to compromise the affair. Mr. Rangan got crotchety at this and said he would put the affair into the hands of his lawyer.

Cross examined by Mr. Kirkwood:—He placed the watches, jewellery, &c. in the small safe; it weighed from 25 to 30 lbs. and was rather thin. The big safe containing the small one was not locked on the night of the robbery.

F. A. Cope, sworn, said he remembered the door of their premises being broken open on the 11th or 12th June last year. (Witness then corroborated the evidence given by his partner). He considered that the goods were safe and properly taken care of. He had the two keys belonging to the two safes at the time.

Cross-examined by Mr. Kirkwood:—The weight of the small safe was from 25 to 30 lbs.

H. Barlow, sworn, deposed that he inspected the premises after the robbery took place. He considered that the door of the godown broken into was a strong and substantial one, as good as any in Yokohama. He should say it had been broken open by a powerful metal lever. The inner door had a hole cut through it.

Cross-examined by Mr, Kirkwood:—He did not see the large safe He thought that it was beyond the power of Yokohama thieves to open an ordinary Milner's safe, if locked.

C. H. Cobden, sworn, said he was a clerk of Messrs. Jardine, Matheson & Co's. He inspected defendants' godown last year for insurance. He took particular notice of the doors, and considered them first class ones, and such as were used in all first class godowns.

Mr. Kirkwood did not cross-examine.

C. C. Baker, sworn:—He was employed by Mr. Rangan last year. He remembered giving defendants some instructions about some goods. He assisted Mr. Rangan in putting a limit on the articles. To have effected a quick sale Rangan would have taken less. The watches, jewellery, &c, &c. were not worth more than $60.00. He called by Mr Rangan's instructions to enquire about the robbery.

Cross-examined by Mr. Kirkwood:—He left Rangan's employment on the 3rd November last year.

Mr. Wills, of the Saibansho, said he translated an account of the robbery, and a list of the stolen goods, received from defendants last year.

Mr. Mitchell said he had no other witnesses to call. He considered that his firm had taken every precaution to prevent loss of the goods, and was not therefore answerable for their loss. He had taken as much care of plaintiff's goods as of his firm's. They had lost $150 in cash and a necklace. It was not through any negligence on their part that their godown doors had been burst open.

Mr. Kirkwood replied for plaintiff, contending that there had been great carelessness in defendants not locking up the small safe of only 25 or 30 lbs. weight inside the large Milner safe, when the thieves would not have been able to carry off the property.

His Honour took this view of the case and gave judgment for $125 and costs, thus reducing amount of the claim by $25, which was for damages which he declined to allow.

Wednesday, 26th January, 1876.

Malcolm, Willcox & Co. *vs.* H. W. H. Morgan, Master of the British ship *Cathaya*, represented by Messrs. J. D. Carroll & Co., Agents.

Plaintiffs claim for damage to cargo consigned to them, and shipped per *Cathaya* from London, $1,200 and odd.

Defendants admit the goods were delivered to the captain for carriage, but deny their liability for damage, as they were of dangerous nature, and insufficiently packed.

Mr. H. C. Litchfield appeared for plaintiffs. Mr. M. Kirkwood for defendants.

Mr. Litchfield, after opening his case, called

Temple Willcox, sworn: I am one of the plaintiffs. I received from England the bill of lading dated June 3rd. When the ship arrived we had notice to take delivery of our cargo. We first received the soda ash. Three casks were in good order, and one was damaged. Eventually I made a claim against the ship for the damaged cask. I first saw the damaged cask on the 14th Dec. It was then lying at the Hatoba. It was damaged considerably; the staves were broken, the ends bulged, and the hoops destroyed. I then arranged with the captain about surveying that cask. The surveyor reported, and recommended an analysis to be made. I had it analysed; I communicated the result to defendants, and I received a letter from them (read). I afterwards had this one damaged tierce sold by auction; it brought net $21. The market value of soda ash at this time is $5.25 per picul. This tierce held 1,320 lbs. If sound, it would be worth $51.97. I

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

paid $10 to the surveyors. I paid $25 for the analysis. I first had notice of the landing of the bleaching powder on the 27th Dec. I found it a mass of powder and a heap of broken staves, unrecognizable as my property. It was on the Hatoba. Messrs. Carroll & Co. wrote to me that my bleaching powder had been landed. None of the casks had been landed at that time. What was on the Hatoba was the first portion only,—about two-thirds. Upon seeing it in this state I declined to take delivery of it. I afterwards heard that some casks had been landed in a tolerably sound state. I received an offer for them, and arranged with defendants that I might sell them. I sold them at $5.25 per picul. Nine casks were sold. The total value of the chloride of lime—the 24 casks—is $914.60, if sold at $5.25 per picul.

Mr. Lichfield: The nine casks sold at this rate would bring $356.63.

Witness: On inspecting the guano on the Hatoba, the captain agreed that it should be removed to our godown and that I should endeavour to find out privately what the damage to it was. Fourteen of the casks only were injured, staves broken, and hoops knocked off. This was to be without prejudice to my claim. I then took delivery, and afterwards made a claim against the ship for the damage to the guano. It was not arranged that a survey should be hold; but on defendants disclaiming liability, I called a survey myself. I gave defendants notice. It was after the survey had been held that they denied liability, stating that they required the damage to be proved. (Letter from defendants to plaintiffs, to this effect, read.) I appointed surveyors, and they reported upon it. I have since tried to sell the guano. I sold two casks that were sound. I sold it at $6 a picul. I have had people to see the damaged portion of the guano, but I have not been able to sell any. The people said it was unmarketable, so far as the outward condition of the casks went. The sound guano is brown in colour, and dry powder. The damaged is of a black colour, and caked from moisture. Taking it at $6 a picul, it is worth $100 per ton. The average weight of the casks is 10 cwt. They are much about the same weight.

Cross-examined by Mr. Kirkwood:—The bleaching powder belongs to Golden, Davis & Co.; that is the unsold portion. I have no property in the bleaching powder whatever. The tierce of soda-ash belongs to Golden, Davis & Co. The guano belongs to the Bi-Phosphate of Guano Co. I have no property in it. The captain of the ship gave me authority to have an analysis made; he said he would abide by the survey. I have tried and failed to sell all the sound casks of guano. I think there is a market here for guano to a certain extent. A Mr. Tomita, a Japanese, bought the two casks that I sold. I would not sell the balance of the sound for less than $6 per picul. I believe my lawyer made a claim for the guano. I wrote to defendants that I would rather take the invoice value of the guano than go to law. I would have taken $100 as compensation for the damage and kept the guano. At one time I would have taken $35 or $40. That was not on account of damage, but the actual outlay I had been to put to. This guano is brown, that is the sound portion. I am not acquainted with the article. I have seen bleaching powder before. I do not know its qualities, or if it is corrosive. Merchants who receive it know its qualities. It is not a harmless chemical. It is dangerous in certain circumstances. I did examine the iron work of the casks, and it did appear to be corroded. The wood was sound.

Re-examined by Mr. Litchfield:—The $35 or $40 was the actual expense and bother I had been put to, but I was willing to take it, rather than go to law about it. The contents of the sound casks differ from that in the damaged one. I consider the contents of the damaged casks unmarketable here, apart from the question whether there is a market here or not.

Court adjourned till half-past one.

On reassembling Mr. Litchfield called.

W. G. Bayne, sworn:—I am the agent of the N. C. Insurance Co. I surveyed one cask of soda ash on 16th December last for Mr. Willcox. The outward appearance of the cask showed signs of damage. The staves were bulged in and the hoops were started. On opening the cask, we found the edge of the contents damaged. I declined to state at the time if the damage arose from sea water. I advised that the contents be analysed. Mr. Wilcox, the Captain, Mr. Spooner and Mr. Glennie were the present when I made the survey. Mr. Willcox said to the Captain, "I presume the decision of the surveyors will be final." The Captain did not dissent from this. I have frequently surveyed goods. My idea at the time was that the casks had been damaged by some chemical agency.

Cross-examined by Mr. Kirkwood:—The cask was stained by what had oozed through, the staves were bulged and so the contents had leaked out. I have had no experience in soda ash. The ash was not in a merchantable state in my opinion. It had turned from soda ash to soda cake. I do not know if it was worse in the shape of a cake than in an ash. I now nothing about guano. Chloride of Lime is dangerous substance if loose. It is not properly packed. Bleaching powder in common with all other chemicals has inherent vices. I believe from the outturn of the *Cathaya* that Chloride of Lime will corrode iron. It might have been from other substances.

Re-examined by Mr. Litchfield:—I examined two or three other shipments by the *Cathaya*; they were damaged by something otherwise than sea water. The cask of soda-ash was bound with wooden hoops. If the contents of packages were sound they would be merchantable. If the outsides of packages are damaged it would warrant a survey. I took the sample to North, Thompson & Co. to be analysed.

A. W. Glennie, sworn:—I am a merchant in Yokohama. On the 16th December I surveyed some goods with Mr. Bayne. I have heard his evidence and agree with it. I made enquiries as to the value of soda ash and found that it was $5.20 to $5.25 per picul.

Cross-examined by Mr. Kirkwood:—I have had no experience in soda ash. This soda ash was damaged, but in what way I do not know. Part of the contents had changed in appearance.

To His Honour:—The soda ash was unmarketable.

J. North, sworn:—I am a chemist. As a chemist I have had considerable experience in analysing. In December last I received a package from Mr. Bayne to be analysed. It contained carbonate of soda, sulphide of soda, sulphate of soda and chlorinated soda. Chlorinated soda is not an ordinary impurity of soda. When it is found in soda I should say the soda had been in close vicinity to chlorine gas. This would damage the soda for its ordinary purposes. It would in its present state be useless for bleaching purposes. I should say the sample of the soda was damaged. I should think the value of it to a soap maker would be but 25 per cent of its original cost.

Cross-examined by Mr. Kirkwood:—I went on board the *Cathaya* in the early part of December. I spoke to the chief-officer and told him I had come to inspect some damaged cargo. He took me down into the hold and I saw some damaged iron and wrappings of bales. There was a strong smell of chlorine. I noticed a powder scattered about amongst the cargo. I asked him to hand me a handful of it and I saw at once that it was chloride of lime. I brought some away with me, also a piece of iron and the wrapping. I tested all three when I got home. The iron had on it a preparation of oxide chloride of lime, the wrapping showed chlorine. The powder showed 19½ per cent. of gas; it was bleaching powder in a deliquescent state. Ordinary samples contain 30 per cent. of chlorine but this had only 19½ per cent. I suppose the difference had evaporated. When the Captain asked me to go on board he brought a sample of soda, but I told him that could not have done the damage. I told him I suspected there was chloride of lime in in the ship. Jars are the best things to contain chloride of lime for long voyages, but I have seen it come out in casks quite dry and in good condition. Casks frequently burst. The outside air coming in contact with the lime might cause it to rot the casks. The gas escaping would affect the soda, but I do not know if it would affect the guano.

Re-examined by Mr. Litchfield:—I saw about a pound lying about here and there. I did not see as much as would fill ten casks. There is generally a lining of paper in the casks. The fumes of chlorine gas are corrosive. It affects iron and most metals. It affects wood and all vegetable fibres. If a vessel of chloride of lime is open the chlorine gas flies off. The corrosive action would not break pieces of wood up.

J. Hartley, sworn:—I am a merchant in Yokohama. For the past 11 years I have imported goods largely. I have imported chloride of lime. If I was to send an order for say 5 tons of chloride of lime, or bleaching powder, without special instructions, it would be sent in large casks made of hard wood. In my experience it generally arrives in good order. I was requested some short time ago to inspect a quantity of chloride of lime on the Hatoba. It was in a heap, some in packing cases and some in native made baskets. I saw none of the original packages; I saw some tierces containing bleaching powder: they were damaged in various ways. I applied my finger to some of the staves and found them quite sound. On examining the fractured staves I came to the conclusion that they were not broken through any explosive force from within. I should say the cause of the casks being broken was bad stowage or else being knocked about. I examined some guano at No. 73. A cask of the sound and one of the damaged were opened. The damaged guano was not in such a fine powder as the undamaged. The packages were commercially

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

damaged. A native buyer would expect a reduction on the damaged packages.

Cross-examined by Mr. Kirkwood: Chloride of lime is hydrate of lime and chlorine gas. It would corrode iron or fibrous matter. If the air got into the casks it might corrode them slightly. I rank my experience in stowing cargo as inferior to that of a Lloyd's surveyor.

Re-examined by Mr. Litchfield:- I saw the marks on the casks distinctly. Some of the iron hoops were intact.

Mr. Kirkwood at this stage raised the question as to whether plaintiffs could bring the present action if they had no property in the goods as stated by Mr. Willcocks. He would ask that they be non-suited.

Mr. Litchfield argued that plaintiffs had the right to bring the action.

His Honour over-ruled Mr. Kirkwood's motion, but made a note of his objection to this course.

The Court then adjourned till 10 o'clock this morning.

Thursday, 27th January, 1876.

On re-assembling,

Mr. Kirkwood asked His Honour if he had finally decided against his motion that the plaintiffs be non-suited, on the ground that they had no property in the goods in respect of which the action was brought?

His Honour said he would like to hear the point further discussed, and was willing to listen to any arguments counsel might have to make.

Mr. Kirkwood then argued the point at great length, citing numerous cases, which, he said, entirely supported the motion he had made.

Mr. Litchfield replied very fully, and also called the Court's attention to quite a number of cases in opposition to those brought forward by his learned friend.

After the discussion had lasted for somewhat more than an hour,

His Honour decided that as the law stood on the point he must non-suit the plaintiffs, with costs.

Mr. Lichfield applied for leave to appeal, if he thought fit, which His Honour granted.

U. S. CONSULAR COURT.

Before Gen. T. B. Van Buren, Consul-General.

Monday, 24th January, 1876.

P. L. Weaver and J. W. Taylor, of San Francisco, by Horace Wilson, their attorney, *vs.* Chas. A Fletcher, of Yokohama, trading under the name of C. A. Fletcher & Co.

Plaintiffs were represented by Mr. G. P. Ness; defendant conducted his own case.

In this case, plaintiffs claimed $5,731.45 for the following goods:

60 sections, each 50 feet (making 3,000 feet) 2½ inch carbolised fire hose, at $1 60 per ft.	$4,800.00
60 sets patent couplings to order, at $11 25	675.00
Boxing:—3 cases at $2.55; 6 cases at $2.60	23.25
Clearance, $1.20; drayage, $2.00...	3.20
	$5,501.45
Interest thereon from July, when same was delivered, to date, at per cent.	230,000
Total...	$5,731.45

Defendant in his answer denies that he owes the plaintiffs the sum of money mentioned in the petition, or any part thereof.

The case for plaintiffs consisted merely of documents.

Defendant's defence was, that he ordered 4,500 feet of the hose in 100 feet lengths, and that instead of this, plaintiffs sent him 3,000 feet in 50 feet lengths, and that the Japanese had refused to take delivery of this, as it was not according to contract; and, consequently, he (defendant) had refused to take delivery from plaintiffs, and resisted their claim.

His Honor reserved his decision.

DECISION.

P. S. Weaver and J. W. Taylor against Charles A. Fletcher.

This action is brought to recover the sum of $5,501.45 and interest from July, 1874, the value of certain patent carbolized fire hose and couplings, sold and delivered by Plaintiffs to Defendant.

The evidence establishes the following facts:—

That the Defendant wrote to Plaintiffs, who are partners in business in San Francisco, Cal., U. S. A., on the 7th April, 1874 saying, that he had persuaded the Japanese Government to send for hose from San Francisco, which he (the Defendant) had guaranteed should be as cheap as English hose, and he enclosed an order for 4500 feet of Patent Carbolized Hose "in 100 feet lengths," which he desired Plaintiffs to send "by first opportunity."

On the 14th May following, Plaintiffs shipped to Defendant 1000 feet of the carbolized hose accompanied by a letter of advice, enclosing bill of lading and invoice.

These 1000 feet were in lengths of 50 feet, and the price was so high that the Defendant, immediately on receipt of the invoice telegraphed Plaintiffs to send no more, and advised them by letter that the prices charged were 60 per cent higher than the English hose, while the order had distinctly stated, he (Defendant) had guaranteed that they should not be any higher.

This telegram was sent on the 10th of June. On the 12th of June Plaintiffs wrote to Defendant that they had shipped to him on the day before, 3000 feet of hose, leaving 500 feet more to be sent by the next steamer.

Under date of the 27th of June they advise Defendant of the receipt of his telegram, but nothing is said of the date of its receipt nor was such date proved on the trial.

The 3000 feet sent on 11th June were precisely of the same description as the 1000 feet previously shipped.

The first 1000 feet received by the Defendant he finally persuaded the Japanese authorities to take and pay for, although they were in 50 feet lengths instead of 100, as ordered, and were marked at a price far exceeding that named in the order as a limit or at least as an approximate price, and the amount realized was forwarded to Plaintiffs.

On the arrival of the 3000 feet, however, accompanied with bill of lading, invoice, and draft upon Defendant for $7,328.65, the authorities refused to receive the goods, and the draft was protested for non-payment, which facts Defendant advised Plaintiffs by first mail under date of July 18th.

Defendant has never taken possession of these goods and refuses to do so, claiming that they differ from the order, both in the length of the pieces and in the price.

Plaintiffs insist, on the contrary, that the price was not absolutely limited in the letter accompanying the order, and that 50 feet lengths of hose are mostly used and are more serviceable than 100 feet as ordered.

They also claim that Defendant is bound to receive and pay for the 3,000 feet of hose, for the reason, 1st, that he had accepted and paid for the first 1,000 feet; 2nd, that he has never objected to the length of the pieces, and 3rd that in his letter to the Plaintiffs, of the 18th July, he refers to the draft upon him for price of the hose as "in order."

I do not think these positions sound. If the 3,000 feet of hose were shipped by Plaintiffs after receipt of the telegram from Defendant forbidding any more shipments, clearly they have no case. If such shipment took place before receipt of said telegram as is probably the case, they, the Plaintiffs, had received no advices whatever from Defendant except his letter and order of 7th April, and the shipment of both the 8,000 and 3,000 feet were made upon that letter and order alone, and not by virtue of any subsequent act or writing on the part of the Defendant.

The fact then that the Defendant, did, after much demur, accept the first 1,000 feet, in no way binds him to take the second if the goods were not according to order.

The goods were forwarded in different shipments, and Plaintiffs were immediately advised upon the arrival of the first 1,000 feet that they were not according to order, but it was offered on the part of the Defendant to try and dispose of them. They were finally so disposed of, not as being in accordance with the order, but as goods of a different character and price.

Neither does the fact that the defendant has not, in exact terms, made objection to the size of the pieces, deter him from his right to raise that defence to his action.

Even if it be granted that 50 feet lengths are more enduring and useful than 100 feet lengths, it still remains that the Defendant ordered 100 feet lengths and is entitled to have them, and it is distinctly proven that the short lengths are much more expensive than long ones by reason of requiring a double number of couplings.

The Defendant's admission that the draft by Plaintiffs upon him was "in order," is explained in the context, wherein he says "it was in order, because "I" (defendant) "had authorised you" "(plaintiffs) to draw upon shipment of goods." Nothing is said as to the amount being correct or the goods being according to order.

It is evident that the defendant has been desirous, from the beginning, to have the Japanese authorities accept and pay for the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

goods, although not in accordance with the order, but having failed to accomplish this, he places himself on what seems to me a perfectly sound defence, when required to receive and pay for them.

I am clear that the plaintiffs are not entitled to recover in this action. The complaint is therefore dismissed and plaintiffs are ordered to pay costs of Court.

28th January, 1876.

ENGLAND AND EGYPT.

(Saturday Review.)

If in quiet times it is a pleasure to be startled, Englishmen may be grateful to the Ministry for giving them that pleasure in a full and handsome manner. That strange things might suddenly happen while the East of Europe is disturbed was obvious, and no one can doubt that, if any Minister would like to do something surprising, new, and unexpected, it would be Mr. Disraeli. But that we should be suddenly told that the English Government has made itself responsible for four millions sterling, in order to purchase a preponderating interest in the Suez Canal Company, surpasses all that could have been imagined. Even the political importance of the step will scarcely impress the public so much as the thought of the extreme delight with which Mr. Disraeli must have done what he has done. It is in his own style of gorgeousness. In a moment he interferes in the East, he commits his country to a new adventure, he bandies about his millions like halfpence. He gives an order on the Golden Lions of the Throne of Judah, and bids a Viceroy draw at sight on Sidonia for four millions. To have lived to make a Duke, which was the dream of Vivian Grey, is nothing compared with having lived to realize the magnificent visions of Coningsby. It is impossible not to enjoy the personal pleasure of the Prime Minister, unless we can pronounce the step taken to be a wrong one. It would have been impossible to prove to a reluctant Prime Minister that he ought to accept the Viceroy's offer. It is very difficult to believe that Mr. Gladstone would have acccepted it, and if he had rejected it, he would easily have convinced Parliament that he had been right. But, on the other hand, now that the step has been taken, it will be equally difficult to show that it was not right to take it. A great opportunity was offered. The Viceroy was in need of ready money, and was obliged to sell his shares to somebody. He selected England as the customer to whom he would give the first choice, because he wished politically to lean on England, and because England is the only possible purchaser that carries about four millions in its pocket. If it is wise to get the command of the Suez Canal into English hands, here was a golden opportunity. If there was a hazard in seizing this opportunity, so also was there a hazard in letting it slip. Every one here is agreed that England must have the command of the Suez Canal, or at least must not allow any other Power to have it. Supposing we had refused the offer, and Russia or Germany had in their turn accepted it, Englishmen might have felt angry, not only with the Power that obtruded itself into our special domain, but with the English Ministry that had wanted the courage to become the purchaser. The fair way to regard Mr. Disraeli's proceeding is to consider, not merely how we like what he has done, but also how we should have liked his not doing it. In a matter where the arguments on each side were no doubt cogent, the nation will feel that it at least has a Ministry which was capable of acting quickly, boldly, and decisively. The thing has been done, and cannot be undone. There can be no question that Parliament will ratify the action of the Ministry, and all that remains to do is to anticipate and face the consequences of the step taken.

It is not a little thing that has been done and no one can say how far it may lead us. The position of the English Government as shareholder in a French Company is itself a curious one. The English Government will be bound by the statutes of the Company it has joined, subjected to the rules that regulate voting, obliged to act through directors, and through alien officials who cannot be suddenly replaced. It will not even possess a majority of the shares, and so long as it does not possess a majority it will always be open to the ingenious efforts of speculators who will try to make it buy their interests by giving trouble. It has, however, given the Viceroy much more than the market value of his shares, and it may later on take the precaution of buying up, at a tolerably cheap rate, enough shares to give it the absolute control of the Company. Even then it will be merely the largest shareholder, bound to account, if it takes the management of the enterprise, to other shareholders, reporting to them, standing their criticisms, giving them information, subject to having its conduct voted on at Paris. This is a very odd position for the English Government to occupy, and possibly the only way out of the difficulty will be to buy up the whole concern; although those who have had any experience of what the process of buying up the shares of innumerable holders is really like, especially when it is known that the intending purchaser is very eager to buy and has boundless wealth, will not think lightly of the cost of the proceeding. The nominal value of the shares is eight millions, and there is a debt of five millions more. It would be absurd to pay the bondholders more than the English rate of interest if the bonds could be bought up; and it may therefore be said that, in order to get the Canal completely into our hands, we should have to find at least thirteen millions, and probably more. But this is not all. Hitherto much allowance has been made for the difficulties of a Company which ran a great risk and had sustained enormous losses. The Canal has been made, but not finished, and it has been kept up in a very imperfect manner. What had been done, and was being done, seemed a good deal for the private persons who believed in M. Lesseps to accomplish, but but it will seem far below the standard of the English Government. Travellers are content to be jolted over ruts on the road of a poor district, but a rich country is expected to offer solid well-metalled highways. To the cost of the purchase, must, it is to be feared, be added the cost of putting and maintaining the Canal in a state not discreditable to England. Nor is it possible to avoid an apprehension that a great and constant pressure may be put on the Government to diminish its receipts, although the outlay has been augmented. It is satisfactory to know that nine-tenths of the ships using the Canal are English. This evidence of our commercial superiority is flattering to our pride. But, like most good things, this, too, has its bad side. Shipowners will have a Government to appeal to which will not perhaps be deaf to the entreaties of persons with good political interest. These persons will urge that British commerce would be greatly aided if the charges on the transit through the Canal were reduced. Little people will say that the high charges work exclusively for the benefit of big people. Cotton-spinners will suggest, that, in order to compete with Indian producers, they must have a turn given them and that the right turn to give them will be to let them go through the Canal at a low figure. To the argument that the nation has laid out its money on the Canal and must have a return for its investment, the answer will be given that the outlay was really made for political purposes, and that the nation gets interest on its money in the shape of an assured route to India. To get the command of the Suez Canal for four millions sterling, even if the investment brought in no return, might be wise; but it may turn out that the four millions will be only a beginning, and that many more millions will have to be invested at a pecuniary loss. It is to be feared that the days of comfortable Budgets for Chancellors of the Exchequer have gone by. This does not prove that the purchase of the Viceroy's shares should not have been made. It may have been wise to pay a long price for the command of the maritime highway to India. But it is of no use to close our eyes and to call a large financial operation a small one.

Politically, too, we must be prepared for this purchase turning out to have important consequences. Nominally we are only shareholders in a French-Egyptian Company; but we may have to look after our property, and we are the only shareholders who can look after it. We shall certainly not pay the Viceroy's debts if he makes default. It ought to be clearly understood from the outset, that if the bondholders cannot get their money from the Viceroy, they will not get a shilling from England. But, if the Viceroy makes default, a cry will be raised that he is a swindling Mahometan, who ought to be dispossessed by an enlightened Christian Power. Should he not be able to pay his way, there may be internal disturbances in Egypt, and we should have at least to see security established along the line of the Canal. Then, again, even the admirers of the Viceroy and Egypt allow that very much depends on his continuing to live, and he may die any day; and then, without his having made default in his lifetime, troubles might ensue, and we should have to interfere, not at first or not at all to take possession of the country, but to make the Canal safe. For this purpose the English navy would have to be freely employed; but the port at the end of the Canal would not do for the English navy, and we might find ourselves obliged to occupy, temporarily, Alexandria. All this will be as evident to foreigners as to Englishmen. They will see and say that England has now chosen to put herself in a position which may any day force her, or entitle her, to send troops and ships to Egypt. England has bought the vassalage of Egypt, and the great Continental

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Powers will ask how the purchase affects them. There can be no doubt that in the old days of French glory and pre-eminence France would have strongly remonstrated against the purchase, as virtually deciding the long debated question whether Egypt was to be a tributary of England or of France. As things are now, France may be rather glad to see the purchase made. She may be pleased to contemplate England in the embarrassing position of a shareholder in a French Company, and may rejoice in thinking that England is committed to a sort of opposition to the allied Emperors whose alliance is calculated expressly to keep France in fetters. We shall soon hear what these Emperors think of the purchase. Perhaps they may not much regret it. They could not in any case control Egypt, and as between them and Egypt lies a sea on which the English navy can act freely, they only lose what they could not have got, but they may hold that this loss entitles them to claim what they would like to have. In dividing the spoils of Turkey they well know that they will have to reckon with each other; but they will expect not to have to reckon with England. They will say that England has got what she wants, and now they must have what they want. The field of plunder may seem open to them, and the Eastern question to have entered on a new phase. Even, however, if this be so, it does not follow that the English Ministry has been wrong. It may have seen too clearly that the end of Turkey is not distant to be willing to hesitate; and it may have thought that to let it be known at the outset what it wanted, to get it, and to get it in an apparently legal way, and without asking any one's leave, was the simplest, cheapest and honestest course. But here, again, it must be said that to take such a course was not a light matter, and that what has been done has made the immediate future an anxious time for statesmen as well as for financiers.

STROUSBERG.

(Spectator.)

STROUSBERG—it is quite absurd to call him Dr. Strousberg, or Herr Strousberg, or Mr. Strousberg—has failed, and the English public, so far is it knows anything of him, is meeting him out hard measure. It classes him remorselessly with the "financing rogues who ever since the foundation of the Second Empire have been trying in Paris, London, and New York to make great fortunes, by speculating in shares which they can send up or down at pleasure, and who have succeeded at last in so discrediting joint-stock enterprise, that Great Britain is at her wits' end to know where to put her accumulations. Very few of them have made solid fortunes, while their "operations" have involved heavy fines on almost every country, and city, and mineral district honoured with their attentions. We should like to know, for example, how much a year America is now paying in the shape of extra interest for railway and mining capital, which, but for the discredit flung on American speculations by half-a-dozen swindlers, she would never have been compelled to offer. Strousberg did not belong to this gang at all. We are not about to defend his pecuniary character, which may be indefensible, for anything we know, and certainly can be defended satisfactorily only by the only man who has the key to his astounding enterprises—that is, by himself,—but the facts on the face of his record, and especially the facts related by Herr Delietz, the special Commissiary appointed by the Berlin Civil Court, do not justify all the harshness of English opinion. For aught that appears in evidence, Strousberg may have been an unsuccessful Brassey, and he was certainly not a man who intended merely to dupe the public. He was a sort of Napoleon of Contractors, and was ruined, like Napoleon, not so much by ambition, though, of course, that helped, as by a fatal disparity between his supply of energy and of foresight. Strousberg was no Stock-Exchange man, but a gigantic speculator of the contracting and the financing class, a man who had conceived the idea that sudden and enormous wealth might be realised out of perfectly honest enterprise, if only the enterprise undertaken were of sufficient magnitude. His theory obviously was that if money can be made out of a railway sub-contract for half-a-mile, it can be made easily, and in larger amounts, out of a contract for a thousand miles; that if a carriage company can make money by engine and carrige-building, so can an individual, if only he can rise to the height of the big businesses which a company can undertake. That theory is true, granted two conditions,—that you can secure sufficient trustworthy agency, and that you have capital enough to stand the consequences of a misfortune. That Strousberg secured the first condition would appear certain, from the bare facts of his career. He did build his Railways; he did supply his carriages by the thousand; he did work his mines; and to do all these things he must have secured agency of a kind which it requires a great knowledge of men of very different capacities to have obtained. It was in securing the second condition that he broke down, and this mainly because his affairs have been so extended by his remorseless energy, that no foresight could cover the whole area of the circumstances which might affect them. His plan was to build Railways in districts which wanted them, and take payment as the work went on in shares, interest on those shares, in his first operations at all events, being guaranteed by a government. The fairness of that business depends, of course, solely upon the question whether or not the public who buy those shares know that they have been paid for in work, instead of capital, a point which the Commissary in this case does not explain. At all events, Strousberg succeeded at first; he built a system of guaranteed Railways, the Roumanian, and made so much money that he thought himself able to carry through any number of similar enterprises. And he might have been able, as far as his own energy and ability were concerned, but he widened his area of enterprise till his foresight was insufficient for the demands on it. He undertook railways in Roumania, in Russia, in Hungary, in Hanover, in Prussia Proper, and in Posen, built the Berlin cattle-market and slaughter-houses, organised immense ironworks at Neustadt and Dortmund, and commenced laying out a new town at Antwerp, and drove on all these immense undertakings at one and the same time. So great was his energy, and so successful was he in discovering competent sub-contractors and other agents, that all he undertook went rapidly forward to completion, and in 1870 it was believed that he had 70 millions sterling of contracts on hand, and that he might win at least a fair per-centage upon the whole amount. Contractors run great risks, and although, from the way they are paid, they do not need, while prosperous, very great supplies of capital, they expect very large returns; but five per cent. upon his undertakings would have left Strousberg, after less than ten years of work on the great scale, in the front rank of the working capitalists of Europe. There are larger fortunes no doubt, but the man who can lay his hand on £3,000,000 sterling of his own, and actually available, can attempt any contract, and almost compel any enterprise to succeed. Strousberg's undertakings, however, had widened till he had reached the point at which politics begin to influence the profits of industry, and about politics he probably knew nothing. He had no more calculated out Bismarck and Napoleon III., than Napoleon I. had calculated out the Russian cold. The war of 1870 broke upon him unexpectedly, and the blow, in Commissary Dieletz's opinion, was fatal. Accumulation stopped throughout the Continent, or if it went on, the people took to hoarding their money till times grew more settled, and the vast masses of shares on which Strousberg depended as capital were saleable only at ruinous sacrifices. He fought on, however, with unabated courage, sold every property that would sell, the Berlin cattle-carket, the Hanover engine-factory, the Neustadt iron-works, the Dortmund iron-works, the Siegen iron and coal-mine, the Hungarian North-Eastern line, parted with his picture-gllery, mortgaged his real estate, and still drove on the remainder of his railway works. With part of the moneys thus obtained he even commenced a new and gigantic businessa, which seems to have had in it many of the elements of success. He would supply the Continent with railway-carriages. He purchased an estate covering a county in Bohemia, and erected works on such a scale that he had thirty-seven miles of railway on his own ground merely to connect them; that his workmen filled a town he had built, and that he could venture to take a Russian contract for 2,000 carriages to be delivered almost at once; while he was building a Hungarian railway for £600,000, which, says the Commissary, when completed, wll pay the debenture-holders heavily; and securing a gigantic concession, that of 550 miles of French railway from Paris to Narbonne. His credit, however, had been shaken in 1871 by a refusal of the Roumanian Government, whose railway system he had built, to pay some disputed guarantee; his need of capital was incessant, he mortgaged every acre of real property he possessed—including, of course, his Bohemian estates—and at last, on the refusal of a Russian bank to make some advances, he collapsed, and was arrested. His whole property would appear to have been sacrificed in the effort to carry on his works—the personalty not being worth £11,000—and the unsecured creditors scarcely hope for a dividend; and yet so powerful is the character of the man, that members of the highest Austrian aristocracy went bail for him, and that even the Commissary expressed his belief that the only hope for everybody was to place Strousberg once more in control of his own affairs.

We have no moral to draw from the story for, as we have said, we know too little of the transactions involved to decide whether Strusberg was a great indurtrial speculator ruined in spite of his best exertions, or a dishonest man trading upon a fictitious credit. His utter fall suggests that he fought fairly and made no purse for himself, and the main fact nn the other side, the magnificence in which he lived, was, the scale of his operations considered, rather ridiculous than extravagant. But there is an intellectual lesson to be derived from his story which has been forced on observers of late years by a good many events. The limit of men's capacity for fnrtune-making would appear to have been reached. Industrial speculation has assumed, year by year, more of a grandiose character, till at last it has begun to demend faculties which no man, or at all event no man found oftener than once in a century, can undertake to find. The great secret of fortune-making has been said to be, that it is just as easy to deal with millions as with hundreds of thousands, with a hundred agents as with ten, with a dozen countries as with two; but that is not the case. There is a point at which the mind of the speculator is found to be insufficient. The able banker who can place ten millions ro well, finds that he cannot place thirty millions safely; that his risk increases not in arithmetical, but in geometrical proportion; that his mind will not carry the history of so many borrowers; that the chancer of an accident are increased not threeford, but by an indefinite multiplier. His range may be ever so wide, but he must reach its edge at last, and over that edge he is as powerless as a blind man. The great speculator can combine up to a certain point, a point quite beyond the little rpecutators ken; but he has his limit too, and that once reached, he is as unable to grasp and provide for all the circumrtances which may affect him as the most ordinary observer. A great business is distinguished from a little buriness mainly by the more fiequent repetition of the same trrnsaction, and up to a certain point, the qualities which suffice for the succerrful management of the little affair suffice also for the sucersful management of the large one; but the point is not indefinite, but is strictly limited by the limit of metal power. A juggler who can keep up two balls can by incessant practice keep up ten, but let him add one more ball than his eye is quick enough, or his brain steady enough to follow, and the performance ends at once in the fall of a shower of gilded pellets. The man who tried to manage the commerec of the whole pellets. The man who tried to manage the commerce of the whole world would find that he made no profit, ever of the business he thought he understood best. It has long ago been shown that the most bangerous of operations is to establish a monopoly of any natural product, for no man's knowledge suffices to mske him certain that more cannot be produced anywhere in some one of the countries of the world, and the man who extends industrial speculation over too wide an ares is under preciacly the same liabilities. Hir knowledge, in fact, which is the basis of hir rkill, is exhausted sooner than his energy, and once exhausted, he is as liable to ruin as the feeblest sub-contractos. His capital may enable him to pay losses, but it will not help him to prevent losses. No brain could understand clearly and provide against all the incidents of a buriness like Strousberg's, and he was as liable to be overwhelmed by accident as the speculator who risks a hundred pounds in shares he knows nothing about. We shall ree big businesses succeed ydt, perhaps bigger businesses than any yet attempted, but that monopoly of business of which many dreamers have dreamed is as far off as ever. Omnipotence in the shape of capital and energy needs omniscience to guide it, in fact as well as in poetry, and omniscience is refused. There is far more energy and power inmankind than there is foresight, and when the latter is over-taxed, the former is of exceedingly little avail.

ARRIVALS.

Jan 22, *Hi go Maru*, Japanese steamer, Vroom, 690, from Hakodate, Jan. 20, General, to M B Co.

Jan. 22, *Dwarf*, H. M. gun-boat, Captain Hon. E. Dawson, from Yoko-ka

Jan. 25, *City of Quebec*, British ship, Davidscn, 707, from Nagasaki, Jan. 18, Coal, to P. M. S. S. Co.

Jan. 25, *Nevada*, Ameri an steamer, Williams, 2,145, from Shanghai and ports Jan 18, Mails and General, to M. B. Co.

Jan. 25, *Tanais*, French steamer, Reynier, 1,010, from Hongkong, Jan. 17, Mails and General, to M. M. Co.

Jan 28, *China* American steamer, Dearborn, 3,836, from Hongkong, Jan. 17, Mails and General, to P. M. S. S. Co,

DEPARTURES.

Jan. 25, *Ceylon*, British steam r, Orman, 2,111, for Hongkong, Mails and General, despatched by P & O. Co.

Jan. 25, *Shinagawa Maru*, Japanese steamer, for Osaka, General, despatched by M B. Co.

Jan. 25, *Hafrofjrod*, Norwegian barque, Meyer, 479, for Kobe, Kerosene, despatched by E. Fischer & Co.

Jan. 27, *Tokio Maru*, Japanese steamer, Dunn, 2,119, for Shanghai and ports, Mails and General, despatched by M. B. Co.

Jan. 29, *Amanda*, German schooner, Harms, 225, for China, Ballast, despatched by F Knoblauch.

PASSENGERS.

Per Steam-hip *Ceylon*, for Hongkong —Messrs. G. W. Thompson, Mr and Mrs. Rangan, Mr. Sibson.

Per Steamship *Nevada* from Shanghai and ports.—Messrs. M. B. Langhorne, F. Pugh, H. Peacock, C. F. Haston, M. de Lum, W. A. Wood, G. Nachtigall, H. M. Blanchard, Joodani, Mrs. Ungno, Miss Ungno, Miss Wilson, and 3 Europeans, 51 Japanese, 1 Chinese in the steerage. For America: Paymaster S. Rand, U.S.N., W. White, and 3 U S. seamen and 1 European in the steerage.

Per Steamship *Tanais* from Hongkong.—Messrs. P. Russell, C. Volka, Faulknett, Mrs. Faulknett, Mrs. Gregorieff, Sœur Ste. Mathilde and two companions 3 Chinese on deck.

Per Steamship *Tokio Maru* for Shanghai and ports.—Messrs E. M. Isaacs, H. Greey, Maike, Kawaguchi, Tsuda, Yoshida, C. B. Bernard, Winckler, and 54 Japanese, 1 Chniese in the steerage.

Per Steamship *China* from Hongkong.—For San Francisco: E. A. Walcott, and 638 Chinese in the steerage.

The *China* reports. Left Hongkong January 17th at 4 p.m. Experienced a strong N.E monsoon, with rough sea, to Turnabout Island; thence moderate wind and smooth sea until 26th inst., when she encountered a very severe gale from N.N.E., lasting 14 hours. Arrived on 28th instant.

CARGOES.

Per Steamship *Ceylon* for Hongkong —

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics.—Since the issue of our last publication on the 10th instant, the demand for cotton fabrics has continued limited. For 7lb. *Shirtings* there have been purchasers at somewhat higher rates, though 8¼ lb. and 9 lb. goods remain unimproved. There has been an enquiry also for good qualities of 7 lb. *T-Cloths*, 6 lb. weights being neglected by the trade. Some large sales of *Velvets* are reported, and prices are firm as we close. *Taffachelass*, so far from exhibiting any improvement becomes daily more difficult of sale. Our quotation is therefore nominal.

Grey Shirtings:—					White Shirtings:—		
7 lbs.	38½ yds.	39 in.	per pce....	$1.90 to $2 20	60 to 64 reed 40 yds.	35 in.	nom. per pce.... 2.20 to 2.40
8 lbs.	38½ yds.	44 in.	„ ...	2 20 to 2 50	Turkey Reds 24 yds.	30 in.	2¼—3 lb. per lb... 0 75 to 1 02½
8 lbs. 4 to 8 lbs.	38½ „	39 in.	„ ...	2 20 to 2 50	Black Velvets		8.50 to 9 50
9 lbs.	38½ „	44 in.	„ ...	2.55 to 2 92½	English Drills 15 lb. 40 yds,	30 in....	3.25 to 3.40
					Taffachelass	12 yds, 43 in....	*nom.* 2.25 to 2.40

Yarns.—Mock water 16/24, and 28/32 in good qualities, continue fairly saleable. All other counts and numbers must however be reported as more or less neglected.

No. 16 to 24 ... ...per picul..	$30 50 to 34.00	No. 38 to 42... ... ...per picul...	$42.00 to 45.00
No. 28 to 32 ... ...per picul..	$35 00 to 39 50	Reverse Twist ... 16-24 ... „ ..	$34.50

Woollens.—Better qualities of black *Italian Cloth* and plain black *Orleans*, have attracted some little attention from buyers during the closing fortnight, no other article of Bradford manufacture demanding particular notice. The prices obtainable are, however, far from satisfactory. Plain *Mousselines de Laine* are readily saleable at current rates, notwithstanding the large shipments advised from Europe, but in fancy Woollens there is no business to be reported.

Plain Orleans	40—42 yds.	32 in....	6 50 to 8 00	Figured Mousseline de Laine..	30 yds.	30 in...	0 25 to 0.28
Figured Orleans	29—30 yds	31 in....	4 75 to 5.25	Multicolored „	...30 yds.	30 in...	0 35 to 0.40
Chimagoro	30 yds.	30 in....	5.25 to 5 75	Cloth, all wool plain or fancy..	48 in. to 52 in...		0.80 to 1 20
Italian Cloth	—30 yds	32 in....	0 25 to 0 33	Presidents	.. 54 in. to 56 in...		0 60 to 0 70
Camlet Cords	29—30 yds	32 in....	6 25 to 7 25	Pilots	...54 in. to 56 in...		0.40 to 0.45
Camlets Asstd.	56—58 yds.	31 in.	...18 50 to 19 00	Union	.. 54 in. to 56 in...		0.40 to 0 65
Lastings, Japan	22—30 yds.	32 in....	13 00 to 14 50	Blankets, scarlet & green 7 to 8 lbs...		per lb...	0.40 to 0.41
Plain Mousseline de Laine	—30 yds.	30 in....	0 19 to 0.20½				

Sugar.—The *Amanda* arrived on the 19th instant, bringing 4,900 bags of Takao Sugar which are reported to be sold at $3.47½, thus establishing a lower range of prices. Three cargoes are said to be on the way.

Kerosene Oil is quotable at $2.35 per case *nominal*.

Sugar:—Formosa in bag	...per picul....	3 30 to 3 60	China No. 5 Kong-fun ...	...per picul ...	4.10 to 4 60

„ No. 4 Kook-fah...	„ ...	5.00 to 5 50	Kerosine Oil.....	... ...	... per case ...	2.35	

EXPORTS.

Silk.—Since the 10th instant, settlements are 325 bales of Hanks, and 75 of Oshiu. Business has been much hampered by the rising pretensions of the Japanese. Purchases of inferior silks have been effected in this market by native manufacturers, and arrivals being very small stocks have fallen off to 800 bales, and good Hanks are becoming scarce. Under these circumstances and notwithstanding the painful impression produced by perplexing advices wired last week from Lyons prices for Hanks have further advanced $10; Oshius are firm at previous rates, and $525 has been paid for a parcel of good native filature.

The shipments of the fortnight are 590 bales, making the total export since the 1st July 10,225 bales against 7,547 last year for the corresponding period.

The value of the Export of Silk from the 1st July to the 31st December, 1875, may be computed as follows:—

	Bales.	*Piculs.*	*Average value.*	*Amount.*
Hanks	6,805	5,444	$417½	2,272,720
Oshius	1,880	1,504	500	752,100
Filatures	675	540	580	313,200
Other sorts	153	120	400	48,000
Total	9,510	7,608	@ $445	$3,386,020

At the rate of exchange averaged during that period, the parity of $445 laid down and sold in London and in Lyons is respectively 16/9; fr. 46.

		At Exchange 4s. 1 in London.	*At Exchange 5.19 at 6 m.s. in Lyons.*

Original from UNIVERSITY OF CALIFORNIA

Tea.—After the departure of last steamer an active business for so late in the season sprung up, so much so that at one time prices showed an advance all round of $1 to $2 per picul; latterly however this subsided as quickly as it arose, and at the close, owing partly to prevailing bad weather, and partly to discouraging telegrams from the other side, our market is extremely dull.

The demand for choice Teas has continued, but there are literally none on offer.

Settlements during the period now under review amount to fully 8,000 piculs, the bulk of which has been of the lower grades.

The *Ukraine* sailed on the 14th instant with 444,670 lbs. from this, and a considerably quantity from Kobe, bringing up our total export to date from the two ports to 22,704,744 lbs. as against 18,905,942 lbs. at same time last year.

The *Rona* was been put on the berth for New York, at £1.15, and will probably get away about the 15th proximo.

The *Robert Kelly* sails for San Francisco to-morrow with about 100,000 lbs. and the bearer also takes a considerable cargo, so that from all appearances the export from Yokohama and Kobe combine for the entired season will reach, if it does not exceed, 25,000,000 lbs.

Common	$14.00 to 18 00	Fine	$32.00 to 34.00
Good Common	19.00 to 22 00	Finest	$37.00 to 40.00
Medium	24.00 to 26.00	Choice	None.
Good Medium	28.00 to 30.00		

EXCHANGE AND BULLION.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

August 1st, 1875. 26 alt.

NORTON'S PATENT "ABYSSINIAN" TUBE WELLS.

THESE celebrated Tube Wells, of which many thousands are in use throughout the world, are the most rapid, simple, and economical means of obtaining water, from the wants of a cottage to supplies of upwards of a million gallons a day. In use at Bass's, Allsopp's and other large Breweries.

Full printed directions are furnished with the Driving Tackle, which any ordinary workman can manage. The average time required to drive a Well is *one to six hours.*

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,
in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,
in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"
Sold by all Chemists and Medicine Vendors throughout the World.

THE

Japan Weekly Mail

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 6.] YOKOHAMA, SATURDAY, FEBRUARY, 5, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

On 1st February, 1876, at No. 7, Bund, Yokohama, Mrs. ROBERT JOHNSTONE, of a Son.

On the 2nd inst., at the Russian Legation, Tokio, MADAME DE STRUVE, of a daughter.

DEATH.

At Kobe, Japan, on January 27th, 1876, ORRAMEL H. GULICK, son of Rev. LUTHER H. GULICK, M.D.

Notes of the Week.

News from Corea is hourly expected, but we must go to press without it. Important preparations are going on in case reinforcements are demanded. The delay in the receipt of intelligence may possibly be attributed to the boisterous nature of the weather at this season on the Corean coast.

The week has been a quiet and a muddy one—especially in Tokio, where the roads have been almost impassable. One of the hardest things Beatrice says to Benedick—it is he who tells us of it, by the way—is that he was "duller than a great thaw," and certainly it was a sore thrust against one who valued himself on his wit. The heavy snow-fall of last week was pleasant enough so long as it lasted, and the night-frosts of the last forty-eight hours have greatly mitigated the miseries we should have endured from a more rapid thaw. But, at best, it has been very bad.

At the time of going to press we have news just arrived of the *Surprise*. It appears that the vessel, in charge of a pilot, was beating up the gulf yesterday morning, when the weather became so squally that she had to run down the bay for shelter, probably trying to get in to Kaneda Bay. Owing to some error of judgment, she was put on to the rocks on which the unfortunate *Hayo-maru* struck, and it is feared will become a total loss. Efforts are being made to save the cargo, which are likely to be attended with success if the weather continues favourable; but there is great danger of the vessel slipping off the rock into deep water if it should come on to blow.

The *Surprise* has on board 450 tons of general cargo, 123 tons of anthracite coal, and 16,500 cases of kerosine oil. We may add that when the consignees gave information of the disaster to the *Kencho*, every assistance was promptly offered, and messengers were at once despatched to the scene of the wreck, with orders to the local officials to render all possible assistance. The Lighthouse Department also kindly offered the use of one of their steamers if required.

We have all become dull and dispirited here with the bad times, or serious over the questions which political affairs present. In Kobe affairs have taken a different turn. There is little business indeed, but the idle times have produced a very good squib *à propos* of the election of a Municipal Councillor. The *Kobe Chronicle*—the name given to it—is a sheet purporting to contain the election news and speeches, which are for the most part imaginary. The thing is smartly done, and there is far more variety in it than could come from dull men, especially as there is but one topic treated.

Yet if we can make no joke, we can embalm one which will delight all true Shakespereans. The Estimates appeared the other day, as our readers know. Speaking to a resident upon the difficulties incidental to getting the information on the subject which we subsequently placed before our readers, he replied, "Of course, they say *Mum* when you say *Budget*." It will take Kobe many a long day, and what Lord Dufferin, in his celebrated speech at Rekjavik, called "*haustum longum, haustum fortem, et haustum omnes simul*," to beat this.

It is said on good authority that the long expected death of Li-Hung-Chang's mother has taken place, and, if so, he will be expected to go into retirement for twenty-seven months. This period may be shortened by special Imperial authority to sixty days; but it is rarely done, and may neither be desired nor demanded by the Viceroy. But the probabilities are that he can ill be spared. His life is active, there are important affairs on foot, and though the Tartars may not be fond of him, they may not be easily able dispense with his services during the present crisis.

Sir Harry Parkes goes down as a passenger to Hongkong in the *Malacca* on Tuesday next—for reasons of health, we regret to say.

From the "Japan Mail Daily Advertiser."

The *Akebono Shimbun* has been refused a new trial in the case of slander against the governor of the Tsurugaoka *ken* for which it had asked.

Captain Descharmes of the French Military Mission has been honoured with a leave-taking interview by His Majesty on his return to Europe on promotion to his majority. His Majesty intimated his intention to bestow upon him the decoration of the order which has been recently established.

Arms and military stores were shipped in the *Nevada*, which sailed yesterday for Shanghai. It is presumed that they are destined for Shimonoseki.

Heavy punishments have been allotted to the editor and certain writers attached to the *Hioron Shimbun* for having published an article assailing the Government of which we gave a translation in our last weekly issue ("Reciprocal

Digitized by Google

Original from UNIVERSITY OF CALIFORNIA

Duties," page 102.) The editor has been committed for a two years term of imprisonment, the sub-editor for one year, and a writer attached to the newspaper sentenced to pay 50 *yen* and to serve three months imprisonment in consequence of its publication.

The *Choya Shimbun* has heard that the Government purposes to issue a new code of press laws of increased severity.

The returns for the past week of the Yokohama and Yedo Railway, which we publish below, indicate a considerable falling off, due no doubt to the unfavourable weather.

In a dearth of news the following "strange story" which we take from the *Nichi Nichi* may be of interest: A villager of Ochiwa in Shinshiu being afflicted with amaurosis, which he declared affected his sight, and unable to obtain a living by trade or husbandry, betook himself to the business of shampooing. Of late a thief obtained access to a policeman's house in the village, and carried off some forty-four garments. In searching for some traces of his movements the constable detected two sacks of rice, hidden in a corner of his garden, which the thief had apparently deposited there with a view to their subsequent removal. This determined the constable to keep strict watch. On the following night footsteps were heard; the constable ran to his garden, and, after a short struggle, succeeded in capturing and bringing home with him the robber whose visit he had expected. He proved to be the supposed blind shampooer.

On examination by the authorities, he admitted that, in concert with a number of accomplices living in an adjoining village, he had executed a vast number of robberies, unsuspected and undiscovered, during the past ten years.

Owing to the imprisonment of three of its editors matters have come to a deadlock with the *Hioron Shimbun*. It has not appeared for some days past.

The Japanese newspapers refer to the arrangements being made for hostilities in the not improbable contingency of war being declared. The Mitsubishi Company has, it is said, received instructions to have eleven steamers in readiness for government service, and to recall such vessels as may be at distant ports forthwith and fit them out for the conveyance of 700 or 800 men. The *Toshima-maru* is now shipping heavy guns at Shinagawa. The *Choya Shimbun* gives the rumour that five battalions of the Imperial troops are under orders for Shimonoseki, and general instructions have been privately issued to the Army and Navy Departments to hold themselves in readiness for a sudden declaration of war.

An attempt to enter a dwelling-house on lot 122 was made at an early hour this morning, but fortunately—a somewhat unusual feature in recent burglaries—defeated by the vigilance and prompt action of its occupier, Mr. H. Collins. Being aroused by a slight noise outside, as of some one endeavouring to open a door or window, Mr. Collins made preparations for capturing the thief, and, waiting until he had entered a bath-room at a distant end of the landing, followed him and discharged his revolver at him. The weapon missed fire, and the thief turning to escape by the steps which led to the ground floor, received a smart blow with the flat of a sword which disabled him and rendered his capture by the police, who had then arrived, easy. The robber, somewhat unexpectedly, proved to be a Chinaman, and an impromptu punishment in the shape of a smart drubbing was executed upon him on the spot with much gusto by the officers. He was provided with a lantern and a screw-driver, but was unarmed.

Our Yedo correspondent informs us that large quantities of Japanese Raw Petroleum are being vended as American Oil. He is assured that one firm lately held no fewer than 3,000 cases of spurious Devoe's Kerosine, the old capsuled tins and cases being systematically bought up or imitated and stored for service. When a few more explosions and conflagrations have been caused by this dangerous stuff, which will not bear the fire test so urgently insisted upon at Hongkong, perhaps the Government will wake up to the fact that it is nearly as dangerous a commodity for a crowded town of wooden shanties and mud godowns as gunpowder would be. Meanwhile, the Mitsu Bishi Company will do well to look closely to native shippers of the article, or it will probably have to write off a ship or two as "destroyed by fire" in its profit and loss account.

European officials are to be appointed as Bridge and River Embankment Inspectors throughout the Empire. At present, some of the highways to the north are utterly impassable, floods and snow having swept away both bridges and roads or converted the latter into mere morasses.

The *Nichi Nichi* has heard that Ishibashi, chief Treasurer of the Itaraki *Kencho*, has escaped to China with Government monies. Two officials of the *Ken* have been despatched to Nagasaki in the hope of discovering and arresting him.

Hirosé, an electrician residing at Asakusa, has received a bronze medal from the commissioners of the Vienna Exposition for improvements in electrical apparatus exhibited there by him.

The Imperial Palace has been specially connected by telegraphic wire with the Central Station. Cipher messages from Nagasaki will pass thither direct.

A Yedo correspondent writes:—

Mr. Consul Shepard's opinion as to Japanese notions of verity and plausibility appear to be borne out by current events. Though the Government would fain deny that war with Chosen (Korea) had been resolved upon six weeks ago, circumstances tend to prove my former assertion, and the most active preparations are being daily made for prompt aggression. The *Hiogo Maru* (Captain Vroom) is held in readiness to start immediately, and the *Takasago Maru* (formerly the *Delta*) selected for her speed as the conveyance for the staff, is being fitted for the reception of 1,500 men, whose packing will not be far better than that of Hadjis bound for Mecca or blacks from Guinea. Twenty-five vessels are ordered to be kept in readiness for the transport of troops.

Telegrams from Shimonoseki yesterday make no mention of advices from Corea—a fact which may be regarded favourably. Had there been any attack made on the ships conveying the Mission, a despatch boat would at once have been sent over to announce it, and it may thus be hoped that the negotiations are proceeding satisfactorily.

Japanese Tobacco continues in favour with manufacturers—in fact, it has now become the chief substitute used by English houses—for the American article (says Morgan's *British Trade Journal*). The demand for home use is now 1,200 bales a month.

Arrangements are being made in Tokio for the manufacture of a species of Depilatory for removing superfluous hair from Japanese craniums without the intervention of a razor. It was probably the announcement of this fact that caused the death of the Little Barber of "Our Neighbourhood."

A Yedo correspondent informs us that, according to information received by him from a Saibansho official, a Patent Law has recently been enacted.

Snow is said to have been rare in the province of Idzu. This year there has been a fall to the average depth of three feet.

The *Hochi*, *Akebono* and *Saifu Shimbun* were not issued yesterday, which is probably due to the editors having been summoned to the Saibansho on the previous day. The *Hioron Shimbun* still fails to appear.

Writing of the preparations for war the *Hochi Shimbun* says that it is proposed to make Osaka the Head-Quarters of the Corean staff, a subsidiary department being created at Shimonoséki. It is intended to send eight battalions of infantry to Shimonoséki and one to the island of Tsushima. The victualling department of the forces will be formed in the Fukuoka *ken*. The authorities of this *ken*

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

are, it is said, now about to contract for the supply of 30,000 *koku* of rice.

The P. & O. s.s. *Bombay* sailed from Hongkong yesterday, 4th instant, at 6 a.m., bringing the English mail to the 24th December. It is intended to despatch the s.s. *Orissa* to Yokohama as an extra steamer.

The American ship *Surprise* from New York is reported to be on the Plymouth Rock. She is consigned to Messrs. Mourilyan, Heimann & Co.

The former Compradore of the Deutsche Bank has been sentenced to ten years imprisonment by the Japanese authorities for his frauds upon that institution.

The *Choya Shimbun* has been informed that one of the Satsuma men, apprehended on the ground of being concerned in an attempt to assassinate a certain high officer of State, has confessed that such was indeed his intention and that he deemed him worthy of death.

A correspondent sends us the following observations upon Japan Tobacco:—

You have mentioned in your issue of yesterday, upon the authority of Morgan's *British Trade Journal*, that Japanese tobacco has now become the chief substitute used by English manufacturers for the American article. The demand which the Japanese product enjoys now must not, however, be taken as a criterion of a superiority, or even an excellence of quality, but must properly be ascribed chiefly to two reasons, viz.: the comparative cheapness of Japan tobacco, and the property it enjoys, over all other descriptions, of imbibing in the process of manufacture, a very large amount of extraneous mixture or *charge*, which renders it valuable to those whose trade it is to transform the original tobacco leaf into *shag*, *returns*, or *birds-eye*. My information is derived from an importer of London, who recommended us to go into that branch of business at a time when the product of this country was not so well known in England as it is at present, assuring us that its consumption would largely extend in the future. That the result has proved the foresight of our friend to be well founded is not a question of doubt; but I do not know whether the smokers at home will have to congratulate themselves on the change, and whether the flavor of *shag*, *returns* and *birds-eye*, will be or is at all improved by the substitution which is taking place.

A Japanese newspaper relates that the former *daimio* of Geishû is about to surrender his pension to the Government, to abandon his rank, and to become a *heimin*, or commoner.

The *Hioron Shimbun* has appeared for the first time since the imprisonment of its editor and other writers.

Two rice boats were capsized at the mouth of the creek yesterday. The accident was fortunately unattended with loss of life, as the men were picked up by boats which were at hand.

The Government is said to have issued a requisition for 70,000 pairs of sandals. Some delay must necessarily take place in providing so large a quantity.

THE GOVERNMENT AND THE PRESS.

IT is impossible to deny that the present state of the relations of the Government to the native Press is most unsatisfactory and calculated to cause much uneasiness. The case is evidently one which will be appealed to by the partisans of a free press as proving their point; and by the opponents of a free press—we speak, of course, in relation to this country, its antecedents and existing condition—as proving theirs. On the one side it will be pleaded that the Press-laws are the cause of this unsatisfactory condition of affairs; on the other, that this condition of affairs proves the unfitness of the Japanese for even such freedom as the Press-laws now permit to the public writers. This is a case, too, in which, though one side must be right and the other wrong, it must ever remain a matter of opinion which is the one and which the other. The fact that matters are in a bad way must be conceded; all else is mere inference, which may be right or wrong.

But we think it well to say that this condition of affairs confirms us very strongly in the views we have from the first held in regard to the absolute unripeness of the Japanese people for a free press, the utter unreasonableness of the supposition that they could or would use an uncontrolled freedom with the requisite discretion, and the singular want of insight into human nature and human affairs which, in our opinion, has always characterised the arguments for a free press in this country. The desire we have shewn to adjust our view as nicely as possible to the necessities of the case, has very unreasonably laid us open to the charge of change of opinion on the subject, and we are supposed to be chafing under a partial recantation because in our Yearly Summary we have reiterated our strong desire to see the Press of this country a useful and honourable institution, and, in that desire, expressed a wish that one of the clauses in the Press-Laws which militated against this, would be excised from them. Nothing can be further from the facts. In the first place, every succeeding month confirms our early opinions on this subject; and, in the next, if the facts seemed to be against us, we should not hesitate to avow it. Whatever may be the value of a man's opinions to others, they ought not to be lightly formed, or to sit lightly upon himhimself. But the expression of dogmatic opinions upon issues which are wholly new, as is this issue in this country, is just as likely to be wrong as right. No one can claim more than this for such opinions, in which view we should not hesitate for a moment to declare our change of conviction had we undergone one. But, be it of what value it may, our first conviction remains unchanged.

And what are the facts presented to us at this moment by the native Press? We see some excellent articles from the pens of thoughtful, sensible and intelligent men, showing much insight into the present state of affairs, a desire for improvement, and a pretty clear apprehension of some of the difficulties which attend it. We see a good deal of vapid, desultory writing which does no harm and no good. And we see a certain amount of vicious, incendiary writing which no government, whether weak or strong, would tolerate for a moment. The consequence is that press prosecutions are frequent, and some of the punishments lately awarded have been very severe, consisting in one case of three, in another, of two years imprisonment.

In order to form a proper estimate of the justice of these severe sentences, it is necessary to look for a moment at the actual relation of the present Government to the Empire.

It is, then, a Government of the Sovereign of the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

country, restored to the legitimate power wielded by his ancestors or predecessors after a long usurpation. It consists partly of men who are more or less remotely connected with the Imperial family, of others who took a prominent part in the revolution to which the restoration of the MIKADO is due, and of others whose talents have enabled them to acquire and retain a leading position in the country. In no possible sense can this be called a mere revolutionary Government. It has usurped no power. It represents the legitimate Sovereign, whose instrument of government it is. It rules by means of constitutional and recognised tribunals. The people have obeyed it for over seven years. It has conducted the country through a period of great trouble and perplexity, has led the march of progress and improvement, has certainly been humane in its dealings with the people, and has earned for itself a very creditable amount of respect throughout the civilized world. It has reformed the Criminal Law, and is bent upon abolishing torture as part of the procedure in Criminal Courts—an extremely difficult thing to do in a system which insists upon confession as a necessary antecedent to punishment. Whether with greater or less wisdom, and from whatever motive, it proposes to reform the Civil Law, and approximate it, as far as circumstances will permit, to the law of the most enlightened countries of Europe. It has given to the people an extended and improved Educational system which may be a blessing to every family in the Empire. Above all it has certainly extended the range of individual liberty, and, in so doing, has earned the gratitude of the nation. We do not dwell upon material improvements, the beginning of a railway system, telegraphs, a postal system &c., because, although very important, they are as nothing compared with the improvements we have enumerated. These are indisputable facts. The Government might perhaps have done more, both for its own people and for the encouragement of foreign intercourse. But it might also have done much less, and while its individual members may have had their own aims and ambitions, as all men have, no one can say with any approach to certainty that they have pursued these to the prejudice of the commonwealth.

Now this is the Government which has punished the writers whose theme is, in so many words, and without any periphrasis whatever, that it should be overthrown and replaced by one which will give entire freedom to the Press, a liberty possessed only by two nations in the world, and those, two nations of one race, nursed on the same free traditions, governed by laws embodying the same free spirit, that spirit being in some sense an inseparable part of their genius, and possibly confined, at least in the high form in which they manifest it, to their race. Of this spirit no trace can be found in Japanese institutions, and yet these men demand that it shall be at once given them in all its richness, fulness and entirety. The demand seems to us folly of the wildest kind, explainable only by the extremely superficial character of the Japanese mind, and of much of the new light which it prides itself on having acquired. And it is certainly curious to find that those who have been most prominent in depreciating the Japanese national genius, for whom no words have been too hard and too contemptuous in speaking of it, and who are never weary of saying that its lightness and superficiality are characteristic of a race of children, are precisely those who endorse the cry of the most superficial of these claimants, for a gift which has never yet been worthily used except by a race which, in political genius at least, we make bold to say, is the greatest race the world has ever seen.

If we saw essays or treatises from the hands of these prosecuted writers which showed they had thought deeply over political philosophy, or had even mastered the works of the great western writers and patriots who have struggled in the noble cause of liberty, we should look upon the question with other eyes. But we see no vestige of anything of the kind. What is the first test of fitness for liberty? A disposition to obey the law, to regard the existing law as binding until replaced by a better, and to secure the change by means which, whether peaceful or otherwise, leave those who have brought it about and their successors, the gainers by the struggle. Yet one of these writers now undergoing punishment proposes that the Government should be overthrown because it will not permit an uncontrolled freedom of expression and govern according to the will of the people—whatever this may mean—; while the other claims that no Government at all is better than one which fails in these two essential respects. Is it for men of this stamp that uncontrolled liberty of expression, and the power of diffusing such opinions as those named throughout an Empire undergoing a transformation which needs the most careful watching, should be granted?

When writers of this class brave the law, we wholly fail to identify their act with anything like courage, and with that noble quality of spirit which has animated the great patriots of all ages. It seems to us the act of children who place their hands or their heads in a lion's mouth, or in the way of a working saw. This is not martyrdom, it is ridiculous folly. It awakens no admiration like the lofty protests against tyranny, or even the humbler efforts to acquire liberty, which are familiar to all readers of history. We shall not pretend to be entirely without sympathy for the sufferers, but men of somewhat sterner mould would certainly say their punishment served them right. They are in the position of men who have had a great boon extended to them, and who are dissatisfied that they are prevented from using it in a manner dangerous to the public welfare. Instead of converting it to their own and the public good, they abuse those who have granted it, and demand the liberty to use it in any way they please. They have got much which they never dreamed of getting, and show their gratitude and moderation by abusing their benefactors and clamouring for more. Have they seriously reflected how much they now enjoy which, ten years ago, they never even thought of possessing?

We have contended, and still contend, that with the exception of the obnoxious clause in the Press-laws to which we drew special attention in our Yearly Summary, the Press has ample room in which to play a most important part towards the Government and the people. And it may plainly be seen that the more moderate section of it does this, and by its very moderation proves a far better claim to an extended freedom than is shewn by these indiscreet and violent writers who have brought the law down on their heads. The editors of the incriminated papers are certainly to blame in this matter. The extension of the liberties of the people is largely in their hands, and by a prudent use of their power they might eventually secure it. Yet how do they use this power? In such a manner as to cause the gravest doubts in the minds of the more liberal section of the Cabinet whether the objections of their colleagues even to such liberty as has already been granted to the Press, are not sound.

Our fear is that the Japanese are hardly ripe for a press even on the basis of that existing among the Continental

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

nations of Europe; for one on the basis of the English press, we are as convinced that they are not ripe as we can be of any proposition incapable of demonstration. Our whole desire in this matter is to see their liberties gradually extended. We believe that as freedom is the greatest of all boons to the individual, it is the best safe-guard of governments. But it must be discreetly and wisely used, and on such use of it its extension must assuredly depend. The abuse of it is always a strong argument against those to whom it is entrusted, and their indiscretions constitute a kind of treachery the punishment of which might be more patiently regarded if it fell only on themselves.

MALCOLM, WILLCOX & CO., *versus* "CATHAYA."

IN this interesting case the plaintiffs, who were consignees of certain casks of soda ash, bleaching powder and guano, preferred a claim upon the master of the British ship *Cathaya*, for damage caused to the said goods while upon the voyage from London to Yokohama; the petition and answer may be summarised as follows:—

1.—The plaintiffs, endorsees of a bill of lading drawn to order, for a specified quantity of goods, accept delivery of part on the understanding that a claim for damage is to be matter of subsequent discussion; and decline delivery of the remainder on the ground of the packages being unrecognizable and their contents unmarketable.

2.—The plaintiffs being unable to obtain satisfaction for the damage from the master, institute this suit.

3.—The defendant answers denying his liability on two grounds:

(a) Insufficient and improper packages.

(b) The dangerous character of the goods.

Evidence is taken in which the plaintiffs admit that no ownership in the goods, in respect of which they claim, is vested in them, whereupon defendant's counsel moves the Court to enter a nonsuit. The plaintiffs' counsel replied, and it is held, that as the law now stands, the plaintiffs having no property in the goods in respect of which the action is brought, must be nonsuited. Decree accordingly.

The ruling of the learned Judge who presided at the trial has created much surprise in a community essentially commercial; and as the decision appears to strike at the root of the chief business of the place, we shall attempt to test and analyse the adverse criticism it has excited. A large portion of the import business of Japan still consists of the consignment of goods for sale on commission, and, except in those cases where the consignee is interested in joint account with the shippers, the ownership of the goods is vested in the consignors, to whom the proceeds of the sale are to be remitted, and from whom, in fact, the ownership of the goods has never passed. The opinion generally held by commission merchants seems to be, that their capacity as consignees or endorsees under a bill of lading, endows them with the rights of ownership of the goods in respect of which such bill of lading is granted: and, in event of short delivery, damage and all other losses to which goods in transit are subject, they are, as the holders of the bill of lading, competent to act for the owner of the goods in legally demanding compensation. This opinion is now shown to rest upon insufficient reasoning and upon a mistaken impression of the construction of the bill of lading. To render our explanation plain we must request our readers to follow us in references to some of the leading authorities on the law of merchant shipping, convinced that the importance of the subject will well repay their perusal. First:—"It will be convenient to 'consider a question of very frequent occurrence in prac-'tice, namely the question in whose name the action 'should be brought for any breach of this contract for the 'carriage of goods,' and, 'The general rule with respect 'to the person who ought to sue in case of the loss of or 'damage to goods carried in a general ship is, that the 'action should be brought in the name of the person who 'has employed the carrier. For the right to compensa-'tion flows from the contract of carriage, and can 'only be enforced by the party with whom that con-'tract was made.' Thus Messrs. Maude and Pollock preface this subject, and continue in language unusually clear and concise:—"The ownership of the goods is very 'material in inquiring as to the right party to sue, not 'because the owner of the goods ought necessarily to bring 'the action, but because where the property passes to the 'vendee by delivery to the carrier, it is in general to be 'inferred that the contract was made with the vendee; 'that is to say, that the vendor, in making the contract 'with the carrier acted as the agent of the vendee. Where 'the property in the goods does not pass to the vendee, 'the provisions of the Statute of Frauds not being com-'plied with, the inference does not arise, and the vendor 'is the person who ought to sue," and this is further explained in this manner:—"Therefore, where by the 'bill of lading the goods were to be delivered for the 'consignor, and in his name to the consignee, and no 'question of agency could arise, the consignee having, at 'the time of shipment, no property in the goods, 'it was held that an action in the name of the latter for 'damage done to the goods was misconceived' (*Sargent v. Morris*) Our readers will see how exactly this ruling agrees with the ruling of the Judge in the case now under review. The conditions of the actions appear identical, so far as the positions of the claimants in the two cases are concerned, they being in each case endorsees under the bill of lading, but without property in the goods.

Previous to the passing of the Act of Parliament known as the "Bills of Lading Act," the rule of law, as stated in the preamble to that act, was that a bill of lading was a negotiable document, by the endorsement of which, the property in the goods might be passed to the endorsee; nevertheless all rights in respect of the contract so made remained with the shipper, the endorsee having no legal right of action. The spread of commercial transactions made it extremely desirable that the ***bonâ fide*** holder of a bill of lading for valuable consideration, should have transferred to him by its endorsement, not only the goods themselves, but all the rights of the shipper in respect of such goods, in order that the endorsee might be enabled to enforce delivery without question from the third party, the carrier, on the faith of whose custody of the goods, he was content to make the advances entitling him to receive possession at the port of destination. The justice of this demand, and its expediency, received the attention of the legislature, and in 1855 the 18 and 19 Vict, C III, entitled "An Act to amend the law relating to Bills of Lading" was passed, and we now call especial attention to Section I, which reads as follows:—"Every consignee of goods 'named in a bill of lading, and every endorsee of a bill of 'lading to whom the property in the goods therein men-'tioned shall pass, upon or by reason of such consignment 'or endorsement, shall have transferred to and vested in 'him all rights of suit, and be subject to the same liabili-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

'ties in respect of such goods as if the contract 'contained in the bill of lading had been made with 'himself." This seems perfectly clear, but a question having been raised as to the true construction to be put upon the words, 'upon or by reason of such consignment or endorsement,' the Court of Exchequer ruled to the effect that the Bills of Lading Act "does not in every case transfer the contract contained in the bill of lading to the consignee of the goods, or the endorsee of the bill of lading, but only in those cases where the property in the goods has passed to such consignee or endorsee." *(Fox v. Nott.)*

Having now shown, we think sufficiently, that the law appears to support unquestionably the ruling of the Judge in this case, we have to consider what is sufficient to vest in the consignee or endorsee "all rights of suit" &c., and to express regret that similar lucid explanations as previously quoted, are not to be gleaned from the authorities. There seems, however, to be no doubt that in order to convey this right, some property in the goods must actually pass with the consignment or endorsement of the bill of lading; and it is a reasonable inference taken from the legal context, that the acceptors of a bill of exchange drawn against the goods for the amount of their value, or only a proportion of their value, the acceptors having no property in the goods so far as the result of their sale is concerned, have acquired such a lien for valuable consideration, as entitles them to be holders for value: also in the numerous cases of which we have daily experience namely where the consignor and consignee are interested, either by themselves or in conjunction with others, as joint owners of the goods, although the proceeds of the sale are to be remitted to the consignor for special purposes, are owners within the meaning of Section I. The endorsement of a bill of lading as security for the balance of an account in favor of the endorsee, although for advances not made specifically upon the goods named therein, is ownership also within the Section, as the following case shows:—The Judge of the Court of Admiralty in London in a recent case held, that the assignment to the plaintiffs, who were bankers, and in the habit of making advances upon security to the assignors, although no specific advance had been made by them against this bill of lading, was an assignment made to and accepted by the plaintiffs, in part payment of a debt due to them from the assignors, and was a sufficient valuable consideration entitling them to sue. *(The Emilien Marie.)* It would also appear that in those bills of lading in which the consignor acts as agent for the consignee, the inference is that the carrier has contracted with the consignee, and is liable to him; but this as we have seen, in cases where there is no express contract to that effect with the carrier, is modified by the Statute of Frauds. In general the legal commentators seem unanimous that it is for the jury to say, looking at the form of bill of lading, the intentions of the parties, and the surrounding facts combined with all the circumstances of the case, whether the property in the goods rests with the holder of the bill of lading.

We hope we have now shown those of our readers who were inclined to distrust the decision against Messrs. Malcolm, Willcox & Co., what the true position of a consignee without value is. There can be no question of his inability to sue the ship for short delivery or damage in an English Court, or that the legal remedy is in all such cases confined to the consignor. The merits of the case which has just been decided, apart from its legal bearings, call for little comment. The successful application of the defendant's counsel for a nonsuit, was under all the generally well-known circumstances, the best possible course for the master and owner of the vessel; the cargo was alleged to be considerable damaged by the chemicals consigned to the plaintiffs, and it may be gathered from the pleas of the defendant, that he intends to try the liability of the shipper for the loss the ship has had to make good, in consequence of the insufficient packing and dangerous character of the goods said to be the proximate cause; and at the same time it may be assumed, that much of the important evidence necessary to establish such a claim can only be obtained at home, where a more satisfactory sifting of the entire matter may be had, at less expenditure than is usually incurred in the Far East in the costly luxury of an action at law.

COREA.

THE foreigners in this country are more deeply interested in the result of the Mission which has just been despatched to Corea than they may all imagine. If the cautious steps which the Japanese Government have taken to avoid war lead to this desirable result, it is more than probable that a new country will be opened to foreign trade without very much delay, and though it is not a rich country, it would prove a new customer, of greater or less means as may hereafter be proved. If, on the other hand, the Coreans refuse to give any satisfaction to the Japanese for their recent attack on the *Unyokan*, or molest or insult the Mission, war between the two countries would be unavoidable, and its consequences to Japan would be very serious. On the supposition that the Coreans have resolved to reject the overtures of the Japanese, it may be presumed that they have made a fair estimate of their own powers of resistance, and intend to defy their antagonists as long as possible, and to give them as much trouble as they can. They must know that Japan is not very rich or very strong, they may have reason to hope that China will help them, and no fear that any of the Western Powers will take the present opportunity for enquiring into or punishing violent acts, which, whether more or less recent, are certainly not forgotten. In this mood on one side, and some insults and injuries to redress on the other, we may rely that the destruction of a few forts, or even the demolition of the capital, will not terminate the affair. The Coreans enjoy the great advantage of being invaded and attacked, and may retire from point to point further into the interior of the country as the Japanese advance. Let us suppose the capital deserted, sacked and burnt: what then? The Japanese will not come away without a parley, a treaty, or some evidence beyond drums and banners that they have gained their point. Suppose the Coreans retreat. The Japanese will hardly sit down and content themselves with roasting chestnuts in the ashes of the capital. They will secure their base and go forward. Whither? Of course they have maps of the country, and know of the various Corean strongholds. Are they prepared to advance and attack them, to keep their base safe and their communications open? This will require a great many men, and this again demands a great deal of money and a great many more men ready here. It is only those who know something of the waste of men and material in war who can estimate the demands made by war when it is once entered upon. For every two men sent into the field, an additional man must be ready to be sent every six months; and if an advance into the country is to be made, ten or fifteen thousand well armed and disciplined troops at the least will be required. If the country affords

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

few or no supplies—and we may be sure it will afford little—the expense of maintaining this little army in a state of efficiency will be very great, especially to a country as poor as Japan. There is doubtless plenty of spirit in the South, there will be thousands of volunteers, and it is even possible that the Satsuma men who do not go will offer to contribute largely towards the expenses of those who do. Nor perhaps would the Government refuse such liberal offers. Yet the drafts on the central Treasury would be very large, and money runs away like water in time of war. Of course the Government would not part with its gold where its paper would do as well or better, and when money is to be had for the mere printing of notes, notes will not only be freely printed, but they will be paid away with none of that savage parsimony which comes into play when men or nations have to pay away gold. But our floating currency is already so large that the gold flows away incessantly. Every fresh million of notes circulated will displace so much more of metallic currency, and it is idle to suppose that there are no limits to the quantity of notes which can be kept floating at par because the Japanese Government has hitherto been able to preserve the equilibrum between its paper and the precious metals. With the issue of every fresh million of notes we come nearer to the point where their depreciation must begin, and we suspect the days are passed when a basket of bankers' heads placed in sight of the nation is sufficient to suspend the laws of nature.

Now this increased circulation of paper would have two effects. It would drive the gold away at an increased speed, and would cause a gradual and general inflation of prices throughout the country, the trade of which would be rendered more and more unsound at every step of such rise. Sooner or later the reaction would come, and, with it, a fearful disturbance to trade which would affect foreigners most adversely. Affairs are bad enough as it is. Are we prepared to see them relieved for a few short months by a most illusory process, and then afterwards fall into a far worse condition than they now are?

We have never disguised the wish that the Western Powers might find in the negotiations now going on between Japan and Corea, a fitting opportunity for putting an end for ever to a condition of affairs in regard to the latter kingdom which is now exceptional and has become rather intolerable in the eyes of the world. What the Coreans did or failed to do two hundred years ago was a matter of profound indifference to every other country, except perhaps China and Japan. But now every ocean is alive with ships, which may be driven on to any coast by stress of weather, want of water or other necessary supplies. As things stand at present, a foreign vessel may approach the Corean coast for either one of these reasons, and her reception consist of a round shot which may possibly sink her; or she may send a boat's crew ashore on this or that errand, and find them chased for eighty miles in hourly fear of their throats. Surely these appear valid reasons for the three Western Powers, France, America and England, the order of whose names, as we we have now mentioned them, represents chronologically the order of the insults they have severally received at the hands of the Coreans, stepping in and demanding compliance with the present demands of the Japanese. No one wishes to hear of sacked and burned capitals, of women and children flying to the mountains, of blood spilt, passions roused, and the works of peaceful labour destroyed. All this is horrible enough even when unavoidable, as at times it seems to be. But here it seems to us avoidable. The appearance off the capital of three ships from each of the three Western squadrons in these waters, together with those of the Japanese, would quell all idea of resistance on the part of the Coreans, prevent mischief and bloodshed, and put an end to a chronic source of general irritation and disturbance. It will be indeed a grievous misfortune, if not a source of serious regret and reflection, if the present excellent opportunity for settling this question finally, be not embraced. The Western Powers have more than a sentimental interest in witnessing the progress and growing welfare of the Japanese Empire. These have already produced some effect upon China, and every year of success here will be an additional argument, and afford a cogent reason, for similar progress there. The whole world is interested in the successful and peaceful solution of the China question, and any legitimate course of action which promises to advance this, be it never so little, deserves attentive consideration.

SPIRIT OF THE JAPANESE PRESS.

The Development of Saghalien—A Hint to Japan.

(Choya Shimbun.)

We have been informed that a Russian joint-stock Company will shortly be formed at St. Petersburgh for the purpose of working a line of mail steamships to connect Saghalien with Shanghai and the South China ports, thus utilising the extensive coal deposits of the island of which they have lately become possessed by exchange with us. It is said that the company has determined to have five steamships built for this purpose.

The people of civilized countries are evidently bent upon advancement and progress. It is but a few months since we effected the exchange which placed Saghalien under Russia and accepted the Kuriles in its stead, and yet the Russians have already had time to consider schemes for its development, and for the utilisation of its vast mineral wealth which will shortly receive practical application in the operations of their new company. It is, however, not alone Russia which exhibits promptitude and energy in availing itself of such opportunities. The people of England, France, Germany and America are equally quick-witted and far seeing, and it would seem that we Japanese alone are behind the rest of the world in the race, for although the Government has duly notified the exchange which gave us the Kuriles, not one of our thirty-five millions of inhabitants has proposed any mode of utilising them by bringing their resources to light. It may be answered that the soil is sterile and ungrateful and the country little known; but why should we neglect Yezo, an island of vast resources with which we are all more or less acquainted? Its agricultural lands are rich and fertile, its climate is salubrious and it abounds in minerals, and the judicious development of all these resources would add immeasurably to the wealth of our nation. An English traveller who visited this island in the days of the Tokugawa dynasty exclaimed that he "had been walking over millions and millions," meaning that the resources of the island were capable of producing unbounded wealth, and he censured us very justly for neglecting to make use of the advantages we had at our doors. Why, indeed, are we as a nation so deficient in perseverance and far-sightedness? We toil to attain the little aims of life; we struggle for the trifles that are beneath our eyes, but we have no conception of working out the larger schemes which raise nations in the scale of civilisation. We have lost Saghalien, but we show ourselves none the more eager to render that which remains to us more productive, but allow our fruitful northern island to remain fallow and waste when all the nations around us are energetically working out their advancement. Between Japan, the torpid, and Russia, the active, the difference is as great as between heaven and earth. I entreat my countrymen to abandon the narrow aims of every-day life, and to turn their thoughts to the development of those resources which would add so much to our national growth and prosperity.

A Lesson from England.

(Nichi Nichi Shimbun.)

England affords an admirable illustration of the salutary effects of promoting the growth of an industrial spirit. The British Islands are situated in the colder regions of the northern hemisphere, and the rigour of their climate permits the growth of neither silk nor cotton, nor can fruits be cultivated there with so much success as in countries lying nearer to the equator. But the energetic character of the people has overcome all the obstacles of Nature. The commodious highways, now chiefly of iron, flourishing manufactures, and the advanced state of agriculture form subjects of universal praise, and such are the wondrous and unparalleled ramifications of their commerce that there is scarcely a port in the world in which the flag of English ships may not be met with. Their industry deals chiefly with objects of utility. The English are great makers of machinery, into which they are constantly introducing important improvements, spinners and weavers of cloth, makers of hardware and miners. Their railways traverse the plains and dive beneath the mountains; their telegraphs rise in air or lie hidden on the bed of the ocean; they make telescopes which pierce space and reveal the wonders of the heavens to the astronomers, and instruments which measure air and temperature and facilitate the navigation of the seas. Their industry is by no means confined to mere outward decoration, in which they differ essentially from the French, who devote themselves largely to the ornamental arts. England has in fact now reached the highest point of civilisation: she does not waste her superabundant resources in war or conquest, but husbands her wealth to which she adds year by year. The history of English commerce dates back to very early times. It has taken such a prominent position that it may be said that all nations must now mould their commercial system upon that employed by the English. Great Britain also possesses numerous flourishing colonies in which she strives to educate and promote the spirit of the parent state. In these, as in England itself, we shall not fail to find the encouragement of free enterprise and liberal institutions to have formed the foundation of their great prosperity.

Turning to eastern countries, we find them as a rule possessed of a productive soil and enjoying a climate far from rigid. But if we compare their inhabitants with those of England we discover as much difference in their character as marks the respective climates. Now how shall we explain this fact, that, with circumstances more favourable, we yet fail to succeed in the same measure as the northern races? From earliest times agriculture has been the most highly esteemed, as it is the most ancient art with us, but when we produced sufficient to meet our own wants we considered that we had done enough. We did not dream of the glories of civilisation, nor did it occur to us that by increased industry and patience we could obtain what we were wanting in. The usages, arts and learning of our country are indeed borrowed from our older neighbour China, and hence it has been the custom to say that we are admirable imitators although wanting in the inventive faculty. Now it may seem well for us to adopt the inventions of more enlightened countries and thus add to our convenience at their cost, but it must be remembered that nations skilled in invention are characterised by other valuable faculties. Since our revolution we have been active in imitating all that seemed good to us in other countries, and we have adopted largely, but we have failed to seize and to acclimatise in Japan that busy, restless spirit of industry which animates the national life of western countries and of which England supplies so signal an illustration. We entreat our countrymen to strive to adopt this spirit and to make it a part of themselves, and this entreaty we address specially to the young men who, following their bent, now resort to our commercial schools, in the hope that they will avert the reproach to which we, in common with other eastern peoples, are justly subject.

The Limitation of Government Control.

(Nichi Nichi Shimbun.)

It appears to us that a great deal of injury is being done by our wise officials in attempting to secure perfect tranquillity in the nation by oppressive measures, and by intermeddling with the affairs of the people, and we will give our reasons for thinking so.

Our wise officials, with a view to securing perfect tranquillity among the people think that they must do everything, whether great or small, which concerns the nation. Whatever comes under their attention, they seek to apply the power of the Government to it, and the result of all this is oppression, from which, of course, the people suffer. Now the officials who thus act cannot justly be termed bad. What then are the causes why their acts tend to produce mischief to the people? There are two. First, they rely too much on the power of Government; and, second, they have an excessive confidence in their own wisdom. In thus seeking to advance the people, they greatly increase the number of duties they are called on to discharge, and it cannot be said that some of these are not imperfectly fulfilled. Thus, when they fail to please the people, displeasure arises; and being convinced that their intention is good, they repress the evidence of this displeasure by the power of the Government.

In cases where practical and local experience is absolutely necessary, the officials sometimes issue notifications to the *kens* without even consulting the *ken* authorities beforehand. The *ken* authorities of course put these notifications in force, and the officials at Tokio, without any further solicitude in regard to their effect on the people, think that because such and such laws have been found effectual and good in France or Germany, they will be equally good in their effects here at some future time. Meanwhile, the murmuring which they cause among the people is unheeded; and all this comes of the excessive confidence the officials have in their own wisdom.

These officials come mostly from the class on whom military honours have been bestowed, or who have busied themselves in politics, and they force other officials to uphold their course by attaching them to their party. Whenever they find any men of ability among the people who they imagine will become troublesome, they give them an office with a certain salary and bring them into the party. They then begin to think that they have acquired power enough to act as they like, and that they can advance the nation to the highest pitch of civilization. They desire men to say that they and Bismarck are the great men of the nineteenth century.

Now, their arbitrary notions increase in exact proportion to their desire to advance the civilization of the country, and when they hear of any murmurs against their views, they say that though those who are thus displeased may surpass them in theoretical knowledge, they are deficient in practical statesmanship. When a clamour is raised against them, they say it is merely the outcry of a few students, demanding no heed.

Are not such officials relying, firstly, on a power vainly imagined to inhere in governments; and, secondly, on their own wisdom? It is well to strive for progress, but this may be done in such a manner as to involve oppression, and particularly so when a country is in a state of transition.

We have an example before our eyes. Some sixteen or seventeen years ago when Iyemochi succeeded to the Shogunate, his Prime Minister was Ii-kamon-no-kami, whose sole idea was the promotion of the welfare of the nation. In trying to accomplish this he became extremely arbitrary, and when men spoke against his methods he imprisoned and even beheaded them, and these acts actually sprang from his good intentions.

The origin of the oppression caused by the Government striving to produce a general tranquillity is its intermeddling with the affairs of the people to an excessive degree. It relies too much on its own power; the officials again relying upon their own wisdom. Our own firm conviction is that perfect tranquillity can only be secured by entirely opposite methods.

The *Kami*.

(Choya Shimbun.)

I am inclined to think that our *kami* are worthless things, and that they ought to be abolished. I may be suspected of having gone too far in saying this; but my plea is not absolutely devoid of reason. Think over it. Have not a number of new *kami* been suddenly created of late, and have not the respective ranks and temples of the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

former *kami* been raised and lowered? On this supposition the *kami* seem things made by the will of man, and the same will which has created them raises or lowers them in rank. Up to a recent date, the Shintoists and Buddhists frequented the same temples, and when the Government ordered their separation they fell apart without a word of remonstrance or resistance; and now, were the Government to order them to unite again they would, in all probability, immediately comply. There is no mistake about it. The *kami* are at the mercy of men.

But is it not clear that what man can create cannot be the creator of man? and that what man can elevate or lower cannot elevate or lower man? This best proves the relative attributes of man and the *kami*. Man, who can elevate or degrade the *kami*, is an honourable being, and, moreover, he has them at his mercy. The *kami*, on the other hand, who are created, and elevated or degraded, by man, are low things. The *kami* may honour men, but there is no need for men to honour the *kami*.

Some may say that it is altogether too grave a thing to abolish the *kami* who have been worshipped for so many centuries down to the present time. But we should advise those who talk thus to examine into the question and see whether the *kami* really have bodies and spirits. If we should discover that they have none, I do not think there is anything to be greatly deplored. If, on the other hand, they do really possess something of a divine spirit, we trust they will no longer depend for support upon the public, but support themselves.

We have now arrived at the 9th year of Meiji, and are gradually entering upon the light of civilization. We must not let any of our dark habits of thought survive. Although the *kami* may be gods, and partake of a divine spirit, if they live upon the offerings of the people and do nothing for the good of the nation, we do not think they should any longer be tolerated. We see no cruelty in abolishing them, and as they place serious obstructions in the way of advancement and civilization, this certainly ought to be done. What does the public think?

[Note by the Editor of the *Choya Shimbun*. "The "above letter was forwarded to us by a certain Mr. Kara-"kusa of Osaka, and though his argument is somewhat "too sharp, it concerns religious matters, and we cannot "decide whether it is good or bad. We publish it there-"fore to elicit the opinion of the public."]

Popular Rights.

(Choya Shimbun.)

A country does not belong to its Government, but to its people, upon whom heaven has bestowed natural rights and liberties, and this being the case, the duty of the Government is to protect the people in those rights and liberties. In all times arbitrary Governments have been directed by self-will, and have cared nothing for the rights of the people. In declaring war or making peace, in the purchase or sale of the land, such Governments have never consulted the will of the people. They impose heavy taxes which are uselessly squandered, and when the native resources are exhausted resort is had to foreign countries, where money is borrowed in the name of the nation, and if any remonstrance is offered against a course of this kind, severe laws are enacted to punish those who make it. This is tyranny. If we look into the past we see that such Governments have existed; and the dark passages in which their history is written force from us tears of sorrow.

Governments are established in order that the rights and liberties bestowed by heaven on the people may be protected. But if a Government acts in a manner contrary to the rights and the happiness of the people, it were better to have no Government at all. It is therefore natural that the people should overthrow such a Government and establish a better one. Nay, more. If the Government deprives the people of the rights heaven has bestowed on them, it sins both against heaven and against the people, so that it is the duty of the people both towards heaven and themselves to overthrow such a Government. If Governments neglect their duties, they cannot be called Governments, but merely constitute a burden on the nation, and their overthrow by the people is the only way of escape from serious calamities.

How happy then are we who live under a wise and virtuous Government and see tranquillity pervading the country. In this peaceful condition were we to tell of the misery of other days, the public would call us fools. But we think that the changes which the future may bring about cannot be foretold, and though our present rulers may be wise and just, we cannot tell what people may come into power hereafter, and thus it is that we have written the above. We hope that none will misunderstand our views.

A Day of Thanksgiving.

(Choya Shimbun.)

The date of the descent of our most revered gods from heaven, and that of the Koran of the Mahommedans, is obscure; facts which have doubtless arisen from the indolence of historians. And not only this, but there seems some obscurity in regard to the date of everything which falls from heaven with the exception of the rain, snow and hail. But on our enlightened confraternity (the Press) heaven has bestowed a gift which is of unparalleled value. Since we received it, we have indeed occasionally been compelled to make offerings and to shut ourselves up in solitary devotion. But we must still admit that it conduces to prosperity. By means of it both our subscribers and our contributors have increased, the pens of our editors have been strengthened, and our staff of writers and compositors alike rejoice. As to our proprietors, of course it is unnecessary to say that they are the happiest of all, for they are the principal gainers. Such auspicious events do not often occur. The people too are becoming zealous, and have begun to carry on sharp discussions solely because heaven has vouchsafed to our enlightened society this precious gift. But, unlike the day of the descent of our gods or the appearance of the Koran, our great day of happiness is well known to all. It was the 28th June, 1875,* and we propose to celebrate this day yearly with thanksgiving to heaven, and have thus written to make known our proposal to all the newspapers.

IS NATURE POSSESSED OF INTELLIGENCE AND WILL?

Perhaps this way of presenting the subject may help to allay excitement and to keep down that over-exercise of the imagination* which so constantly interferes with our arriving at clear and sound judgments.

Says Butler, "one cannot but be greatly sensible how "difficult it is to silence imagination enough to make the voice "of reason even distinctly heard in this case; as we are "accustomed from our youth up to indulge that forward "delusive faculty, *ever obtruding beyond its sphere;* of some "assistance indeed to apprehension, but the author of all error; "as we plainly lose ourselves in gross and crude conceptions of "things, taking for granted that we are acquainted with what "indeed we are wholly ignorant of."

This is what we need to guard ourselves against in reading what has been written by some scientistic philosophers who take such liberties with what they call "Nature:" and the only "cause" we undertook to "illustrate and plead" is that of *truthful speech*, of accurate statement. Moreover, if any one wishes to know, we think it one of the most desirable things in the world to bring discussions to a point, by setting people to say *what they mean* in cases of doubtful phraseology, and then require them to stick to their own meaning.

Now the real question—the question which we place in the forefront, (not inconsiderately, but wittingly), is this—"*Is Nature Possessed of Intelligence and Will?*" We do not—purposely do not—allude to any moral element; but confine the inquiry to the two points mentioned. If any person answer "Yes"—we count him a poet, a rhetorician: and

* The date of the issue of the Press-laws.

* It is not intended to disparage the beautiful faculty of imagination by this remark; any more than music would be disparaged by bracketing together the great Handel and a whistling blacksmith, if the object were to show an analogy between them. As to being understood as failing to appreciate poetry because an imaginative nurse and an imaginative lynist—both of them given to personification—are mentioned together; this is—well, surprising!

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

while we find no fault with him for this, we cannot regard him as a philosopher. If, on the other hand, he says, and means, and keeps consistently to that meaning—that nature is not endowed with intelligence and will, but is only "the instrument through which God works"—then we came out into the sunshine, and are clear of fog and mirage.

Then the problem can properly be discussed (not that we propose to discuss it here), "How is insensibility in nature—the mere instrument—compatible with love and benevolence in the Creator?" How is insensibility in the lancet compatible with benevolence in the surgeon? How is insensibility in the arsenic compatible with malevolence in the poisoner?

Our immediate object is attained if we can get it fully, clearly, honestly recognized and remembered that nature ought not to be spoken of as *a person*, in philosophical discussions—that *God* is the great agent with whose character and action we are concerned; and that it only tends to confusion and "darkens counsel by words without knowledge" when we depart from that definition of nature which makes it the unintelligent instrument of which no volition or moral action can be predicated.

E. W. S.

[We are pleased to think that our Correspondent is satisfied with our disclaimer of any idea of personality in nature, and in our definition of it as the "instrument through which God works." We wish we could be equally satisfied with his analogy of the scalpel. But it is an obviously false one. We can assert positively that the pain produced by the scalpel in the hands of the surgeon is the necessary concomitant of an operation undertaken with a beneficent intention. But we cannot say anything of this kind in regard to the devastating results of famines, pestilences, earthquakes and convulsions of nature. To say that they are of service to those who fall by them would be sheer nonsense, and we are certain that our Correspondent would not even urge the plea that they might be so for all we can say. He would, we imagine, as little urge that they are for the general good of humanity, because to bring about good by such means, even on man's finite view of morals, (the only standard, however, by which he can work) would involve injustice altogether too shocking to contemplate, and wholly impossible in a just and benevolent Being.—Ed. *J. W. M.*]

Law & Police

IN H. B. M.'S CONSULAR COURT.

Before R. Robertson, Esq.

February 1st, 1876.

Charles Heins, ordinary seaman of the *City of Quebec*, was charged with refusal of duty.

James Davison, sworn, stated that the prisoner returned on board the ship, yesterday, but refused to go to his duty. He called him aft, and asked him why he refused to "turn to," but he declined to give any reason.

Prisoner said he did not want to go in the ship.

Sentenced to seven day's imprisonment, with hard labour.

IN CHAMBERS.

Before C. W. Goodwin, Esq., Assistant Judge.

Saturday, 5th Feb., 1876.

James Lockyer appeared in answer to a judgment summons, to show cause why he had failed to pay the judgment for $3,000 given against him, in the late case of Mrs. St. George, through her husband, *vs.* himself and wife.

Mr. Dickins appeared for plaintiff; Mr. F. Lowder for defendant.

Defendant pleaded his inability to pay the judgment, stating that he was employed in the Japanese Customs at a salary of 100 *yen* per month, and that besides himself he had a wife and family to support.

Mr. Dickins questioned him at great length as to his income, property, and what interest he had in his wife's property.

After a slight discussion

Mr. Dickins said he would ask His Honour to make an order that defendant pay his salary into his (Mr. Dickins') hands.

Mr. Lowder objected to this, and said the question was, what could be spared by defendant out of his salary, after supporting himself, wife, and family.

Mr. Dickins said defendant's wife and family required no support from him. Defendant had already, under oath, stated to him that his wife lived in Yedo, and lived on her own means, and provided for the children.

His Honour said he could not make the order Mr. Dickins had just asked for. He thought that as Mrs. Lockyer had means of her own, and supported her children, defendant could pay $50 per month.

Mr. Lowder said defendant was only employed by the month, and that as he was paid in *yen*, he hoped His Honour would make the order read 50 *yen* per month.

His Honour then ordered that defendant pay to Mr. Dickins 50 *yen* per month.

IN H. B. M.'s PROVINCIAL COURT.

Before R. Robertson, Esq., Consul.

Saturday, 5th, Feb., 1875.

Hugh Shields, a seaman of the British barque *Alhucra*, was charged by the captain with being drunk and creating a disturbance on board his ship, and was sentenced to seven day's imprisonment.

Pequignot & Co. *vs.* Wm. Curtis.

This was a claim for $19. for horse feed supplied.

Defendant did not appear.

Judgment for full amount claimed, and costs.

KANAGAWA SAIBANSHO.

Before Mr. Asaina Kansui, Vice-President.

Friday, 4th Feb., 1876.

E. Antoine *vs.* Yasuoka Kihachi and Kataoka Koichiro.

This was a claim for 74,000 dollars, for breach of contract.

Plaintiff stated that he was engaged, during the year 1873, as managing director of the Nagasakayama copper mines, in the province of Tosa, belonging to the above-mentioned defendants. Plaintiff's first contract was to expire at the end of the same year, and the same was duly ratified by the Japanese Government. The plaintiff left for the mines accordingly, in order to make a general inspection, and to extract some samples of copper ore, which were to be analyzed at Yokohama, in order to ascertain whether it would be profitable to work the mine, or not. Mr. Pelegrin, of the Yokohama Gas Co., made an analysis of the samples brought back by plaintiff, the result of which led to a new contract between the parties. The new contract was for a term of five years, and conferred upon plaintiff the full power to engage all foreigners and buy the plant necessary for the working of the mines. The contract further stated that the first produce of the mines was to be employed in paying off all funds that had been raised for the working of the mine. The defendants having no money, plaintiff was requested to raise the necessary money to enable the work to commence. Plaintiff consequently succeeded in obtaining a loan of about $12,000, being advance money on a certain amount of copper, the delivery of which was to be made at the end of the same year. Plaintiff again left for Tosa, and shortly after his arrival there the working of the mine was commenced; but at the beginning of November of the same year the working of the mine was stopped by the authorities, in virtue of a decree issued by the *Sei-so Ka* (Revenue Department), dated August 23rd, 1873. Although plaintiff had left Kochi for the mine fully a month after the date of said decree, he never was informed of the existance of the same. And yet the officials had ample opportunity to do so, when it would have been still time to prevent plaintiff from uselessly investing his funds in an enterprise which the officials knew could not last very long. However, plaintiff duly protested, and his work seems not to have been interfered with subsequently. In spite of defendant's promises to forward plaintiff the new ratified contract, the same never came to hand, and at last plaintiff was informed that the Government would not ratify it. In the beginning of 1874 a new loan of 8,000 *ryos* was obtained from Takenouchi, a member of the *Horaisha*; but a short time afterwards a fresh want of funds was felt, but neither of defendants was able to provide any. At last plaintiff was requested to come to Yedo, in order to see Kataoka, and arrange with him with regard to

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the further steps that should be taken in this matter. Plaintiff arrived in Yedo on the 2nd August, 1874, after having been drained of all his money; and seeing that defendants were unable to do anything, the present action ensued. The amount of $72,000 includes the salaries of several foreigners employed, together with the loan above mentioned, as well as indemnities.

The Court here adjourned until Monday, at 2 p.m.

THE CHALDEAN GENESIS.*

(The Times.)

The deciphering of Assyrian cuneiform is marching at a pace that must astonish its most ardent admirers and surpass the expectations of its most devoted followers. Treasures that have been kept as enigmas for the last quarter of a century in the British Museum, the results of the excavations of Mr. Layard, Sir H. Rawlinson, Mr. Rassam, Mr. Loftus, and Mr. Smith, have now given up more of their secret meaning. Kedorlaomer had been interviewed, Assurbanipal had been cross examined, and now Bel and the Dragon have been brought into court. For the interpreters have put on seven-leagued boots and walked into the realms of infinity, where an old unknown region has been discovered, revealing in broken outline its grotesque features and astounding forms. The history of Babylon and Assyria had already been explored, and the languages, of Accad and Nineveh, Turanian and Semitic, have for some time past been mastered by philological researches. Now the mythology, or rather the religion, of the Semitic polytheists has been conquered, and Bel and Nebo, the Gog and Magog of the alluvial lands of the Tigris and Euphrates, have descended from their pedestals to be the future subjects of the scalpel of criticism.

The curtain is raised, and the first act of the traditional history of Babylon is before the eyes of the spectator. Enter Chaos and Ocean, Adami, and Bilkain, Hasisadra and Izdubar, Heabani, and Ishtur. Before the drama is described a moment's pause will allow a glance behind the scenes. The Assyrian baked books date from the 15th century B.C., when the first library was formed at Kilah Shergat, the ancient Assur. Six centuries later the Monarch Assur-nazir pal, the old and valiant Sardanapalus, rebuilt Nimrud, the ancient Calah, and had the clay learning of Babylon collected for its use; and a century or so afterwards it is gratifying to find that Sargon had a principal librarian who had the zeal and sense to copy the inscriptions he could not acquire. The library at Nineveh, the present Kouyunjik, flourished greatly under Assurbanipal, the grandson and successor of Sennacherib, the second, or voluptuous, Sardanapalus of the Greeks, supposed not to have cared for matters of the kind, but who really added to his other loves those of literature and learning. From Babylon and Borsippa, from Cutha and Akkad, from Uruch and Sarza, from Nippur, and everywhere, he begged, borrowed, or stole, transcribed or collated the tablets, that contained the myths, the histories, the laws, the poetry, the learning of old Babylonia. His library consisted of about 10,000 tiles, which were kept in an upper story of the palace at Nineveh, now the mound of Kouyunjik, opposite Mosul, and one of the heaps of brickbats into which the love of glory, the lust of conquest, and the errors of statesmanship reduced the armed monarchy of Assyria. There is reason to think that the originals of some of the transcripts are as old as 20, and certainly not later than 15 centuries before Christ, a period which ranges in scriptural history from the birth of Abraham to the mission of Moses, so that here are contemporary sources or different versions of current traditions; and it is necessary to add that the Bible narratives wear an air of truth and simplicity which does not appear in the meretricious ornamentation and studied improbability of the mythology of Babylon. If Science would squeeze the earth out of a comet, tradition derived the Cosmos from a drop of water; for, according to these old legends, Mummu, or Chaos, and Tiammat, or Thasallat, the Ocean, preceded the gods of heaven. These elements or matter, agitated and rent by the dual action of the male Lahmu and the female Lahamu, or Force and Power, gave birth to Anu and Anatu, the King and Queen of Heaven. The demiurgic power of the celestial gods created the host of heaven; Shamas, the sun; Uru, the moon, which rose like a gigantic bubble from the boiling Chaos; the Zodiac, or starry groups, disposed in three rows in the form of animals; and the planets to regulate the beat of time and the limits of space. Later than these were called into existence monsters of the deep, domestic cattle, beasts of the field, and creeping things; but the links of the chain are wanting, so that the order is not quite sure. Last of all, Hea, the God of the Waters, formed mankind, endowed with mind and speech, and enjoined to live in the fear of God and the worship of angels. Perhaps- but by no means certainly—the war in heaven is connected with the creation of the earth. Tiammet, or Ocean, declared war against the gods, and it is supposed, but by no means proved, that the dragon of the sea had in an unknown manner corrupted mankind or seduced them from their allegiance to the celestials, and rendered them liable to sin, suffering, and sorrow. To punish and curb the rebellion of the water and its dragon, Anu, the God of Heaven, offered a reward for its destruction, and Bel armed himself with the thunder, the whirlwind, and sword for the war betwixt the "green sea and the azure vault." First the dragon fell, and then Tiammat was burst by a hurricane and imprisoned, while her confederated forces melted in confusion away.

This part of the story bears some resemblance to the opening of the Book of Genesis, the gaps in the Chaldean narrative being due to the want of complete tablets, which gave in detail the evolution of Cosmos, the thrusting out of the great dragon, the creation and the fall of man. It has also some relation with Aryan traditions and Greek myths, as the revolt of Neptune against Jove, and it disposes of the supposed Zend derivations of the earlier mythology of Greece, still deemed to be entirely derived from Aryan sources, with modified or adapted forms of belief transmitted by the Phœnicians to the isles of the Archipelago and the coasts of the Peloponnese. Some mutilated fragments show, however, other and even older traditions, races of human beings with the heads of ravens, or birds with human heads, that sprang "autochthonous" from the soil, created by thousands, and then destroyed and ruled over by seven kings, monstrous conceptions like those described in the pages of Berosus. There was also another war in heaven, that of seven evil spirits against the Moon, finally put to flight by Hea, the god of the waters. Their part in the Cosmogony is not defined; probably they attacked that luminary at its first creation. The most complete of the mythological series are the 12 tablets detailing the adventures and misfortunes of Izdubar, a god or hero at last identified by circumstantial evidence as the long-wanted, but never detected, Nimrod of the Bible, although mentioned by Moses and confirmed by Shishak. He has been by various writers supposed to wear the historical mask of Evechus or Bel, Alorus or Elu, or the gods Merodach or Nergal; to have waded through the Flood and spied Noah in the ark; to have built Babylon, and been slain by Hare; to have hunted the lion and founded the cities of Assyria. But his name has baffled the Assyrian inquirer, and his exact place in history defied the most self-assured of chronologists. At last the history of Izdubar turns out to be the life of Nimrod, and though the names may differ the person is the same. Twelve tablets, supposed by Rawlinson to describe the zodiac, detail his adventures, one of the most remarkable—that translated by Mr. George Smith, in 1872, and read before the Society of Biblical Archæology—recording the Babylonian version of the deluge as revealed by Hasisadra, the Xisuthrus of Berosus, and the Noah of the Pentateuch. The god Hea, the Assyrian Neptune, commanded Hasisadra to build a ship—not an ark—600 cubits long and 60 high, to load it with his grain and his wine-skins, furniture and household, domestic animals, and his metallic wealth. Seven times he examined it, and six times Hasisadra pitched it within and without. Shamas, the sun god, announced the flood; Hasisadra embarked with his boatman or pilot, while the gods of heaven poured forth the waters or deplored their effect. Seven days the deluge raged, and at last the ark grounded on, or could not double, Mount Nizin. The dove, the swallow, and the raven sent forth returned not, and Hasisadra, descending from his ship, raised an altar to all the gods except Elu, who had sought to destroy the ark against the remonstrances of Hea. For the future Bel was entreated to punish the wicked, not afflict the good with another deluge, and reduce the numbers of men by wild beasts, famine, and pestilence. Hasisadra, after a sojourn at the mouths of the great rivers, was translated to heaven.

This story, in some of its aspects, resembles the translation of Enoch and the deluge of Noah. Exegetical theology will see in it a strong confirmation of the truth of an universal deluge, and comparative mythology treat it as one of those widely-diffused legends springing from a common source which have put a girdle round the earth. That it differs essentially from the deluge of Noah is evident, and that the Hebrews had retained a simpler and consequently older version of the deluge is clear, for the Scriptural narrative, at all events, is prior to the building of ships and the construction of rudders. It is also

too hazardous to reconstruct history on a base of broken tablets with half-interpreted inscriptions, and Izdubar, if an historical personage, has a very fabulous garb. His assumption of the crown did not precede a war in which he slew Humbaba, an Elamite rival; but, as his legends are not earlier than the second Chaldean and fourth Babylonian dynasty, it is supposed that a date of about B. C. 2200 may be assigned to the reign of Izdubar. He dreamt that the stars of heaven fell on his back, and offered a reward, like Pharaoh, for an interpretation. The seer was not far to seek. The mystical Heabani, a solitary hermit, with horns on his head and the hind quarters of a bull, who dwelt in a cave, consorting with the beasts of the field, the type of a Greek river god, and whose description recalls to mind the fate of Nebuchadnezzar, had to be tempted from his retirement to assist in the solution. The royal huntsman Zaidu took for this purpose two of the facile and fascinating ladies of Babylon. Heabani was overcome by their seductions. Taking with him a ferocious animal—a tiger or lion—to test the strength and the valour of the giant king, he assisted him to defeat and kill Humbaba. Subsequently, Ishtar—"the goddess," *par excellence*, the Assyrian Venus—offers herself in marriage to Izdubar, but the hero rejects her, and upbraids her monstrous loves, her insatiable infidelity to her husband, Tammuz, and the cruel treatment of her adorers, whom, like Circe, she changed into beasts or converted into pillars. In revenge she sends the winged bull, which is killed and mutilated. In consequence of this, she descended to Hades, the dwelling of Irkalla, the Babylonian Pluto, to bring back to the light of day her lost husband, Tammuz the yearly wounded of the Syrian myths, the Adonis of Greek traditions, and here follows a legend the most beautiful and poetic of all the tales told, by the waters of Babylon. Ishtar underwent the fate of the dead as she passed the seven gates of Hades. She was stripped of ornament after ornament, and, last of all, her clothes. Admitted into the presence of Ninkigal, the sad and stern Queen of Hell, she was afflicted in all her limbs. Shamas, or the sun, wept to Hea, or the sea god, and the prolific power of nature was arrested. Hea sent the Sphinx to drink the streams of Hell, and Ninkigal relented. She restored Ishtar with the water of life, returned her, clad in her ornaments and dress, through the seven gates, and allowed her Tammuz for awhile. Mysterious were the wanderings of the hero by flood and forest, the wonderful birds that he saw, and actions that he performed, till, at last, he lost his bovine Mentor or friend, who fell in some accountable manner, perhaps by a gad-fly, and not in the battle field, and so passed to the palace of Nergal, the Elysium of Greece, the Valhalla of the North. Heabani's death and burial is described in a burst of unexpected pathos. "The arms of the earth," cried Izdubar, "have taken thee, oh Darkness, oh Mother Ninasu, oh, Darkness, her noble stature as a mantle covers thee, her feet like a deep well enclose thee." Subsequently, at the request of Izdubar, the spirit of Heabani was evoked and his "glassy" soul rose at the bidding of the hero from the earth.

Later than this legend is the Babylonian account of the building of Babel, confusion of tongues and dispersion of mankind. The tower, which rose in stages, was 272 ft. square, and what was made by men in the day was destroyed at night by the gods, who were unwilling to allow access to heaven in this irregular manner. Other fragments of the literature are of some interest—the legends of the god Zu, whose name is like the Greek Zeus, or Jupiter, and whose story has also some points of resemblance; that of Lubara, the plague god; and Saturda turned into a bird. Enigmas and fable work into the series of the mythological mosaic, although their exact position in the picture is not satisfactorily determined. There are here materials for future comparison, and, it may be added, restoration and criticism, for the mutilated state of these scraps from oblivion, the difficult reading, and conjectural interpretations throw doubts on the meaning, sequence, and coherence of this great Epic and its arrangement. Its style resembles the Sagas and Vedas in its elevated diction and deep pathos, linked as it were on one hand to the Semitic literature, the Talmud, the Koran, and Arabic folk-lore, and tied on the other to the myths of Greece, over which it throws an orient light and a special sunbeam. Izdubar performs the exploits of Hercules, Ishtar the descent of Orpheus. The hero of Babylon has the locks of Samson and the limbs of Hercules; a great giant and mighty hunter, he grapples the beasts of the field, defeats the tyrants of the land, and sails beyond the ocean to the fabulous realms of Hasisadra.

The descent of Ishtar is only an old story revived, having been translated by Mr. Fox Talbot, Professors Oppert and Lenormant; and the Deluge has previously appeared; but the mass of materials in Mr. Smith's work has been collected and translated with rare diligence and great ability, if not real genius. A step, the importance of which cannot be overlooked, has been made in a study which has a religious as well as literary value, for here are the contemporary records of Babylon, the thoughts and ideas of that great Semitic centre from which Moses descended and Abraham sprang. This was the religion of Erech and the faith of Nineveh, these the current histories of Bel and Nebo. Hence came the later cosmogonies, hence Berosus plucked his traditions, Callisthenes his information, and Damascius his translations. The worship of nature, the adoration of the hosts of heaven, the *cultus* of the elements, the origin of evil, the struggle betwixt sea and air for supremacy, the storm and winds, the thunder and lightning, are all to be found here. But they differ so considerably from the Mosaic books that they cannot be claimed for more than incidental illustrations and examples of value for comparative profane mythology. Many, too, are evidently later than the period assigned to them; and if Mr. Smith has seized the general sense and meaning, much critical labour will be required to correct and amend the details, nor are they all derived from an acknowledged canon, for there are evidently versions blended with versions to make up a complete whole. Still, as the oldest legends which have issued from Pagan workshops, they are interesting as the pole of mytholygy, the protozoa of early religion, and no exertion should be spared to reach their meaning or dredge up their fragments from Assyrian mounds.

Every effort will be made to rescue and preserve the pieces which lie hidden in the ruins of the valley of the Tigris. Till all the pieces are visible to the eye of the discoverer, the problems of chronology, mythology, and history are ambiguous oracles or inexplicable riddles. They will neither disturb faith nor dissipate doubt, but will be raw material for the intellect to spin and weave into a connected woof. They will stay the intellectual faculties palled with well-known stories current in Aryan literature or gorged with Greek mythology. Much remains to be done, both by the brain and the hand; but step by step, the ranks of the inquirers press on, and more critical acumen will be applied to the task as this last siege of Babylon and Nineveh proceeds. The labours of Rawlinson and Hincks and Norris first opened the trenches, the efforts of Mr. Fox Talbot, Mr. Smith, and Mr. Sayce continue the traverses and saps, and if continental erudition ultimately overtakes the progress already made, the honour of the enterprise will always remain with those who began, and to the soundness of whose judgment, the energy of whose exertions, and the penetration of whose intellect is due one of the most brilliant discoveries of the 19th century.

MUTUAL MISCONCEPTION.

(Saturday Review.)

Most unreflecting persons probably would regard the existence in men of some faculty of understanding one another's ideas as an axiomatic truth. They might triumphantly point to the fact that all the complex operations of society proceed on this certainty of mutual comprehension. Yet, in spite of so self-evident a truism, a thoughtful person will be led to inquire how far this very desirable power really reaches, and whether there is not a considerable margin in most men's minds which never exactly coincides with the line of vision of their most intimate friends.

That we have no perfect intuitive knowledge of each other's minds, apart from the media of language and expression, most men would probably allow. And when once the slow and cumbersome process of learning each other's ideas by language is distinctly apprehended, the numerous liabilities to be misunderstood cannot fail to be recognized. Indeed this danger seems so to have haunted the imagination of the philosopher Reid that he fell back on the comfortable doctrine that certain features of the countenance, sounds of the voice, &c., indicate certain thoughts and dispositions of the mind, and that the meaning of these is known independently of experience. Very grateful though the doctrine would prove, it does not appear to have been adopted by the philosopher's successors. It seems to be rendered highly improbable by the fact that, however nicely and accurately the connexion of thought and word maintains itself in most cases, it may and does frequently give way, and the consequence is a dismal and hopeless misunderstanding. Any thoughtful person who has carefully observed the effects of his words will be able to recall many cases in which all his attempts to describe to a patient listener some subtle shade of sentiment or intricate process of conviction ended in a humiliating failure. Nor does one see how this could well be otherwise so long as the process prettily described as communion of souls is limited to a precarious mode of interpreting so complex a set of signs as vocal sounds, with all the subtle visible changes that make up expression.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The ability of one man to understand the ideas of another seems to presuppose several distinct conditions. The first and chief is that the experiences of the two men should have been similar. Human life is in so many respects a dull repetition that we are very apt to overlook the need of such community of experience. Thus the terms in which old age describes its larger vistas fall well nigh meaningless on the ears of youth. Still more is this power of imparting ideas limited when the thing to be conceived is some special subjective experience. There are numerous varieties of feeling not common to all men which it is clearly impossible to make intelligible to the most sympathetic friend unless he himself has experienced something of the particular emotion. Not to speak of sentiments limited by age and sex, the subtle shades of emotion producible by music are confessedly a *terra incognita* to one destitute of the particular organic susceptibility. His most assiduous musical friends cannot even bring him within sight of it. Little wonder, then, that people so frequently shape the oddest conceptions of each other's meaning when the terms employed have a significance for one which they cannot have for the other. Your polite listener tries of course to infuse some life into the otherwise dead members of your vocabulary, and the ambiguities of language easily enable him to find an undesigned interpretation. In like manner, the limits of individual experience impress their stamp on the habitual ordering of a person's ideas, making it practically impossible for him to conceive things otherwise than thus or thus. The effects of a narrow individual experience in predisposing to the formation of certain combinations of ideas, and in rendering all conflicting forms proportionately difficult, have been a frequent theme of philosophers. Take, for instance, the gloomy view of human nature cherished by certain religious sects. Possibly their own observation has made them unduly familiar with the lowest attributes of our race. In any case they persist in thinking of their fellow creatures as of precisely one dye, and seem incapable of entering into any of those more cheerful affirmations respecting human destiny which are the light and joy of others.

Yet, while narrowness of life and observation does much to impede a free and flexible mode of conceiving things, peculiarity of mental conformation probably does much more. Our various experiences have, it is presumable, some remote tendency to uniformity; but in spite of social tyrannies individual character will never, it may be hoped, undergo utter effacement. How particular temperament and modes of feeling serve to determine the beliefs which we entertain has long been a matter of psychological observation. Scarcely less clear perhaps is the effect they produce in shaping and colouring the very ideas we conceive. We may observe this distinctly enough in the common phenomenon of a conceited youth whose philosophy invariably includes himself as central pivot of the universe. Such a pre-occupied imagination is unequal to the strain of conceiving other Egos besides his own with impulses and aspirations just as real as his. Strong emotional elements in a character may be seen magnetically selecting, so to speak, the ideas to be framed and the modes of their combination. Thus it is a matter of common remark that the fine æsthetic sensibility predisposes a man to dwell on ideas of beauty, harmony, and so on, and to predicate relations to these ideas of as many subjects as possible. Such a one may easily become quite incapacitated for conceiving any repulsive fact or unlovely theory of life. Again, a too delicate moral feeling may, as is well known, unfit a person for adequately conceiving all the circumstances of a wrong action, and so appreciating its precise character. For a like reason, those not endowed with the particular degree of emotional bias will fail to enter into many of the ideas and modes of thought generated by it. It is very doubtful, for example, whether, among the critics of Plato, either Aristotle or Grote was really capable of conceiving, largely and adequately, the highly poetic creations of the philosopher's peculiar system.

With respect to purely intellectual idiosyncrasy, its effects in facilitating certain forms of thought and discouraging others is a very subtle matter, and is, we suspect, very apt to be overlooked. Yet it is probable that every mind by its inherent bent leans much more to some kinds of images and modes of thought than to others. In some cases this is clear enough. We speak familiarly of the peculiar style of thought of Mr. Tennyson or Mr. Browning, and refer not so much to any emotional characteristics as to stamp of idea and groove of intellectual motion. The commonest instance of such intellectual bent actually excluding interchange of ideas is to be found perhaps in the contrast of the strongly abstract and speculative with the concrete and practical mind. How hard it is for practical statesmen to think themselves, to use a German expression, into a set of purely theoretic considerations, has often been noticed. Nor is a rigid theorist likely to understand the value of propositions which are urged, not on any abstract grounds, but solely because of their fitness to a definite and concrete set of circumstances of the hour. One may see, too, in contemporary philosophical disputes abundant illustrations of misconception brought about simply by unequal and dissimilar conceptive powers. It is obvious, for example, that in order to conceive the psychological hypothesis that our feeling of necessity in certain truths is derived solely from innumerable and uncontradicted experiences, a person must be able to represent to himself with some degree of clearness a state of mind in which this feeling was wanting; as, for example, a child's view of nature, or the notions a man would possess in an imaginary world where there were no such things as uniform and unbroken laws. And it may be remembered that Mr. Mill makes some very courageous assertions as to his own ability to picture to his mind this absence of necessity. On the other hand, when one reads any of the numerous utterances on the other side, one strongly suspects that the writer may be incapable of framing this conception, and that, whenever he is speaking of the process by which the feeling of necessity is generated, he is really tacitly postulating its existence.

In this way it seems to be true that individual differences of temperament, education, and experience are continually limiting both the number and quality of a man's ideas, and the modes in which they group themselves. And from this cause arises what may be called perhaps the natural boundary to all community of thought. The familiar communications of mind to mind by means of articulate speech are, after all, but a very rough mechanical device, the precise end aimed at being never probably exactly attained, owing to the retarding friction of the causes just assigned. At the same time it must be apparent that the range of possible misconception may be indefinitely reduced by persons' voluntary efforts. Although mutual barriers may shut us out from a perfect ideal understanding one another's sentiments and thoughts, what has most to do with the common cases of misunderstanding is the avoidable and curable carelessness of the people in not using all available means of understanding the opinions of others.

No doubt the duty of patient attention to the communications of one's companion is nominally enforced by society as a part of ordinary courtesy. Provided, of course, that a talker or writer has fairly made out that he has something to communicate, and evidently takes certain pains to make his utterances as clear as possible, it is commonly admitted that he is entitled to a respectful hearing. Indeed some people whom one occasionally meets in society seem somewhat to eager to fulfil this graceful obligation, and are rarely rude enough to allow you to go to the trouble of explaining yourself. To such persons it never appears to occur that you may possibly have an entirely new idea to impart to them. They apparently regard the region of the knowable as a very limited and clearly defined quantity, and, with a kindness worthier of a better service, attempt the obstetric art of catching your thoughts before they escape your lips. But, excepting this class of mistaken friends, people for the most part appear in conversation much too intent on airing their own ideas to give adequate heed to those of their neighbours. Occasionally one may, it is true, observe a knot of spell-bound listeners eagerly striving to outdo one another in seizing the magic meaning of some parlour oracle. In this case the stimulus to patient attention is supplied by a high degree of reverence, and still more perhaps by the keen desire of outwitting one's rivals. But where the speaker is comparatively unknown, the chances of his being fully heard and his meaning appreciated are very slender indeed. What ardent youth has not frequently smarted under the mortification of finding all his eloquent efforts to instruct his fair auditor in some favourite social or other speculation rendered cruelly abortive by the lady's unforeseen and unsuspected inattention? However needful it may be to practise this species of snubbing on too confident enthusiasts—and this mode of execution, like all others, is never likely to want its unscrupulous volunteers—it does seem a little hard that when a man has really something of value to say, about which he has thought long and patiently, he should so often find it immensely difficult to secure a just hearing. That nobody professes to listen to him would not so much matter; but that, while pretending to do so, people's minds should really be pre-occupied and inattentive, is, we conceive, a fair subject for blame.

In like manner, with respect to that rapidly increasing class which seeks to diffuse its intellectual creations by means of literature, they can hardly complain if nobody reads their lucubrations. For they are able to compete on a perfectly just footing with all others, and they may easily reflect that, unless they have something of paramount interest to divulge, they are

Original from UNIVERSITY OF CALIFORNIA

exceedingly liable to be overwhelmed in the crowd. But they may reasonably complain when critics or literary disputants commit the silliest acts of misconception through sheer intellectual indolence. We are far from condemning in a sweeping manner the whole method of contemporary criticism. We believe, on the contrary, there never was a time when there was more conscientious effort than at present to understand and estimate the worth of any new contributions to literature. Nevertheless, one still meets too frequently with instances of the shallowest understanding of a work due solely to the infinitesimal quantity of cerebral energy that was concentrated on the reading of it. It has frequently been asserted that a man's ideas, if worth much, will require some amount of diligent study for their adequate comprehension. Yet, in spite of this, how easily does the pseudo-critic dismiss as worthless a train of argument which he has never seriously tried to grasp! Nor is this literary injustice always confined to the professional reviewer. In the disputes of philosophy and science, not to speak of the more turbid region of politics, one is constantly observing the most egregious instances of careless reproduction of other men's ideas. Indeed, if we are to accept the complaints of writers like Mr. Spencer, there must be an amount of culpable misrepresentation which is really quite dismaying to those who are fondly looking forward to a progressive convergence of certified opinion. It might be as well, perhaps, for critics and adversaries to remember that the nature of the human mind has imposed sufficiently rigid limits to mutual comprehension, and that from this source alone there will probably always, for the more sensitive, flow enough of the misery of being misunderstood, without any addition from avoidable and voluntary negligence.

Shipping Intelligence.

ARRIVALS.

Jan. 20, *City of Peking*, American steamer, Tanner, 5,079 tons from San Francisco, Jan. 7, mails and general, to P. M. S. S. Co.

Jan. 31, *Talisman*, French gun-boat, St. Hilaire, 386, from Kobe, on the 26th January.

Jan. 31, *Malacca*, British steamer, Bernard, 1,709, from Hongkong, on the 23rd Jan., Mails and General, to P. & O. Co.

Jan. 31, *Kiusiu Maru*, Japanese steamer, Christensen, from Hakodate, General, to M. B. M. S. S. Co.

Jan. 31, *Mary Blair*, British barque, Riddle, 328, from Newcastle, N.S.W. Dec. 9, Coal to Order.

Feb. 3, *Iris*, British 3-mtd. schooner, Taylor, 238, from Takao, Jan. 7, Sugar, to Smith, Baker & Co.

Feb 3, *Hiroshima Maru*, Japanese steamer, Furber, 1,870, from Shanghai and ports, Jan. 27, Mails and General, to M. B. Co.

Feb. 3, *Eme*, British ship, Sproule, 773, from Newcastle, N.S.W., Dec. 21, Coals, to Walsh, Hall & Co.

Feb 3, *Carl Ludwig*, German brig, Clausen, 238, from Takao, Jan. 4, Sugar, to F. Knoblauch.

Feb. 4, *Hope*, American ship, Hancock, 797, from New York, June 30, 1875, Kerosene and Coal, to E. Fischer & Co.

Feb. 5, *Christian*, German 3-med. schooner, D. Steber, 237, from Hamburg, Feb. 1, 1875, General, to Simon Evers & Co.

Feb. 5, *Western Chief*, British barque, J. P. Hill, 750, from London, Sept. 14, General, Captain.

DEPARTURES.

Jan. 30, *China*, American steamer, Dearborn, 3,836 tons, for San Francisco, mails and general, despatched by P. M. S. S. Co.

Jan. 30, *Robert Kelly*, American barque, Kingman, 823 tons, for San Francisco, general, despatched by Smith, Baker & Co.

Jan. 30, *Burmese*, British steamer, Lock, 1,268 tons, for Kobe, general, despatched by Jardine, Matheson & Co.

Jan. 31, *Nevada*, American steamer, Williams, 2,145, for Shanghai and ports, Mails and General, despatched by M. B. Co.

Feb. 1, *Volga*, French steamer, Nondedeu, 960, for Hongkong, Mails and General, despatched by M. M. Co.

Feb. 1, *City of Peking*, American steamer, Tanner, 5,076, for Hongkong, Mails and General, despatched by P. M. S. S. Co.

Feb. 1, *Kworio Maru*, Japanese steamer, Stevens, 600, for Hakodate, General, despatched by M. B. Co.

Feb. 5, *Lethley Rich*, American ship, Lewis, 1,305, for Hongkong, Ballast, despatched by Captain.

PASSENGERS.

Per British str. *Burmese*, to London.—Mr. and Mrs. Klassen and 3 children.

Per *City of Peking*, from San Francisco:—For Yokohama: S. Butcher, Rev. S. H. Gulick, Miss Fanny Gulick, J. F. Twombley, Thomas Wells, W. T. Newberry, Hendenobu Nambu, Hedernaru Nambu Saland Suan, and J. S. Farel. For Hongkong W. H. Sam, Ogden E. Edwards.

Per Steam-ship *Malacca*, from Hongkong: Captain Lebon, Miss Harkess, Mrs. Terry and Servant, and 4 Chinese.

Per Steamship *Nevada* for Shanghai and ports.—Mr. and Mrs Cargill, Revd. W. F. Garrett, Messrs. H. Greey, E. M. Isaacs, G. Gilbert, Kodoma, Matsumoto, L. Favre, and 1 European, 55 Japanese, and 2 Chinese in the steerage.

Per Steam-ship *China*, for San Francisco—Miss. Jenny Claus, M. Rekel, Paymaster Rand U. S. N., M. B. Langhorn, Julia Gombault, Miss. Center, W. Praun, J. Middleton, W. Whyte, G. Saunders, C. Smith, E. A. Clark, Miss Wilson, Dr. Mc Phin, Mr. and Mrs. Malcolm, H. Wilhelm, C. Benenson, T. Brown, A. Holt, 5-1 Chinese in the steerage.

Per Steam-ship *City of Peking* for Hongkong.—Mr. H. M. Blanchard.

Per Steamship *Volga* for Hongkong.—Miss Satchell, Mr. and Mrs. Cheesman A. Jonssaud, and Tokio Teranishe.

Per *Hiroshima Maru* from Shanghai and ports.—Messrs. J. P. McClatchie, C. A. Raven, F. Whitaker, Mr and Mrs. Wolff, J. F. Calder, B. F. Wood, U. S. N., Mr. and Mrs. Roper, B. Blundell, E. C. Kirby, Suzuki, Tani and Nanjiya, and 130 Japanese, and 6 Chinese in the steerage.

CARGOES.

Per Steam-ship *Malacca*, from Hongkong—

Sugar	1,774 bales.
General	1,448 „
Ex. s. s. "*Gwalior*"	287 „
Total	3,479 packages.

Per Steamship *Volga* for Hongkong.—

Silk for France	...174 bales.
England	18 „
Total	192 bales.

Per *Hiroshima Maru*, from Shanghai and ports.—

Treasure	$179,491 00

REPORTS.

The Steam-ship *City of Peking* reports: leaving San Francisco January 7th, up till the 10th had moderate N. W. winds and pleasant weather, and from 10th to 15th had light winds from East to S. W. with smooth water, communicated with the *City of Tokio*, on the 15th, all well, thence up to 23rd light winds from West to N. E. with moderate weather, for a few days arterwards strong gales between South and N. W. Arrived in Port January 29th, at 12 30 P.M. 20 days and 20 hours from port to port.

The Steam-ship *Malacca* reports: from Pedro Blanco to Turnabout experienced strong monsoon with moderate sea, thence to St. Clair strong gale from N. E. accompanied with heavy sea, and thick weather; from St. Clair to Yokohama fresh N. E. breeze and fine clear weather. Arrived in Yokohama January 31st, at 7.30 a.m.

The *Iris* reports very severe weather with strong northerly gales, and a heavy sea throughout the entire passage.

The German brig *Carl Ludwig* reports having experienced very severe weather throughout.

The American ship *Surprise* from New York, is on the Plymouth Rock. Mourilyan Heimann & Co., Agent.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics.—The heavy snowfall throughout the country and consequent bad condition of the roads have much interfered with the traffic, and clearances have been very small. Dealers have shown but little disposition to buy and transactions have been next to nothing. Prices may be given at same rates as before, but in the absence of business are quite nominal. The heavy decline in exchange constitutes however a serious depreciation in comparison with last week's values.

Grey Shirtings:—

Woollens.—Business in this staple continues trifling. The only serious demand existing is s ill for best qualities of *Italian Cloth*, while the previous enquiry for *plain Black Orleans* and *plain Mousselines de Laine* has somewhat slackened and prices close weak. Notwithstanding the active preparations on the part of the Government for the expected expedition to Corea, *Blankets*, as well as woollen cloth, fail to attract the attention either of the officials or speculators, and on the whole Woollens remain in a most languid and miserable position, aggravated by the rapid decline in the rates of exchange.

Plain Orleans	40—42 yds	32 in....	6 00 to	8 00

EXPORTS.

Silk.—Under the circumstances enumerated in our last report, and owing also no doubt to exceptionally bad weather during the past week, transactions have been extremely limited.—Since the 27th ultimo, arrivals are 150 bales, and deliveries 175 piculs. Prices remain quite firm at previous quotations.

NOTICE TO MARINERS.

SHIKA-NO-SE BUOY.

NOTICE is hereby given that a Buoy has been moored to mark the position of the Shoal called SHIKA-NO-SE in the Inland Sea.

The following is a specification of the position and appearance of the Buoy.

The Shoal called Shika-no-se is situated at the Eastern end of that portion of the Inland Sea called Harima Nada, and is about 9 miles in a Westerly and Southerly direction from Awadgi Lighthouse.

The Buoy is moored about 4½ cables to the Southward of the middle of the shoal in 17 fathoms at low water.

Awadgi Lighthouse bears from it North 79 degrees East.

The summit of Rioruji Yama in Awadgi South 54 degrees East.

The Western extreme of Yesaki near Yenoura on the Western shore of Awadgi South 5 degrees East.

Bearings true.

The Buoy is painted Red and is surmounted by a circular cage, the top of which stands 15 feet above the water.

NOTICE TO MARINERS.

MOTOYAMA BUOY.

NOTICE is hereby given that a Buoy has been moored to mark the position of the Shoal to the South Eastward of Motoyama in the Inland Sea.

The following is a specification of the position and appearance of the Buoy.

Motoyama is situated at the Western end of that portion of the Inland Sea called the Suwo Nada.

The Buoy is moored off the South-eastern extreme of the Shoal which extends to the Southward and Eastward of Motoyama.

It is about 13½ miles in an easterly and southerly direction from Hesaki Lighthouse, Shimonoseki Straits.

It is moored in 10 fathoms at low water. Hesaki Lighthouse bears from it North 65½ degrees West.

The point on the Northern shore directly South East from Ubeko North 2½ degrees East.

The North East point of Hime Shima South 68½ degrees East. Bearings true.

The Buoy is painted red, and is surmounted by a circular cage the top of which stands 15 feet above the water.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

THE

Japan Weekly Mail

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 7.] YOKOHAMA, SATURDAY, FEBRUARY, 12, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

In our issue of the 22nd ultimo. we stated that the two Chinese envoys to Corea would probably not leave Peking before the beginning of January. We now learn from the Court column of the *Peking Gazette* that they were received in audience to take their leave on the 28th December, but the arrival of Mr. Mori on the 4th will probably further delay their departure as they will naturally be anxious to learn something of the Japanese view of the Corean question. Mr. Mori made his first visit to the Peking Foreign Office on the 8th ultimo, but the reception was confined to matters of ceremony.

The *Nichi Nichi* and *Choya Shimbun* imagine that the late notification of the British Minister places British subjects in some mysterious manner under Japanese laws, and are very jubilant over the supposed fact. Let them moderate their joy. Sir Harry Parkes' notification has no more the effect imagined than it has the effect of placing British subjects under Chinese laws. It is a concession to reason and justice on a point touching what every one must allow to be the sovereign rights of this country as an independent empire. On these rights no European Government, still less the British, wishes to trench beyond the limit necessary for the orderly intercourse of its subjects with the Japanese, and anything which may be termed encroachment has arisen solely from this cause. But no European Government considers that Japan has yet advanced sufficiently far to warrant the abandonment of the extra-territoriality jurisdiction clauses in the treaties, and the idea that the notification in question has any such bearing as these two native journals imagine, is entirely fallacious.

It is extremely gratifying to observe that the best of the native newspapers are—if we may judge by our interesting translations of this week—leaving the late path of petulant declamation or oblique inuendo directed against the Government, and employing themselves with marked ability upon the large questions involved in the foreign relations of the Empire. Of course we should be glad to find purely domestic questions treated with equal vigour and good sense, and if they are, both Government and people will be under large obligations to the Press. It cannot be too often pointed out that the native Press has a large field for useful work in this country, and if it will be content to employ itself well within this limit, its increase in power and usefulness is certain. Patience and moderation will win the battle which the foolish temper we have recently seen displayed will assuredly lose.

The *London and China Express* gives some particulars of a recent sale at Liverpool of Japanese porcelain and *faïence* ware, the property of a collector who resided for nine years in Yedo. Among them, we read, were

A large temple vase of the finest period of Satsuma ware, most important in its size, twenty-four inches high, taken from a temple near Kioto, the palatial residence of the first Tycoon, 1570, and supposed to have been a votive offering, is of a cream-coloured paste, boldly crackled, with two large medallions containing mythological subjects and saints with gilded nimbi; it sold for the enormous sum of 400 gs. A pair of Satsuma vases, nineteen and a-half inches high, with Buddhic subjects, 300 gs.; two other vases of the best period of Satsuma *faïence*, cream-coloured paste, crackled glaze, the decoration consisting of twelve open fans painted with various subjects, £126, and its companion for the same price. Other vases of old Satsuma sold at 110 gs., 80 gs. Of the Kioto *faïence*, a fine old vase, probably a votive offering, with mythological subjects and saints with golden nimbi like the 400 guinea Satsuma vase, sold for £75. An oblong dish of the same ware, ornamented with a golden pheasant and chrysanthemum, in high relief, in red enamels, and gold, £39, a bowl of ancient Kioto *faïence*, buff paste and crackled glaze, with archaic figures, 35 guineas, and another £30, a large vase with figures, in medallions, red enamels and gold, £56., and the companion, £50; perfume burner, with dragons and clouds in relief, the cover formed of a curled dragon issuing from the waves of the sea, yellow and green, £4 12s.; a pair of crackled basins of Hizen porcelain, decorated with fans in gold, and powdered with the mallow-leaved crest of the Tycoon, £33; basin of Tokio, painted in imitation of Satsuma £5 10s.; pair of flower vases, Awata *faïence*, 19 guineas, and another, 21 guineas; a teapot of fine modern Kaga ware with figures delicately painted on a ground of burnished gold, 30 guineas; large Kaga basin elaborately decorated with medallions of figures and flowers in red and gold, £4 15s., and others, £8, £5, and £4 15s.; a pair of hand-finished ancient bronze figures, representing Japanese divinities, Force and Justice, £90; vase of Chinese cloissonné enamel, £50. The sale realised £3,134 ls. 6d.

The opposition which the revised regulations of Telegraph Companies have met with from Eastern and Australian merchants would appear to have culminated in a project to lay an independent cable to India, China and the Eastern settlements. It is to be regretted that a period of such depression as that under which Eastern trade is now languishing should have been selected for inaugurating a change so much opposed to the economising spirit with which mercantile operations are now conducted, and it is to be hoped that a timely concession to the views of their supporters may yet be anticipated from the various companies.

The Peninsular and Oriental Company intimate their intention to reopen weekly communication with Shanghai *via* Kobé and Nagasaki. The steamers *Orissa*, *Massilia*, *Columbian* and *Bombay* will be placed upon the line, and will begin to run on Saturday the 26th instant. Until the two last-named vessels are fully available the steamers will be despatched fortnightly in place of weekly.

The full development of the hideous plot conceived by Thomassen to destroy the *Mosel* and her living freight has naturally drawn attention to the absence of international regulations for dealing with the manufacture, storage and

Digitized by Google

Original from UNIVERSITY OF CALIFORNIA

transmission of explosive agents of this character. Near the scene of the explosion the excitement has naturally been greatest. 'The disaster' says a correspondent of the *Times* 'has caused a general hunt for explosive stores all over the country. Three ships with dynamite cargoes lying off Harburg, in the frozen River Elbe, had to turn out their fiery cargoes without a moment's loss of time. No less than 1,200 chests—enough to heave up the earth—were carried to a hollow in the hills some seven miles from the city. There they will remain buried until returning Spring allows the ships to continue their voyage. The inhabitants of the fortress of Minden, too, have sent in a petition requesting that 200 cwt. of the dangerous stuff deposited in the earthworks in the immediate vicinity of their city be removed forthwith.' A correspondent of the same journal states that, as early as the year 1873, he communicated to the German Government the names of certain persons who were concerned in an intended shipment of explosive material with the object of destroying the fated vessel that unwittingly received it.

And while upon this subject we may appropriately call attention to the growing use to which the empty tins of reputable American oil refiners are now being turned by unprincipled and probably ignorant native dealers. As illustrating this we may state upon excellent authority that many thousands of these disused vessels, bearing the respectable name of Messrs. Devoe & Co., of New York—whose extensive reputation has probably led to their being singled out—are now bought up for refilling with inferior oils—in some cases with *crude petroleum*, exploding at a dangerously low temperature. No dishonesty will so surely work out its own punishment as that which tempts the perpetrator to tamper with dangerous materials, and we warn the Municipal Authorities of Yedo and Yokohama of the risk to which property and life remain exposed while frauds of this nature are unchecked. There are other and higher grounds on which interference might reasonably be sought for, but in the absence of international arrangements it would be idle to discuss them, and Messrs. Devoe & Co. or their agents must resign themselves as they best may to the loss of reputation to which the fraud exposes them. In the meantime, another means of destruction is opened up to the Japanese by the enterprise of their traders, and the survivor of the thousand adulterations with which the cheap stores of the native towns are filled may shortly enjoy the opportunity of adding to his other experiences the 'sensation' of an explosion.

The Hon. James St. Vincent Saumarez has been appointed Second Secretary to H.B.M. Legation in Tokio.

From the "Japan Mail Daily Advertiser."

GAIETY THEATRE.

The Amateur Dramatic Corps brought a strong force into the field on Saturday evening, and entertained the public with two pieces sufficiently well known to the English stage, "Raising the Wind," and "Slasher and Crasher." The former contains among its *dramatis personæ* the celebrated character of Jeremy Diddler, and though perhaps strictly speaking a farce, in view of the ludicrous materials of which two of the characters are composed, it might almost take rank within the sphere of legitimate comedy. The writing is very clever, the stage is kept constantly alive, and there is a fair amount of such incident as belongs to the stratagems of the principal character, who, as his name imports, is a plausible and thoroughly demoralized adventurer living on his wits at the expense of other people. All the parts were well filled. Mr. Spurgeon as Jeremy Diddler was excellent. Mr. Vernon as Sam, the waiter, not less so; Mr. Toddles as Plainway, up to his usual mark of excellence: Miss Matthews as Laurella Durable, at her very best and unusually successful: Miss Herbert, as ever, herself: and Mr. Fitz Thomas as Plainwould—a first appearance—most careful and promising. It is a truly appalling thought, by the way, that our grandfathers and grandmothers really dressed in the style represented by Diddler, Plainwould and Miss Durable.

"Slasher and Crasher" is a far lower order of piece, and, though amusing, is the vulgar farce of the London stage. Mr. Latham as *Blowhard* fully justified all the promises of his excellent *début* last year, Mr. Vernon as *Slasher* was as good as in the preceding piece, and Mr. Fredericks as *Crasher* played well up to his part. Mr. Coventry as *Lieut Brown* was painstaking, while *John* and *Rosa* were efficient.

The evening was a very agreeable one, and "Raising the Wind" will probably bear repetition, which it deserves.

The following particulars in regard to the wreck of the *Surprise* summarise the incidents of it, and the concluding paragraph demands special attention.

The American ship *Surprise*, Captain Johnson, bound from New York to this port with a cargo of kerosine, coal and general merchandise, while working up the Gulf of Yedo, on Friday morning, against a strong northerly wind then blowing, and being close to Kanonsaki, the captain in consultation with the pilot in charge, thought it advisable, owing to the heavy gusts and squalls that were blowing right down the Bay, to run down again to Kanida Bay for shelter, and there wait for the weather moderating.

While this was being carried out it unfortunately happened through an error in judgment, or not knowing that any such danger existed, the vessel struck on a sunken rock that lies some three hundred yards to the eastward of what are known as the Plymouth Rocks and remained fast on it. That rock has been known for some years as the *Haigo-maru* Rock, that unfortunate vessel having struck it on her way from Yokohama to Kobe, but as she was going at great speed at the time she bounded off and sunk almost immediately, causing the loss of nearly all her crew and passengers.

In the present instance, although there has been no loss of life, and both cargo and vessel may ultimately be saved should the weather keep good, we would suggest that the attention of the Government authorities be called to the fact of such a danger to navigation existing, and that they should order a buoy to be moored on the East side of the Rock—there being about twelve fathoms close to on that side and that all vessels be instructed not to go between said buoy and the Plymouth Rocks for the future.

One of the men suspected of being implicated in the recent attempted assassinations, has undergone severe tortures, but has made no confession.

The *Akebono Shimbun* announces that General Saigo will start for Philadelphia on or about the 26th instant.

Two native servants of a French resident at Bancho, Tokio, died on the 3rd instant, from eating a poisonous fish called *Fugu*.

All traffic on the Subashiri road was stopped by the late heavy snow-fall, some of the drifts being twenty feet deep.

The activity in the new branch of the War Department at Shimonoseki has caused a rise in price of many articles of current demand.

Hino, the former Editor of the *Nisshin Shinjisshi*, was fined 2.25 *yen* on the 4th instant, for sending the *Bankoku Shimbun* to the former subscribers of the above journal.

The Government is said to be about to issue postage stamps for an "express" delivery of the letters to which they are attached.

The *Choya Shimbun* states that an advertisement lately issued by the Mombusho for a person able to copy Japanese writing, at a salary of 8 *yen* a month, was answered by no less than two hundred and fifty applications for the post.

The *Maiichi Shimbun* states that the *Tashima Maru*, lately despatched for Shimonoseki, has been prepared for the conveyance of troops to Corea.

News is said to have been received at Yedo from Corea yesterday afternoon, but no authentic version of it has been circulated. Had it been unfavourable, the probabilities are that it would soon have got abroad.

The *Choya Shimbun* expresses its gratification that foreigners are gradually coming under Japanese laws, as it observes

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

that Mr. Black has been prohibited by the British Minister from publishing the *Bankoku Shimbun*.

A little confusion of thought on the part of the native journal is excusable enough in this case, but the Editor must be informed that the law under which Mr. Black has come is English and not Japanese. The Queen in Council delegates to her Ministers in China and Japan a certain portion of her prerogative, for the purpose of preventing any disturbance of the friendly and peaceful relation which her treaties with those countries contemplate. It is this power which has been wielded in the case of the *Bankoku Shimbun*.

The *Hochi Shimbun* says that 175,000 piculs of rice are shortly to be exported.

The *Akebono Shimbun* lately stated that the former Daimio of Geishu was about to lay down his rank and surrender his pension to the Government and become a *heimin*. It has since heard that the propriety of this course was recently discussed at the *kadzoku kuaikuan* (Nobles' club). Some contended that as the Mikado's will was for the continuance of the class of nobles, this Daimio ought not to follow the proposed course. Others argued that there was no impropriety in it, and the majority in the debate sided with this view.

The *Hochi Shimbun* says that the tea-houses at Uyeno, Tokio, are about to be pulled down to make room for an Exhibition building.

A new theatre is about to be constructed at Yotzuya Tokio.

It is reported in Tokio that the Japanese Mission has been received in the Corean capital and that negotiations have been opened in a satisfactory manner.

Some two hundred tons of the cargo of the wrecked ship *Surprise* have already been recovered. Active operations are now in progress, which it is hoped may result in a large portion of the remainder being saved.

An enquiry into the cause of the sudden death of Mr. Harvey, ship's compradore, held by Drs. Eldridge and Wheeler yesterday, discovered it to have been caused by the rupture of an aneurism of the left renal artery.

Small-pox is now committing lamentable ravages in the province of Kaga.

A certain Godai Saisuke is said by the *Hochi Shimbun* to have received authority from the Government to build a railway from Wakayama to Osaka.

A number of the officials of the Army Department, and of the foreigners connected with it, held at meeting at Hamagoten on the 8th instant, presumably, it is said, for the purpose of discussing the action to be taken in Corea in case of eventual hostilities.

The attention of the Government is apparently directed to the Press-laws with a view to certain changes. On the one hand, is is alleged, a new code of regulations is to be adopted, marked by a greater degree of severity, while others are induced to believe that they will shortly be abolished altogether. In view of these divergent statements it is not impossible that the *Saifu Shimbun*, from which we take this information, has made the announcement prematurely.

The Governor of the Shirakawa *ken*, it is related, has ordered the inhabitants of that *ken* to abstain from reading newspapers.

Some wealthy private individuals of the Ishikawa *ken* have decided upon opening an exhibition at Kanazawa on the 1st April next.

The following copy of a telegram from the London Post Office, dated 30th December, was received by the *Golconda*, from the Packet agent at Suez. It will be observed that a portion of the mails were unavoidably left behind in London on Christmas Eve:—

To British Packet Agent, Suez.

Will you write by to-morrow's Packet to Post Master-General, Ceylon, Hongkong, Singapore and each Australian colony, informing them that enormous pressure of business on night of twenty-fourth caused many letters for those colonies and for China and Japan to be left behind. This will explain failure if complained of. Inform sorting officer on board Packet for Bombay to like effect for communication to Post Master-General, Bombay.

The Festival of Jimmu Tennô's accession to the throne was observed yesterday by the native population. Salutes were fired at noon by the men-of-war in harbour and the Kanagawa Fort.

A French gentleman in the employment of the Department of Justice has presented a memorial to the Government urging the abolition of torture in legal procedure.

A large sum of money was stolen from the Government building of the Chiba *ken*, by a party of robbers who succeeded in obtaining access to the offices.

The *Hioron Shimbun* has been informed that the Government has applied to a foreign Insurance Company in Yokohama for a loan of three millions of *yen*. The loan, it adds, has been agreed to on the production of the necessary securities.

The *Hioron Shimbun* reports that a Foreign Office official has been sent to Corea by a special steamer to enquire the purpose for which the three battalions demanded by Kuroda are required.

The P. & O. Co.'s extra steamer *Orissa* left Hong Kong for Yokohama on the 10th instant, at 10 a.m.

The *Hongkong Press* comments on the excitement caused here by the establishment of a vernacular paper by a British subject.

It says that the Japanese officials not unnaturally regard the issue of the *Bankoku Shimbun* as an attempt by a foreigner to give the natives a means of expressing opinions hostile to the Government and to the laws, without incurring the pains and penalties which a breach of the Press laws laws entails upon the journalist. The attempts made to stifle this paper are not judicious, but the difficulties which beset the path of the Mikado's Ministers are neither few nor small, and a good deal of allowance should be made for them when they commit mistakes of this character. The press laws have been carried out with injudicious severity. But however much foreigners may regret that the Japanese Authorities have seen fit to stifle liberty of discussion in the public Press, they have no right to interfere. *The question concerns the Japanese and the Japanese alone.* On this account it is to be regretted that Mr. Black has attempted, in the face of such a ferment, to launch a project so unpalatable to the Japanese Government. It thinks it would be well if Sir Harry Parkes were to endeavour to arrive at some definite understanding on the matter with the Japanese Government.

THE BRITISH MINISTER'S NOTIFICATION.

THE issue by the British Minister of the recent notification forbidding the publication by British subjects of newspapers in the Japanese language, seems an act equally conformable to reason and justice. It has, however, naturally and very properly, been made the theme of much discussion, and is regarded with greater or less favour according to the views which his critics take of the limits of the power placed in his hands by the QUEEN'S Order in Council, and of the obligations he is under to protect the Japanese Government against infractions of its sovereign rights, wrought under cover of the clauses in our treaty which remove British subjects from Japanese jurisdiction. It is quite proper that Englishmen should view with jealousy any act of their authorities tending to curtail their liberties and undoubted rights, or any power placed in the hands of those authorities which appears to wear an unconstitutional appearance or to possess an arbitrary bearing. Nor can it be doubted that much of the objection raised to the British Minister's Notification arises more from vague apprehension that it proves him to be possessed of an amount of power uncontemplated by British subjects who are ignorant of the nature of the Order in Council, than from the prohibition which that notification enforces. It is not, however, within our present intention to discuss the constitutional nature of the Order in Council, upon which it only seems necessary to say that it was drawn up by constitutional lawyers; that it has been in operation many years open to the criticisms of a perfectly free Press; and that any action taken by a minister in virtue of the extraordinary powers with which it invests him is subject to reference to the Sovereign in Council, and liable to reversal in case such action is out of harmony with constitutional precedents. Nothing can be more erroneous than the assertion that it gives to a British minister powers wielded by the minister of no other western country. It is, in real truth, a necessity created by the superior liberties enjoyed by British subjects in their own country, and a guide in working the special machinery provided by the British Government for the administration of justice in China and Japan in cases affecting its own subjects. It only gives to a British minister the power of meeting extraordinary emergencies by means which are comprehended within the ordinary powers wielded by other ministers. It is under the strict control of the Home Government, all whose acts are subject to Parliamentary revision.

The question to which we must confine ourselves here is this:—Is it right or just that the subjects of a foreign state should be permitted to avail themselves of the freedom granted to them by their own laws, under which they live in a foreign country, to cause possible embarrassment to the government of that country in its relations with its own subjects? Or, more narrowly:—Is it right or just that the subjects of a country in which the published expression of opinion is practically free, should claim that freedom in the conduct of a newspaper published in a foreign country where the expression of opinion is subject to certain laws, and in the language of that country?

In regard to our first question, let us imagine, for a moment—the thing is not impossible—that Englishmen in France were judged by their own authorities established there. What would be the result of an Englishman publishing a newspaper in French under the plea of a free Press in England, and criticising, in the free strain common in England, the French Government and French institutions? And are we to take advantage of extra-territoriality jurisdiction clauses, intended altogether for other purposes, to do here what it would be a flagrant wrong to do in France? Reason and justice alike answer Assuredly not.

The liberty of the Press is one which is peculiarly local in its nature. No one can claim that if an Englishman or an American goes to France or to Germany he carries this liberty with him. His enjoyment of it is confined to his own country, or to the foreign possessions of his Sovereign or Ruler. There he may write what he likes: throughout Europe he comes under the law of the country in which he resides. It will hardly be contended that on a point which is purely and peculiarly a domestic one, he should enjoy a larger amount of liberty than the people among whom he resides. Our immunity from special municipal regulations binding upon the Japanese is owing to our all living together in a settlement apart from them, our action there being that of foreigners with and among foreigners, and but very slightly affecting the Japanese. But no European Government would claim on this account a license for its subjects which would have the effect of reducing to a dead letter the laws regulating the relations between the Japanese Government and *its* subjects. The American Government, indeed, goes beyond our own in these matters, and requires its citizens to obey Japanese laws in all matters not specially regulated by the treaties. We have always contended that it goes too far in this respect. But most assuredly its decision on the question before us could be anticipated with absolute certainty from the doctrines it has laid down on the general question of the respect due to Japanese law from American citizens.

Look for a moment at the practical effect of claiming any such immunity from the operation of the native Press-laws as is claimed in the case of the *Bankoku Shimbun*. A foreigner sets up a Japanese newspaper over which the law has no control. He knows that belief in the divine descent of the MIKADO is an article of faith with the people, and that on this superstition the whole fabric of government in this country rests. Is he to be allowed to make it the subject of unbounded and universal ridicule, presuming him to have humour enough to do so? The Shintô faith is bound up with this superstition. Is he to be at liberty to cover this faith with scorn and laughter, and to show not only its contradictions but such other absurdities as it may involve? Many of the Japanese laws are childish and absurd in the eyes of Europeans. Are they to be held up to the scorn of the Japanese? The form of government in Japan would not be tolerated for a day in any country of Europe west of Russia. Are the Japanese to be told in so many words that they are a race of slaves? and all this by foreigners settled here and enjoying the protection and hospitality of their government or sovereign? The question is not what Mr. A. or B. intended to do with the *Bankoku Shimbun*, but what might be done by a foreigner disposed to take this course. And presuming such an one to take it, would this conduce towards the peaceful relations between ourselves and the Japanese which it is the business and duty of our respective ministers to preserve?

It has been urged that a foreigner might be sued before his own authorities for such writing. But we really do not see how he could be convicted, or even, on the basis of English common law, why he should be. He could fairly plead that what he said was true, and could illustrate his plea by facts, and the common law can no more prevent men from ridiculing the customs and form of government of other nations than it can prevent their taking

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

the very air they breathe. What evidence would satisfy an European judge that such and such matter was calculated to undermine the fabric of the Japanese polity? The evidence of a Japanese official? Hardly, we imagine. Of three native merchants? Equally not, we think. Of whom then?

On what section of the basis of reciprocal advantage—that basis on which we have always so strenuously insisted that treaties between ourselves and these oriental nations should rest—on what section of this basis can we find room for any plea that this usurpation of the sovereign rights of the Japanese is of any advantage to them? The education which may produce riot or rebellion, which may undermine the basis of their polity or their faith, is one upon which they should at least be allowed to express an opinion. Their polity may be arbitrary, and their faith absurd, their laws may be childish and their social economy vicious and opposed to their rise in the scale of nations. But whether these things be so or not, it is for the Japanese to deal with them; certainly not for us by publications diffused among them in their own language, and still less when the process begins with ignoring and even violating Japanese law.

It is curiously enough urged by some that the Japanese Government should have used indirect means to repress the *Bankoku Shimbun*, by preventing its circulation, or forbidding Japanese subjects to engage themselves on it. They took a wiser course. They trusted to the common sense, the obvious justice and reasonableness of their case. They did not believe that the British Government would connive at the infraction of Japanese laws by Japanese subjects—for this is what the continued existence of the *Bankoku Shimbun* would have involved. The Government trusted, as we said in our article on this subject of the 22nd ulto., that they could and should trust, to the conscience of the Christian countries, and neither their expectation nor our own has been deceived.

Let us imagine that the representation of the Government to the British Minister had been disregarded on any such illogical plea as that the English Press is free, what would have happened? All native newspapers would in a month have been placed, by fictions of one kind or another, in the hands of British subjects, and the Japanese Government would have been defied by its own people under the ægis of British law. Is it possible to conceive a more monstrous anomaly and injustice? If Englishmen conceive, as some appear to do, that the British Government will give its sanction to a course which not only might, but certainly would, attack the very foundations of the relations which exist between the Japanese Government and its own subjects, they are egregiously mistaken. The large and generous faith in liberty which English institutions and feelings represent would be prostituted to the worst purposes if it were made a cover under which the laws of the oriental governments could be set at naught by their subjects. All instructed men must know that institutions which are salutary in one stage of a nation's history may be utterly unsuited to it in another, and would only lead to anarchy and the further postponement of that period when these more advanced and liberal institutions are possible. The experimental science of government does not consist in the exhibition of specifics, irrespective of the age and idiosyncracy of a nation. Quackery is not the less quackery because it administers valuable preparations. Must we invoke the memory of the French heroine to testify to the crimes which have been committed in the name of liberty? And does it seem well that the first step of that process of education which was to have commenced with the *Bankoku Shimbun* should involve the violation and defiance of law? It is for England and Englishmen to show that one of the chiefest and best results of their love and possession of freedom is a law-obeying spirit, which inculcates obedience while it adores liberty, which abhors indirect means to attain even desirable ends, and which respects law as law.

We cannot for a moment admit that the discrepancy sought to be established between the action of Sir HARRY PARKES in refusing to prohibit the teaching of Christianity, and his action in this case, is a real one. It is the theory of the Church that a divine command has been given that CHRIST's Gospel was to be preached thoroughout all nations. We know by experience what is the effect of this Gospel. Its teachers are responsible men. It is comprehended in a book which can be examined, analysed, and tested by its results. On this theory the Christian nations have undoubtedly acted. They have not gone into the question whether it was thus expedient to preach this Gospel, or to give themselves any care about the results of doing so; and they may assuredly say that the acceptance of the doctrines of CHRIST has everywhere been attended with advantage to nations. Can it be said that an unrestrained Press would ensure similar results? If so, why are there still severe Press-laws in France, and in Germany, and no vestige of freedom of the press in Russia—all three Christian countries? It is because the press is an irresponsible power, which experience has proved to be incompatible with orderly government, until liberty and the disposition to obey the law exist in an equal and coordinate measure. It is a great good attended by the danger of great inseparable evil. It is medicine or poison according to the condition of the patient, and before he is allowed entire freedom in its use there must be some guarantee that it is wise to entrust him with it.

NOTIFICATION.

The Japanese Government having represented to the Undersigned that the publication of newspapers in the Japanese language by persons who are not subject to the Japanese Press-Laws may be subversive of internal order, and cause grave injury to the public interests of Japan, and the said Government having also requested the Undersigned, on these grounds, to prohibit the publication of such newspapers by British Subjects, the undersigned, Her Britannic Majesty's Envoy Extraordinary and Minister Plenipotentiary in Japan, in pursuance of sections 85, 86 and 90 of the China and Japan order in Council 1865, hereby makes and establishes the following Regulation, and declares that, the same being urgent, it shall, in pursuance of sections 85 and 88 of the said order in Council, have effect in said Consular district in Japan, at the time, and in the manner provided by the said order in Council, unless and until it is disapproved by Her Majesty, and such disapproval is received and published in the manner prescribed by the order in Council aforesaid.

REGULATION.

Any British Subject who shall within the dominions of His Imperial Majesty The Mikado, print or publish a newspaper in the Japanese language shall be deemed guilty of an offence, and upon conviction thereof before any British Consular or other Court shall be liable to imprisonment for any term not exceeding three months with or without, hard labour, and with, or without a fine not exceeding five hundred dollars, or a fine not exceeding five hundred dollars without imprisonment.

Given under my Hand at the British Legation in Japan at Yedo this seventh day of February, A. D., 1876.

(Signed) HARRY S. PARKES,
Her Britannic Majesty's Envoy Extraordinary and Minister Plenipotentiary in Japan.

SPIRIT OF THE JAPANESE PRESS.

EXTRA-TERRITORIALITY.

(Nichi Nichi Shimbun.)

A certain writer says—"It is the Extra-territoriality which "impairs the rights of equality of the Japanese people as towards "foreigners and destroys their independent standing, and, as it is "owing to it that foreigners resident in Japan cannot be made "subject to Japanese law, we are determined to assail that right "on the grounds that justice demands that the power of trial "should be fully vested in the hands of the Japanese Govern-"ment."

Well said, indeed! The preservation by Japan of the name and reality of an independent country consists in the investment in the hands of its Government of the two great prerogatives of trial and taxation. This subject has already been partly discussed by us in the *Nichi Nichi Shimbun* (October 27th 1874) under the title of a "Short Talk about Foreign Intercourse," and therefore we must at once yield to the call of the writer of the above and see if together we can make our attack. Before, however, going forth to the assault with our quill spear it is necessary to make a survey of the nature of this strong-hold "extra territoriality," to consider what are the means to adopt in assailing it, and also to see whether we can find any precedent affording a plan for our present assault.

What is the meaning of the word "extra territoriality?" A says that "it is the presence of the foreign Legations, etc, in our "country while we are not able to impose our laws upon them." B says that "it means the right of imposing our own laws on our "Legations, etc, abroad, though they are not in our territory." The conclusions in the definitions of both are the same though their starting points are different. I do not know which of them gives the true rendering, but the one usually accepted is similar to the explanation given by A. However, let it be which it may, extra-territoriality is in reality the non-subjection to our laws of foreigners resident in Japan, and their government by the laws of their several countries. This privilege being secured to them by the terms of the treaty which is now in force, the usage in accordance with it is supposing that in Yokohama a Japanese is plaintiff in a case against an Englishman, he lays his plaint before the English Consular Court, while, on the other hand, an Englishman with a plaint against a Japanese prefers it to the Judicial Court of Kanagawa, and begs its judgment in the matter. An Englishman in Yokohama is punished for his crimes by English law, and therefore it is just that a Japanese in London should be punished for his crimes by Japanese law. But, though in accordance with the rules of trial provided in the treaties for both parties neither should gain advantage over or suffer loss from the other, and a complete standing of equality should be secured between both, still the observance of these rules during the seventeen years that have elapsed since the opening of the ports has, in opposition to their spirit, given always the profit and advantage to the foreigner and always hurled on the head of the Japanese all the loss and injury; and if we enquire the opinions of foreigners on this subject we shall find that they do not universally approve of this mode of trial in their and our respective courts, and, as a full discussion will shew that the treaty is a convenient means for procuring partiality in cloking offences, it cannot be said to be to the mutual advantage of both parties to it.

The privilege of extra territoriality is in Europe limited to the minister alone, and the first instance of it having been extended from him to the commonest resident in the same country occurred when trade was commenced with Turkey. A reference to history will shew us that, when the Emperor of Rome first assumed the administration of the Government and obtained the sway over a country of immense extent, he was prevented by the dissimilarities of nationality, sects, and customs that existed among the people whom he governed from assimilating in the smallest degree the laws and form of administration throughout his empire, and it was only after the lapse of several hundred years, in the time of the Emperor Justinian, that the celebrated Roman laws were all collected into one digest. The western Empire having fallen and Europe become split up into a number of sovereignties, the title of the Emperor of Rome was given to the eastern emperor in the small territory of Greece, and even Mahomet, after he had made his invasion, did not obtain the same power (as had belonged to the Emperor of Rome) in ancient days. Afterwards, in the time of the Crusades, the then proud people of Venice, strong in both military power and wealth, came to a place opposite Constantinople, the chief capital of the eastern Emperor and separated from it but by a single river, and seized all the trade of the Black Sea and Sea of Marmora. The place to which they came is that where Pera now is. The laws of the Venetians and Grecians were founded upon a similar basis to that of the Roman, but the dissimilarities that prevailed in their origins, manners, language, religion, and customs led to differences in both their laws and forms of administration, and Venetian law was observed throughout Pera. It was only from dread of the military strength of the Venetians that the Eastern Emperor was forced to yield this privilege to them, and this is in truth the first instance we have of the appearance of extra-territoriality.

When the Turkish Emperor Mahomet II conquered Constantinople, the present government of the "Porte" was established. After peace had been established between Turks and Christians, it was important for the interests of the latter that the privilege (of extra-territoriality) should not be done away with, and, it having been, after due conference, obtained from the Turkish Emperor, it has lasted down to the present day. Intercourse with Egypt and Persia is also based upon this precedent, and, it having finally extended to India and China, when, over twenty years ago, the American Envoy Townsend Harris desired to conclude a treaty with Japan, he considered it of primary importance to make this treaty as regards Europeans and Americans similar to that with China.

Now at the time for the revision of the Treaties the Japanese Government should be earnest in its desire to abolish this prejudicial compact of extra-territoriality and, as becomes an independent country, subject all persons resident within its limits, making no distinction between foreigners and natives, to the authority of its laws. To effect the attainment of this wish, it is only required to give some proof of the reliability of the Japanese laws and legal procedure, and if that cannot be done, certainly no amount of intercourse and conference with foreigners can secure the object of our wishes. How do we know this? There is proof that foreign Governments have been forced to make this compact to secure trial in their own respective forms, and that, from the first, they have given careful attention to the great wrongs that have accrued from it, and that finally if there were no substantial obstacles to prevent them doing so they would readily hand over this right to the Japanese Government.

In the year 1862 our ambassador during the course of his mission sounded the opinions of the Foreign Ministers of England and America in his conferences with them in respect to this clause in the treaties, and he was informed by those Ministers that, if the Japanese law and legal procedure were such that their countrymen could be subjected thereto, their Governments would gladly abandon it. Although I would not venture to discuss the reliability or otherwise of the words of the foreigners in this matter, still if we give a calm consideration to their feelings we shall clearly see that a large amount of trouble is caused to them by this clause, Owing to the entrustment of the right of trying both civil and criminal cases to Consuls who are unacquainted with law, a great number of persons allege that they are discontented on account of the mistakes which the Consuls make in procedure, and others again are dissatisfied owing to their inability to obtain their rights in the Japanese Courts of Justice. The complaints that are addressed to the Governments of the different countries on this account are incessant. They are nevertheless unable to establish legal officers at every port and place owing to the immense expense which such a proceeding would entail, and we therefore see that to the Governments also this matter is a source of no small perplexity.

Though for these reasons Foreign Governments cannot fancy that extra-territoriality is a source of profit alone to them, even if to-morrow we commenced our conferences with them for the revision of the Treaties, and promised (to speak briefly) that we should "hereafter reform our laws, hereafter establish laws for "the due protection of human life, hereafter allow criminals "the privilege of an attorney, hereafter establish trial by "jury, and that, as it was our intention to gradually assimi-"late our laws and legal procedure to those of Europe, you "need feel no anxiety in submitting your countrymen to "them; that, as we are sincere in regard to this compact, deliver "to us the power of trial," is it likely that the foreign Governments placing full reliance in these promises would answer "We "shall at once hand over this power to you, and, your Government "having made the above promises to us, we feel not the slightest "anxiety in doing so?" Even if, as the writer says, all the justice of the case in the discussion was on the side of the Japanese Government, still justice would not be acted up to. Certainly our intercourse with foreigners does not afford the example of the performance only of what is just.

If, fortunately, Foreign Governments should transfer to us the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

power of trial, whatever their reason therefor might be, whether they yielded to this argument as to the rights of an independent country or gave credence in their conferences to promises, certainly nothing could be of more importance to us, and the satisfaction that would be felt both by ourselves, the above-mentioned writer, and the Japanese people in that case, would be boundless, but we are still afraid that they are not likely to give this assent. Looking to the present times, seven or eight out of ten of the foreign Governments will certainly say—"Your intentions are certainly "very admirable, but, first reform your laws, first establish safe-"guards for human life, first allow attorneys in criminal cases, first "arrange trial by jury, and if all these are done in your country and "you give proof that our countrymen may be entrusted to you, we "shall at any time whatsoever give up our right of trial in our "Courts." In such a case as this with what arguments as to what is right will our writers controvert this truism? It is probably not the intention of the Japanese Government to go so far as to employ force in continuation of the argument. Even, if it were, it is easy enough to talk of doing so, but it is a determination the carrying out of which is very difficult. As the writer has clearly stated, all countries' laws may not be quite perfect, still it is clear that there are some much more so than others; supposing for example, the Chinese Government were to propose to ours to do away with the right of trial in our own courts, we would certainly refuse to assent thereto. And again, if we came to discuss treaties with Corea, Siam, Burmah, or Persia, we would be careful to argue in the interests of our countrymen on the necessity of extra-territoriality being granted to us, our reasons therefor being that we believe our laws and forms of trial to be by several degrees superior to those enjoyed in those countries. In this way foreigners distrusting Japanese laws and forms of trial do not desire to become subject thereto, and when we consider the opinions that they hold in those respects we certainly cannot accuse them of injustice for doing so.

We have heard from one of our friends a very apposite illustration of this subject. He said that when returning from Europe to Japan he visited in accordance with the Government instructions the countries of Greece, Turkey, and Egypt. These being countries with which Japan has as yet made no treaties, he travelled through them knowing that in doing so he had to subject himself in every way to their laws. During his travels as far as regards Greece he met with no inconvenience, but immediately on crossing the frontier of Turkey, he found that the religion and customs differed entirely from those of the rest of Europe, and he was therefore caused great anxiety by the thought that their laws would also differ in like manner. He imagined that whether sleeping or waking, or even in the midst of friendly intercourse with them, he might unexpectedly meet with some trouble, and he was therefore compelled to appeal for protection to the minister of some one of the Treaty Powers. Ah, certainly Eastern Turkey is no savage country, and if its stage of advancement and its laws were carefully compared with those of our country, we might observe differences as great as those between the laws of *Ro* and *Yei*, two Chinese provinces, yet we would not dare to say they were so great as between earth and heaven. If then you will consider the peace of mind which our friend enjoyed in France and England, and the anxiety which he suffered in Turkey, you will see that the reasons of Europeans and Americans for not suddenly abolishing extra-territoriality in Turkey while they recognise the faults in it, are that they have full grounds for refusing to trust their countrymen to the administration of its laws.

Egypt and Turkey, being thus affected as regards their rights as independent countries in a manner precisely similar to that in which Japan is, have, with the idea of investing the usual right of trial in themselves, repeatedly addressed representations to the different countries of Europe, but the latter in view of the above described state of things have not very readily assented thereto, and at the present day the treaty providing the old imperfect system of trial in the respective (foreign and Turkish) courts is in force. In like manner the refusal of foreigners to place faith in the laws and legal procedure of our country constitutes the stronghold of extra-territoriality, and the plan for destroying the stronghold is to perfect both the laws and legal procedure. If we neglect to do so, strive we ever so much by argument to effect our object, I fancy that we shall be like the Turks, who have always striven therefor and always failed, and down to this day have not overcome the strength of the fortress they attack.

Let us grant that the laws and form of procedure observed in Japan are becoming to the stage of advancement of the Japanese people and suit their customs, the idea of forthwith subjecting foreigners thereto is confined to the arguing that it is just that such should be, but it will never succeed in accomplishing the destruction of the extra-territoriality treaty. Careful consideration of our present condition, too, will show that while we are advancing day by day, and while there is one system of laws which is administered in one court our practice differs from what it was formerly in that equilibrium is not preserved between the two classes of criminal and civil cases. I had anticipated that such would be the case. If you will look at the trial of a civil case at the present time you will see that a public hall where the trial can be heard is allowed, that attorneys can be employed, and that the rights and justice of matters are fully sought out. There is no doubt that we have made a wonderful advance. But if on the other hand we look at the form of criminal trial we shall see that listeners are not yet allowed to be present, that Counsel are not granted to the prisoners, that there is no law to ensure the protection of the prisoner's person, that the decision of a jury is not taken, and that we cannot yet say our criminal has been brought to the same level as our civil procedure by the elision of all the old evils and entire removal of all their traces. It is owing to the different causes that produce the two classes of cases that this difference has arisen. At the present time in the case of a civil matter if there be any difficult point connected with it, the truth of it is gradually sought up to the very roots, and references made to the civil law of Europe and America, while, on the other hand, in the trial of criminal cases, the Chinese law is adopted and we refer for guidance to the laws of Min and To.

If we adhere to this system we shall find that civil law has eagerly advanced to the brightness of the dawn, while criminal law has stopped in the profoundest darkness, a great case of solicitude to us. Even now if Foreigners on good grounds believed in the justness of decisions in civil cases in Japanese Courts, the criminal trials would certainly meet with the greatest censure at their hands. For these reasons the assimilation of our forms of civil and criminal trials is a matter of primary necessity. It may be the intention of the Japanese Government, as I have heard is the case, gradually to reform their laws, and if this is so is it a very strained fancy on my part to imagine that the Government is, by first reducing their laws to uniformity, making preparations for doing away with extra-territoriality?

Do we then say that until our laws and forms of trial are perfected nothing whatsoever can be done towards the abolishment of extra-territoriality? We do not:—something can be done. There is one very efficient expedient therefor and that is what is called a "Mixed Court." One well versed in the ways of the world may perhaps on hearing of this disparage it as a temporary expedient, but, in view of our present condition, is it not better not to argue from high grounds and refuse to withdraw one single step from the stand hold of an independent country, and in the old way lose several steps thereby, but to confine our discussion to a moderate point and by doing so gain by degrees step upon step of advancement? Would not the establishment of a Mixed Court, such as at present exists in Egypt, be the attainment of one step of advancement?

I have heard that Egypt has sworn that even if she shakes off the sway of Turkey she will continue to observe all the treaties that have been made by Turkey with foreign powers, and in those treaties extra-territoriality is secured. Of course the trial of mercantile suits only are held under the rules of the Mixed Court, (for example, a plaint arising from a mercantile dispute between a Turk and an Englishman is tried by a Turkish and English official sitting together) and civil and criminal cases differ in that they are tried in the old way in their respective Turkish or English courts, and the case, as regards Japan under the present treaties, is precisely similar. The evils which Egypt has suffered from this treaty securing trial in their own or foreign courts, as the case may be, are countless, and, in the year 1867 their minister for Foreign affairs, Nubar Pasha, greatly grieved thereat, drew up a memorial to the Viceroy, and fully described therein the evils that were brought about by the system, and at the same time proposed the establishment of the mixed court in very similar way to that in which memorials have till recently been presented by us to our Sovereign. In accordance with the Viceroy's instructions he addressed the several foreign Governments on the subject, and the commissioned officers of those Governments, having met together in Constantinople, for the first time concluded an agreement for the establishment of a mixed Court.

The power of the mixed court in Egypt was limited to the trial of civil cases, their criminal jurisdiction being confined to the trial merely of cases of contempt of court, notwithstanding which by the establishment of that court seven-tenths of the force of extra-territoriality were destroyed. The method of its working is—to take the case of the supreme court which may be composed of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

seven judicial officers—three of these are Egyptians and the remaining four are chosen from the foreign judicial officers (just as lawyers are employed by the Japanese Government). It is only in criminal cases therefore that the Consul has authority, all civil ones being tried and decided in the Egyptian mixed Court. Can this be said to be aught else than the maintenance by Egypt of the status of a country and the revival by it of its rights?

Supposing that we purpose to treat for the establishment of a mixed Court in Japan, if we compare the ease with which we could do so with the difficulties that were experienced by Egypt, we shall find that our respective cases differ as much as heaven and earth. The internal government of that country is entirely at the will of the Viceroy, in its foreign relations it is entirely subject to Turkey, and all advances made by it in that respect serve as grounds of jealousy on the part of the latter country towards it. As a mixed court was not desired by Turkey, every obstacle against the attainment thereof was raised by it in the negotiations. And again, foreign countries did not look upon Egypt in the light of a perfectly independent country, and, at the same time, disliked the union that existed between its religion and Government in accordance with the custom that prevails in Mahommedan countries. As regards our country the case is very different. We are perfectly independent; it is now the time for revising the treaties; administration of the government is not interfered with by religion, and if we propose to establish a mixed court, we believe the difficulties that we should have in doing so would be only half those experienced by Egypt, while, on the other hand, the benefit that would accrue to us would be double what has been gained by that country.

My wish is that the easy establishment of a Mixed Court should be effected by the Japanese Government, and that the authority of this Court be afterwards extended to the trial of criminal cases; that the number of Japanese legal officials in it should be in excess of that of the foreign and that care be taken to prevent partiality being displayed by the latter towards their own Government and people. None of these things are beyond attainment. If we should have the good fortune to obtain this Mixed Court with greater powers than that of Egypt, that will in truth be the carrying by storm of this stronghold 'extra-territoriality,' and if this stronghold be once so carried, the doing away of the Mixed Court itself at a future day when our laws have been perfected will be an easy matter.

For three days now I have spoken of the easy establishment of this Mixed Court and my wish hereby to do away as quickly as possible with the abuse of the system of trial under the extra-territoriality clause. I believe that this is the best means for the destruction of that fortress which both the writer (whom I quoted at the beginning of this article) and I hate, and I beg to ask that gentleman whether he does not think so too?

The British Minister's Notification.

("Nichi Nichi Shimbun," February 10th.)

Those persons who read our issue of yesterday will have observed that as soon as we saw a Notification which appeared in the newspapers in foreign languages at Yokohama, by which Sir Harry Parkes, Envoy Extraordinary and Minister Plenipotentiary for H. M. the Queen of Great Britain, has published a Regulation prohibiting Englishmen resident in Japan from printing newspapers in the Japanese language, we lost no time in translating it and placing it before our readers.

It is plain from the terms of this Notification that the causes why this Regulation has been issued are to be looked for in the question of the suppression by the authority of the Japanese Government of the *Bankoku Shimbun*, a newspaper printed in the Japanese language by an Englishman named Black, and to which public attention has been directed since the beginning of January last. It refers to a communication from and a request made by the Japanese Government, which is a sufficient proof of this assertion.

Mr. Black's printing of the *Bankoku Shimbun*, however, took place in effect before the publication of this Regulation, and if it is to be not only enforced for the future, but is also made retrospective in its action, is it likely that Mr. Black will refrain from complaints. This, however, is a different question, and we do not propose to state our views respecting it to-day.

What is it then on which we propose to state our opinion? It is simply this—that we are gratified to see that our Government has succeeded in bringing foreigners within the pale of Japanese law, and we are sensible that the British Minister has exercised his authority in a reasonable way, and after a full consideration of all the circumstances of the case.

Suppose, for a moment, that this request had been made ten years ago? No matter what circumstances might have been urged by the Japanese Government, nor with what politeness the claim might have been advanced, the foreign Ministers would never have agreed to issue such a notification. When we reflect upon the state of affairs at that time, we feel certain that they would have opposed it. Must it not be admitted that the Japanese people have recovered a certain portion of the rights which they formerly were deprived of in their relations with foreigners?

In whatever way the Japanese Government may explain their action in this affair of the publication of the *Bankoku Shimbun*, they were unable to avoid a difference in the stringency of the repressive action, owing to the difference with which Japanese and foreigners are treated in respect to the very same act or business. They had no other course open to them but to cancel the Press Laws or to cause foreigners to observe them. If we quietly entered into the brain of some writers and tried to gather what was going on there, we should probably find that they believe that the advantage lie with the repeal of the Press Laws and freedom of discussion, rather than with the observance of these laws (by foreigners.) We, however, should be sorry to see a wrongful facility obtained at the cost of having recourse to the protection of foreign influence. In the last days of the Shogunate there were cunning and shameless persons who counted it a clever expedient for the Tycoon's Government secretly to make concessions to foreigners, and were not ashamed to be continually invoking their aid and making themselves slaves to them. This evil gradually diminished after the Revolution, but it had already deeply imbued the minds of the nation, and there were many who of their own accord abandoned their rights, and cared nothing for loss of honor so long as they could gain the ends they had in view. Must not facilities gained in such a way as this be termed wrongful?

We are only poor newspaper editors, but we are at the same time citizens whose ardent hope it is, if possible, with our fellow citizens of the Japanese Empire to stir up a spirit of Independence. Far from taking any pleasure in such abuses, we cannot even bear to look on them. The Constable de Bourbon with the borrowed help of foreign troops seized the throne of France, and Seki kei to, serving the barbarous country of Kittan as an elder brother, ascended to the throne of China: but has the voice of public opinion ever to this day set them down as patriotic men, or as men of an independent spirit? Now what conclusion shall we draw from these historical examples? There is a difference in the importance of the subject, but are they not both cases of seeking the protection of foreigners to the detriment of the national rights and prerogatives and for the sake of selfish gain and convenience? For these reasons we looked forward hopefully to one solution of this question, and did not stop to consider whether the other might not be preferable in so far as our own interests were concerned. The solution which we hoped for has now been attained, and it is not unreasonable that we should be pleased at it.

It is unnecessary to show that the Japanese Government have in this question firmly maintained the principle that Japanese laws should be observed throughout Japan, and that their having ultimately succeeded in causing the English Minister to issue this notification is a result due to their desire to maintain our national independence. On the other hand it must be admitted that in giving his assent to this course, the Minister was acting in a manner worthy of his office. If, unfortunately, his mind had been ever so little affected by motives of partiality, it would have been easy for him to find excuses for rejecting the demand of the Japanese Government. And not only might he have declined to agree to it; he might have without difficulty have found a pretence for supporting Mr. Black. We believe, however, that the Minister's sole object has been to improve the relations between the two countries and to give a substantial proof of his friendly disposition, and that he has therefore, after carefully weighing the various considerations affecting this question, acceded to our demand, and has exercised the authority vested in him in issuing this prohibitory Regulation. It must be admitted that in this matter a great advance has been made towards recovering on some future day our natural rights of jurisdiction.

In the *Japan Herald* (a newspaper in European characters published at Yokohama) of the 8th instant, there is an article in which the writer without entering into these general considerations or enquiring what the duty of a Minister is, has attacked with great freedom of expression this prohibition as a wrongful proceeding on the part of the Minister. (It would be easy for us to translate this article, but it contains numerous reflections on the Japanese Government, and we do not translate it, lest we should expose ourselves to penalties for doing so.) The grounds on which this

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

attack is based are as follows: "If," it is argued, "the English "Minister agrees to issue a prohibition requested by the Japanese "Government on the grounds that anything disturbs the internal "tranquillity of Japan and is injurious to the national interest, "is he to prohibit the Christian religion if requested to do so for "the same reasons? If it is said that commerce is injurious to "the national interests and tranquility, of Japan, is he therefore "to consent to prohibit it? The principle is the same in each "case, and they should not be dealt with differently." It is impossible to look on this as any other than a very forced line of argument, and the reason will be found in our statement that the Minister has carefully weighed all the circumstances of the case. Both Christianity and commerce are matters in which all Englishmen have the strongest possible interest. It is for the general interest of Englishmen and not of one person only that the English Minister should protect their religion and facilitate their commerce. In the present case, to allow or not to allow Englishmen to publish a newspaper in the Japanese language (even granting that Mr. Black is affected by it, he is after all only a single person) is a question of deep concern to the Japanese nation, whereas there is no reason why it should matter a straw to Englishmen generally. We feel assured that if our Government asked the English Minister to prohibit the publication in Japan of new-papers in the English language, he would certainly refuse to do so. Why so? Because the interests of Englishmen generally would be affected by it. England suffers no loss, and Japan gains by this prohibition. Why then should the English Minister not gladly accede to the demand of the Japanese Government, and notify it publicly? For these reasons we have said that the English Minister has exercised his authority in a reasonable way, and after a full consideration of all the circumstances of the cases.

The author of this attack in the *Herald* further argues that "the Regulation sanctioned by the English Government which invests the English Minister in Japan with such powers is an unnecessary one, and that the British Minister has had vested in him the power of both Legislative Houses, and that his authority exceeds that of any of the three elements of the Legislation. There are no regulations of this kind in France, Russia or Prussia, and yet the Ministers of those countries get on well enough without them."

All this may possibly be correct, for aught we know, but we cannot think that it affects very much the present question, and do not see the advantage of discussing it. Sir Harry Parkes, the English Minister, has exercised a power officially conferred on him by the English government and people, and his action cannot impugned. No matter how eloquent the writer in the *Herald* may show himself, or how clever a pen he wields, he cannot contend that because he has shown the injustice of this regulation he has therefore succeed in impugning the action of the Minister in exercising the power conferred by it. In short we judge from this article of the *Herald* that the writer does not understand that a matter must be decided according to the side in favor of which there are the weightiest considerations, and we therefore think that his attack has utterly failed to reach its mark. No doubt it had its origin in a genuine blind British admiration for freedom. Any one can easily see this.

We hope that the vigour shown in this matter may not be relaxed, and that we may go on firmly advancing step by step in bringing foreigners within the circle of Japanese law, and that we may finally place ourselves on a level of equal rights with foreigners.

Political Parties.

(Hioron Shimbun.)

When in 1873 the Cabinet was divided on the question of an expedition to Corea, the elder Saigo resigned his office of *Sanghi* and retired to Kagoshima (Satsuma) his own province. Many of his followers also resigned their places at the same time, and the government has since endeavoured, although vainly, to induce him to return to office. Now the people watch the movements of Saigo very attentively, and augur from it in regard to probable future events. It is said that the Cabinet still recognizes the necessity for keeping the Satsuma clan well in check.

There appear to be two great distinct parties in this country, one of which may be termed the party of the Government, the other the Satsuma party. What must be the result of such a division? When two parties like these are in constant conflict, both cannot continue to exist for any great space of time. Should the Government party be worsted in the struggle, the Satsuma men would take the reins, and this is clear to every one.

When Saigo resigned, the people thought in this wise: Saigo's views differ from those of his colleagues, and he has resigned because it would be incompatible with his sense of honour to remain with them. The act does not spring from any want of interest in political affairs, for if the other *Sanghi* had said that they would adopt his views, he would probably have remained in office. But as the Government again and again tried to induce him to return, the people argued that Saigo was not desirous of working with the present Cabinet. After the meeting at Osaka last year of Kido, Okubo, Ito and others, when Itagaki returned to office, a person well acquainted with Satsuma affairs said within our hearing, "Itagaki has returned to office and will try to work with the present Cabinet, but he will not succeed." And so it has proved, for Itagaki has since resigned; and it is clear that the Satsuma party has its own designs and is averse to the present Cabinet.

Now there are many minor parties existing in the country, such as those who contend for a return to the feudal system, those who clamour for popular rights &c. In fact, there are many parties arrayed against the Government, but they are mostly weak, and their only chance of carrying their wishes or views is to unite with the Satsuma party. What is going on in Kagoshima? and what is Saigo doing? are the principal questions asked by them. Although the views of these minor parties do not coincide at all points with those of the Satsuma men, they clearly lean more towards the Satsuma party than towards the Government. Thus we may expect that all the disaffected will be found at Kagoshima. If the Government wishes to preserve peace in the country, what policy should it adopt? As we said before, both parties cannot long co-exist.

A Few Words to the "*Shidzoku*."

(Chuga Shimbun.)

The old adage tells us that we "must not expect honesty from men who are very ready to proclaim themselves honest, and that those who rely over much upon an air of sagacity are not to be credited with wisdom." The justice of these sentiments has so forcibly struck me that I have been induced to commit the following reflections to paper.

It must be admitted that since the accomplishment of the late Revolution many important reforms have been introduced into our country. But, however much has been effected, we are in many important respects but little advanced. In true wisdom our people have made little progress. The ignorant are still numerous; the wise few. We are without representative institutions by means of which we can make our voices heard. Our manufactures languish, and trade and industry are discouragingly bad. Judging indeed from the small progress we have made in civilisation, we are like a child of three years, and it may almost be said that the very foundations of our constitution are as yet not perfectly laid.

It is this, no doubt, that causes so much anxiety to the patriotic spirits of our noble *samurai*, whose keen glance is ever directed to the proceedings of the Government which they criticise with unsparing minuteness. "The *heimin* (commoners)," say they, "are "ignorant and useless elements in the nation. It is in us alone "that our country can confide to preserve its honour unspotted "and its independence unassailed. We are the 'salt of the earth': "trust in us and all will be well with you." Or again we are told by them that representative institutions should be granted to us, or that this should be abolished or that reformed, and there is indeed scarcely any subject upon which these wiseacres are not prepared to offer their sagacious theories off-hand. Nothing can be more promising than the air of wisdom which they assume in their deliberations, and the patriotic sentiments which garnish their arguments are truly agreeable to the ear of the lover of his country. But looked at a little more closely we discern the unreality of these professions and their obvious want of sincerity, and we are fain to class such *shidzoku* among those whose honesty is too self-conscious to be trustworthy, and whose wisdom is too specious to be sound. Compared with the *heimin* whom they affect so much to disparage, I must confess that they do not appear so greatly to advantage. What will be their plight in the event of their pensions being discontinued? They may be admirable choppers of logic, but can they chop wood? Can they wring a living from the soil? Have they, in fact, any means of subsistence within their reach? I doubt it. They must trust to their fellow-beings to support them, and may, not improbably, someday be found appealing to the compassion of those very *heimin* whom they now profess to hold so cheap. They may indeed prove not only a burden but a menace to the community, and it may thus be that their pensions will be continued to them somewhat longer, in order that they may learn to support themselves by industry. They are now a drain upon the nation; a parasitic growth that robs it of much of its vital energy and power. The sage has well said that "the people must be independent if the country is to be so." Let

the *shidzoku* bear this in mind, and be advised by us to abstain from arguing upon questions in the practical solution of which their present incapacity and inexperience forbid their taking any important share.

Correspondence.

IRON MINES.

To the Editor of the "Japan Weekly Mail."

Yokohama, 11th February, 1876.

Sir,—I observe in Mr. Plunkett's report on the Mines of Japan that he omits to mention the very promising Iron Mine of Naka ko saka at Shimonita, in the province of Joshiu, now being worked under the superintendence of Mr. Waters.

This mine at present is producing over six tons of pig iron a day, and on the completion of the erection of the additional machinery, the yield will be increased to thirty tons a day. The iron is of a very rich quality, equal, if not superior to Swedish. It is worthy of note that this mine is being worked by native capital on foreign principles in a quiet, unobtrusive manner. Considering the importance of the question to Japanese and foreigners, it appears to be not a little strange that it should have been left to the English Secretary of Legation to make the first report on the Mines of Japan and their probable value.

Valuable as Mr. Plunkett's report is, it is naturally incomplete, and I think the public have a right to expect from Mr. Godfrey some account of the work he has been engaged upon in his expensive department for some years past. In any other part of the world the responsible head of a department would be expected to make his report of the work done during the year, so that some idea could be formed as to the progress of the work under his charge.

With regard to the Mining Department, this has now been at work for some years, and all that is known is that large quantities of machinery have been brought into the country by the Department, and it is only reasonable to expect that long ere this some practical result would have been discernible from its work.

I remain Sir,
Your obedient Servant,
OBSERVER.

THE BRITISH MINISTER'S EDICT.

To the Editor of the "Japan Weekly Mail."

Sir,—I take the liberty to address you a few remarks upon this notification, which appears to have afforded the foreign community in Japan ample grounds for diversity of opinion with respect to the soundness of judgment and principle manifested in having recourse to such an expedient under the present circumstances. The edict it must be observed, is not levelled at the *substance* of the matter printed, but purely at the *language*, that is to say, it is immaterial whether the matter printed be perfectly harmless or whether it be of the most seditious character; the offence is the same if it be printed and published in the shape of a newspaper in the Japanese language.

Why is the edict only directed against newspapers? Because, so far, the Japanese have only drawn H. B. M.'s Minister's attention to newspapers; but the same argument that could uphold the propriety of the regulation as affecting newspapers must clearly apply also to books, proclamations, notices of every description, and in fact every printed matter (the translation of the Bible included) provided the matter be printed and published in the Japanese language. But the principle which upholds this regulation does not stop here. Its ramifications and results are far more extensive, for it must apply also with equal force to the publishing publicly by word of mouth of any matter whatever in the Japanese language. The effect of a discourse or speech at a public meeting, or to an assembly of people, is undoubtedly just as great on the audience as the perusal of the same matter in print would have been, and the harm done must be quite as great, if not greater, when the matter be published by word of mouth as when published in print, provided the means of conveying the ideas and thought, viz.: the Japanese language, be made use of in both cases; for, in print, the area over which the tares are sown depends alone on the sale of the printed matter; whilst in discourse it depends on the number of the audience. The two cases are indeed exactly parallel, and the arguments that would support the present regulation must apply to the case first mentioned.

The argument generally adduced in support of this regulation appears to be somewhat to this effect:—'Surely we have no right to incite sedition, to publish matter in Japanese holding up to scorn and derision those in power.' Few indeed will be found, however, who would for a moment advocate that such conduct should be tolerated. The real question would indeed seem to be, Has, under the circumstances, the right course been adopted for preventing such conduct on the part of British subjects? It appears to me that it has not. It should be the substance alone of the published matter that should be aimed at, and the foreigner should, if he merit it, be punished by his own magistrate, if such substance be without such bounds as the law considers proper. How is the nature and character of the matter to be determined, and what matter when published will constitute an offence?

It appears to me that if a foreigner choses to publish matter in the Japanese languege, he should, having regard to the present position of foreigners in this country, be considered thereby to submit the nature and quality of the matter published to the same test with respect to its harmless character or not as matter published by a Japanese would be subject to; and that, on a proper representation being made to such foreigner's magistrate, by the Judges, let us say, of the Superior Court, that such matter was contrary to law and dangerous to the peace of the country, then that such foreigner, on his magistrate being satisfied that such representation was well grounded, should be liable to such punishment for such publication as it might be within the province of the magistrate to award.

This course would allow foreigners free use of the Japanese language, but with the obligation of acquainting themselves with the nature of what matter they might publish without rendering themselves liable to punishment. No doubt there are difficulties in the practical working of such a course, but every possible means should have been tried to legislate for this anomalous state of affairs before resorting to the sweeping measure now under discussion.

I am, Sir,
Your obedient servant,
A BRITON.

[Our Correspondent's method of dealing with the matter would involve us in an inextricable confusion of English and Japanese law, to the latter of which we have nothing, and can have nothing, to say.—Ed. *J.W.M.*]

Law & Police

KANAGAWA SAIBANSHO.

Before Mr. Asaina Kansui, Vice-President.

Monday, 7th February, 1876.

Plaintiff appeared. Neither of defendants appeared personally.

After some explanations, furnished at the commencement of the session by Mr. Antoine, as supplement to the evidence given by him on the 4th inst., the Court proceeded to examine the two Japanese lawyers who are rendering the defendants their assistance.

To all the questions which the Vice President addressed to them with regard to the fact advanced by plaintiff, they either answered that they knew nothing about these facts, or they denied them.

The Court adjourned until the 6th inst., at 10 a.m., when the defendants, Messrs. Yasuoka and Kataoka, will be examined.

Wednesday, 9th February, 1876.

E. Antoine *vs.* Yasuoka Kihachi and Kataoka Koichiro.

The further hearing of this case was postponed until the 14th inst., at 10 a.m.

JAPAN AND COREA.

(THE HOUR.)

Corea is a nominal dependency of the Chinese Empire, and has refused intercourse with any other nation, referring all seekers for trade and intercourse to Peking. They send an Embassy to the Chinese Emperor every winter to give and receive presents, and so far as known their relations with the Chinese Government are friendly. A few years ago an American trading vessel, the *General Sherman*, adventured upon the coast of Corea for commercial intercourse, but the overture was received in a very unfriendly manner, and several of the adventurers were killed, and others imprisoned and maltreated. The United States Minister in China took up the matter with some warmth, and accompanied a portion of the fleet of the Government in Chinese waters to the coast of Corea, for the purpose of obtaining satisfaction, but they were repulsed, and gained neither military nor diplomatic advantage in the controversy with the Coreans, and so the matter has rested without further pressure. The Japanese recently sent an Embassy to Corea to remonstrate against the ill treatment of some Japanese seamen who had been cast ashore there and were maltreated by the natives, but the ruler of Corea refused to receive the Japanese Embassy, reproaching them with having abandoned the costume of their ancestors and adopted European dresses and customs. The result of this rebuff was a threatened invasion from Japan to chastise the Coreans for their inhospitality and incivility. The Coreans naturally applied to the Chinese Government for protection, hence the proposed despatch of Chinese troops for the Peninsula. The population of Corea is estimated at 8,000,000 but as they have absolutely prevented any intercourse with foreign nations up to the present time very little information can be obtained of their condition or resources. Their fortresses on the sea coast were sufficiently strong to repel the American attack made some years ago. The Ambassadors who visit Peking annually are clothed in cotton gowns of their own manufacture, wear straw hats of the sugarloaf pattern, and bear the evidences of cultivation and refinement; they are perfectly independent of the rest of the world, and produce in their hermetic peninsula all that they require. Ever since the emergence of the Japanese from their exclusiveness, they have been "spoiling for a fight" with their Chinese neighbours, and in their recent invasion of the Island of Formosa exhibited but little respect for the Chinese Sovereignty. The threatened attack upon the Corean Peninsula is a continuation of Japanese aggression, and, as they have a superior fleet, the Chinese would not at present be able to compete with them in maritime warfare. In addition to this the Japanese, by the adoption of foreign customs, arms, and military drill, have acquired the friendship of foreigners, and in any conflict with the Chinese over the Corean Peninsula would have the good will and assistance of foreign fleets in Japanese waters, especially of the Russians and Americans. An invasion of Corea by the Japanese would tend to open relations with that secluded people, and as foreign nations, especially the Americans, forced open the hermetically sealed ports of Japan to foreign intercourse, no complaint can be made if Japan in return should attempt to force the gate of the Peninsula. The grievance of the Japanese is precisely the same as the grievance of foreign nations against Japan– the imprisonment and mistreatment of shipwrecked seamen--and as Japan has been admitted into the family of nations, she surely has the right to protect her subjects upon the adjacent coasts. As China has held proudly aloof from friendly intercourse with foreign nations, she can expect neither sympathy nor alliance in any contest in which she may become involved with Japan. On the contrary, the humiliation of China, by the wresting of the Corean Peninsula from her control, by her warlike neighbours, the Japanese, would be looked upon with complacency, if not with favour, by foreign nations; at least, the chastisement of the Coreans for their inhumanity to shipwrecked Japanese is a duty forced upon Japan by her new position as a maritime power; and we have no doubt she will acquit herself well of the obligation, notwithstanding "the drilled Chinese troops which are to be despatched to Corea to repel any invasion that might be attempted by the Japanese."

THE PRESIDENT'S MESSAGE.

(The Spectator.)

It is obvious that General Grant has not yet given up the idea of a Third Term, and we suspect that his new Message will do a good deal to render that proposal, if not agreeable to the people of the United States, at least one the inadmissibility of which they will regret. It is not easy for Englishmen to enter into the deep-rooted prejudice regarding a third term. We are said, indeed, to be a people of very persistent habits, and easily outraged by needless innovations, and the Poet-Laureate has described English freedom as "broadening slowly down from precedent to precedent." Still, we suspect that we should not be so much influenced by a mere negative precedent,– by the accidental absence of any precedent for renewing the Administration of the same Minister after a given number of terms,—as the American people are; and though we do not feel any special admiration for the Administration of President Grant, who has proved himself even less enterprising as a statesman than we had anticipated, we should not be sorry if the Message which has just been delivered to Congress were to take such a hold of the country as to break down this particular superstition. Nothing can be idler than the suggestion that if once a third term be permitted, a Presidency for life might be the result, unless, indeed, all that is meant is that if once a third term be permitted, other renewals might follow in the case of a particular President whom the people trusted, till his Administration happened to be ended by death or old age. Of course, that might be so, and why not? The use of the renewal at stated intervals is not to interrupt an Administration with which the people are satisfied, but to give them sufficient opportunities of terminating one with which they are not satisfied. For our own parts, if our opinion were of any moment, we should certainly wish for an abler statesman and a keener antagonist of administrative jobs than General Grant; but as it is by no means easy to find any man sufficiently known and trusted by the people of the United States to promise a change for the better, we should not be sorry to see an end of that rather silly self-denying ordinance which appears to debar the people of the United States from pleasing themselves for twelve years in succession, though they have no objection to pleasing themselves for eight.

The passage in the Message which is probably intended to win popularity, and certainly well adapted to do so, is President Grant's recommendation to Congress to consider the advisability of adopting a constitutional amendment establishing all over the country free schools, irrespective of race, colour, nationality, or religion, forbidding the teaching therein of religious, atheistic, or pagan tenets, and prohibiting taxation for sectarian purposes. The effect of this amendment would be, of course, to tax very heavily throughout the United States all those who hold religious education to be of the essence of a proper schooling, since they would not be able to avail themselves for their children of the free schools for which they were taxed, and would be obliged to tax themselves still more heavily besides, in order to supply the kind of schools which they preferred. And it is precisely this incidental consequence of the suggested amendment which will render it very popular just now in the United States. The alarm about Romanism, which has almost exhausted itself on this side of the water, is just beginning on the other, and a proposal which in some States would put Romanism at a great disadvantage, and do a good deal, in the case of the poor Irish, to force the children into secular schools, would excite real interest and perhaps even enthusiasm throughout the Union. But we do not suppose, on that account, that it is at all certain to be carried. An American President often proposes changes which the people like to have proposed, and like him the better for proposing, and which yet are discussed for years without being matured, and are not unfrequently put aside in the end. It has been so at least in relation to Civil-Service Reform, and it will, we fancy, probably be so in this case. There are three considerable reAsons which will affect all the States very powerfully, and a fourth which will affect most of them, against any hasty action in this matter. In the first place, there is the general indisposition in the United States to adopt Constitutional Amendments without the most urgent cause. The Constitution of the United States is a sort of Bible to the people, from which they are certainly unwilling to substract, and to which they are almost equally unwilling to add a single iota. Next there is the very deeply-grained objection to any transference of a region of political activity over which the separate States have hitherto retained their control to the domain of fixed national law, in which the legislatures of the States are to have no voice. Thirdly, there is the strong distrust of over-government, and liking for *laissez-faire*, which showed itself in the various ingenious constitutional restrictions on all legislative impulses, and which certainly will not act least powerfully on a subject on which men are so jealous of interference as the mode of educating their children. And lastly, in most of the States it will be felt that the influence of dangerous propagandist faiths, however remarkable, is not one which deeply affects the policy of those States. In New York, and perhaps in California (in relation to the Chinese

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

schools), President Grant's proposal may awaken much more active political passions. But we doubt if the Ultramontane question is at all real enough in any State but New York to startle the American people out of their deep distrust of central authority, and their preference for keeping local affairs in local hands. There is, moreover, one other difficulty which in Europe would be far more important than any we have named, but which is, perhaps, hardly so important in a half-developed society like that of many of the American States, as it would be here,—we refer, of course, to the difficulty as to what "religious, atheistic, and pagan" teaching is. President Grant's proposal of Constitutional Amendment would be wrecked on that rock here. Parliament would at once recognise that questions would always be arising before the tribunals as to whether any particular teaching, as to the era of the Reformation, say, or the conflict of Christianity with Paganism, or the old heathen Mythology was or was not religious teaching. If Paganism is to be banished from the schools, clearly antipaganism must be banished also. Would not, then, any lesson on classical mythology, and certainly on the mythology of India, which assumed that those mythologies were all fables, be contrary to the spirit of the Constitutional Amendment? These difficulties, however, will probably make less impression on the people of the United States, with whom popular education is somewhat "in the rough," than it would with us, And we suspect that the earlier considerations we have named will have more to do with preventing the speedy adoption of the proposed Constitutional Amendment than difficulties more really intrinsic and insurmountable.

The other important element in General Grant's Message is the part which refers to Spain and Cuba, even the studied moderation of which has perhaps a dangerous significance. General Grant is careful to say that he does not see among the Cuban insurgents any sign of such a Government as could be recognised as belligerent, and careful also to express his sincere wish that Spain could herself put down the rebellion, and so save the necessity of interference. But he has evidently no hope of this, and he does not conceal his hopelessness. Nor does he conceal from the people of the United States that the time may be very near when interference of some kind on the part of foreign Governments must put an end to anarchy so prolonged and so dangerous. "I shall feel it my duty," he says, "should the hopes of a satisfactory adjustment, an early restoration of peace, and the removal of future cases of complaint be disappointed, to recommend to Congress, at some not remote period *during the present Session*, what may then seem necessary." Put this together with the very marked and even spasmodic activity in the Navy Yards of the United States, and it sounds very like a serious and carefully-weighed intention to intervene before long, and to intervene authoritatively, in the affairs of Cuba. How far this part of the Message will add to the popularity which the Educational suggestion is likely to cause, it is not very easy to say. The people of the United States are not eager for new responsibilities in relation to the Negro race, and have a great dislike to any increase of the area of the Union by the annexation of islands which it will take a fleet to defend. Still they must see the grave disadvantages of letting matters drift in Cuba, and should the Spanish Government be irritated into taking the initiative, and declaring war on the United States, we imagine that General Grant's third term would be tolerably certain. Even Mr. Lincoln was averse to swapping horses while crossing a stream, and to have a good soldier at the head of the Union during a war with Spain, would be a motive too powerful to give way even before the deep-rooted superstition as to a third term.

THE CENTENNIAL YEAR.

(The Nation.)

Usually the opening of a new year only suggests reflections on the old one. People ask themselves how their situation compares with that of last New Year's Day, how they have lost and how gained, what they have to mourn and what to rejoice over in the twelve brief months. Those, too, who use the beginning of the year as a season for the making of good resolutions are apt to base them on the short experience of the year that has just closed, so that on the whole the New Year's moralizing is not apt to be very profound or far-reaching. Just now, if we were not entering on the Centennial year, most of our philosophers would probably confine themselves to rejoicing over the rapidity with which we had, in 1875, been passing through what is called "the process of liquidation," and over the prospect in 1876 of a real revival of business. We should count gleefully the number of thieves we had detected and punished during the old year, and the number of "rotten concerns" which had been cleared away to prepare for a "healthier condition of trade." We should do it, too, without thinking much of the amount of misery which "the process of liquidation" covers, of the number of cases in which the removal of "dead wood" marks not the culmination of a career of fraud or folly, but the close of a manful and honest strife with adverse fate or personal incapacity, or of the unarmed host behind the combatants who bear the misery of the defeat without the poor consolation of having at least tried to save themselves.

The opening of the Centennial year, however, carries the mind back over many panics and much "liquidation," and through many experiences that are not simply commercial. Hardly anybody of a thoughtful turn has entered on it without asking himself how, not this country simply, but the civilized world, has fared during the century which has nearly elapsed since the Declaration of American Independence. It has probably been asked more earnestly during the past week than it will be asked next July; for we are just now in the midst of a somewhat unhappy winter, and we are at the period of the year in which most people over forty are apt to be grave. Next summer we shall all be so busy in rejoicing, that all questioning will be put aside as inappropriate, even if the weather be cool enough to make it possible.

The very first thing which strikes anybody who compares the Christendom of to-day with the Christendom of one hundred years ago is that North America, as we may call it, while gaining enormously in political force and importance—that is, while rising from the position of a batch of feeble colonies into the rank of a first-class power—has not maintained its moral and social pre-eminence among the nations, if we rule slavery out of the problem. The distance which separated the social condition of the whites of the thirteen Colonies, and especially of those of New England, from the social condition of the population of any European country, as regards personal liberty and independence, moral culture and capacity in the transaction of business, was in 1776 enormous. The first actual observation of the supremacy of law over all classes and conditions of men which the French officers who took part in the struggle ever obtained, they obtained here, and the spectacle which so much excited their surprise would have been equally surprising to the officers of any other Continental power. In France, Germany, Russia, and Italy of that period, either large classes of persons were raised by usage above the law, or the field reserved by law to the discretion of the executive, either directly in express terms, or indirectly by the non-provision of any legal remedy for the abuse of power, was so great that it might be said that there was practically no restraint on the strong but such as the strongest chose to impose. It was, indeed, only in England that men were equal before the law, and that the law was irresistible. But then the equality before the law in England was largely neutralized by the inequality of conditions. Influence, therefore, was more powerful than the law in determining the rights of large bodies of persons. The poor-laws had already demoralized the laboring class by destroying their independence, and all the large chartered towns were close corporations, and contained a real proletariat or mob.

In the Colonies, on the other hand, circumstances had helped both to break down social inequality and to foster individual independence and self-respect in a very high degree, so that an Englishman would have been surprised a hundred years ago by the absence of a peasantry and of powerful men, and the general comfort and intelligence. No European could have come here during or before the Revolution without finding himself in a really new society, from which all that was most objectionable to satirists and moralists in the condition of the Old World was absent. In the last hundred years the advance of Europe in the matter of providing better protection for the individual man, and freer play for his faculties, has been very great. There is no country now in Christendom, except Russia, in which the rights of the citizen are not covered by the law, as administered by independent judges, and in which the arbitrary discretion of the executive is not restrained within very narrow limits. In this very important matter, therefore, the Old World has really caught up with us. America does not now enjoy the pre-eminence in it she did then, although it ought to be said that much of the improvement in Europe is neutralized by the growth of large standing armies and the attendant conscription. In the matter of judicial procedure, also—so important a part of any legal machinery intended for the protection of individual rights—the Colonies occupied the very foremost position reached by the English reformers of the seventeenth and eighteenth centuries touching the value of judicial independence. The ideas of 1776 on this subject have been slowly gaining ground in Europe, and may now be said to be firmly established in all its leading states. On this point, however, our country has not held its own,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

There has been in all the States a greater or less alteration for the worse in the popular conception of the judicial character.

What the European observers and critics said, when the Revolution for the first time revealed to them this new community which had during the previous century and a half been silently growing up beyond the sea, was, that no respectable or enduring political organization could be based on social conditions of such exceeding and primitive simplicity, and that when the protecting and restraining hand of the mother-country was withdrawn, either whatever was exceptional in the social organization of the Colonies would disappear, or the attempt to weld them into an independent political power would break down. It is really the failure of this prophecy—the growth of a state on the foundation laid in the Colonial period, and without any marked change in the fundamental ideas and usages—which we have to celebrate this year. The rejoicing next July will be not over our having maintained the superiority to Europe which was visible in 1776, but over our having created a nation without any marked changes in our moral and social plans and foundations. In that sense, the experiment is universally admitted to be a success of the most striking kind. The government has been carried on on the lines traced out at the beginning, and, whatever else has happened, has become a strong government, whose will is obeyed in all places over which it claims jurisdiction, and which in a trial of physical strength is one of the most formidable in the world.

In considering the things in which the United States has retrograded, or appeared to retrogade, within the century, such as the matter of administration, in which this retrogression is undoubtedly well marked, the main plea of most of the apologists, viz., the influx of ignorant foreigners, is both disingenuous and insufficient. The influx of foreigners has been part of the growth of the country, which has converted the Colonies into a powerful and wealthy state, and made the waste lands a source of strength. Without it, it is safe to say, the purely political side of the experiment, the creation of a first class power, would not have succeeded. To say that we had made no preparation for this state of things, too; that the strain it has put on our system of government is greater than it can bear; and that our political fabric is based on virtue, or presupposes general virtue; and that, when the supply of virtue falls short, things get out of order—is a very feeble and one-sided statement of the case. The foundation of this government is, and has always been, the capacity of the people to see things as they are, and to adapt their legislation to the actual facts of their condition. This lies below all constitutions and laws, and the success of a government, no matter of what form, depends on the amount of it the people possess. There has been a temporary loss or decline of this faculty in the United States during the past seventy years, under the influence of the eager desire felt very soon after the Revolution to put the doctrines of the Declaration of Independence into actual practice, which led first to the remodelling of all the State constitutions, and next to the agitation against slavery. It is safe to say that nothing short of actual demonstration would have satisfied nine-tenths of the American people of the extent of the change which the growth of manufactures and of large cities, and the spread of rapid emigration by the aid of steam have wrought in the character and circumstances of the population. There are many who are still not convinced, and talk fondly of this city as if it were a simple New England town where the deacons and the minister and the "fore-handed men" could have things all their own way if they would only go to the conventions and the polls. Even if this knowledge of the changes in the problem wrought since the Revolution had come sooner, the anti-slavery agitation would have prevented its bearing much fruit, so long and so thoroughly did that agitation absorb the thought and attention of the class into whose hand reforms naturally fall. Indeed, it is safe to say that it is only within five years that the mind of the country has been waking up to the fact that republican institutions, like others, do not work of themselves, and cannot be so constructed as to serve for all time; and we shall probably witness, during the next quarter of a century, a vigorous effort to regain the ground we have undoubtedly lost in all that relates to the administration of justice, the punishment of crime, the collection and disbursement of taxes, the procedure of legislation, and the protection of property against the taxing power of persons who have no interest in it. The proper place of the country, the place which its pretensions in a measure compel it to hold in these matters, is at the very head of the civilized world; and if we of this generation cannot claim it, let us hope our sons and grandsons will be more fortunate.

TWO VIEWS OF THE TURKISH QUESTION.

(Pall Mall Gazette.)

The article contributed by Mr. Freeman to the current number of the *Fortnightly Review* is a record of impressions which may be taken as fairly typical of those likely to be produced upon a sensitive and liberal mind by a near view of the struggle in the Herzegovina. Mr. Freeman has lately returned from the scene of the insurrection, and his just and natural detestation of the abuses of Turkish rule has been indefinitely quickened by intercourse with the near neighbours of the men whom it has driven to revolt. With a great deal of what he has to say on the subject of the insurrection and its cause, it is impossible to disagree. His main position, that the Turk, even after five centuries of European sway, is essentially a mere invader of the territory which he holds in Europe, may be admitted without much dispute, and his description of the character of the invader's government is doubtless accurate. "The so-called Turkish government," says Mr. Freeman, "is no government at all. It has no claim on the allegiance of those whom it calls its subjects. Founded on wrong in the beginning, it has kept on the first wrong to this day. It has never, even after five hundred years, become a national Government. It has never in all these ages had any feeling or interest in common with those of the nations over whom it has borne sway. It has never done for them even those common duties of Government which the worst of civilized Governments does for its subjects. The Turk is still as much a stranger in European Turkey as he was when the land first began to take his name." All this must necessarily be conceded to Mr. Freeman, with much more to the same effect in vindication of the men who have risen against their Turkish masters. These statements are put forth in something of the combative tone of a writer who expects to have to fight for his premisses as well as his conclusion; but they will nowhere encounter serious opposition. Little as he seems to count on any such support, Mr. Freeman would find that ninety-nine out of every hundred of his countrymen agree with him in thinking that the rule of the Turk in Europe is an odious tyranny, and that it provokes and justifies the constant revolt of his Christian subjects.

Thus much, we say, will be generally granted to Mr. Freeman; but with the practical conclusion drawn by him from all this, we and, we imagine, all others of his countrymen who do not suffer a too passionate sympathy with wrong to disturb their judgment are forced to differ. Mr. Freeman thinks that when this has been said all has been said; and that from the misgovernment and oppression of Ottoman rule, coupled with the known or strongly suspected impossibility of any real reform, it follows that Ottoman rule in Europe should be abolished forthwith. He does not in so many words suggest its abolition by force at the hands of other European Powers; but we do him no injustice in assuming that he would be prepared to counsel immediate resort to force for this end. "The Porte," he says, "makes endless promises of reform; but, even if it wishes to carry them out, it cannot. A Mahommedan Government cannot, if it will, give real equality to its subjects of other religions." And he does not hesitate to push this assertion to its extreme consequence. "The Turk must go or he must cease to be a Turk. As he is not likely to cease to be a Turk, it is enough to say that he must go. It does not follow that he need go all at once. From Servia he has gone already. Bosnia and Herzegovina have given him notice to quit, and from them he must go at once. It will be time for him to go from Bulgaria and Albania when Bulgaria and Albania give him notice to quit also. But Bosnia and Herzegovina have made up their minds that they will get rid of him or perish. Which of these two alternatives is to take place is the true Eastern Question." At the risk of coming under the condemnation pronounced by Mr. Freeman on the "gentlemen sitting at their ease in London" discoursing on the Eastern Question, we must avow our conviction that the Eastern Question is something other and less simple than this. Mr. Freeman declares that the question is one which the Powers of Europe have to settle; and he adds that "no one supposes that, if the combined voice of Europe speaks, the Sick Man whom Europe has so long swathed and bolstered up for its own ends will dare to disobey." We, on the other hand, believe that, if this were really so—if there were really certainty that the voice of Europe would compel the Turk to a peaceful resignation of his revolted provinces, the difficulty now troubling Europe would be already solved, and Mr. Freeman would not now be making his impassioned appeal on behalf of men whose wrongs would be already righted, or in a fair way to be righted forthwith. It is, in truth, uncertainty on the very point so confidently assumed by Mr. Freeman that constitutes the gist of the difficulty before us. It is just because many people do suppose that the Sick Man—

Original from UNIVERSITY OF CALIFORNIA

in spite of his sickness, or rather because his sickness is now nearly desperate—will "dare to disobey"—might even be forced to disobey—that Europe hesitates to press upon him too closely. It is feared, and very plausibly feared, that the Turk will not submit to the dictation suggested; and if these fears should be well founded, on what grounds does Mr. Freeman represent the responsibility now resting upon the European Powers as "a responsibility of deciding between good and evil"? Their task, on the contrary, is the far more difficult one of choosing between two evils—the evil of acquiescing in the existence of a tyrannical rule which it is perhaps impossible, as he says, to reform effectually, and attempting to abolish it at the probable cost of one of the worst and most sanguinary forms of war.

The truth is that Mr. Freeman, like many other passionate haters of oppression, is too much inflamed by the spectacle of instant wrong to leave him any cool thought of the probable consequences of a forcible attempt to put an end to it. It may be said that to him injustice is a thing so hateful, that only to discover it is with him equivalent to proving the necessity for its immediate extirpation; forgetting that to the practical politician he appeals to, injustice is only an object of hostility by reason of the misery which it produces, and that to uproot it at the expense of inflicting greater and more widespread misery in the process would be an offence against the first principles of his profession. It is the more necessary to devote our attention to this condition of the problem, because Mr. Freeman has diverted his attention from it altogether. To him it seems all-sufficient to say: The Turk is a tyrannical and oppressive ruler; he must reform or be deposed; he cannot reform, therefore he must be deposed—peaceably, no doubt, if possible, but if not (unless we have misunderstood the whole tenor of Mr. Freeman's article) by force. He declines to weigh against the misery inflicted by injustice the misery which would be inflicted by a great religious war—one of the first symptoms of the outbreak of which might, too probably, be a wholesale massacre of those very Christian populations in whose interests Mr. Freeman is advising that pressure should be put upon the Turk. Should such a war break out, no man could fix its limits; nor could any man undertake to define the area of human suffering in the struggle to which violent intervention in Turkey might indirectly lead between the Great Powers of Europe. We do not yield to Mr. Freeman in sympathy with the unhappy subjects of Turkish misrule; but we do not think their grievances should fill our minds to the exclusion of all other considerations. Some thought and some sympathetic interest should be spared for equally innocent and much more numerous populations whose peace ought not to be lightly broken up in a moment of excessive sympathy for the misfortunes of others. Mr. Freeman, it seems to us, has altogether mistaken the mode in which the question of the Herzegovinian troubles should be approached. These insurgents may suffer deep and bitter wrong, but it is more fitting to treat it as a disease rather than as a wrong. If Mr. Freeman assumes that attitude towards the question at all, it is only to insist on the necessity of immediately applying the knife to the peccant part. But a closer inspection of the case must soon convince any one that the evil cannot be so localized as to render this vigorous treatment of it prudent or practicable. The part is too intimately bound up with the entire organism to make such treatment safe. The whole body would be affected, and violently, if not fatally, affected, by heroic dealing with the isolated part. The case is, in short, not a case for surgery at all. It is a case for medicine, and even, perhaps, for only temporary and provisional form of that. For the present we must be content with palliatives; but even this treatment is better than that which aims at the excision of the part at the expense of the whole.

An incendiary fire broke out at about 3 o'clock this morning at the office of the *Rising Sun*, but fortunately it was discovered in time and soon extinguished. Probably some substance had been saturated with kerosine, packed between the venetians and the window and then lighted. The window was nearly burnt out and the verandah much charred. A large bottle which had contained kerosine was found on the verandah. The glare from the flames attracted the attention of parties living opposite, and if there had been five minutes more delay nothing could have saved the house, when the next one to it must have gone also. No clue has as yet been obtained of the fiendish perpetrators.—*Cosmopolitan.*

ACROSTIC.

THE WORDS.

A prying bore is my Second, you'll say,
But she's everywhere now, she's the mode of the day,
She knows more of the world than it knows of itself,
Of its food, drink, and clothing and ill-gotten pelf.
My First dreads her like poison, and inwardly quakes
When her wise solemn head, at his doings she shakes;
And, grey through his facings, his looks may be seen
When she turns and says to him "Sir, why are you green?"

No. 1.

The man of the day I mean to be,
And all who look out shall see me soon
On the very top of the Gallic tree;
I was higher up once in a big balloon.

No. 2.

Humble and simple to the sight
You may thank me for music's highest flight.
Deem not this boast an empty whim
Without me what were Joachim?

No. 3.

I'm a sort of first cousin this
But shorter, sharper, and more to the point
Than these double acrostics of yours,
That have put my poor nose out of joint.

No. 4.

A favorite Transatlantic notion
Not thought of much this side the Ocean,
For, spite of laws which oft have said so,
Men ne'er were born and can't be made so.

No. 5.

Im nothing, Im never seen.
I'm perfect negation,
Im annihilation,
I never have been!

No. 6.

In days of old when came the tug of war
One song of this was worth a thousand men,
Its music nerved each warrior's fearless heart,
And gave to every arm the strength of ten.

No. 7.

I strove to snatch my rival's flowery crown
And in her stead to rule a nation,
But gone is all my sovereign state,
I'm only now a junction station.

No. 8.

I've favored many a dark design
I've fostered many a plot
Yet innocent of all am I,
Conspirator I'm not.
A guiltless traitor not unsung,
My doom is ever, to be hung.—*Shanghai Courier.*

Shipping Intelligence.

ARRIVALS.

Feb. 7, *Benledi*, British steamer, Buchaman, 999, from London via Hongkong, Nov. 25, 1875, General, to Jardine, Matheson & Co.

Feb. 7, *Augusta*, British 3 masted schooner, Thompson, 210, from Takao, Jan. 4, Sugar, to F. Knoblauch.

Feb. 8, *Menzaleh*, French steamer, Pasqualini, 1,008, from Hongkong, Jan. 31, Mails and General, to M. M. Co.

Feb. 8, *Oceanic*, British steamer, Parsell, 3,707, from San Francisco, Jan. 18, Mails and General, to O. & O. Co.

Feb. 9, *Ariel*, British barque, Fullerton, 340, from Nagasaki, Jan. 25, Coal, to P. M. S. S. Co.

Feb. 10, *Genkai Maru*, Japanese steamer, Conner, from Shanghai and ports, Feb. 3rd, Mails and General, to M. B. M. S. S. Co.

Feb. 10, *Lochleven Castle*, British ship, McKechnie, 602, from Liverpool, Sept. 18, 1875, General, to Chipman, Stone & Co.

Feb. 11, *Gaelic*, British steamer, Kidley, 2,630, from Hongkong, Feb. 2, Mails and General, to O & O. Co.

Feb 11, *Genoa*, British steamer, Corrigall 1,215, from Hongkong, Feb. 4, General, to Jardine, Matheson & Co.

Feb. 12, *Bombay*, British steamer, Smith, 1,325, from Hongkong, Feb. 4, Mails and General, to P. & O Co.

Feb. 12, *Traviata*, German barque, Breckwelde, 270, from Takao, Jan. 14, Sugar, to Chinese.

Feb. 12, *Regulus*, Norwegian barque, C. Holter, 565, from New York, Sept. 6, 1875, Petroleum, to Chipman Stone & Co.

Feb. 12, *Wm. Van Name*, American barque, F. V. Potts, 466, from Nagasaki, Feb. 5, Coal, to P. M. S. S. Co.

Feb. 12, *Nightingale*, American ship, Palmer, 722, from New York, Aug. 14, 1875, Kerosene and General, to Fraser & Co.

MISCELLANEOUS.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

COMMERCIAL INTELLIGENCE.

Cotton Fabrics.—During the past fortnight only a small business has been done, and prices show in most instances a decline. The almost unprecedentedly bad weather has materially interfered with all traffic in the country and clearances are going on very slowly.

In Cotton Yarns only 16 24 "mock water" attracts some attention; all other counts are neglected.

The inquiry for Grey Shirtings has been very limited, and stocks are again accumulating. 7 lbs. T. Cloths continue saleable in small lots, whereas 6 lbs. do not find buyers.

Black Velvets are moving in moderate quantities at about former prices. Taffachelass are quite unsaleable. The tendency of our market for Yarns and grey goods continues to be downwards.

Grey Shirtings:—				White Shirtings:—			
7 lbs.	38½ yds. 39 in. per pce.	$1.90	to $2.20	60 to 64 reed 40 yds. 35 in. nom. per pce.	2.20	to	2.40
8 lbs.	38½ yds. 44 in. „	2.20	to 2.50	Turkey Reds 24 yds. 30 in. 2¼—3 lb. per lb.	0.75	to	1.02½
8 lbs. 4 to 8 lbs.	38½ „ 39 in. „	2.20	to 2.50	Black Velvets	8.50	to	9.50
9 lbs.	38½ „ 44 in. „	2.50	to 2.90	English Drills 15 lb. 40 yds, 30 in.	3.25	to	3.40
				Taffachelass 12 yds, 43 in. *nom.*	2.00	to	2.25

Yarns.—

No. 16 to 24	per picul	$30 50	to 33.00	No. 38 to 42	per picul	$41 50	to 44.00
No. 28 to 32	per picul	$35.00	to 39.00	Reverse Twist 16-24	„	$34.00	

Woollens.—The market continues in the condition reported in our last weekly issue and shares the general languor of local business.

Plain Orleans	40—42 yds. 32 in.	6 50	to 8.00	Figured Mousseline de Laine	30 yds. 30 in.	0.25	to 0.28
Figured Orleans	29—30 yds. 31 in.	4.75	to 5.25	Multicolored „	30 yds. 30 in.	0.35	to 0.40
Chimagoro	30 yds. 30 in.	5.25	to 5.75	Cloth, all wool plain or fancy	48 in. to 52 in.	0.80	to 1.20
Italian Cloth	—30 yds. 32 in.	0 25	to 0.33	Presidents	54 in. to 56 in.	0.60	to 0.70
Camlet Cords	29—30 yds 32 in.	6 25	to 7 25	Pilots	54 in. to 56 in.	0.40	to 0.45
Camlets Asstd.	56—58 yds. 31 in	18 50	to 19 00	Union	54 in. to 56 in.	0.40	to 0.65
Lastings, Japan	22—30 yds. 32 in.	13 00	to 14.50	Blankets, scarlet & green 7 to 8 lbs.	per lb.	0.40	to 0.41
Plain Mousseline de Laine	—30 yds. 30 in.	0.19	to 0.20				

Sugar.—No further arrivals from Formosa have taken places since our last. Sales of 5,300 piculs Takao at $3.50 to $3.52½ are reported. China kinds are unchanged.

Sugar:—Formosa in bag	per picul	3.30	to 3.55	China No. 5 Kong-fun	per picul	4.10	to 4 60
in Basket	„	3.25	to 3.40	„ No. 6 E-pak	„	3 60	to 3 90
China No. 1 Ping fah	„	7 20	to 7 30	Swatow	„	2.40	to 2.60
„ No. 2 Ching-pak	„	6.40	to 6 80	Daitong	„	2 80	to 3.00
„ No. 3 Ke-pak	„	5.70	to 6 20	Japan Rice	„		
„ No. 4 Kook-fah	„	5.00	to 5 50	Kerosine Oil	per case	2.30	to 2.32

Silk.—One evidence of the unprosperous state of the Silk trade among the Japanese is that the number of native brokers being still nominally about twenty, the business of this market is actually done by one fourth of that number. Now that four-fifths of our probable total export for this season has already been shipped, native dealers can the better afford to hold for improved rates as their stocks are in the hands of fewer sellers, a combination among whom has resulted in a further advance of $10 on medium and common Hanks and Oshiu.

Checked by higher rates, settlements since the 27th ulto. have been only 175 bales of Hanks, and 125 of other sorts. Arrivals are small, and the continued drain of inferior silks on our stock by native mauufacturers has reduced it to 700 bales.

The shipments of the fortnight are 358 bales, making the total export since 1st of July 10,583 bales against 7,955 last year for the corresponding period.

Tea.—During the fortnight that has elapsed since the date of our last mail issue a current business has been done, principally, however, in the lower grades. These have been and still are more than sufficient to meet the wants of buyers, but the supplies of really good Teas appear to be getting exhausted, and at the moment are very difficult to meet with.

Settlements are estimated at about 4,000 piculs, but we see no reason to alter our previous quotations.

The *China* on the 30th ulto., took 147,471 lbs. for San Francisco, and 175,443 lbs. for New York and Eastern cities. The *Robert Kelly* left for San Francisco on the same day with 97,997 lbs. These cargoes bring up the total export from this to in round numbers seventeen and a-half millions, and with that from Kobe five and a half millions make a grand total of 23,000,000 lbs.

The *Rona* is expected to get away about the 15th inst and there seems every probability that our total export for the entire season will approximate very closely to an original estimate of 25,000,000 lbs.

Common	$14.00	to 18 00	Fine	Nominal.	
Good Common	19.00	to 22 00	Finest	„	
Medium	24 00	to 26.00	Choice	„	
Good Medium	28.00	to 30 00			

Exchange.—Sterling Rates continue to decline, with a very small business.

Gold Yen are higher and very scarce, while *Satz* have declined, touching 412 but closing a little firmer.

THE GREATEST

WONDER OF MODERN TIMES!
HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!
HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

May 17th, 1873. 6m.

THE

Japan Weekly Mail

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 8.] YOKOHAMA, SATURDAY, FEBRUARY, 19, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

DEATH.

On the 7th instant, at Osaka, from hemorrhage, THOMAS GRAY, Resident Engineer, Imperial Government Railways,—aged 32 years.

Notes of the Week.

No further news from Corea has been received during the week, but there is the best reason for believing that the Chinese have disclaimed any intention of interfering in the Corean question, and they are even understood to have concurred in the justice of the Japanese demands. This must relieve the Japanese Cabinet from some little anxiety, and tends to strengthen the position of the Government in the eyes of its subjects. But there is apparently no relaxation in the preparations necessary for strong measures in case they should be needed. It is observable that according to our report from Yokoska H. M. S. *Dwarf* has left Nagasaki for Corea.

The attention of the public has been most painfully drawn this week towards an inquest held upon the body of a Mrs. Hatton, a married woman resident here but separated from her husband. The objections to an analysis of the case and any lengthened comments upon it, seem to more than counterbalance any advantage which would accrue from such a course. But the facts are such as to warrant extremely ugly suspicions. There is no evidence to prove that the course adopted by Dr. Klotz was not necessary; but the convergent testimony of the medical men examined left no other course open to the jurors but to record their conviction that death was due to want of sufficient attention to the case. Beyond this evidence we refuse to go, though it will leave many unsatisfied. The medical evidence was extremely unsatisfactory in certain respects, though we entirely agree with a correspondent who singles out that of Dr. Eldridge for commendation. It appeared impossible to obtain from the doctors an opinion that the demand for $200, to be paid beforehand, for an operation from the effects of which Dr. Klotz said that Mrs. Hatton—a laundry-woman, though in a good way of business—would recover in a few days, was excessive; and we are most strongly of opinion that no professional etiquette whatever should have prevented the most distinct expression of opinion in regard to the amount and conditions of this demand. There ought to be no doubts whatever left on the mind of society that doctors are, or conscientiously purpose and try to be, benefactors to mankind, not vultures who hover over human infirmities. "The labourer is worthy of his hire"; but at the very least he *should* be worthy of it. The whole case is most distressing and most disturbing.

The necessity for referring to a Japanese Court all claims and questions arising to foreigners from the transaction of business with the Mitsu Bishi Company, promises to receive a satisfactory solution earlier than could have been expected. The Mitsu Bishi Company proposes, and binds itself by the form of a new Bill of Lading about to be issued, to refer any such claims or questions to two arbitrators, who of course will be foreigners. The clause will be as follows:—

Every difference which may arise between the parties to this Bill of Lading touching the construction of all and singular of its clauses, or as to the rights and liabilities of either party thereunder or in any wise relating thereto, shall be referred to two arbitrators, one to be named by each party, and in case of their disagreement then to an umpire to be chosen by the arbitrators previously to entering upon the consideration of the matters referred to them; and in case either of the parties shall neglect to name an arbitrator for the space of seven days next after a notice in writing so to do shall have been given to him by the other party, or shall name an arbitrator who shall refuse to act, then the arbitrator named by the other party may make a final decision alone.

We publish in our present issue an interesting addition by Dr. Geerts to his previous contributions on the minerals of this country and the mode in which they have hitherto been dealt with. His present paper on *Gold* may be said to supplement usefully the report which Mr. Plunkett, H. B. M. Secretary of Legation, furnished recently to the English Government, and confirms the general impression that its production at the present rate of labour can leave no sufficient margin to the workman engaged in alluvial washing, while the statement that the outlay on account of the Sado mine exceeds the value of the gold obtained is not calculated to encourage quartz-mining. It is understood that the Government has shown some sensitiveness to the depreciatory observations with which Mr. Plunkett concludes his report, and the scepticism which is apparent throughout it as to the mineral wealth of the country. But as that gentleman acknowledges the cooperation and aid of the Minister for Public Works, in giving him access to departmental documents, and in authorising the communication of official returns by the foreign head of the Mining Office, we must consider this report unfounded. The country cannot really suffer from the light now shed upon the subject by foreign observers, disappointing though their criticisms may be to those who have nursed a faith in unreal and supposititious wealth hidden in the bowels of the earth. The same science which melts the harmful delusion is capable, if tried, of giving in exchange the knowledge that will enable its possessors to turn to account the many resources which, wisely studied and developed, may one day enrich this yet truly uninstructed country.

The policy of the Gas Committee is all wrong. It is a question between a little more money on the one side, and much more convenience, safety, decency and economy of curses, not loud perhaps but deep, on the other. There is no principle involved in standing out against the demand of the Gas Company. What we want is light. If we can't get it for guinea, let us pay five-and-twenty shillings and have it. It may be annoying to have to give in to a high charge, but no one in his senses will starve because he has to pay sixpence for a penny loaf. Practically we are starving for light with the sixpence in our pockets. Money sometimes costs too much.

The *North China Herald* in a recent issue made some reflections upon the alleged illiberality of the P. M. S. Co. in not reducing the rate of freight charged upon the articles sent from China to the Philadelphia Exhibition. All ground of complaint on this score has since been removed by an order from New York to take the exhibits at half freight and the first-class passengers attached to the mission in charge at half rates.

From the "Japan Mail Daily Advertiser."

Some 8,000 packages of cargo have now been recovered from the wreck of the *Surprise*, which have been landed at the Imperial Dock-Yard at Uraga. The wreck lies upon a sandy bottom close to the entrance of that harbour, and there is but little hope of raising it. The assistance of divers will be necessary to save the remaining portion of her cargo.

One of the representatives of Foreign Powers has, it would seem, expressed a wish to obtain the use provisionally of a plot of land at Uyeno in Yedo, for the purpose of laying it out as a pleasure-ground. The *Nichi Nichi Shimbun* from which we take this intelligence does not mention the Minister's name nor the reception given to his application.

A pupil of the Père Nicolai was examined by the authorities of the Yedo Saibansho on the 10th instant on the charge of having writen an offensive letter which has appeared in the *Saifû Shimbun*. Both the judge and the accused would seem to have been highly excited, and the arguments on either side grew so warm that the former deemed it wise to close the controversy by ordering his adversary to be bound and thrown with prison.

The Football match, Residents against non-Residents, on Saturday terminated in the victory of the former after an exciting game.

A Committee of seven members of the *Dai Shi In* has, it would appear, been appointed to investigate the circumstances of the recent collision between the *Nagoya Maru* and the *Osaka Maru* in the Inland Sea.

A fire which occurred at Numadzu, near Hakoné, on the Tokaido on Saturday, destroyed ten houses.

The *Akebono Shimbun* mentions a great increase of activity in the manufacture of gunpowder.

The *Nichi Nichi Shimbun* has had intelligence of the prevalence of small-pox at Osaka and in the Okita *ken*.

While there is apparently no cessation of activity in the preparations for hostile operations should they be necessary, there is an impression in the capital that the intelligence last received from Corea gives much hope of a peaceful settlement of the difficulty. The uncertainty which exists has paralysed native business, and the announcement of continued peace would be welcome to all.

The *Choya Shimbun* announces that certain foreign residents of Osaka contemplate the establishment of a line of steamers to run thence to Yokohama. This is apparently untrue.

We read in the *Hochi Shimbun*:—An agent of Shimada, the banker, who failed recently forwarded by a messenger to Mr. Inouyé during his visit to Ozaka a present of 5,000 *yen*. Mr. Inouyé declined the offer, but on his return to his employer the messenger persisted in declaring that the present had been accepted. The case is now under investigation by the authorities.

Severe punishments have again been inflicted for recent infractions of the Press Laws, the editor of the *Choya Shimbun* being fined 150 *yen* with eight months imprisonment, and the manager of the same journal 100 *yen* with four months. The latter gentleman, Mr. Narushima, was at one time tutor to the late Tycoon.

The Local Government of Hiogo having advertised for the services of forty seamen at the wages of 13 *yen* per month, received 200 applications for work. The purpose for which the men are required is not mentioned by the newspaper from which we take the intelligence.

Disturbances are said to have occurred in Ehimé *ken* in reference to a change in the collection of the land-tax, and the *Daijô* of the Naimushô (Home-office) has proceeded thither to investigate the grievance.

The *Akebono Shimbun* gives a rumour that eight new clauses will shortly be added to the press laws with the view of providing against the use of parable or figurative expression in political writing. The administration of the law, which until lately has been somewhat mildly construed, will also be rendered more severe. It is stated that the law will be altered so as to comprehend public lectures within its scope.

On the 14th instant, the late editors of the *Nichi Nichi Shimbun* and the editors of the *Hioron*, *Akebono* and *Saifu* newspapers were called to the Saibanshô to answer a charge of contravening the Press-Laws.

The native papers assert that Mr. Mori's first interview at the Tsung-li-yamen has been a satisfactory one; that the Chinese repudiate all idea of an intention to interfere in Corean affairs, and that they quite agree in thinking that the late acts of the Coreans justify the Japanese demand for explanation and reparation.

The *Hochi Shimbun* has learnt that the *Seiki*, a man-of-war recently built at Yokosuka, is now in course of repair. The writer has heard that her boilers have been placed above the water level, which he thinks a serious mistake in the case of ships of war.

An attempt to burn down the printing office of the *Nagasaki Express* was made on the 2nd instant. The fire was fortunately discovered before it had made much progress and was extinguished without difficulty. The paper says:—

That the object was the destruction of the plant, and not, as is generally the case, for purposes of burglary seems to be very conclusive; for no attempt was made to burst any of the fastenings of the doors, while the idea of running such risks of capture, for the mere gratification of a handful or a pocket of type seems too absurd to be entertained for one minute. That it was done by some person acquainted with the office, either personally or through the instructions of others, may be inferred from the fact that it was fired on the side of the office where all the valuable type is usually cased and where the damage would have been most effectual. However, the matter is now in the hands of the police and every effort will be made to capture the perpetrator and his accomplices if any.

The *Mainichi Shimbun* has heard that an alteration in the salaries of Government officers is in contemplation, but has failed to learn whether they are to be increased or diminished.

The *Hochi Shimbun* notices the threatened bankruptcy of Hizen Ya, a well known native mercantile establishment in Yokohama. Its difficulties, it is rumoured, have been caused by the legal proceedings taken against it by a foreign coal-merchant.

The Peninsular and Oriental Steam-ship *Sunda*, bringing London mails to the 7th January, left Hongkong for this port yesterday morning, the 17th inst., at 6 A.M.

Three of the pupils of Mr. Narushima of the *Choya Shimbun*, whose sentence to fine and imprisonment we recently recorded, have offered themselves as substitutes to serve his term of punishment. It was explained to them by his friends that the law does not accept vicarious service. The youths are all less than fifteen years of age.

Preparations for the equipment of the artillery are, the *Hochi Shimbun* says, being made with all speed. Some 70,000 small arms and 15,000 pairs of infantry shoes are also ready, and the storehouses are being enlarged so as to facilitate the preparation and despatch of military supplies.

The Department of Public Industy is making experiments in the deodorisation of field manure at Fukagawa in Yedo, sulphuric acid being used for the purpose. The waste of ammonia is now only too apparent to the foreign pedestrian, and it will be well if, in the large towns at least, some means to stop it can be found.

The Marines on the war ships *Riogo*, *Adzuma* and *Chiyoda* now stationed here, some three hundred in number, have been inspected recently with a view to ascertaining their fitness for active service.

With the view to the exclusion from the native law courts of weak or ignorant practitioners, the Government has decided to institute examinations for the purpose of determining the competency and knowledge of native law possessed by those who propose to become its exponents in future.

A short time since the discovery of a diamond, said to weigh seven pounds, was reported in a native newspaper. The finder has not as yet succeeded in meeting with a purchaser for his bulky gem, which he values at seven to eight millions of dollars, but is said to be spending large sums of money in anticipation.

The *Hochi Shimbun* notices the shipment from the port of Shinagawa of rice sold by the Government. A vessel, the *Mary Blair*, is now loading there for Australia.

Some 4,500 cases, each of the value of 25 *yen* of half *sen* copper coins were delivered in Yedo on the 17th instant from the Osaka Mint.

A telegram from Shanghai which is given in the *Nichi Nichi Shimbun*, reports the capture there of the former treasurer of the Ibaraki *Kencho*, who recently left Japan taking with him a large amount of Government monies.

IMPERIAL GOVERNMENT RAILWAYS.

One of the funniest instances of a fraudulent trade label which we have yet seen was brought to our notice this week, our old acquaintance "Sugar of Lemons" or "Portable Lemonade" being the medium. This material has reached this market of good quality from both America and England, the labels being so much alike that one is probably fraudulent in law, though we are not in a position to say which is in fault, and it has long been known that the esteem in which the article was held had led to the manufacture of Japanese imitations. The tin before us is smaller in size than the foreign ones, and the edge of the lid slides inside the top instead of outside. The pictorial illustration on the label is a sufficiently good copy to deceive on the shelf of a shop, but on taking it in hand it is at once seen that the apparent letter-press is a pictorial illustration also, and evidently drawn by somebody totally ignorant of the distinctions between one Roman letter and another. The only things decipherable are two devices, one of which is evidently meant for "Direction" and another which might be intended for either "Boston" or "London" the likeness being, however, rather more to the former than to the latter so that we suppose an American label was the original studied.—*The Hiogo News.*

THE BRITISH MINISTER'S NOTIFICATION.

(No. 2.)

PERHAPS the most surprising feature of the contraversy which has been excited by the issue of Sir Harry Parkes' recent notification prohibiting the publication of newspapers in the Japanese language by British subjects, is the wide-spread ignorance it has revealed of the nature, and even the existence, of the Order in Council under which British subjects in Japan are governed. Given, this surprising ignorance, of course the panic created by the notification need cause no great wonder. But it is not the less curious that a large body of men singularly jealous of their rights and liberties—and quite justly and properly so—should find themselves one morning in a position which makes a number of them imagine and cry out that all their boasted liberties are shams, and that they are, for all practical purposes, under as arbitrary a rule as the subjects of a despotic Government; and all this by reason of an act of their Minister, the grounds of, necessity, and justification for which are as plain as the letters of the alphabet. Of course it is rather humiliating to some of us to find ourselves in the presence of foreigners of many different nationalities, including the Japanese, and hear it proclaimed that we are slaves and that all our boasted liberties are as filthy rags. We have the consolation indeed of knowing that such talk is preposterous nonsense; but we are not the less ashamed of it—not the less disturbed at the silly forms it has taken, its blatant character, its utter idleness and want of solid foundation.

In treating of this recent notification last week, we dealt chiefly, as seemed then most desirable, with the grounds of reason and natural justice which it might be presumed animated our Minister in issuing it. Our reference therefore to the Order in Council itself was necessarily very meagre, and those who have been content meanwhile to harden their erroneous conclusions regarding its alleged arbitrary character, instead of dissipating them by a study of the Order itself, have worked themselves up into a kind of frenzy for which there is the smallest possible ground. By this means they have produced an impression, among other than British subjects, that Englishmen in the East are seriously curtailed of their rightful liberties by their own authorities, and that their Minister wields a power over them which is at once dangerous, humiliating and unconstitutional. We propose in the few following words to show how groundless are these fears, and how carefully the liberties and rights of English subjects have been guarded in this Order in Council which has so erroneously been regarded as an engine of arbitrary power.

Before doing this, however, we may make a remark the justice of which must be estimated by our readers, but which a very fair experience of life has strongly impressed on our mind. In no country in the world is the feeling of the average government official so much in harmony with that of the mass of the people as among officials in England. Of the abject and slavish fear which the Oriental feels towards an official, of course we know nothing. But we are also as entirely free from that timid and subservient habit of mind in respect of the instruments of government which a very moderate experience of life on the continent of Europe soon reveals. In spite of the strength of the doctrine of equality, which is a great living force in France, the relations between official and unofficial Frenchmen are marked by attitudes of mind which betray something of that antagonism which exists between the depositaries of a somewhat arbitrary power and those over whom

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

it is wielded. The English official, on the other hand, is as a rule, as sturdily constitutional as those towards whom he stands in an official relation. He is quite as willing, or even anxious, to point out to them the extent of their liberties, and the limits of his own powers, as to show the extent of those powers. The official of the Continent is before all things an official; in England he is before all things an Englishman. In one case he is the depositary of a certain amount of power; in the other he is himself the possessor of certain rights, and the exponent, almost the guardian, of those rights for others. We are sure we shall not be understood as saying this in any boastful or invidious sense. Nothing can be further from our intention. The explanation of the fact—if such it is admitted to be—is to be found in the concluding sentence of a speech recently delivered by M. THIERS, the exact words of which, indeed, are not within our reach, but the sense of which is, that while all the Governments of Europe are now engaged making organic reforms in obedience to the great progress of political thought during this century, England alone is exempted from this necessity, because the large freedom admitted into her polity in its early history has brought all these reforms gradually in its train.

The bearing of these remarks is this: It is *à priori* wholly unlikely that an English Minister, wherever placed, would stretch his own power unduly, or curtail other English subjects of any of those rights and liberties of which he, as an Englishman, is as proud and jealous as they. And any one who is at all familiar with the history of foreign intercourse with this country must be well aware that no one has more vigilantly and determinately withstood the insidious attempts which have more than once been made by the Japanese to deprive foreigners of the rights guaranteed to them by the treaties, than Sir HARRY PARKES. While some other Ministers have either failed to detect or have yielded to these, he has always been foremost in insisting that those treaties, at least as far as British subjects were concerned, should be carried out to the letter. Thus far, the argument from antecedent probabilities that there existed a good reason for the issue of this notification. But we must turn to the Order in Council itself, and see how far it bears out the character which we attributed to it last week.

In the first place, then, the preamble of the Order shows that it had its origin most constitutionally in two Acts of Parliament, the 6th and 7th Vic. c 80 and 94, the objects of which were to ordain laws and ordinances for the better government of British subjects in China and Japan, and particularly, as we pointed out last week, for the more efficient and regular administration of justice among them. Such being the authority for and the objects of the Order, it was made with the advice of the Privy Council, a body which embraces a large number of the best authorities upon constitutional law. The 4th Clause of the 2nd Section of the Order declares that, "Subject to other provisions of this Order, the civil and criminal jurisdiction aforesaid, shall, as far as circumstances admit, be exercised upon the principles of and in conformity with the Common Law, the Rules of Equity, the Statute Law, and other Law being in force in and for England." And the 6th Clause says "Except as to offences made or declared such by this order, or by any Regulation or Rule made under it, any act other than an act that would by a Court of Justice in England be deemed a crime or offence, making the person doing such act liable to punishment in England, shall not, in the exercise of criminal jurisdiction under this Order, be deemed a crime or offence making the person doing such act liable to punishment."

It is obvious that this last provision was necessary. The laws of England could not be expected to provide for all the novel relations into which British subjects are brought by the treaties in virtue which they reside in foreign countries under the jurisdiction of their own authorities. The contemplation of these relations was not within the scope of those laws, and it is difficult to see how the offences liable to arise out of them could be provided for except by such machinery as an Order in Council having its origin in parliamentary sanction.

Passing over the succeeding sections of the Order as foreign to our present purpose, though they are well worth study as showing how scrupulously the lines of the Common Law are preserved throughout, we come to Section VII, headed Treaties and Regulations, the 85th Clause of which is as follows:—"Her Majesty's Minister in China" (the 90th Clause extends the operation of Clause 85 to Japan) "may from time to time make such Regulations as seem fit for the peace, order, and good government of British subjects in or resorting to China, and for the observance of the stipulations of Treaties between Her Majesty, her heirs or successors, and the Emperor of China, *and for the maintenance of friendly relations between British subjects and Chinese subjects and authorities* &c., &c." This appears a large power, and would, if unqualified, justify any amount of apprehension, remonstrance and resistance. But, of course, it is most strictly guarded. The whole genius of our polity is based upon the noble theory that the largest measure of freedom which it is possible to give to men, shall be given to them; that the very *minimum* of the quality of unexpectedness or arbitrariness, even in the power to meet emergencies, shall be retained by our authorities. This theory is not one held by the people as opposed to their authorities. It is, of course, the outcome of the genius of the masses of our race, or of those who have represented them in their struggles against arbitrary power. But it has become the theory alike of governors and governed, and the one feels as much pride and confidence in it as the other. And thus it is that this power is guarded. The same clause which gives it to Her Majesty's Minister, says:—"Any such Regulations shall not have effect unless or until they are approved by Her Majesty, such approval being signified through one of Her Majesty's Principal Secretaries of State,——save that in case of urgency, declared in any such Regulation, the same shall have effect unless or until they are disapproved by Her Majesty, such disapproval being signified through one of Her Majesty's Principal Secretaries of State, and notification of such disapproval is received and published by Her Majesty's Minister in China." It will be observed that the urgency of the case for which the British Minister had to provide, is expressly stated in his notification, agreeably to the terms of the Order in Council.

Again omitting such matter in the Order as is irrelevant to the present issue, we come to Section XI, which contains Clause 100. This clause is framed so as to protect the Japanese from offences which might be committed against their Religion. It is over long for reproduction here, and we must refer our readers to the text itself. But thus much we must quote as bearing upon our argument of last week:—"If any British subject is guilty of * * *" or of wilfully committing any act tending to bring any such religion or its ceremonies, mode of worship, or observances into hatred, ridicule, or contempt, and thereby to provoke a breach

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

of the public peace, he shall be liable &c., &c." The next clause provides, indeed, that "every charge against a British subject of having committed any such offence shall be heard and determined in a summary way;" but it is added:—"Her Majesty's Consular officers" (and therefore *à fortiori* Her Majesty's Minister) "shall take such precautionary measures as seem to them proper and expedient for the *prevention* of such offences."

We have been careful to give this clause of the Order because it shows the difference between the manner in which careful, wise and responsible men treat questions of this gravity, in opposition to the frivolous manner in which it is handled by ignorance and fanaticism. We asked last week whether the religion, the customs and laws of the Japanese people were to be held up to ridicule and scorn by any irresponsible person who commenced his career by an act as certain as the succession of day and night to endanger the friendly relations of the two Governments. And, in reply, we are asked whether ignorance and superstition are not to be met with their natural weapons, enlightenment and true religion, and to be swept away to make room for a better order of things. In reply again we answer; Assuredly not, if this involves the employment of unlawful means: Assuredly not, if the process is to involve the destruction of friendly relations between the subjects of the two Governments: Assuredly not, if the good done in one direction is more than counterbalanced by the mischief done in another. Upon whom would this inevitable destruction of our present friendly relations react? Upon every foreigner in this country, be he trader, missionary, or professional man of whatsoever class. It would engender a bitter feeling against foreigners which would work more harm in a month than could be repaired in years. It would arouse the Government and the people alike against us, nor would it be possible by any representations or protestations to make either believe that we possessed one vestige of the sense of justice.

It has been contended that it would have been more in consonance with English law and feeling to wait for an overt act committed by the paper, or any such paper, tending to the disruption of our friendly relations. We reply that the very publication of the paper in the Japanese language under the claimed exemption from Japanese Press-laws would have produced this effect. It would hardly have been possible by any writing whatever to aggravate this consequence: impossible by any subsequent writing or conduct, however conciliatory, to obliterate the sense of wrong and insult inhering in the very existence of such a journal and attaching to its illegitimate origin.

It has been contended that in a somewhat analogous case, H. M.'s Consul at Shanghai took an altogether opposite course. The circumstances, so far as we are acquainted with them, differ considerably, though we cannot now undertake to show in what manner. But thus far we shall go: We think H. M. Consul was distinctly wrong in his act, the legality of which would not, in our opinion, be upheld by the lawyers of the Crown in England. We say this under the reserve necessary to an imperfect acquaintance with all the circumstances of the case.

It has been contended that Sir HARRY PARKES is the only Minister who has issued a notification of this nature. The answer is simple. The complaint was made against the act of a British subject. Next; the British Minister is the only one of the Ministers who could have any misgivings in regard to the justice or expediency of the prohibition. Mr. BINGHAM is clearly and tightly bound by Mr. FISH's orders to compel the obedience of American citizens to Japanese laws in all matters not expressly provided for in the treaty. The other Ministers represent Powers all of whom control the press of their respective countries by stringent laws, and it is not easy to conceive that the subjects of these Powers would ask for, or have conceded to them, a greater freedom of expression than they would enjoy in their own country.

As for the "howl of moral indignation" with which Mr. FAULDS says that the notification will be received in England, it is truly lamentable to think that any such expression should come from the pen of one who claims the protection of English law. When rational Englishmen have serious work to do, we submit that the last thing they do is to "howl." They are self-respecting men, and regard with just contempt the fanatics who confuse issues, and make the temple of liberty the scene of vulgar and frenzied orgies.

SPIRIT OF THE JAPANESE PRESS.

JAPANESE JURISDICTION.

(Hochi Shimbun.)

Although our Empire consists only of a group of Asiatic Islands, we form an independent nation of thirty millions of people. So long as we claim to be thus independent, we should endeavour to uphold the sovereign rights which belong to us in common with all other independent states, otherwise this claim is a mere vain boast. But—we say it with sorrow—our independence is not real, and we do not enjoy the full rights to which we are justly entitled. It may be urged that when the people of Formosa attacked our Loochooan subjects, our Government spent a great deal of money in enquiring into the cause of the attack; that a discussion arose on the subject between us and the Chinese which ended in their paying us five hundred thousand taels in satisfaction of our claim; that since then, the Coreans fired upon one of our ships of war, and our Government sent over Envoys to enquire into the reasons for this; that these things have been done in order to efface the insults levelled at us, and to show to the world that we know how to preserve our honour untarnished; and, finally, that they also are evidences of the independence of our country.

To these contentions we would reply: That the Coreans and Formosans are uncivilized people, and that we could not be disgraced by attacks of this nature, and that investigation into such offences, and even our punishment of them in order to preserve our honour, do not suffice to prove us an independent people. The real question which touches our rights and honour is the possession of jurisdiction over foreigners resident in our country, and the power of taxing them. The latter power is of quite secondary importance, so that we shall not argue it here. We will content ourselves first by showing why the jurisdiction over foreigners ought to be in our hands. The first thing that must be abolished is the clause in our treaties which confers on foreigners extra-territorial rights, the rights, namely, of foreigners living in Japan to be judged by the laws of their respective countries only, and not by the laws of Japan. This is the real contradiction to our claim to be an independent people. An independent nation is one which has the power of making its own laws, and needing to recognize no other laws, and of applying these laws to all those resident in its territory. Now we claim to be independent and to enforce our own laws. Yet foreigners resident here do not observe them, and thus our independence is not real and complete. This being an indisputable fact, how can we keep silence? However unjustly foreigners may treat our people, we cannot punish them as they deserve. This may be sport to them, but it is death to us, and the more so, that whenever any of our people commit an act of injustice against foreigners they are severely punished for it. On the whole, foreigners certainly escape from the punishment of their offences, because the Japanese cannot prosecute them as they could wish. Foreigners come to this country for the purpose of making their fortunes, and in this pursuit they might be expected to give up some of the rights they enjoy in their own countries. The acquisition of their fortunes and the retention of their rights are two good things, and we do not think they ought to enjoy, or even expect to enjoy, two such things at one time. Indeed, foreigners may now be regarded as our guests, and enjoy rights and immunities which they never enjoyed before

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

But what kind of rights must those be which are injurious to us who are the hosts? We are told that foreigners cannot obey our laws on account of their imperfections. But what does this mean? There are no laws which can be called perfectly good. The laws of all nations are adapted to the minds of those for whom they are made, and suited to their condition of civilization. The laws of our country are not perhaps the best which could be made, but they suit and reflect the mind of our people, and we think that whoever lives in our country and associates with our people ought certainly to observe them. For if we find ourselves together in one country, and one observes one set of laws while the other observes another set, grievous injustice must be the result, and the fact that the Japanese cannot get their injuries redressed is a proof of this. It is only just, however, to admit that there are portions of our laws which are not exactly in accordance with the condition of modern affairs, and that these must be altered. But when our people obey them, foreigners must do the same, and thus it is that we have said that foreigners must be content to forego something of their rights when they go into other countries to make their fortunes. We began trading with foreigners for our mutual benefit. But foreigners had better return to their respective countries if the retention of their rights here inflicts injury upon us. If mutual benefit cannot be otherwise obtained, this is the only solution of the difficulty, for, then, they need not obey our laws, nor need we submit to injustices.

With reasons so fair as these we see no reason why we should not urge the excision from the treaties of the clauses which give extra-territorial jurisdiction.

"Be Cautious."

(Nichi Nichi Shimbun.)

There are three classes of men in our country.* First, we have those individuals who think they have acquired sufficient knowledge and are desirous of becoming officials of the Government. Next, those who believe themselves possessed of a natural talent and exhibit a disposition to engage in business. And, lastly, we have the wealthy men who care for no steady occupation, and who, being mere voluptuaries, aim only at using their wealth for the purpose of procuring for themselves the maximum of enjoyment and pleasure that money can procure.

If we turn to the first named division we hear them say that, "Every man of merit may now obtain a Government post irres-"pective of his birth, and it is therefore not a time for idleness." Spurred on by their intense vanity and self-esteem, numberless young men of this class abandon their provincial homes and hasten to the capital to try their fortunes and procure for themselves the coveted appointments under Government. Some few are successful, and owe their good fortune to the smiles and patronage of the high officials, but in ninety-nine cases of a hundred, it is not too much to say, they fail egregiously in their aims. In their native provinces they would doubtless have held their own, but they had not reckoned upon the superior intelligence and alacrity of the youth of the Capital. Their means at length exhausted, they are compelled to abandon their pretensions to official life, and return despondingly to their native provinces which they had left in high hope. And whence their disappointment? Assuredly because they had not accurately guaged the measure of their capacity and had allowed their self-esteem to delude and fool them. Because, in short, they were deficient in the necessary element of caution.

Let us now consider the next class to which we have referred. We fancy we hear them say, "Although it may be true that we are "now a free and independent people, there are among us those who "play the sycophant to men of high position in the hope of being "raised to some advantageous post: the truckling spirit still lurks "in the minds of such men. We are not of such poor clay as these "fellows. No, let us be traders; for, if a man possess but brains, "there is nothing like a commercial career for him. It is the "mercantile class that builds up the true independence of a coun-"try." Excellent reasoning indeed! But let us look a little closely into their conduct. Are they assiduous in their trade: attentive to the details of their business and so minutely regulating their outgoings that they shall be proportionate to their incomes? Alas, no. They are for the most part mere gamblers. They speculate without means, plan operations by which a fortune may be gained without labour or thrift and as easily as by a successful cast of the die, and throw the risk of loss upon the confiding persons who are willing to give them accommodation or credit. Some may succeed it is true—though we must confess that we have heard of no such instance—but failure is generally the result. Then follows disappointment to the unlucky creditors, actions in the law courts and, finally, disgrace and loss of character. And all because they were not cautious.

And now to a type of the third class. "Knowledge and talent" he declares "are well enough, but there is no power like that of "money. Fortunately for me, my father was born before me "and I have inherited abundance from him. Be it my duty to "turn the prosperity to good account." His first act is to build himself a handsome stone house, and to this he removes, living in luxury and surrounded by all sorts of fashionable appliances. His money flows away like water and flatterers and sycophants profit by his free-handed generosity. But can this continue long? Assuredly not. However wealthy a man may be, if he adds nothing to his fortune and spends much of it his career must come to an end sooner or later. And thus it is with the individual case which we have selected. His money has wings and flies from him, and at length he has hardly a roof under which he can lay his head: another painful illustration of the consequences of a want of caution.

It is true that the conduct of the types of these various classes may not exactly correspond in detail with the instances we have selected, but the resulting failure is the invariable end. How truly says the sage 'Human ambition must be bridled by human reason.' Ambition is a noble quality and the satisfaction of an ambitious purpose an honourable and praiseworthy aim; but success depends upon caution and sagacity. The frequent imprisonments and fines inflicted upon newspaper writers of late may be taken as a pregnant instance of their negligence in this respect. A little caution would have saved them from the penalties they have incurred. Now if learned men commit blunders of this serious nature, can we wonder that less instructed people should also err?

No; ambition must be kept within reasonable bounds and not permitted unlimited range. Industry and perseverance impose the necessary checks upon it, and guarded by these invaluable qualities, and stimulated by a fair share of ambition and high purpose, every man may cut out for himself a path to competence and ease or, it may even be, to fortune.

The Practice of Adoption.

(Nichi Nichi Shimbun.)

The time has, in our opinion; arrived when the Government should prohibit the adoption of heirs to property. If we examine into the origin of the indolence and lack of independent spirit which characterize our people, we find it in the custom of confining inheritance to male heirs. This custom arose in days long past at the commencement of the Shogunate, and it has become so deeply rooted in the minds of the people that it will be very difficult to abolish it.

In the olden days of the Empire there were no laws requiring males to inherit, and thus we have had Empresses regnant. But, as the Shoguns were all *samurai* whose duty it was to head our armies in the field, male heirs could not be dispensed with, and as all their followers, officials and servants were also *samurai*, the same law had to be observed. When Yoritomo came to the Shogunate, he passed a law that the heirs of all *samurai* must be males, and when his son died Hojo brought children from among the far and near relatives of the Mikado, and adopted them as Yoritomo's sons in order to secure the succession.

During the Ashikaga dynasty of Shoguns, the country adopted the feudal system, and male heirs became all the more necessary. The names of great families acquired high distinction, and the fashion of changing names arose, a practice carried to a great length among the Daimios. When the Shogunate came into the Tokugawa family, a law was passed that none but the true male heir could inherit the estates or pensions of a family, and that he must be seventeen years of age. By this means the practice of adoption was abolished, and many families which had no male heirs were deprived of their estates and revenues. There were also cases where the heir was not seventeen years of age on the death or retirement of his father. This law seems to have been made with the object of weakening the feudal system, but it was soon abolished on account of the trouble to which it threatened to give rise. The practice of adoption again revived, and laws to give it due effect were also passed. Here we may state—though it is perhaps unnecessary—that the exclusion from inheritance of all but male heirs gave rise to the bad custom of open concubinage, and it is recorded that one family represented to the government that it had no heir even by concubines.

* The writer apparently alludes to the *samurai* only.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The estates were not allowed to be divided among the sons of a family, so that when there was more than one son, the eldest of them inherited, while the younger were adopted into other families or became dependents on their father or elder brother for their whole lives. It may be said that just prior to the overthrow of the Tokugawa government, some of the younger brothers were appointed to state offices, and that officials were chosen from among the commoners or any available able men. But we would reply that this arose from unavoidable causes, the government being then on the brink of ruin. Under this law, the eldest son, however foolish, inherited the estates and revenues of the family; and however intelligent or educated the younger, they were dependent during their whole lives. This custom became general among all classes, and gave rise to the saying "The first-born are fools and the rest are dependents." The eldest son knew that he was to inherit the estates, and thus took no pains about his self-improvement, feeling that it mattered nothing whether he were intelligent or not. The younger brothers felt that they were dependents on their elder brother and dared not displease him, and hence the indolent and dependent spirit which has become so marked among us. Wealthy farmers and merchants did, indeed, sometimes divide their estates among several sons, but cases of this were very rare.

Since the Restoration this custom has changed, and the family revenues can be divided among the various children of a family, pensions can be inherited by females, and there is no necessity for adopting heirs. But the force of the old laws still seems to prevail, and this keeps the back the independent and industrious spirit of the nation.

As we have arrived at a period when news laws in regard to the inheritance of property are about to be made, we think that the practice of adoption should be abolished. We see no injury which would arise from this course; but what does the public think?

The Same.

(Choya Shimbun.)

The *Nichi Nichi Shimbun* says that we have arrived at a period when the practice of adoption should be prohibited by the Government on account of its tendency to keep the people in a state of dependence and indolence. The writer enters into minute details regarding the transmission of property through male heirs in ancient times. But it appears to us that there are advantages to both sides in the practice of adoption, while there is no evidence that the prohibition of it would cause the people to be more industrious or independent. We occasionally hear of cases of differences between parents and adopted sons being brought for adjustment before our courts; but it is impossible to say that no such differences arise between parents and their own children. Moreover, it is commonly supposed in Japan that it is the happiest thing for the aged to hand over their estates to their sons and retire from the affairs of the world, in which case it is extremely convenient to be able to adopt an heir when they have no offspring of their own. It is also advantageous to those who are left as orphans to be adopted into a family, and all these advantages would be lost were the practice prohibited. The writer states that the spirit of indolence arises from the younger sons of *samurai* seeking to become the heirs of other families, and that the necessity for pleasing the eldest brother keeps them in a state of humiliating dependence. But we do not think this is always the case, for no families seek for ignorant young men to adopt. They always choose the most intelligent they can find, and though it was customary during the feudal times for the eldest son to inherit, this is so no longer, so that there is no reason why our younger sons should be dependents on their elder brothers, though it is true that the custom still lingers among the *kuadzoku*. The merchants and farmers never wish to adopt indolent heirs, and, in proof of this, they even send away adopted sons who turn out indolent, so that an idle spirit is certainly not fostered by the practice of adoption.

In proof of our assertion that neither indolence nor dependence are encouraged by the practice, we will relate following fact.—There was a temple at Hakusan, in Kaga, which was controlled by ten families of priests among whom the custom of adoption was not practiced. Thus when any one of the families had no son and thus became extinct the property occupied by it was handed over to the eldest son not already an heir of one of the remaining families. An enquiry into the condition of these families proved that the men remained priests all their lives, and that no industrious spirit could be found among them. Thus we do not think that the prohibition of the custom of adoption necessarily produces industrious habits. The endowment of the eldest son with the estates of the father is an ancient custom among us, and when fathers more generally divide their states among all their sons, the desire to become adopted will cease. Moreover, as the *Nichi Nichi* itself states, the custom is dying out, and thus though the prohibition of it need cause no serious inconvenience, there is no necessity for the Government to meddle with it. Let it die out of itself.

The Same.

(Hochi Shimbun.)

The *Nichi Nichi Shimbun* has argued that the practice of adopting heirs should be prohibited. The *Choya Shimbun* pleads that it is attended with advantages to both sides, and that there is no evidence to prove that it tends to make the people less industrious and independent than they otherwise would be. We should have been content to remain neutral on the question, but the opinion expressed by the *Choya Shimbun* is so entirely opposed to our own that we cannot refrain from saying a few words on the subject.

It seems to us that the *Choya Shimbun* has only considered one side of the question, viz: the advantages attending the practice to the aged who desire to retire from the affairs of the world, and to the orphans who are thus provided for. These are the advantages; but we must now look to the other side at the disadvantages, and strike a balance between the two.

The lack of offspring is a natural misfortune, and shows that nature thinks it best to terminate the existence of a family so circumstanced. We see no reason for rebelling against the decree of nature, and perpetuating such a family by adopting heirs into it, and thus it is that all nations have made laws for the disposal of the properties of extinguished families.

When younger sons are adopted into families as heirs, they do do not pay sufficient attention to their education, knowing that they will be provided for as the holders of certain property. They have no thought of earning an independent livelihood, and to a certain extent lose the spirit of self-reliance from being compelled to obey their (adopted) parents, who, without giving any real attention to the natural bent of the son's disposition, order him to do this or that because it is the established practice of the family. Thus when the son, after a long period of hardship, becomes the master of the house, family troubles come and he is rendered unhappy. He balances his present condition against the hardships he has had to bear, and under ordinary circumstances contrives to rub along in one way or another. But at times these family troubles become excessive and he flies to dissipation. The sons of the poorer classes begin to learn a trade at the age of thirteen or fourteen, and are usually able to earn their own living when they arrive at manhood. When the younger sons of such families are adopted, a fictitious parentage is created which brings about unnecessary troubles.

There is another grave evil which attends the practice of adoption. Evil-minded people sometimes adopt female children, and convert them to bad purposes for the sake of gain.

Such are the evils attending the practice of adoption, and after balancing against them such advantages as are pleaded for it by the *Choya Shimbun*, we conclude that the practice should be bolished. This will help to root out indolence from the middle classes, and still greater evils from the lower classes.

The *Choya Shimbun* seems disturbed about the inconveniences which would result from the abolition of the practice. Such fears seem to us idle. The advantages are only such in relation to our special habits; there is no radical need for them in human nature. And how are we to become civilized unless by the abolition of these bad customs?

Health and Industry.

(Nichi Nichi Shimbun.)

It is the custom of civilized nations to set a high store on life and fortune. In Europe and America not only is life regarded as precious, but every care is taken to preserve health. As regards wealth, not only is it prized, but men strive during their whole lives to increase it. With the Indians, however, in America, the case is wholly otherwise. They do not seem to set very much value on their lives, they have no houses and little clothing, they live wherever they can find food and shelter, and as they know little about wealth, they care nothing about accumulating it. The same indifference exists here, and this may be termed the lingering of the spirit of the *samurai* and feudalism. In days long past when the Shoguns usurped the power of the Mikado, the *samurai* formed a class who received pensions, and had nothing to do in times of peace. Whenever war broke out it was their duty to sacrifice their lives if necessary, and this conduct appeared to them very

Digitized by Google
UNIVERSITY OF CALIFORNIA

honourable. Their habits were reckless, and whenever one of them killed himself or others in a moment of exasperation, people praised him as a true *samurai*. Whenever, on the contrary, he thought of trying to make his fortune, he was regarded with abhorrence, and this seems to us the very reverse of a civilized view. Our government, in reconstituting the Empire, has abolished many of our ancient cnstoms, the pensions of the *samurai* are being reduced, and we no longer see men about with long swords in their girdles. The ideas attaching both to life and wealth are more advanced. Yet we grieve to say, men do not yet know how to make their fortunes or preserve their health. We find many leading lives of idleness and dissipation, and we hope they will become more industrious, for this would tend to preserve their health and better their fortunes. In thus doing, they may claim to be called civilized people.

USEFUL MINERALS AND METALLURGY OF THE JAPANESE.

E.—GOLD.*

BY DR. GEERTS.

***Read before the Asiatic Society of Japan, on the 16th of February,* 1876.**

Gold, 金 *Kin;* Syn. *Ki-gane* (yellow metal), *O-butsu* (yellow matter), *An-tan, To-nan-yo-nitsu* (sunshine in the South-east), *Kiyo,* &c., was first found in Japan in the year 749, during the reign of the 45th Emperor *Seï-mu* (or *Sho-mu-tenno*). This first gold came from the district Odagōri, in the province of Oshiu. The Prince of Suruga presended in the following year (750) to the Mikado some gold, which was found in his province. Since ancient times there have been rumours abroad about the enormous wealth of gold ore in this country. Before Kaempfer's time there had already been such an exaggerated belief. Those stories about the richness of Japan and especially of the much desired "*gold* and *silver islands*" (kin-shima and gin-shima) have dazzled the minds of many foreigners.† Kaempfer (1692) and even Thunberg (150 years later) indicate the situation of these islands at a distance of 150 miles East, or E. N. E. off the coast of Oshiu. The Spaniards had tried in vain in 1620 to find them. The Dutch sent two vessels in 1639 the *Engel*, and the *Graff*, under command of *Mattys Cluast* and *Abel Tasman*, in search of these precious islands, but they returned to Formosa, after having sailed 600 miles at 37½° N. L. East of Japan, without seeing any traces of land. In the year 1643 two other vessels, the *Castricum* and the *Breskens*, were ordered under Commander *Vries* to explore the Northern Pacific Ocean, the East coast of Siberia and the gold and silver islands East of Japan. Our eminent Dutch navigator did not, however, find the latter, but he discovered first the Bonin Islands, second the Island of Yesso, third the Kunaschiri, fourth the Iturup (Staten-land), and fifth the Urup (Compagnies-land).

The accounts of the richness of Japan in gold-ore, have been copied from book to book, without having been sufficiently weighed and tested. When the Portuguese first came into contact with the Japanese—and even still many years later—there was a considerable stock of precious metals, and especially gold in this country. This relatively large amount of gold does not prove, however, the extreme richness of the country, because it was in reality the product of gold-washing during many centuries. Japan being closed at that time to nearly the whole world, the gold remained in the country and augmented with every year. Under such circumstances the quantity of gold must have been considerable after many centuries, even if the country contained but a very moderate quantity of ore. The extreme cheapness of labour in former times allowed of gold-washing out of very poor gravel, which could not, without a decided loss, be worked either in Europe or America. The production of gold being moreover larger in relation to silver than in other countries, the relative value of the first precious metal became quite different from our standard. Whilst in Europe the relation between gold and silver varies only a little between 15 to 16 : 1, there has been a time when this relation was in Japan 6 : 1. The Portuguese and afterwards the Dutch have had the advantage of levelling the ground considerably, whilst the opening of Japan in latter years has done the rest. The quantity of gold metal exported by the Portuguese during their stay in Japan, 1550-1639, may be estimated at least fifty nine and a half millions sterling, or in average 660,000 yearly. Kaempfer speaks even of some years with an export of two and a half millions of gold and adds in his peculiar style (Book iv, chap. v) "if this trade had lasted "but twenty years in the same degree, the Portuguese "would have exported (out of this Ophir to Macao) the "same quantity of gold and silver, which the Bible says "that there was in Jerusalem, during Solomon's time.

The Dutch afterwards exported chiefly copper and silver from Japan, but also gold, especially from 1649-1671. The quantity of silver exported by the Dutch alone during the seventeenth century may be valued at 112 millions of taels and the quantity of gold exported during the same period at 6,192,900 pieces of the old *koban*. During the eighteenth and nineteenth centuries there were besides exported considerable quantities of gold and copper. The whole quantity of Japanese gold and silver exported during the 16th and 17th centuries may be estimated as follows :

Portuguese...gold and silver.....		£59,500,000
Dutch.....gold	£15,482,250 }	
silver	£28,000,000 }	..... £43,482,200

Or nearly 103 millions.

We have had the opportunity of seeing many gold-ores out of different parts of Japan ; the last exhibition in Kiyoto (1875) had about twenty samples accurately labelled with the localities of occurrence) of nearly all those provinces, in which gold is more or less worked. By the kindness of the local government we obtained and examined these specimens, together with the samples in our former collection. Most samples consisted of ochry silicious conglomerates and ochry argillaceous gravel, there being very few samples of more dense and pure auriferous quartz or feldspar. Nearly all rocks had a disintegrated character, caused by the long-continued action of air and water. The samples of alluvial auriferous gravel proved undoubtedly their origin as products of disintegration from primitive rocks, under the continued action of torrents. The gold in these alluuial deposits was found in very small scales, so that the aid of a lens was necessary to discover them, and in many instances the gold-dust could only be ascertained after a process of washing and levigation. Gold in dendritic forms we have only seen in some samples of pure auriferous quartz from Satsuma and Kai. The general aspect of all these ores was poor.‡ Considering further that samples in an exhibition usually represent the better kinds, we cannot but believe that Japanese auriferous gravel or quartz is as a rule poor, although these gold-

† Vincent Romyn and afterwards William Verstegen, who came back from Desima to Batavia, send in a memorial to the Governor-General Henricut Broumer (1635), stating the great importance for the East Indian Comp. to commence a trade with the Gold and Silver islands, situated in the Pacific Ocean at 37½ degrees North Latitude. [Cf. Reis naar de Eilanden ten Noorden en Oosten van Japan door *Marten Gerritszoon Vries* in 1643. Transactions of the Royal Institute of Netherlands India. 2nd Series Amsterdam 1858.]

‡ When we speak of "general aspect" we must leave the question of the *quantitative amount of gold* open, because it is impossible to make an exact determination in a single piece of *poor* gold quartz. To determine practically the value of these ores a certain volume, say one cubic metre, of rock or gravel must be taken, crushed, washed etc. The resulting goddust must then after purification and drying, be carefully weighed on a chemical scales.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

bearing minerals occur, often in considerable quantity, in many different localities. According to Japanese books on the subject "pepitas's" (nuggets) were often found in former times but of late the gold-washer gets nothing but "gold-dust." In many places a workman, who washes gold-gravel for four or five days cannot obtain more gold-metal than is contained in an old *nibu*. Many gold-bearing places are now lying without being worked, because it becomes more and more difficult to work the ores with profit, on account of the wages of workmen having considerably increased during the latter years, since the abolition of the *daimios*. With exception, perhaps, of the ore in Satsuma, the gravel of O Sümi, the quartz of Komagōri in the province of Kai and of Esashoyori in Rikuchiu and of the mine at Aikawa in the island of Sado, we cannot believe that gold-metalurgy will enjoy in Japan a brilliant future, because most of the ores at other places are too poor and cost therefore too much labour in separating the gold-dust.

The manner in which the Japanese work the gold-ores nearly resembles our Western methods and deserves much credit. They understand perfectly the separation of even the smallest quantities of gold dust from other stones and gravel, by means of a system of washing and levigation.

The different ores are ;

1.—Alluvial Sand and Gravel 砂金 Sha-kin or Seī-kin or Sui-kin. The Japanese distinguish according to the dimensions of the gold found in this ore :

a. *Mominuka* or *Kokin* or *Ku-to-kin* 狗頭金 (heads of dogs) ; these are the largest nuggets or rounded masses.

b. *Uri-sané-kin* (Melon seed-gold) or *Kuwā-shi-ken* 瓜子金 of the size of melon seeds.

c. *Nassubi-sané-kin* (Tomato-seed‖ gold) or *Fu-baku-kin* 麩麥金 a little smaller than the other.

d. *Sha-kin* 砂金 golddust.

These are found in the beds of old and existing rivers. The Japanese believe, but not always rightly, that the gold produced by rivers is not of the same good quality as the gold from rocks. They believe also that this gold is poisonous (?) and that the flesh of the "Shako" and of snakes is an antidote to it.

2.—Auriferous Rocks of Quartz "Feldstone" or other silicious Conglomerates 山金 San-kin or Yama-gane. The rock itself bears the name *Haku-seki* or *Fun-shi-seki*. According to the dimensions the Japanese distinguish of yama-kin the following varieties :

a. 馬蹄金. *Ba-tei-kin* (Horse-shoe-gold) the largest pieces.

b. 橄欖金. *Kan-ran-kin* (Chinese olive§ gold) or *Tai-kuwa-kin* 帶榜金.

c. 黃牙. *Oga* or *koga* or *Insu* of the auriferous rock forms stalactitic masses.

3.—Gold, which is disseminated in other compound metallic minerals, especially copper, silver, lead-ores and iron-pyrites. The Japanese now understand the separation of the small amount of gold from these ores by the liquation and cupellation-process, which we have already described under the head of silver (vol. 3, part 1, p. 90).

Gold Metal, after it has been purified and melted in different shapes, bears different names :

1. 鏡.—*Kiyo* or *Shima-kin*, large flat oblong pieces, very fine gold ; rare.

2. 熟金.—*Juku-kin* (ripe gold) or *Mochi-gané* is the ordinary button-form of good ordinary gold.

3. 金鐵屎.—*Kin-tetsu-ki* or *Kana-kuso* gold out of auriferous iron pyrites not so pure as the former.

4. 黃金.—*Ojon* or *Kogané* is of much lighter colour, more yellow or greenish and considered very common.

5. 砂金.—*Shakin*. Gold in powder. The colour is much lighter than that of Juku-kin, but after melting and repeated hammering it is believed that it can become *juku-kin* (ripe gold). *Shakin* is generally considered to be of low quality.

6. 金箔 *Kimpaku* gold-leaf.

7. 金絲 *Kinshi* gold-thread.

‖ Salanum melongawa Linn.
§ Canarium Pimela Roab.

The native writers call gold the "king of the five metals (gold, silver, copper, iron and tin).', Although buried for many years, it never rusts and it loses nothing of its weight, even if it be smelted a hundred times. The alloy of gold with silver is pretty soft; if this alloy be struck on the touchstone (*Tsuké ishi*) a light, greenish-yellow line will be seen. But if the gold be alloyed with copper, it becomes very hard and emits a sound, when placed on the touchstone. Gold which is perfectly pure has a dark reddish-yellow colour and is so soft, that it easily receives the impressions of the teeth. Gold is further said to have an antipathy to tin and to be afraid of quicksilver."

The Chinese and Japanese judge the quality of gold principally according to its colour and hardness. They use for this a black touchstone, a variety of a black basaltic siliceous slate (kïezelschiefer) perfectly resembling our Lydian-stone and very near to the fine black Japanese inkstones (*Sudzuri-ishi*) which consists of ordinary black siliceous slate. By the different colored marks the experienced Japanese analyst judges the purity of the gold, and for comparison he has in stock a collection of golden needles of different alloy. The touchstone is rubbed at the same time with one or two of the needles and the gold in question. The Japanese scale of fineness is much better than ours, being decimal. Perfectly pure gold has 100 touches; if the gold has 85 touches it contains 15 per cent of alloy, and 85 per cent pure gold. At the same time the hardness of the metal is observed accurately, and this is quite necessary because a distinction according to colour can only be deemed a very rough and inexact one. For it is very easy to give different shades even—the so much praised high red-orange colour—to gold by mixing with it specific quantities of copper and other metals. Nevertheless the careful Japanese expert but seldom misses the aim. We have ourselves had many proofs of Japanese assayers giving us a percentage of samples of gold and silver, which only differed slightly from our chemical analysis. Although we highly respect the skill of these experts, their method is far from being as accurate as our wonderful results of analysis by the wet process, which is in reality a model of precision.

But besides colour and hardness, the Chinese and Japanese books give another method of testing. They prescribe the drawing of a line with the gold on the touchstone, then to comparing this line with other marks of the touch-needles and finally to bring the line into contact with very little molten sulphur. If the gold is pure, the mark preserves its bright colour unchanged, but if it continue silver or copper, &c., the line will become dark coloured. The larger the amount of these metals present the darker the colour of the line. It is clear that this simple but rough method of testing rests on the principle that sulphur does not combine at all directly with gold, whilst it forms dark-brown and blackish compounds (sulphides) with copper, silver, &c. In addition we must, however, say that we have not seen a skilled Japanese assayer practice this method and we must also state that this *virtuoso* considered the last sulphur-essay perfectly superfluous, being already quite sure of his conclusion by judging the colour and the hardness.

The old gold coinage of Japan was an alloy of gold and silver and not like the European and the present Japanese gold pieces a mixture of gold and copper. These old gold pieces varied very much in their absolute weight as well as in their alloy, so that the real intrinsic value could not be assertained accurately. The old pieces were :—

1.—The *ō-ban* 大判 large flat oblong pieces, only in nse with the Shoguns and old daimios. Value variable from 20-26 *koban*.

2.—The *koban* 小判 *ichi-riyo-kin* also a oblong flat piece (alloy of gold and silver) having a legal value of 60 *momme* silver, but varying in reality from 58-65 *momme* silver. Since the year 1707 *kobans* were made smaller in size. The new *koban* (*Ho-yei-koban-ken*) must therefore be carefully distinguished from the old pieces. According to many assays, formerly made at Batavia, the percentage of gold of the *koban* differed enormously between 542-833 per mille, although they had generally a standard of 631 per mille.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

3.—*Nibu-kin*, 二分金 originally half a *koban*. No piece of money in the whole world has had such a variable and arbitrary standard as the *nibu*. The intrinsic value varied between $0.17—0.55. The following table which gives the composition (per mille) of a number of Satsuma and Tokugawa *nibus*, will closely prove the irregular composition of these money-pieces.

Sokugawa-nibu.			Satsuma-nibu.		
Gold.	*Silver.*	*Alloy.*	*Gold.*	*Silver.*	*Alloy.*
225	762	13	39	900	61
232½	753½	14	20	955	25
227½	760½	12	41	934	25
225	734	11	37	908	55
223	761	16	37	906	57
225	763	12	37	923	40
231	756	13	53	891	56
226½	761½	12	34½	922½	43
225	763	12	41	912	47

4.—*Ichibu-kin* 一分金 originally the fourth-part of the koban ; seldom met with of late.

5.—*Nishu-kin* 二朱金 originally the eighth-part of the *koban*, rare.

6.—*Ishu-kin* 一朱金 originally the sixteenth-part of the *koban*.

The new Japanese gold money pieces have all a fineness of 900 per mille, alloyed with 100 parts of copper.

Metallurgy of Gold.

The Japanese manner of extracting the gold from the auriferous minerals is very simple and, agrees in the main points with our old western method. The whole process may be divided into the principal stages.

1.—If the gold—as is mostly the case—is to be extracted from sand or alluvial deposits of rivers and torrents, then the separation of the small gold scales is effected by *washing* the gold sand, either on an inclined plane or levigation apparatus, or directly on mats in a washing dish. This process is called *kanéyuri* or washing of the metal.

2.—The gold-dust obtained by the washing process is melted on a bottom of calcinated salt, until a button or half round nugget *Mochi-gane* or *Juku-kin* is obtained. This process is called *kin-toku* (Gold-melting.) In the gold mines where the auriferous mineral consists of hard quartzrock, feldspar or feldstone (*haku-seki*), the ore must be crushed first by means of large iron hammers (*kanamé-tsuchi.*) It is then roughly powdered in a mortar, in which the pestle is worked by the foot (*karausu*), and finally ground in a stone mill (*tsuki-usu.*) Being thus minutely divided, the powder is washed in the same way as above.

When the ores consist of auriferous metallic sulphides, (copper or iron pyrites, grey copper-ore, etc), they are first crushed and roasted. The roasted mass is powdered and melted until a coarse metal is obtained. The earth now contains the whole of the gold. The crude metal is then fused with some lead, which extracts the gold and falls to the bottom, (*Dé-namari*). The alloy of lead and gold is then finally treated by a cupellation process.

The process of extracting gold from the ore by means of amalgamation with quicksilver is unknown to the Japanese.

The Japanese possess no good process for the separation of gold from silver. Hence, all Japanese gold contains more or less silver.

We will now proceed to describe the whole working more minutely and suppose that we are visiting a gold mine, where hard auriferous quartzrock, or feldstone, is to be worked. According then to old Japanese custom, first a feast, the feast of the mountain-gods (*Yama-no-kami-sama*) must be celebrated at the mountain or place (*kana-yama*), where a gold mine is to be opened. The best and most propitious day for this feast is the 9th day of the 7th month. A small temporary shrine is constructed and wrestling and other kinds of amusements (*mise-mono*) are ordered from Kioto or Osaka to amuse the villagers and the miners (下 財 *késai*) who all enjoy the festival of the opening of a new mine. The priest, or *Kannushi*, takes care to ask the favours of the gods for the new enterprise, as can be clearly seen by the first of our engravings.

The gods being thus propitiated, care is taken to provide for the daily wants of the miners, who are often obliged to work at a great distance from other habitable places. A kind of store-house and mining-office, called 臺所 *dai-dokoro* (great kitchen) is therefore built near to the entrance of the new mine. In the provinces of the west of Japan this store-house is called *kamba* (office for payment). This *dai-dokoro* or

勘場 *Kamba* is also the office, where the miners get their payment, either in money, or such articles as charcoal, wood, fagots, salt, oil, *Shoyu*, rice and all other necessaries of daily life. Peasants and merchants repair to this place to sell their products or merchandise to the officer in charge of the office by whom all accounts of income and expense are settled and kept. The artist has depicted the *dai-do-koro* in the second engraving.

The second necessity consists in the 床家 *Toko-ya* or a house where a forge is first constructed for making and repairing the necessary tools and mining utensils ; and secondly several foundries are erected for melting the metal in bars or cakes. The officer in charge of this place is called *Toko-yakunin* and ranks second to the chief officer of the mine. The third design gives a representation of the *Tokō-ya*.

After all these preparations are made, the miners commence to open the mine. The chief gallery *shiki-guchi*, 四ッ留メ口 *yotsu-domé-guchi*, is first constructed according to the directions given by the *Shiki-yakunin* or chief officer of the mine. The upper floor *(kesho-ki)* and the sides *(ya)* of the galleries are supported by wooden beams, called 留メ木 *toméki*. It is usual to give the gallery a precisely square form of sixteen beams in every direction, and generally this chief gallery has a moderate incline, as already described under the head of copper. If the main entrance be of considerable length, air-shafts, *kazé-mawashe-guchi* 風廻シ口 are constructed in a similar manner, and finally several gangs and reservoirs are cut out in the main gallery for the removal of the mine-waste *(O kiri-guchi* 大切口 or *midzu-nuki)*. Very much labour is spent on the removal of the water, the only machinery consisting of two kinds of pumps *(to-yu)*, namely a round one made of bamboo, called *také-midzu-to-yu* and a square one, made of wood, *ki-midzu-to-yu*. The water is pumped from one reservoir to the other, until it has reached the outside of the mine. It is obvious that the difficulty in removing the water increases enormously with the depth of the mine. Very often mines are wholly abandoned on account of the water requiring too much cash and labour to be kept under. The drawings on figures 4, 5 and 6 give some idea of the manner in which the galleries are constructed.

We must now turn to the miners, those laborious men, artificers who are compared by the author of the Chinese Poem *Ra-in* with the bees, in the saying "with toilsome "labour the bee collects honey out of thousand flowers, "but for whom is the sweetness?" But we will first describe shortly the different tools of the miner, as they are represented on Table VII. There are :—

1.—The *Tsuru-bashi* or iron pick, for loosening the gravel and rocks.

2.—The *Takané*, or long iron chisel or wedge, for breaking the rocks.

3.—The *Mago-hachi*, or short steel wedge, for crushing very hard rocks.

4.—The *Yama dzuchi*, or ordinary (small sized) mining hammer, worked with the *bakané*.

5.—The *Genno*, or heavy large iron hammer for driving the wedge or *mago-hachi*.

6.—The *Sazai-hito-bashi* or mine-lamp, consisting of a shell filled with oil and a wick made of the pith of a kind of rush.

7.—Three kinds of *Kuwa*, or hoes (mattocks) to remove stones, earth and gravel.

8.—The *Joren*, or hoe-shaped bamboo baskets for removing gravel and earth.

9.—The *Yebu*, or long baskets for removing débris from the mine.

10.—The *Datsu*, or cylindrical baskets for receiving the ore. The filled baskets are carried on the back of women

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

or miners, each basket containing from 40—50 kilogrammes of ore.

11.—The *Yenza* or *Tebu*, or round thick mat, which the miner wears on his girdle and which serves him as a chair, to sit upon.

12.—The *Masu*, or measuring box, for measuring the quantity of ore to be washed.

13.—The *Kanamé-tsuchi*, or long hammer, for cleaning the ore from the adhering stones, which work is mostly done by women and children. (Fig. 8).

14.—The *Kara-usu*, or mortar for powdering the ore, by means of a pestle, worked by the foot.

15.—The *Usu*, or stone mill for pulverising the ore roughly.

16.—The *Také-midzu-toyu*, or round bamboo pump.

17.—The *Kimidzu-toyu*, or square wooden pump.

18.—The *Nekota*, or washing apparatus so called "Long Tom," consisting of a water-reservoir and wooden inclined plane (Fig 7 and 9).

19.—The *Midzu-Sagashi*, or cotton sweeper, to stir the gold sand in the water on the inclined plane.

20.—The *Nadeki*, or wooden broom, being two pieces of wood fixed cross-wise, for the same use as the former tools.

21.—The *Nekoza*, or straw mat, for collecting the gold-sand, when the washing of gravel is carried on in a washing ditch and not on an inclined wooden plane.

22.—The *Ywei-bachi*, or goldwashers pan, consisting of a wooden dish. This tool is used for separating the gold from the concentrated sand.

23.—The *Kane-ywei-ita*, or a slightly warped and dish-shaped board for the same use.

24.—The *Namban-buki-ya*, or furnace for melting metal mixtures which contain gold, with lead extracting the gold by the melted lead. (Only used when other metallic ores are worked on gold).

25.—The *Geshi*, *Kara-mikaki* and *Portuya*, flat iron scrapers for collecting the gold- or silver-containing lead, which has run out the above furnace (Fig. 11.)

26.—The *Kawa-koki*, or long charcoal-scoop for regulation and feeding of the charcoal fire.

When the miners have brought their ore out of the mine, the women commence by crushing it roughly with long hammers; subsequently it is powdered in the mortar and stone mill. The powder is now given into to the *Nekota* (Fig 9), the water of a bamboo aquaduct running into this reservoir and flowing off, through the opening below, on the wooden plane. The goldsand runs off with the water, but being much heavier than the small particles of sand and gravel, the gold-dust remains in the greater part on the wooden plane, where it is collected and still further washed by the cotton sweeper. The water runs finally into a large hole where the heavier gold-dust which might have escaped from the plane, sinks to the bottom and can be callected afterwards. This process of washing on the inclined plane is called *Neko-ta naga-shi*. The gold sand being thus concentrated, it is transferred to the shallow wooden washing board or the so called "pan." This is done with great care in a large wooden tub (*Han-kiri-oké*) filled with water. The board is first floated on the water and the sand slightly shaken by a slight oscillating motion. From time to time the board is raised from the water and the less heavy sand washed away from the gold by some quickly effected longitudinal jerks. Thus alternately and skillfully moving the board, the bright yellow gold grains become more and more visible and separated from the sand or quartz. Finally the gold dust is dried and further separated, by blowing, from some heavy iron sand, which is generally still present. This process of washing on the board, which requires great skill and dexterity is called *Ita-yuri*. Our Japanese author of the *San-kai-mei-butsu-dzu-kuwai* states that the gold washers receive no money, because they can sell the gold dust which remains in their clothes! (*Todjigané*.) He adds that in former times the gold washer found some often small golden nuggets in his dress but of late this is no longer the case. It would seems therefore that the gold washer in the latter times receives payment for his labour.

The gold thus obtained is now fused and hammered in the *Tokoya*, in order to obtain a metal button or bar. A round cavity is made of 10 parts of calcinated salt and buck-ashes and one part of gold-dust put on it. By means of a strong charcoal-fire the gold becomes fused and is then strongly hammered until the piece of metal has the desired shape. In this state it is called *Mochi-gané* (metal-cake) or *Fuku-kin* (ripe gold.)

The Japanese use, besides the precess now described and actually followed at the gold mines (mountains), still another method of washing, when the gold is to be extracted from the gravel or sand of rivers or other alluvial deposits. This process is more simple than the working of the harder rocks, and has already been described with much accuracy by Mr. H. S. Munroe in his report of the gold fields of Yesso. We will therefore only take the main points of Mr. Munroe's account. Table X. gives a slight idea of this washing process. Mr. Munroe has compared this Japanese method practically with those in use in Europe and America, namely, the washing with the "Cradle" and with the so called "Long Tom" and, he has arrived at the interesting conclusion that the Japanese process gives for better results than any of these western methods. The working with the slince "is generally considered to be by far" the best of the foreign washing-methods, but Mr. Munroe had no opportunity to use this method in Yesso; nevertheless his experiments leave no shade of doubt, that the Japanese precess is better than those with the "Cradle" or "Long Tom."

It is much to be regretted that the numerous experiments, made by order of the Kaitakushi in the so-called gold-fields of Yesso, which had—until lately—such an enormous reputation for their richness, have not given better prospects of a profitable gold production in this country. The chief result of all the researches in Yesso is that in none of the gold fields the amount of gold was large enough to give much encouragement to working.

This second Japanese method then consists in washing in a "ditch" made from the bed of a river by putting walls or banks at such a distance that the washing ditch has a width of two or three feet and a length of fifteen or twenty. The afflux of water from the stream must be thus regulated in order that the water in the ditch should have a velocity of $1\frac{1}{2}$ to 2 feet per second and that about 60 to 80 cubic feet water per minute are obtained. Care must be taken that the walls of the ditch do not permit the water flowing outwards to the stream. The gravel is then shovelled from the measuring box (one-half cubic metre) into the head of the washing ditch, and the box refilled with gravel. The gold-washers then stir the gravel, throwing away the large stones by hand and separating the smaller stones from the sand by means of a bamboo basket (*joren*) and a hoe (*kuwa*). The fine sand, clay, &c., are thus washed out by the rapid current. When some four to six boxes (2 to 3 cubic metres) of gravel have been shovelled into the ditch and broken in the same way, the gold washer commences to wash on mats (*Nekoza.*) These mats are placed side by side across the stream, at a little distance below the place where the gravel lies. The workmen now remove the latter to the head of the mats, by which action the heavy gold and iron-sand sink on the mats, whilst the lighter sand and gravel pass down stream. When all the gravel has thus been held over the mats, the latter are removed about two feet down stream, in order that a new quantity of fresh gravel may be worked.

The mats are finally removed, folded in both directions and jigged up and down in the water, to separate the lighter sand from the heavier gold-dust. The other mats are broken in a similar way and all the gold sand of the different mats is subsequently transferred carefully into one mat. From this mat the concentrated sand is finally transferred on the wooden washing board (*Kane-yuri-ita*) and further washed in the same manner as already described by the former process. This washing method, simple as it is, requires, however, great care and skill on the part of the gold washers, but with good workmen it seems to give surprising results to prove the usefulness of this method, we will only give the results, which Mr. Munroe obtained from the same gravel, be washing with "Long Tom" and the Japanese process:

The best gold-field in Yesso, tried by Mr. Munroe, was that of Toshibetsu. The gold sand here contains, however, but one-half of the amount of gold which the poorest gold-fields of California contain. The number obtained by Mr. Munroe, may speak for themselves.

These numbers show enough that the so-called richness of the Yesso gold-fields is a fiction, and that perhaps the Toshibetsu gravel only might be worked with a small profit. I must leave it to the future to determine the practical value of the ore or gold-sand at the other localities mentioned in the above list, but I believe that the metallurgy of gold will never become in Japan a very profitable industry, as is possible in the case of copper.

ASIATIC SOCIETY OF JAPAN.

A regular meeting of the Asiatic Society was held at the Kaisei-gakko, on the 16th instant. Dr. Antisell occupied the Chair.

The minutes of the last meeting having been read and approved, the names of new members, Messrs. J. Troup (Kobe), T. R. H. McClatchie (Tokio), Professor E. Mondy (Tokio), J. L. Bowes, G. Ashdown Audsley (Liverpool), J. E. Day (Yokohama) were announced.

It was then stated that the whole of the property belonging to the Society—including the Library and furniture—had been removed from Yokohama and was deposited in the room No. 4 assigned to the Society's use in the Kaisei-gakko. Professors Syle and Summers had been appointed at a Council meeting on the 9th instant a Library Committee *pro tem.* On the motion of Dr. Veeder, seconded by Professor Smith, they were requested to continue their services and to select a curator. Professor Syle stated that it was their intention to keep the Library open for members' use daily between 3 o'clock and 5.

The Secretary laid upon the table the various transactions of the learned Societies which had been sent from Europe in exchange for this Society's Journal. A discussion then ensued as to the kind of papers most desirable. Professor Grigsby objected to the number of scientific papers which were read, and he wished to know why Mr. Russell Robertson's paper upon the Bonin Islands had not been presented to be read at this meeting. Professor Syle remarked that it was not respectful to the Council to criticize their method of dealing with papers. They did always the best they could under the circumstances.

Professor Ayrton said that several letters had passed between himself and Mr. Robertson, and that that gentleman expressed his willingness to come to Yedo and read the paper, but that some members of the Council in Yokohama had decided that it should be read there, and that Dr. Geerts' paper should be read in Tokio.

The Chairman thought it was quite competent to the meeting to express its opinion, and to ask why certain papers were kept back and others brought forward. The Rev. W. B. Wright suggested that interesting papers should be read in both places. This was subsequently put as a motion and seconded by Dr. Veeder. Another motion, that the Council be respectfully requested to present papers to the Society in the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

order in which they were received, was proposed by Professor Grigsby and seconded by Professor Atkinson but was not carried. Professor Marshall suggested that in the case of papers being not forthcoming, a lecture should be substituted, but as no one seconded this, it was withdrawn. Professor Smith moved that the Council be respectfully requested to furnish a larger proportion of interesting papers upon literary topics. Professor Grigsby heartily seconded the motion, and it was carried.

Dr. Geerts' paper upon *Gold* was then read by Professor Ayrton, and a discussion followed in which the Chairman observed that Dr. Geerts' paper was much more a literary than a scientific one, and that he had not given any information upon gold mining in Japan. He had spoken of gold washing which was a different process from extracting gold from quartz, which he believed might become a very profitable industry. He visited four gold mines in Satsuma in 1873, and there, although neither gunpowder, pumping nor tunnelling were employed, the operations had been successful and profitable. The methods the Japanese had lately adopted were as good as those in use in Nevada and California. The gold found in the quartz was, like the Nevada gold, mixed with silver, in the proportion of nine parts silver to one of gold. They had recently imported machinery, but they had been able to accomplish much by imperfect imitations. The stamps they had made of wood shod with sheet iron, so light that the crushing was imperfect. Although the paper was not without interest it was incomplete, and, as regarded gold mining, insufficient.

Professor Atkinson made some remarks upon the question of Japan being a gold-country, referring to Mr. Plunkett's late report which showed that in 1874, although the value of the outcome of the gold mines had been 250,000 *yen*, about 200,000 had to be expended in getting the ore, carrying it to the refiners, and that left a balance of only 50,000 *yen*. It could not therefore be rich in gold.

Professor Summers remarked that Mr. Atkinson had omitted the consideration of what the country might produce when machinery came to be used.

Dr. Veeder added that even the gold washings were sometimes more productive in better hands as was proved by the Chinese working in California. He observed that the mines in California lay in a line parallel to the Pacific Coast, in the lines of volcanoes.

The Chairman said with regard to lines of fracture the rocks in which gold was found in Satsuma were feldspar, and that the veins of quartz ran from E. to W., six to eight inches in width, in mountains lying N. to 12 E.

Professor Syle referred to the model of the Sado mines (presented by Mr. Erasmus Gower sometime ago) now in the room. Another model was in the possession of the Hakubuts *ken*. They supplemented each other; in some respects this was superior, in others inferior. He asked Mr. Ayrton why there had been some years ago so great a disparity in the value of gold and silver in Japan.

Mr. Ayrton thought that gold had been found in larger quantities.

The Chairman suggested that as only silver coinage had been in use gold had depreciated accordingly.

Mr. Wakayama believed that a much greater difference had been found 200 years ago.

Professor Syle said a *Kobang*, worth $3 here in 1858, had been sold at $5 in Belgium.

Professor Smith asked the Chairman if he could favour the meeting with any information on the gold produce of Yezo from his experience.

The Chairman considered that Mr. Munroe's account was trustworthy, and the only account of that kind of working which was superficial. There were in some places 40 feet of gravel and they ought to go down. Then he expected it would be more satisfactory.

The meeting was then adjourned.

Correspondence.

POISONS AND ANTIDOTES.

To the Editor of the "Japan Weekly Mail."

Sir,—Referring to Dr. Stuart Eldridge's interesting paper on "The Arrow Poison of the Ainos" read before the Asiatic Society on the 19th January, two curious facts in some degree bearing on the subject came within my own personal experience last summer in China. First, the daughter of an Englishman (an official in the Chinese Government service) was stung in the finger by a scorpion, and although remedies were immediately applied, the girl for hours suffered the most excruciating pain, until a Chinese servant brought one of the large black spiders of the tarantula species common in the North of China, and placed it on the suffering part, which it attacked, dying a few moments afterwards. This only relieved the pain in some degree, and the servant then made a poultice of some half a dozen of these insects, and applied it to the finger. In half an hour the pain had entirely left, and as no subsequent effects followed it, is to be presumed the poison was removed from the system.

In the second case, the father of the girl was bitten some few days afterwards in the foot by a scorpion, and the only effectual remedy was found in the "spider poultice," which was applied with an equally successful result.

With regard to the death of the spider in the first case, it is to be observed that the finger had been dipped in ammonia, so it is possible that the insect was poisoned by this means. This spider is said, I believe on good grounds, to be a natural enemy of the scorpion, and must therefore be frequently victorious in their engagements, a fact which tends to show the improbability that the poison of the scorpion which the spider presumably extracted from the wound, was the cause of its death.

Yours faithfully,

X.

To the Editor of the "Japan Weekly Mail."

Sir,—Although a stranger to Dr. Eldridge, I request permission to state in your columns my admiration of the character of his evidence given at the late inquest. He refused to allow a false view of professional etiquette to stand in the way of the discharge of the most manifest duty towards the public; and, but for him, a case demanding the fullest consideration in all its bearings, would, in all probability, have been glossed over, to the detriment of justice and the prejudice of the public welfare.

I am, Sir,
Your obedient Servant,
AN ENGLISHMAN.

Yokohama, 17th February, 1876.

INQUEST.

Tuesday, 15th February, 1786.

An inquest was held yesterday morning by H. B. M.'s Consul, at No. 130, on the remains of Mrs. Julia Hatton. Messrs. E. J. Fraser, D. Hay and C. H. Cobden were jurors.

From the evidence given (much of which is unsuited for publication) it would appear that Dr. Eldridge, who was called in to attend the deceased on the 11th instant, found her in an exceedingly prostrate condition, suffering seriously from the consequences of an abortion early in the month of January. Dr. Eldridge employed remedies to procure rest for his patient and subsequently performed an operation, having in the meantime procured the assistance of Dr. Geertz. The patient, however, did not rally and expired on the morning of the 14th instant. A statement from the deceased was read to the effect that Dr. Klotz had attended her shortly after Christmas, and that an operation performed by him caused an abortion from the consequences of which she was then dying. She stated that she had paid Dr. Klotz $200 for his services, and further that she had since repeatedly sent for him but that he had refused to attend. Dr. Eldridge stated that although an operation of this nature may be occasionally necessary to save the parent's life, there appeared to be no special necessity for it in this case.

UNIVERSITY OF CALIFORNIA

Mr. H. S. Wilkinson, stated: On the afternoon of Sunday, the 13th inst., shortly after 4 p.m., a man, whom I did not know, but who afterwards informed me that his name was Fleury, came to me at the Consulate, stating that Mrs. Hatton was dying, and that Mr. White had sent him to say that she wanted me. I came immediately to this house (No. 130); heard a statement from Dr. Eldridge, and received from him this paper (Mrs. Hatton's statement). After the lapse of some time, during which Mrs. Hatton made her will, I was called in to see her. She then appeared unwilling to say anything, saying Dr. Eldridge knew all about it, and adding she would send for me again if there was any danger, perhaps to-morrow. Dr. Eldridge told her that he could hold out no hope to her of her survival until morning. She then said, "if that is so, I will tell all." I then read over to her what was written in the statement, and she gave answers in the affirmative to each sentence except one, which I in consequence altered, stating the particulars somewhat more fully than written in the statement. She mentioned the name of Fleury as having been concerned, and I sent for him as I was about writing out her statement in his presence. But Dr. Eldridge pointed out her condition and the necessity of his own leaving at that moment to save time. I read over the statement again in Fleury's presence. She assented to all the particulars and gave the information which is written in my handwriting. I asked her if it was all true, and she said, "yes." I asked Mr. Fleury if he had any questions. He said, "no, it is all true, I have here a paper about it." He produced a paper. I told him what he said might be used against him, and that it might perhaps be as well for his own sake to say nothing. I then wrote the final clause and signed it, and Dr. Eldridge signed it. What I have now stated, from my being called into the room of Mrs. Hatton until the signing of the paper, took place in the presence of Dr. Eldridge. I then left in search of the Consul. Not finding him I went to the French Consul, Dr. Klotz being a Frenchman. The French Consul and Dr. Klotz went with me to Mrs. Hatton. I told Mrs. Hatton that I had brought Dr. Klotz, that I was to re-read her statement, and she at each sentence was to say if it was true. I proceeded to read, but was interrupted by Dr. Klotz who said: "Yes, it is true, I did perform the operation" Asked by the French Consul, why he had done it, he said that when he came and examined her, she complained of pain, and that certain symptoms having declared themselves, he performed what he considered a necessary operation. He acknowledged to have received $200 for the operation. His statement was shortly this: "Fleury came to me and said Mrs. Hatton was ill and wanted to see me. I came and saw her: from what she said I asked her to go into a bedroom, and I would examine her. I examined her; I then saw Fleury, I told him it was a very dangerous case, that I ought to be paid beforehand and that I wanted $200 for performing the operation." Dr. Klotz denied the statement that he had refused to come when sent for. On one occasion when sent for, he did not come, but sent a prescription. Mrs. Hatton sent him a letter that he was not wanted any more. Fleury, who was present at this interview, confirmed Dr. Klotz's statement on this point. I endeavored to elicit from Mrs. Hatton a more detailed statement, but she was too much exhausted, and asked to be allowed to rest for a little time. We then left the room. Mr. Kraetzer did not consider it necessary to resume the examination. The portion of the statement which was read to Dr. Klotz in presence of the deceased, is from the commencement down to the words "refused to do." I placed this paper next morning in the hands of the Consul. The deceased said that when Dr. Klotz came she told him, if there was any danger, he was not to perform the operation, as she was the only one who was earning any bread for her poor children at home; but Dr. Klotz said she would be all right in a day or two. This statement was not made in Dr. Klotz' presence, as Mrs. Hatton was then too weak to repeat it. At the time Mrs. Hatton signed her statement she appeared to me as convinced as any person could be, that she was dying. Mrs Hatton stated to Dr. Klotz that he had refused to come when she had sent for him; he denied it in her presence. Dr. Klotz stated in Mrs Hatton's presence that Mrs Hatton had at first sent Fleury for him under the plea of sickness. But Mrs Hatton had previously told Dr. Eldridge and me that when Dr. Klotz first called, nothing was the matter with her. According to Mrs Hatton's statement Dr. Klotz attended her after the operation up to the time when she felt uneasy about the effects of the operation and asked him to call in somebody else. His answer was: "I have plenty to do, you may call whomever you like." She stated that Dr. Klotz had performed an operation on her. * * * * * * * * * She said that she consented to the operation on the statement of Dr. Klotz that there was no danger. I cannot say if Mr Fleury was present when Mrs Hatton stated that she was not ill when she sent for Dr. Klotz. When Dr. Klotz stated to the Consul that Fleury had come to him to call him on the part of Mrs. Hatton, Fleury said in French to the Consul: "It is quite true what the Doctor said." The statement of Mrs. Hatton was signed before I went to the Consul. Mrs Hatton asked, that Mr. Fleury should be spared if possible. Fleury heard the statement read and did not object to it.

On resuming, Dr. Wheeler stated that in accordance with instructions from H. B. M. Consul he had made a *post mortem* examination of the body of the deceased in the presence of Drs. Simmonds, Geertz, Eldridge, Hall and Massais. He detailed the result, and added that death was caused by peritonitis.

A statement was handed to the Consul from Dr. Klotz, describing the details of the case and explaining that his demand of a fee of $200, to be paid beforehand, was made in view of his approaching departure from Yokohama, as much as to mark his sense of the importance of the case.

Medical evidence corroborative of the result of Dr. Wheeler's examination was given by Drs. Simmonds, Eldridge, Geertz and Massais.

F. E. White, Consular Constable, stated: At 4-10 am. on the morning of the 14th February Mrs. Hatton died; I was present from 3 p.m. on the previous day. After the medical men had left her she told me that Dr. Klotz had killed her.

The Jury returned the following verdict:—

"The deceased, Julia Hatton, died on the 14th February between 3 and 4 a.m., at No. 130, from peritonitis, caused by the rupture of an abscess on the right ovary, brought about by pyæmia, due to the want of sufficient attention on the part of Dr. Klotz."

Law & Police

IN H. B. M.'S PROVINCIAL COURT.

Before C. W. Goodwin, Esq., Assistant Judge.

Wednesday, 16th Feb., 1876.

Whitfield & Dowson v. J. J. Jarmain.

This was a claim for $63, the price of a heating apparatus made by plaintiffs for defendant's hothouse.

Mr. P. S. Dowson, sworn: During November, Mr. Jarmain asked us to make a boiler for his conservatory. On the 9th of November, I sent him an estimate and a sketch (produced). At the time, Mr. Jarmain mentioned that he wanted something cheap to keep his plants over the winter. He never mentioned anything of Mr. Smith. The delivery of the job was a little delayed, and Mr. Jarmain wrote us a letter (produced), and in this letter there also is no mention of Mr. Smith. The boiler was delivered a couple of days after the receipt of the letter, in December. Mr. Jarmain advertises constantly in his own name. I have paid money to Mr. Jarmain on bills made out in his own name. Early in January I met Mr. Jarmain in the street, and he then asked me if I would let my account stand over for a few days; he would be able to pay me on the 15th, as he had a contract which would be finished on the 18th. I wrote to him at the end of the month to remind him of his debt. A couple of days after writing that letter I met Mr. Smith in the street, who asked me if I would mind to let Mr. Jarmain's account stand over a few days longer. I consented. Afterwards I wrote again to Mr. Jarmain, and received a letter in answer (produced), in which Mr. Jarmain mentions that Mr. Smith had arranged about the matter; so that I never heard of Mr. Smith's name until after his failure.

Mr. Jarmain sworn, produced his contract with Mr. Smith, and stated that he is a servant to Mr. Smith, employed as a gardener, on monthly wages of $60. It was in the latter end of 1872, or commencement of 1873, that Mr. Kramer, who formerly was in charge of the garden, left for Yedo. Mr. Smith then asked me to put up my name over the place, and to advertise in my name, but he has had the benefit of the garden. I only received my salary. When I ordered the boiler, I saw Mr. Whitfield, and had a long talk with him about the order. I distinctly told Mr. Whitfield that I would have to see my employer before I could give the final order. Afterwards I saw Mr. Smith, who told me to order to boiler.

Mr. Dowson: Mr. Whitfield told me distinctly, this morning, that he never knew anything of the order being made for Mr. Smith.

The Judge asked Mr. Dowson to go and call Mr. Whitfield.

Mr. Jarmain remarked: I thought everybody knew that I was employed by Mr. Smith, but I must confess that when I spoke

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

with Mr. Dowson in the street, I never mentioned Mr. Smith's name; the bill was sent up to me on the 30th January; I enclosed it an envelope and I sent it to Mr. Smith, who afterwards told me that he had seen Mr. Dowson about it.

Mr. George Whitfield, sworn: I had a talk with Mr. Jarmain about the price of the boiler ordered by him, and as he was a working man, I charged him little more than cost price. He left me, saying that he would see the other parties interested, and let me know. He never mentioned the word "employer." I paid particular attention to his using the words "the other parties."

Mr. Dowson: Mr. Jarmain's plea for having the thing done cheaply was, that he was a working man. I knew very well that Mr. Smith was the owner of the land.

Judgment given in favour of plaintiffs.

Defendant observed that he had no employment now.

The Judge ordered payment within six weeks.

IN THE U. S. CONSULAR-GENERAL COURT, KANAGAWA.

Before Gen. T. B. VAN BUREN, Consul-Genenral

Thursday, 17th Feb., 1876.

CHARLES SUMMER *vs.* JAMES JOYCE.

This was a case of assault and battery, committed on the 15th inst., on board the American ship *Nightingale*, Capt. Palmer, now lying in harbour, by James Joyce, formerly a seaman of the said ship, on Charles Summer, the carpenter.

Prisoner admitted the charge, and said that the assaulted man, Charles Summer, was the cause of all the troubles he had had on board the *Nightingale*.

Charles Summer, sworn: I am the carpenter on board the American ship *Nightingale*, now lying in port. The prisoner was a seaman on board, and was discharged a few days since, at his own request. On the 15th inst. the prisoner came on board the ship, and went to the forecastle. After a while he came to my door, and abused me in most foul language. I did not take much notice, because I could see he was intoxicated. He than jumped inside the door, and struck me with his fist. Then he picked up a carpenter's plane, and gave me one or two blows with it. (Witness showed his face cut, plastered, and swollen.) He then dropped the plane. He afterwards kicked me several times. I was sitting on my tool chest. While the prisoner was beating me, I was trying with my arms to fence off his blows. The prisoner said something about me talking "yarns" about him. Another shipmate came and got him away. He went forward, put on his coat, and went ashore. I called for the officer of the deck; he did not come. Captain Palmer came. I went to bed from pains, on account of the beating I had received.

John A. Palmer, sworn: I am captain of the American ship *Nightingale*. On the afternoon of the 15th I went on board, and met prisoner on the gangway. I spoke pleasantly to him. I asked him if he had come off to see us. He said yes; he had a small account to settle, and he had done so. I asked with whom? He said, "That man who calls himself a carpenter." I said, "You must not come here making trouble." He said no, he had done it, and was going away. I went to the carpenter's shop, and found him sadly bruised about the head. He has been unfit to work, and off duty ever since. Joyce was discharged at his own request. He said there were those on board he could not get along with, but he had no fault to find with me. He had never had any difficulty with the carpenter. He is a passionate man.

Prisoner called for his defence

Wm. Eclin, sworn: I am a seaman on board the *Nightingale*. When prisoner came on board, he went forward first. He then went to the carpenter's shop, and asked the carpenter if he was man enough to come on deck. The carpenter did not answer. Prisoner then entered the carpenter's shop, and struck the carpenter. He then took up a plane and hove it at him. I do not know of any privious trouble between prisoner and the carpenter. I have only heard say that the carpenter had spoken about prisoner.

Prisoner was sentenced to imprisonment for 30 days, and to pay a fine of $5.

KANAGAWA SAIBANSHO.

Before Mr. ASAINA KANSUI, Vice-President.

Monday 14th Feb., 1876.

E. ANTOINE *vs.* YASUOKA KIHACHI and KATAOKA KOICHIRO.

Mr. Yasuoka appeared personally. A Japanese lawyer appeared for Mr. Kataoka who declared that the management of the mine belonged entirely and exclusively to Yasuoka and that Mr. Kataoka had no direct part in the same.

Yasuoka deposed: the mountain was acquired in 1871 by me. It was only in 1872 that signs of a mine were found. Two analysis of the ore have been made; the one in Yedo by Japanese, the other by the care of Mr. Antoine. The Japanese analysis gave a much poorer result than the one made by Mr. Antoine. The richness, which this latter analyis seemed to prove, caused Yasuoka to explore the mine. I recognise the contract of 1 May 1873, but the Government would not approve of it, and let me know that it would only approve of a contract for one year. I do not know if Mr. Antoine returned that contract to me after the new contract was made, which should annul the first one. I have borrowed different amounts from different Japanese in order to meet the expenses of the exploration. On the 25th June a passport arrived from the Gaimusho for Mr. Antoine. I do not know the exact date, when Mr. Antoine set out for the first time. I should have accompanied him, but I was prevented by an indisposition and went afterwards to Kobe, where Mr. Antoine arrived in August. From Kobe Mr. Antoine and Yasuoka came together to Tokio. The last time that Mr. Antoine returned to Kochi he brought with him Mr. Gandanbers from Kobe. This was the commencement of September. He arrived at Kochi on the 15th September. I could not go to the mine, I was imprisoned for debt. In December Mr. Antoine obtained leave to remain on the mountain on account of sickness. The contract of September was made at Yokohama, and was written by Mr. Antoine in a foreign language. I never knew its contents, and thought that they were the same at those of the first contract. Mr. Antoine had told me, that it was exactly the same thing. I believe, that it was Takeda who delivered the permission to explore to Mr. Antoine. Mr. Antoine had only asked to see it. I was at that period still in prison, and not know anything of this circumstances. I was represented at the mine by Minami and another banto. Mr. Antoine's books were kept in Japanese. I do not know if Messrs. Favre Brandt & Co. have lent money, I do not even know these gentlemen's name. I have signed the contract of 5th September, I know that it treated of a sale of 3000 piculs copper on which an advance should be made as soon as the permission to explore had been obtained. I have heard that these gentlemen advanced $10,000 and that it was thus written in the document, which I signed. Of these $10,000 I have in 3 instalments received $5,660, I have used that money in the mines. Mr. Antoine's books must contain the particulars of that expenditure. When Mr. Antoine left the mine, there was a quantity of ore, which had not yet been taken. I do not know, if there was $100,000 worth, I believe there was 200,000 *kwan*, worth about 20,000 *rios*. Mr. Antoine's salary has not been paid; it should only be paid out of the profits from the mines. Mr. Antoine knew that, and he has never made any claim. It is not a contract of partnership, although the contracting parties had subjected themselves to French jurisdiction. I know only two foreigners who have gone to the mines. I have heard Dr. Massais spoken of.

Mr. Antoine: I told the parties that the first contract would expire on the 31st December, and I asked them if they were sure to be able to keep their engagements under the second contract. They told me "Yes." This conversation took place on the day when I signed the second contract. In November, 1873, I sent my interpreter to Tokio, to Mr. Kataoka, in order to know if my contract had been approved by the Government. The interpreter came back from Tokio and said that it had been impossible for him to see Mr. Kataoka; that he at last had had recourse to a *yakunin*, and that it had been decided that I, on the 20th of the 12th month, should have a permission from Government to prolong my stay at the mine for two months. I know that the Japanese cannot engage foreigners to go into the country without the permission of the Government, and as I knew that the first contract would expire on the 31st December, I was anxious to have a new permission from the Goverment before the expiration of the contract, therefore, I pressed the Japanese to take the necessary steps; but they always told me it was all right, and as I was not my own master, I could not quit the mine to push the matter myself. In the month of May, 1874, I left the mine, and stayed at Tokio. I had been informed that my permission to remain at the mine had not been renewed, and that I had better leave; but in order to leave I wanted money, and with that object I wrote to Mr. Kataoka. It was only in the month of March, 1874, that I knew from Kataoka that the approval of my contract had met with difficulties on the part of the Government. The works at the mine had been suspended by order of the Governor of the Ken, against which act I had at once sent in my protest. There was only one foreigner at the mine, besides myself

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

and Dr. Massais; the latter was duly furnished with a passport, and arrived at the mine in company with Kataoka.

The Court remarked that the Government can only recognise the first contract as valid, inasmuch as it has not approved of the second one.

Mr. Antoine; I protest against this view of the Government. The Government had once authorised the sale of the ore, afterwards it revoked this permission. I was not paid any salary, because I had the ore in hand, and could pay myself out of the proceeds of sale.

The Court here adjourned *sine die*, to give time for the production of extracts from the books of the mine showing the payments made by Mr. Antoine and by Kataoka.

IN THE FRENCH CONSULAR COURT, KANAGAWA.

Before EMILE KRAETZER, Esq., Acting Consul;
and
Messrs. VOUILLEMONT and RENAUD, assessors.
Saturday, 19th Feb., 1876.

Mr. M. KIRKWOOD *vs.* Messrs. RAUD & Co.

This was a claim for three months' rent, for the house No. 149, at $139 per month.

Mr. Raud: In September, 1874, I made an agreement with Mr. Kirkwood to take the house No. 149 for 4 years, at a monthly rent of $139, to be paid 3 months in advance. When I have asked for repairs of the house, Mr. Kirkwood has refused on the plea that the lease was, according to English law, not valid against him, although perfectly binding upon me. He added the he was willing to submit our dispute to arbitration. I sued Mr. Kirkwood, who is a British subject, in the English Consulate, and the Court decided on the 20th of last month that there was no valid lease. I then wrote to Mr. Kirkwood that at the end of February I should quit his house. Mr. Kirkwood protested.

Mr. Kirkwood: There was between me and Mr. Raud an agreement to take a lease of No. 149 for 4 years. This agreement was dated 23rd September, 1874. Mr. Raud had the agreement deposited in the French Consulate, and the agreement thus became a lease. But when Mr. Raud sued me in the British Consulate, it was there decided that it was only an agreement to make a lease, and not a lease. I have not put my seal to the agreement. According to French law, Mr. Raud is bound as tenant for 4 years; according to English law, it is only binding from year to year, as long as it is not sealed by me. It is, however, defendant's fault if I have not put my seal to the document, because he has the document in his possession, and has never asked me for my seal to it. When two persons of different nationality make a contract, each party should be bound by the contract according to the laws of his country. In my opinion, landed property in Japan should be considered as property moveable, because when the owner dies, his landed property is treated according to the laws of his country, and not according to Japanese laws. In my opinion, when a French proprietor has an English tenant, the English tenant should be sued in a French Court.

The Consul here remarked that he had several times requested Mr. Kirkwood to sign the contract; but Mr. Kirkwood had always answered that he would make a lease according to English law. Mr. Raud had always asked Mr. Kirkwood to accept the agreement as lease.

Mr. Kirkwood observed that he was of opinion that his case should be judged according to proof, and not with reference to what conversations he might have had with the Consul.

Mr. Raud: I proposed to Mr. Kirkwood to make a lease according to the agreement. Mr. Kirkwood answered that he wanted to make a lease before an English lawyer, and that I should pay the expenses.

The Court then passed the following

JUDGMENT.

Considering that on the 23rd September, 1874, between Messrs. J. Raud & Co., and Mr. Major, whose rights and obligations have since passed to Mr. Kirkwood, an agreement was entered into with promise of lease of the property No. 149, Yokohama, on several conditions, among others that the lease should be for four years, and that the rent should be paid every three months in advance.

That Mr. Raud and Mr. Kirkwood did not agree with regard to the form of the lease, whereupon Mr. Kirkwood sued Mr. Raud to fulfil his promise, and that in consequence the French Consular Court in Yokohama, on the 27th August, 1875, passed judgment, ordering the agreement of lease to be registered in the Consulate, and that the same should serve as lease between the parties;

Considering that the English Consular Court on the 20th January 1876, decided that the lease, as recognised by the French Court, was not made in accordance with English law, and not binding upon Mr Kirkwood as a lease, but only from year to year, although Messrs. Raud & Co. are bound by the said lease for four years;

And under Arts. 1102 and 1184 of the Civil Code, the Court declares the said lease cancelled between the parties from the 20th of January, and Messrs. J. Raud & Co. to be monthly tenants, who may give or receive 30 days' notice to quit from month to month, according to general custom, and who shall pay rent from month to month, at the end of each month, as the agreement between the parties has become null and void;

The notice to quit given by Mr. Raud to Mr. Kirkwood is valid. Mr. Kirkwood is condemned to pay the costs.

Messrs. DOMONEY & Co. *vs.* Mr. LA PLACE.

This was a claim for $212.22, for provisions delivered.

Domoney & Co. appeared by proxy; Mr. La Place appeared personally.

The defendant observed that he had deposited $50 in the Consulate towards the payment of the bill, and that he would pay the balance, $162.22, in the course of 15 days.

This was accepted.

Mr. FOURCADE *vs.* Mr. LA PLACE.

This was a claim for $411.76, for provisions delivered.

Both plaintiff and defendant appeared personally.

Mr. Fourcade observed that in the amount claimed was included $36 for interest, as his bill had been of very long standing.

Mr. La Place remarked that he did not think that he ought to be charged interest on an account current.

Mr. Fourcade said that in February last year he wrote to Mr. Place that he would be obliged to charge him 6 per cent. annual interest, and Mr. La Place had hitherto not made any remonstrance. He (Fourcade) was, therefore, highly surprised that objections were made now.

The Court ordered payment of the $411.76 within 15 days.

MR. THOMASSEN'S CRIME.

(The Spectator.)

The deliberate crime to which Mr. Thomassen appears to have confessed is probably one of the most amazing of which we have any record in history,—not so much on account of the magnitude of the consequences, either intended or accomplished, for many a war rashly and wickedly declared has produced more misery; nor even on account of the marvellous inadequacy of the motive, for the unrestrained love of gain, even as manifested in some single breasts, probably sacrifices more lives, though in a less sensational fashion, every year that passes over us, than are likely to fall victims to this frightful act of wickedness; but rather because all the deterrent incidents of the crime,—all which render it horrible to contemplate even from a mere onlooker's point of view, and still more from that which the perpetrator of the crime would have occupied,—must have been so very vividly present to the mind of the man who planned, and who indeed virtually committed it, even though the catastrophe which he had intended to bring about happened sooner than he proposed, and not in the way he had contrived. Nor is it even the striking minutiæ of the horrors as they must have been present to the mind of the man who was carefully contriving a tremendous explosion in mid-ocean to send a great ship and all its living freight into the air or sea, on the running-down of a piece of clockwork, which alone make this crime so exceptional. It is easy to conceive that many single discharges of artillery, mowing down the ranks of an army, must have not only carried as much destruction with them, but had their fearful results quite as clearly anticipated. But in this case, in addition to the magnitude of the results, the utter disproportion of the motive, and the graphic detail of the horrors which must have been present to the imagination of the wholesale murderer, there must have been also the distinct knowledge that all the victims would be hurried to their frightful doom without any sort of expectation or alternative on their own part, and simply and solely through the deliberate fiat of their murderer. When even an absolute monarch plunges into a bloody war, there is always some sort of passive permission, if not implied consent, on the part of those who do the fighting for him. When any great mine explosion, due to negligence or parsimony, brings about wholesale destruction, there is always the knowledge that the victims of the calamity were more or less aware of the dangers which beset them, and deliberately accepted these perils for the compensating advantages.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

But in a case like this, it may be safely said that if the author of the crime had been able deliberately to *will* the death of each of several hundreds of his fellow-creatures in order to secure for himself so much a head from each life forfeited, he would hardly have committed a crime more horribly significant in every detail to the imagination, than Mr. Thomassen seems actually to have committed now. A man who proposes to himself to blow to pieces a great passenger-ship at sea in order to gain a valuable insurance, must be held to have weighed every life on board against his own pecuniary gain, to have realised that a great act of fraud and treachery had to be backed up by a most unscrupulous and wholesale massacre, and to have regarded the gain which was to be so purchased as far more attractive than the cost was repulsive. And it is this which really appals us. Few, if any of us, realise how suddenly the fabric of society would collapse, if it had to depend for its stability on any of the external precautions by which crime is averted or visited with retribution. Once let there be, we do not say a number, but even an appreciable group of men, distributed over the civilised world, who would, if they safely could, sacrifice a whole host of their fellow-men to save a sixpence or earn a sixpence for themselves, and we venture to say that such a group of men could, if they acted with any sort of system, drive an association of civilised States into something very like anarchy. Who is there whose sufferings or death might not be made incidentally far more profitable, in the coarse sense, to some one or more of his fellow-men, than his life or happiness ever could be? An architect of Mr. Thomassen's mind might blow up half a suburb, in order to create an active demand for new building; a ship-builder of his order would *contrive* the destruction of a 'Captain' or a 'Vanguard,' in order to stimulate naval shipbuilding; an undertaker of his stamp would poison a family in in every street, to multiply the number of his funerals; a medical practioner of his cast would introduce an epidemic against which he thought himself protected by his own medical antecedents, in order to increase his practice; and a railway-stock speculator of like nature would plan a wholesale railway accident, solely to guarantee the success of his speculations for a fall. Such a dark plot as the Gunpowder Plot becomes almost the work of an angel of light, when compared with a deed like Mr. Thompson's. That was at least the act of a fierce fanatic, who hazarded his own life for a cause he thought nobler than life. But this shows all the wholesale cruelty and unscrupulousnes of fanaticism, without its dignity or disinterestedness. If it were not singular in the annals of the world, we might expect to have criminals who emulated its cynicism avowedly committing a murder for the sake of a few coppers, or firing a town in order to secure a new building-site. Indeed, the same temper of mind would lead a man, if it could safely be done, to forge alarming false messages only in order to put out his adversary's play at whist, or to forfeit an innocent person's life rather than get out of bed to give evidence a few minutes before the most agreeable time.

It may be said that the chief safeguard against such disproportionate crimes for advantages is this,—that the risk would be too gigantic for the end. But the truth is that the risk diminishes in exact proportion as the motive becomes inadequate to common eyes. No one would suspect a man of commiting a murder for sake of a pinch of snuff, even of the crime of forging a cheque for the gain of a few shillings at a time. Had this ship of the German Lloyd's Company disappeared in the Atlantic no one would ever have even hazarded the guess that it had been destroyed by the deliberate intention of some sender of insured merchandise, who sent out with his goods the means of blowing the vessel and all it contained into the air. A great crime can hardly even be suspected without the appearance of some motive which ordinary men would think at least not out of disproportion to the violence done to human nature. Conceive for a moment that such a disproportion might habitually exist, and the criminal is really protected by the very enormity of his crime. It is not difficult to understand a crime like Thomassen's if committed for the sake of unsettling civil order, or altering the succession to a throne; but for the value of an insurance-policy, however important, no one would ever have guessed it, had not the author of the scheme confessed it, and had not the horrible circumstances corroborated his confession. One asks directly, if a man will do what results, even when the plot fails, in killing eighty people and mutilating another hundred, for the sum payable under a policy of insurance, why should not another man shatter London to pieces for idle curiosity, and a third get up an insurrection in India as an historical or ethnological experiment? The absence of a rational motive is as bewildering in its effect as the absence of a man's natural shadow would be, and puts you in much at fault in your attempts to discover the true author of the crime. Moreover, a man who felt "no scruple" in destroying a town to secure his dinner, might very well be himself so little conscious of guilt as to be doubly secure against detection. The only reasuring feature in this crime of Mr. Thomassen's is that, in spite of the wonderful and monstrous character of its conception, the evidence of moral cowardice was forthcoming after all, and led to his suicide and his confession,—though whether the former was due only to the failure of the plan, or to some extent to the horrors which accompanied that failure, we cannot, of course, decide. One would almost have been inclined to guess that a man who could scheme such a crime would be quite devoid of anything like fear or horror such as Mr. Thomassen has evinced, and that the emotion he would feel at its failure would be only irritation and despondency, not remorse. It is something to know that the man who can calmly provide for extracting a small fortune out of a massacre is as capable as any lesser criminal of the agonies of a moral collapse. It shows that even in the region of the monstrous, the laws of divine retribution the not quite suspended, and that one may fairly hope to trace are vestiges of the commandments written on the tables of the heart, even amidst the bewilderment of so astounding a reversal of all our experience.

"A BLACK OUZEL."

—"*Shallow.* And how doth my cousin, your bed fellow? and your fairest daughter, and mine, my god-daughter Ellen?

"*Silence.* Alas! *a black ouzel*, cousin Shallow."

—*K. Henry IV.*, pt. 2, a. iii. sc. 2.

What did Justice Silence mean by calling his daughter "a black ouzel"? is the puzzle on which contributors to *Notes and Queries* have been exercising their ingenuity of late. One guesses that Ellen was "a comely brunette"; another, that she was "still unmarried—a solitary bird"; a third finds her described in ornithology as "naturally shy and suspicious, jealous and distrustful," etc. No one suggests the explanation which to simple, non-critical readers might seem to lie on the surface. The owlish Silence will accept none of his gossip's compliments. He may have "been merry twice and once ere now," but is become pessimist and grumbler. All the world goes wrong with him when he is sober. Shallow—who believes that "good phrases are surely, and ever were, very commendable"—asks after his friend's son: "I dare say, my cousin William is become a good scholar. He is at Oxford still, is he not?" "Indeed, sir, *to my cost*," is the sad response. "Many of mine old acquaintance are dead," chirrups Shallow. "We shall all follow, cousin," groans Silence. In the same humor, he meets the compliment to his "fairest daughter": "No *white blackbird*, alas! only a black ouzel, one of the commonest sort." "A poor virgin, sir, an ill-favored thing, sir, but mine own"—as Touchstone puts it. The ouzel was the common blackbird. We do not find that the name, in Shakspere's time, was ever given to other species, though the French (and adopted English) *merle* was sometimes extended to the field-fare, a larger thrush:

"Blacke byrdes or *ousyls*, among wild foule hath the chiefe prayse, for lyghtnes of digestion,' etc.—*Sir T. Elyot, Castell Helth*, 1534.

"*Owsell*, the bird called a *Blacke macke*, with a yellow beake, a *blacke bird*."—*Baret's Alvearie*, 1580.

"*Merlo*. An owsell, a Plackmacke, a merle, or Blacke-bird."—*Florio*, 1611.

"*Merle* A Mearle, Owsell, Blackbird. *Merle noir*, The Blackbird or *ordinarie owsell*."—*Cotgrave.*

Chapman's

"Black, black as an ouzel,"

and Shakspere's

"The ouzel cock so black in hue,"

have been cited by writes in *Notes and Queries*. A *white* ouzel was a proverbial rarity—"Rara avis in terris, nigroque simillima cygno." Cotgrave (under *Merle*) gives the saying: "Je vous donneray vn *merle blanc*," as equivalent to "I will perform impossibilities, or bestow on you a most rare gift." "Alas!" says Silence, "I have only an 'ordinarie owsell,' cousin Shallow."—*The Nation.*

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics.—In some branches we have to report an increased demand, but so far prices do not show any improvement and exchange continues to decline. For *Yarns* the demand is exclusively running on 16/24 assortments. *Grey Shirtings* are only moving in small lots. *Velvets* have been in good demand and some large sales have been effected. In *T. Cloth* no transactions are reported. *Taffachelass* is neglected.

Grey Shirtings:—				White Shirtings:—			
7 lbs.	38½ yds. 39 in. per pce.	$1.90	to $2.20	60 to 64 reed 40 yds. 35 in. nom. per pce.	2.20	to	2.40
8 lbs.	38½ yds. 44 in. „	2.20	to 2.50	Turkey Reds 24 yds. 30 in. 2¼—3 lb. per lb.	0.75	to	1.02½
8 lbs. 4 to 8 lbs.	38½ „ 39 in. „	2.20	to 2.50	Black Velvets	8.50	to	9.25
9 lbs.	38½ „ 44 in. „	2.50	to 2.90	English Drills 15 lb. 40 yds, 30 in.	3.25	to	3.40
				Taffachelass 12 yds, 43 in. *nom.*	2.00	to	2.25

Yarns.—

No. 16 to 24 per picul	$30.50	to	33.00	No. 38 to 42 per picul	$41.50	to	44.00
No. 28 to 32 per picul	$35.00	to	39.00	Reverse Twist 16-24 „	$34.00		

Woollens continue to be neglected by the native trade and rates are nominally without change.

Plain Orleans	40—42 yds. 32 in.	6.50	to 8.00	Figured Mousseline de Laine	30 yds. 30 in.	0.25	to 0.28
Figured Orleans	29—30 yds. 31 in.	4.75	to 5.25	Multicolored „	30 yds. 30 in.	0.35	to 0.40
Chimagoro	30 yds. 30 in.	5.25	to 5.75	Cloth, all wool plain or fancy	48 in. to 52 in.	0.80	to 1.20
Italian Cloth	—30 yds. 32 in.	0.25	to 0.33	Presidents	54 in. to 56 in.	0.60	to 0.70
Camlet Cords	29—30 yds. 32 in.	6.25	to 7.25	Pilots	54 in. to 56 in.	0.40	to 0.45
Camlets Asstd.	56—58 yds. 31 in.	18.50	to 19.00	Union	54 in. to 56 in.	0.40	to 0.65
Lastings, Japan	22—30 yds. 32 in.	13.00	to 14.50	Blankets, scarlet & green 7 to 8 lbs. per lb.		0.40	to 0.41
Plain Mousseline de Laine	—30 yds. 30 in.	0.19	to 0.20				

Sugar.—Since the publication of our issue of the 12th instant two vessels have arrived from Formosa with sugar. The sales reported amount to 25,000 piculs at $3.20 for old crop sugars, the new crop bringing $3.50 to $3.60.

We have to report a firmer condition of the market: stocks in first hands do not exceed 6,000 piculs which are now held for higher rates.

Kerosene Oil is firmer at $2.40 per case.

Sugar:—Formosa in bag per picul	3.60	to	3.65	China No. 5 Kong-fun per picul	4.10	to	4.60
in Basket „	3.45	to	3.50	„ No. 6 E-pak „	3.60	to	3.90

„ No. 4 Kook-fah „	5.00	to	5.50	Kerosine Oil per case	2.40		

EXPORTS.

Silk.—Since the 12th inst., arrivals are 90 bales and deliveries 156 piculs. Prices have been steadily maintained and the market continues as dull as reported on that date. There is no lack of good Kikai silks, but they are held at prices which compared with the present value of European raws check business. Kamatoki are in good demand at full rates.

Tea.—A desultory kind of business, chiefly in execution of San Francisco and other small orders, has resulted in the settlement of about 1,000 piculs, at previous prices.

Arrivals come in very slowly and present appearances point to a dragging business during the remainder of the season. The last steamer took 71,213 lbs. for New York 102,022 for San Francisco and 40,055 for other eastern ports.

The *Rona* got away on the 16 inst., but her cargo has not yet been circulated. No other vessel has as yet been talked of.

Common	$14.00	to	18.00	Fine	Nominal.
Good Common	19.00	to	22.00	Finest	„
Medium	24.00	to	26.00	Choice	„
Good Medium	28.00	to	30.00		

Exchange.—Sterling Rates are again lower, with, however, but little doing.

Gold Yen are higher and very scarce.

Rates close as follows:—

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

May 17th, 1873. 6m.

FRAUD.

On the 27th June, 1866, MOTEEWALLAH, a Printer, was convicted at the Supreme Court, Calcutta, of counterfeiting the

LABELS

Of Messrs. Crosse & Blackwell,

London, and was sentenced by Mr. Justice Phear to

TWO YEARS RIGOROUS IMPRISONMENT:

And on the 30th of the same month, for

SELLING SPURIOUS ARTICLES

bearing Labels in imitation of Messrs. CROSSE & BLACKWELL'S SHAIK BACHOO was sentenced, by the Suburban Magistrate at Sealdah, to

TWO YEARS RIGOROUS IMPRISONMENT.

CAUTION.—Any one *selling spurious oilmen's stores*, under Crosse & Blackwell's name, will be liable to the same punishment, and will be vigorously prosecuted. Purchasers are recommended to examine all goods carefully upon taking delivery of them, and to destroy all bottles and jars when emptied. The GENUINE Manufactures, the corks of which are all branded with Crosse & Blackwell's name, may be had from EVERY RESPECTABLE DEALER in India.

THE

Japan Weekly Mail

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 9.] YOKOHAMA, SATURDAY, FEBRUARY, 26, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

MARRIAGE.

On the 4th Dec., at Christ Church, Philadelphia, U.S.A., by the Rev. Ed. A. Foggo, D. D., ARTHUR BELLAMY, of Yokohama, fourth son of the Rev. RICHARD BELLAMY, Vicar of St. Mary's, Balham, London, to NELLIE, third daughter of THEODORE V. FAY, of Philadelphia. No cards.

Notes of the Week.

There is no news from Corea, and not the shadow of ground for believing in the report that Kuroda had been treacherously murdered by the Coreans. Should any such tragedy occur, every nation with a ship of war in these seas would be bound to support the Japanese in any reasonable demand they might make as indemnity for the outrage.

There is much uneasy feeling in the capital, and an apprehension among well-informed persons that mischief of one kind or another is brewing. The departure of General Saigo for America is much talked of, some saying that he cannot be spared, others that he has been got out of the way by convenient pretexts in order to render more easy the carrying out of designs to which he might have offered formidable opposition.

The great reduction of freight rates and passenger fares made by the Mitsu Bishi Company to meet the competition of the P. & O. Company, does not seem justified by sound policy, and would hardly we think, have been resorted to if the Mitsu Bishi Company had been managed by a board of directors representing a body of shareholders, or by a foreign superintendent conversant with steamboat management on a large scale. It at once imposes an enormous loss upon the line, and although the public gains in some respects by a competition which lowers rates, it cannot be desirable that business on any scale should be conducted at a heavy loss. Nor must the Managers of the Mitsu Bishi line imagine that their rivals will retire at once from the contest. The steamers are here, and cost a certain sum for maintenance even if unemployed. It is very hard, even with low rates, if they cannot earn enough to pay their expenses, minus the sum now spent on their maintenance while lying idle in harbour. It is true that this involves doing business for nothing, but the Mitsu Bishi is doing far worse on a far larger scale. It cannot be doubted that the management of the P. & O. is much closer than that of the native company, that its ships are more carefully and economically worked, and that the wear and tear in the one case, with machinery especially, will be far heavier than in the other. The general feeling before the announcement of the competition which begins practically to-day, was that the Mitsu Bishi rates were too high. Had a somewhat more moderate scale been laid down at first, the chances are that no opposition would have appeared, and the public, which generally judges fairly enough of such matters, would have been quite satisfied with that scale. But the high rates have brought a rival into the field, and the policy adopted to drive him off will entail heavy losses. It is all very well to imagine that because the government is at the back of the Mitsu Bishi, it must hold out longer than the opposition. But the position of the P. & O. Company seems to us this: It has some unemployed steamers which can hardly do worse at work, even on low rates, than lying idle. It cannot sell the steamers elsewhere and may ensure a sale here by the desire of its rival to buy off an irritating and ruinous competition, and thus it goes to work. The objections to buying off a rival are that it offers a premium to other competition with a similar end in view, and it is sometimes better to trust to the chapter of accidents that to increase the stake in an already unprofitable investment. The business along the coast and between the ports of Japan and China will, of course, be increased by the low rates of freight. But the Treasury of this country is in no condition to stand constant heavy drafts upon it, the necessity for which might, we think, have been avoided by meeting the opposition of the P. & O. Company in a different manner. We should have preferred to see a moderate reduction of rates and some agreement arrived at in regard to their maintenance on both sides. Each line of policy has its advantages and disadvantages, but we are disposed to think that, on the whole, the latter course would have proved the more satisfactory.

It is hardly too much to say that those who went to Dr. Faulds' Lecture on Development ignorant of the subject, must have come away in a state of the most hopeless confusion of mind, while it is certain that those to whom it is moderately familiar were cruelly disappointed. We have no wish to be less than entirely just to the lecturer, but he was in a thoroughly false position. He was called by a number of well-meaning people to give an address on a subject which they regard much in the light of a test-subject, and it is hardly too much to say that nineteen twentieths of his audience came together to hear Darwinism exposed, denounced and confuted, not because they have studied it, but because they have made up their minds about it without any investigation of it whatever. Thus they were almost horrified to find the lecturer bearing testimony of a very unequivocal nature to the value of the Darwinian hypothesis and the lofty attributes of its author's mind. He had been called to the platform to curse the common enemy, but his language was throughout that of almost unalloyed blessing. In his preliminary recapitulation of the processes which result in modifications of recognized types of life, whether animal or vegetable, Dr. Faulds was clear enough, because he kept closely to Darwin's own lines, from which he only strayed for a short occasional gambol in the by-path of the feeblest and dreariest humour. Of the congruous or becoming in relation to serious subjects, Dr. Faulds seems to have no more real conception than he has of what constitutes, or does not constitute, a joke, and thus he constantly left the greater part of his audience in doubt whether he was for or against Darwin's theories. He threw away his only chance of raising a laugh by the uncertainty

Digitized by Google

Original from UNIVERSITY OF CALIFORNIA

which hung over the direction of his humour. Many of his audience were quite ready to accept any joke, however bad, directed against Darwinism, but they were in mortal fear at each sally that they might be laughing on the wrong side, and thus remained prudently grave. Never was a party more sorely tried by one of its own prophets. It is not, however, difficult to see the attitude of Dr. Faulds' mind in relation to Darwinism. His theological prepossessions place him in opposition to it, while his reason shows him that it is by far the best hypothesis ever yet offered to explain the facts with which it has to deal, and thus he wished to show that it is 'not proven.' This is fair enough. But Darwin claims no more. So exquisitely balanced is his mind that he estimates the exact value of his hypothesis far more accurately than the great majority of his critics, whether favourable or the reverse. The hypothesis may, we think, be absorbed in some future more perfect theory, yet the mind of Europe has now agreed in the most unmistakeable manner that it never can be refuted—in other words, that it is true—not as the sole cause of the origin of species and the variations from recognized types which observation discovers to us, but as the main cause. Its great work has been the destruction of the idea of the creation of special invariable types—an idea which has been unquestionably banished for ever from the domain of positive knowledge. In claiming that Darwinism is not a new thing, Dr. Faulds did not bring into sufficient prominence the fact that Lamarck had no conception of the processes by which structural modification is brought about. He saw that there was adaptation, but had not facts enough from which to infer how it came to pass—possibly his scientific imagination would not have been keen enough to see the luminous point through them all, even had he possessed the knowledge of them which Darwin has. In saying that Darwin was more indebted to Owen than he cared to acknowledge, Dr. Faulds aimed a poisoned arrow at one of the most perfectly just and impartial minds of this century, one which bears its wondrous freight of classified and accurate knowledge with a modesty which will make him for all time the model of a scientific demonstrator. The climax of the lecturer's confusion was reached when he pointed out that Darwinism was implied in the Mosaic account of the creation, because it proclaims that the birds and the reptiles were created on the same day, and the scale of the reptile is only another form of the tissue from which the feathers of birds are made. Is not this playing fast and loose with the whole subject? Is it honest controversy? Does it not violate the morality of the intellect? To say first that Darwinism is 'not proven,' to take sides against it although paying it homage, and then to claim that even if it is true it is included by implication in the very theory of creation which on that hypothesis it absolutely annihilates, is to undermine all our faith in truth and to proclaim the apotheosis of sophistry. This is sad indeed.

No. Dr. Faulds was all wrong from first to last. He should have given a fair *resumé* of Darwinism and allowed no confusion to remain in the mind of his audience as to his own estimate of it; but he should have disabused them of the idea that because with infinite pains we have arrived at some definite idea of the works of the machine, we must therefore abandon the idea that it has come from a Divine Artificer. Until quite recently we have only seen that it *is* a wonderful machine; now we are beginning to see into the works, and to understand the relation of their several parts. We may not honestly—that is, it is not just to our reason—to shut our eyes to the great facts of nature and the history of the human mind in relation to these facts. It has pleased the Deity, in whom we live and move and have our being, to carry out his ends by means of second causes, and these we must investigate if we would learn anything truly concerning the methods of his work. We may not play at "hide and seek" in these matters. During the period of essential changes of human beliefs, and that transitional period when convictions become weak, when intellects become paralysed, and laxity of principle is the great danger to be feared from these causes, it is all the more necessary that truth should be clung to as a sheet anchor, and that the morality of the intellect should be guarded at every point. That the world is now slowly undergoing this change is as certain as anything unsusceptible of demonstration can be, and those who come forward as teachers should, if they have to deal with contradictory opinions, at least leave no doubt in the mind of their hearers that they endeavour fairly to assess the respective values of those opinions.

If the severity of English taste—ruthlessly violated, by the way, by Dr. Faulds on two or three occasions—was a little disturbed by the form of the remarks which Mr. Bingham made after the lecture, it was appeased by their excellent moral. He welcomed, he said, these discoveries, which added to human knowledge and, in spite of all fears, invariably conduced to human welfare. They left the grand sentiment of duty untouched, and, indeed, more often served to fortify it. The men who scorned delights and lived laborious days in the cause of science and truth were the great benefactors of mankind, Them no contumely nor obloquy deterred from fulfilling their beneficent mission, while truth gained by their labours and derived support from their devotion.

The steady and rapid decline in the value of silver is a source of most serious loss to merchants who have sold for distant delivery, and to all investors and mortgagees. Five years ago men bought property or lent money on it with dollars which were worth four shillings and six pence or eight pence. These will be repaid at three and ten pence—an enormous depreciation in the standard of value—to say nothing of the decline in the value of property itself. Could not merchants combine to sell on a gold standard?

We publish elsewhere a translation from the *Hochi Sodan*, which is the organ of the Buddhists, and is edited, we believe, by a priest of high position and acknowledged learning. It is curious and interesting as showing the activity of the spirit of enquiry awakened among the religious orders in this Empire, and the nature of the arguments with which the Buddhists meet the dogmas of the Christians. It may be fancy, but the great tenderness for life characteristic of the doctrines of Sakya Mouni seems to us very apparent in the essay.

The translation given elsewhere from the *Choya Shimbun* of the Rules recently made for the admission of attorneys to practice in the Judicial Courts of the Empire, is valuable as showing how urgently the Japanese are pushing forward measures to place their judicial system on a new and improved basis. But when is the annonncement to be made of the abolition of the hideous practice of torture? It is less resorted to than formerly; that we know; but it should be abolished by proclamation for ever. The necessity for it is purely imaginary. Judges and juries must find out whether or not men are guilty. Guilty men will sometimes escape; innocent men will sometimes be punished—though this ought to happen very rarely—but torture must be abolished. It is a mere question of sooner or later; then why not at once?

For many months past, says the *Times*, there has been in progress of construction by Messrs-Morgan and Co., of Long-acre, Her Majesty's coach-builders, a magnificent state carriage for H. M. Mikado. Every modern improvement and luxury has been introduced, and a most imposing vehicle is the result. The body is built of the finest Spanish mahogany, special care being taken that the grain of the wood should harmonize throughout. The upper part of the coach is painted a rich canary colour, the lower panels being a deep green and gold. The Imperial arms, which adorn the doors and back panels, have been most elaborately painted in relief by the deaf and dumb heraldic artist, Mr. T. D. Baker. The under carriage throughout is painted green and gold, the latter being the prevailing colour, The wheels have been made in the solid, and are the only part of the carriage which is not consonant with European ideas—probably on account of the difference in the roads. The mountings and lamps are of solid silver, chased and gilt, and are very massive. The interior is lined with a rich yellow satin, deeply brocaded

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

and curtained with rich Brussels lace. By an ingenious arrangement the back part of the head can be thrown back so as to form an open chariot, the Imperial arms in silver gilt forming a very pretty canopy, upheld by silver-gilt poles in the centre. The carriage is intended for state and ceremonial occasions, and is the third state carriage turned out by this firm for the Imperial family.

We hear that the Japanese authorities have already parcelled out the South Camp on the Bluff in lots forsale, but it is much to be regretted that they have made no provision for widening and improving the adjacent road. This could now be done easily and at little sacrifice of saleable land, while the benefit of such an improvement would be unquestionable. The road, as it is at present, is dangerously inconvenient, and we hope the authorities will not neglect the chance they now have of making a needful alteration—a chance which will be utterly lost after the land is sold.

As the Government is about to provide for the better regulation of public lecturers and others, it would perhaps be well that they should take into consideration the case of the exponents of panoramas of foreign countries now being exhibited in the capital, whose views as to history are not unlikely to mislead their hearers. The ruins of the Colosseum at Rome are not, it may be observed, employed for wild beast and man fights at the present day, nor are the prisoners captured by the Italian army reserved for this mode of amusing the idlers of the Holy City. Such, however, it is explained, are the uses at one of these exhibitions in Yedo of the Coliseum, nor does the circumstance appear to trouble the audience with any doubts as to the advantages of our civilisation.

We are requested to intimate that Professor R. W. Atkinson of the *Kaisei-gakko* will deliver a lecture on the subject of "Indigo" under the auspices of the Asiatic Society, on Saturday evening next, 4th March. The lecture will be given at the *Horaisha*, Shinbashi.

From the "Japan Mail Daily Advertiser."

There is some reason for believing that the Government will shortly abandon the present mode of punishing recalcitrant writers for the press. This would seem to have proved of little avail in repressing opposition writing, and while it covers the editors with all the glory of martyrdom occasions them in reality but little actual suffering; that little being amply compensated by the increased sale of their journals. It is alleged that the penalty usually inflicted in France will be resorted to in future, and the issue of the newspaper prohibited for a certain period.

The *Nichi Ichi Zappo* of Kobe states that during the years 1874 and 1875, 35 native Christians were baptised in the Protestant Church at Kobe. This year, however, some thirteen persons have already been admitted to baptism.

A fire broke out in Osaka, on Sunday last, and before its progress could be stayed 300 houses were burnt down. It originated in a theatre.

The photographers have been for some time past actively engaged in the secret production and sale of the Imperial portrait, many hundreds of which we are informed have been exported to European countries. As this is an offence of *lèse-majesté*, the police have been on the alert to discover the offenders, two of whom were found on Monday at Asakusa in Yedo.

General Saigo, Commissioner from this country to the Philadelphia Centennial Exhibition, and *suite*, proceed to America by the steamship *City of Peking*.

During the last few days the preparations for war have been somewhat less active and a peaceful close to the negotiations in Corea is now generally anticipated.

The arrival of some 300 men of the Satsuma clan in Yedo, is noticed by the *Saifu Shimbun*.

The absence of rain and snow since the 18th instant, has facilitated the loading of ammunition which has been going on vigorously.

A room has been opened at Sakai in the *Ken* of that name in which newspapers are publicly read out, explained and commented on. The novelty is said to be highly popular with the inhabitants.

Further cases of offences against the press-laws are being dealt with by the Authorities. The *Hioron Shimbun* remarks: an official has stated his opinion that until some fourteen or fifteen newspaper writers are locked up the press will be deaf to all warning. The tale must be nearly made up.

The *Naniwa Maru* has been appointed by the Post Office Department for the monthly postal service to Fusan in Corea.

The *Hochi Shimbun* states that a plot of ground of some 700 tsubos has been purchased at Yokka Ichi, Tokio with a view to the building there of a Registry Office for shipping.

In consequence of there being no American man-of-war in harbour, the anniversary of Washington's birthday was not observed yesterday with the customary salutes.

Mr. Augustus H. Mounsey has been appointed First Secretary of H. B. M. Legation at Yedo in the room of the Honble. F. R. Plunkett who has been nominated to the Embassy at Washington.

The rules for the guidance of the examination of persons desiring to be licensed to practise in the native law courts have just been issued by the government,

A Representative Assembly of the people of Yedo will shortly be held at the Office of the Tokio *Fu*. It is intended that meetings of the *Kucho* and *Kocho* shall take place regularly henceforth.

Arrangements had been made for a public distribution of Medals of Honour by H. M. the Mikado at the *Sei In* on the 22nd instant. Owing, however, to His Majesty's indisposition the presentations were made at the Imperial Palace instead.

At one o'clock on the 21st instant says the *Choya Shimbun* an unsuccessful attempt was made to enter the residence of Yamagata, Minister for War; and an hour later the same persons, it is presumed, endeavoured to set the house on fire. Fortunately, however, neither loss nor damage resulted, although the thieves succeeded in making their escape.

The sales of horned cattle in Kobe during the past year amounted to 5,172 head. This, we believe, shows some slight advance upon the sales in previous years. A large portion was purchased for shipment to Yokohama.

The Yokohama *Daily News* reports the forthcoming opening of a lucifer-match manufactory in Yokohama. The import, during the year ended December 1874, to Yokohama alone amounted to a value of $21,000.

The *Akebono Shimbun* has the following:

When a collection was being made at Nagasaki a few months since in aid of those who had suffered from the calamitous floods which occurred lately in the South of France, the Vice-Consul of that country called upon the *Kenrei* to solicit his subscription, who at once contributed $30. He has since enquired whether this sum is to be at the cost of the Government or of his personal estate, and has been informed that the charge cannot be admitted in the Public Accounts.

An Army and Navy List will, we learn from the *Akebono Shimbun*, be shortly published in Yedo.

Mr. S. M. Bryan, Foreign Superintendent of the Imperial Post Office, leaves to-day for Shanghai on public business.

The P. & O. Company's s. s. *Columbian*, left Hong Kong for this port yesterday morning at 10 a.m. The *Columbian* is destined to run on the new Shanghai line.

The *Nichi Nichi Shimbun* mentions a report that certain foreigners have memorialised the Government with a request

We read the following in the *Pall Mall Gazette* of January 7th:—

About six weeks ago a British merchant ship named the *James Paton* was wrecked off Fukushima, Japan, and was totally lost. The Japanese authorities and the natives near that place showed the greatest kindness to the shipwrecked men, all of whom, including the captain's wife, owe their lives to the exertions made by the natives. The sufferers had every attention shown them, being fed, housed, and conveyed to Yokohama gratuitously. The Board of Trade, learning these particulars from despatches received by the Foreign Office, have forwarded the sum of £100 to Sir Harry Parkes, her Majesty's Minister at Yokohama, to be distributed at his discretion to the natives who showed such kindness to the unfortunate crew.

It were much to be desired that the sphere of the Act here alluded to could be made to comprehend neighbouring settlements:

An Act of considerable importance in Hong Kong has just come into force, and we doubt not that the steps necessary to give full effect to its provisions will be speedily taken by the Colonial Government. The Office for the Registration of Trade Marks was opened on the 1st inst., and the marks being thus formally made the property of those using them, the technical objection which has stood in the way of prosecuting the swarm of imitators of well-known brands in Hong Kong will be removed. Had the existing Act been in force at the time it is probable that the case—which many of our readers will recollect—in which a Chinaman was prosecuted for selling spurious oil as "Hubbock's" could not have fallen through. The prosecution in that case was, if we recollect rightly, withdrawn because no proprietary right in the trade mark could be proved in the absence of Messrs. Hubbock from the Colony. At present, we presume, a copy of the register of the mark could be taken as judicial evidence on this and similar points.

THE BRITISH MINISTER'S NOTIFICATION.

IT would be by no means just to a very reasonable party, whose opinions deserve every respect, to ignore the fact that the recent Notification of Sir HARRY PARKES appears to them too sweeping and arbitrary in its nature to be entirely sound; in addition to being vitiated, in their opinion, by the absence of the concurrence of the other Foreign Representatives in a course where it would most probably have been obtained with little difficulty and with great advantage. As things stand at present, a subject of Holland or Belgium, in which countries the press is almost if not quite as free as in England, could set up a Japanese newspaper, while an English subject would be punished for doing so. This, it is argued, cannot be sound. It is contended, too, that the prohibition is fatal to any effort which might be made in the cause of religious or secular education, science or art; that it will soon be pushed to the suppression of free public speech in the Japanese language, and will thus be used to obstruct all the advantages which the Japanese might derive from missionary labour. If, it is said, the views of the Japanese had anything like breadth and generosity, the prohibition would not be unfairly or unwisely used. It would willingly be restricted by them to newspapers, which undoubtedly might be employed in such a manner as to cause dissension between the Government and its subjects. But, in view of the essential narrowness of the Japanese mind, the arbitrary nature of the Government, and the prominence now attached to the idea of securing in some form or another jurisdiction over foreigners—an idea the existing force of which we erroneously somewhat underestimated in our Summary of 1875—it is contended that the Notification will be wrested to purposes other than those it was intended to provide against, and will militate against some of those efforts for the advancement of this people from which unalloyed good might be predicted. The general position is conceded that any plea that Englishmen or other foreigners can carry their free press into another country, not being the territory of their Ruler, and where press-laws exist, is preposterous in the last degree, opposed to the first principles of reason and justice, and not merely calculated, but certain, to lead to the disturbance of friendly relations. It is conceded that on no principle of equity can we force on the Japanese a liberty of our own which is at variance with every feature of the design of their own polity. So far the party of which we speak concur in the views of the notification under discussion which have appeared in these columns.

But they do not like to see the British Minister standing alone in a measure which seems to them, before all things, opposed to their justly cherished principle of free thought and free speech. They think the indirect consequences of the Notification will be bad, and, perhaps above all, they do not like the idea that in a matter where the subjects or citizens of other nationalities are free, at least at present, Englishmen are bound by an act which, though undoubtedly legal, they cannot help feeling to be one out of harmony with the genius of the free institutions under which they have been nursed. The fairness and reasonableness of this opposition must be acknowledged. In this respect it differs widely from the claim for a free press for American citizens which has been put forward in answer to some remarks on this subject in our issue of last week. In this claim it is actually gravely asserted that the following article in the Constitution of the United States can be pleaded for permitting American citizens to publish newspapers

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

here in the Japanese language,—"Congress shall make no law * * * * abridging the freedom of speech, or of the Press" &c. But surely the operation of this clause applies exclusively to America, and Judge STORY, who is quoted in a long passage on the freedom of the Press—as if any one doubted the value of that freedom—would have been the first to say that it had, and could have, no possible bearing on this case. We maintain most distinctly that we do not carry the right of a free press into foreign countries, and even that much as we cherish that right as part of our undoubted liberty in England, no power on earth except the Japanese Government could justly extend to a foreigner the right of absolutely free publication in this country, any more than in France or Germany any power but the Government of those countries could give us a similar right of publication there. More than this; we think that it would be a grievous violation of all equitable principle to contend that because we live here among ourselves under our own laws, we are at liberty, in a matter touching alone the relations between this Government and its subjects, to override a law considered necessary for the maintenance of those relations.

And now, turning to the reasonable position of those whose objections to the Notification have already been stated, does it not seem well that in view of the circumstances under which foreigners came to and reside in this country, all such consideration should be shown to the Japanese as leaves them in the undisputed possession of their full rights as our hosts? They are not our vanquished enemies. Though but for our strength we should not have gained our present footing, it is by no right of conquest that we are here. That our presence has been an unmixed good to these people, no one will contend for a moment. That we are bound to make our presence as advantageous and as little irksome to them as possible, no one will deny for a moment. Yet to step in between the Government and its subjects, and to incite one against the other, would do the very reverse of this. It would produce a double complication; one between us and them, and another among themselves. They do not prohibit the entrance of our books and our newspapers into the country; rather, indeed, do they encourage it in every way. By this means they acquire our best thought, and this will surely do good work for us and them in an orderly and gradual manner. Remedies should surely bear some relation to the idiosyncracy and constitution of a patient, and the regimen which would brace a man of our own zone would kill an Arab or a Cingalese. People are far too much inclined, it seems to us, to regard a free press as a fetish, and to imagine it can do anything and everything for anyone and everyone. Our own belief differs widely from this. We do not believe that restraints which have been imposed for ages, and which have moulded the minds, customs and habits of thought and action of a nation, can be thrown off at once without imminent danger. We deplore the previous restraints. We think the condition of a free people immeasurably higher than that of a people so bowed down by authority as the Japanese. But we plead that these antecedents must be taken into consideration; that the change must come gradually, and by the concurrent effort of the Government and people, or, it may be, of the pressure of the people on the Government. But we do not see how we can justly increase this pressure by means which form the subject of warm remonstrance by the Government against ourselves; which if adopted by Japanese subjects, would be either evasions or violations of the domestic laws of the Empire, and which no Western Government would for a moment tolerate.

We are, however, disposed to regret that the representation of the Japanese Government in respect of the *Bankoku Shimbun* was not made the object of a conference of the Representatives of the Treaty Powers. That they would have concurred in the general position taken up in Sir H. PARKES' Notification, is almost certain. But they would, in all probability, have thrown the prohibition into a somewhat different form, which would have covered less, though enough, ground, and would have gained great additional force by the unanimous nature of its testimony to the necessity for, and the justice and reason of, the measure.

RULES FOR THE APPOINTMENT OF LEGAL PRACTITIONERS.

("Choya Shimbun" February 23d 1876.)

[NOTIFICATION No. 1.]

It is hereby notified that the accompanying rules (for the governance) of attorneys have been recently framed, and that, on and after the 1st of April next, it is forbidden to employ any person as attorney who has not obtained a license under these rules.

After that date, however, a principal (in an action) who has no attorney and is prevented by illness or other urgent reason from appearing, may cause a near relation (such as father, brother, son, uncle or nephew) to appear for him. Those who have no such near relations may depute a person whose fitness is certified by the *Ku* or *Kocho* to act for them.

(Signed) ÔKI TAKATÔ,
Minister of Justice.

February 22, 1876.

RULES (FOR THE GOVERNANCE OF) ATTORNEYS.

No: 1.—Persons desiring to become attorneys shall draw up a petition stating the court of justice in which they are desirous to carry on their profession, and apply to their local authorities to be examined. After this examination has taken place the local authorities shall draw up a report on it and forward it to the Board of Justice, and if the applicant deserves the license it shall be granted to him by the Minister of Justice.

No: 2.—The examination of attorneys shall be held on the following points.

(*a*) To see whether they possess a general acquaintance with the changes that have been proclaimed or notified.

(*b*) Whether they possess a general acquaintance with criminal law.

(*c*) Whether they possess a general acquaintance with the present form of procedure in courts of justice.

(*d*) The nature of their (present) conduct and antecedents.

No: 3.—Persons who cannot be authorized to act as attorneys are as follows.

(*a*) Persons who have undergone the actual punishment of imprisonment with hard labour for one year or longer.

(*b*) Persons who have been made bankrupt.

(*c*) Persons who have not a defined place of abode within the jurisdiction (in which they wish to practice.)

(*d*) Officials or persons holding official rank. (Including those temporarily in office.)

(*e*) Any person whatsoever employed by officials, nobles, gentlemen, traders or other persons.

However, employés who have certificates of their master's consent (to their becoming attorneys) are excepted.

N: 4.—The names of all persons licensed shall be recorded in the attorney's list in the Board of Justice and in those in the several courts.

However, persons who have been licensed must reside within the division in which the court (that they practice in) is situated.

No. 5.—Persons who have been licensed shall pay a fee of ten *riyos* to the Board of Justice.

A license is, however, in force only for one year. Per-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

sons who wish to continue to carry on this profession shall obtain a new license.

No. 6.—Attorneys are not limited to acting only for persons living within the same jurisdiction. They may be consulted by all persons whatever.

Although they are not allowed to practice in any court other than that to which they have been licensed, they are not, if they have hitherto carried on the case, prevented from appearing in the upper courts in cases of appeal from the lower.

No. 7.—Whenever there is evidence of any dishonesty or disingenuouness on the part of the attorney as towards the appellant, the latter may at any time whatsoever report the same to the Saibansho and then discard his attorney and procure another one to act for him.

No. 8.—Attorneys are to make themselves acquainted with the purport of the plaint, answer, and correspondence in a case, and to answer any questions which the judges may put to them in Court. They shall be forbidden by the judicial officers from impeding the trial by wandering from the details of the explanations (which they give to the officers) or by perverting the purport of the plaint.

No. 9.—Should any point be omitted in plaint, answers, or correspondence, any attorney shall not be allowed to argue on the case until a new document (embodying the omitted point) shall have been handed into court.

No. 10.—Plaintiff and defendant must not argue together in Court if they have not received the permission of the judicial officer to do so.

No. 11.—Although it is permitted to address the judicial officers in respect to all notifications, proclamations, and rules, the right and wrong of these must not be discussed nor the source of existing laws.

No. 12.—Should the attorney be prevented by illness or other cause from appearing on the appointed day, he shall report the same to the court. Should he fail to appear without due reason, and the trial be postponed in consequence, he shall reimburse both plaintiff and defendant the expenses that they have incurred in consequence of the postponement.

No. 13.—The amount of an attorney's fees shall be arranged beforehand between him and his client.

No. 14.—(*a.*) Attorneys reviling the national laws in court or contending with the judicial officers.

(*b.*) Those arguing on their own views or using false arguments.

(*c.*) Those slandering or reviling their opponents or damaging their reputation or fame.

(*d.*) Those taking fees beforehand or demanding excessive fees.

(*e.*) Those purchasing plaints of others for debts, contracts, etc., and turning them to their own profit.

(*f.*) Those encouraging plaints.

(*g.*) Those damaging their client's interests by purposely effecting delays.

Punishments on all the above shall be inflicted by the judicial officer directly in accordance with the gravity of the offence. The punishments are as follows:

a. Admonition. *b.* Suspension from practice for not less than one month and not more than one year. *c.* Name being struck off the roll. In this latter case the person shall not be again admitted to practice as an attorney till after the lapse of three years.

Those, however, who are guilty of heavy crimes shall be treated in accordance with the law thereon, and the punishments provided in these tables may also be imposed. Those who come under rule *a* in No. 3 shall not again be permitted to become attorneys.

No. 15.—Persons coming under these rules are not affected by any other laws or usages.

Notification No. 22.

To the several Courts, *Fu, Ken.*

You are hereby notified that after the 1st of April next steps are to be taken in accordance with the rules for the governance of attorneys recently notified in No. 1. whenever any person in your several jurisdictions is desirous to become an attorney.

Attorneys may, however, on the request of plaintiff or defendant be allowed to carry on cases which have been previously referred to the Court until decision in the same is given.

(Signed) Oki Takatô,
Minister of Justice.

February 22, 1876.

Notification No. 25.

To the several Courts, *Fu* and *Ken.*

With reference to Notification No. 1 recently published by this Department, it is hereby notified that it is to be carried out in accordance with the following bye-laws.

(Signed) Oki Takatô,
Minister of Justice.

February 22, 1876.

Rules for the Governance of Attorneys.

Bye-laws.

No. 1.—Persons desirous to become Attorneys are to send in an application to that effect to the local *Ku* or *Kocho* by whom it is to be endorsed, and it is then to be sent to the local Government office.

No. 2.—The local Government office having received the application are to examine the *Ku* or *Kocho* by whom it is endorsed and cause them to state whether there has been any transgression of Rules 2 or 3.

No. 3.—Although in reference to this latter point the local Government office may make such investigation or examination as may be found convenient, they must not in reference to the subjects mentioned in A., B., and C., under Rule II., fail to make the applicant produce a written treatise.

They must, however, give a subject for this treatise or set questions and cause the applicant to send answers in writing.

No. 4.—A person having been approved of by the local Government office, the latter is to send in to the Board of Justice a memorandum to that effect enclosing the applicant's petition also his treatise or answers, as the case may be, as well as the statement made by the *Ku* or *Kocho.* Of course they are not to forward to the Board of Justice the petition of any person of whom they do not approve, but to return the same together with the other papers direct to the applicant.

No. 5.—The Minister of Justice having received the papers shall have them examined, and if he decides that the applicant should be licensed he shall cause such license to be granted and have it recorded in the general list of Attorneys in Japan. Of course, if he decides that the person should not be licensed he shall at once return the papers to the local Government office.

The license fees are to be paid within 10 days to the local Government office; they are to be accumulated in such office and forwarded to the Board of Justice four times in each year on the same dates as money recovered from thieves and amercements.

No. 6.—The license having been received by the *Ku* or *Kocho* from the local Government office is to be given to the applicant. The latter having received it is to forward enclosed in a report to the Court of Justice, and the Judicial official having read it shall order the clerks to record in the list of attorneys of the court his full name, residence, rank, age, etc., and then return the license to him.

The *Straits Times* says:—"There is a report current that His Excellency Sir William Drummond Jervois has resigned. We do not know what truth there may be in this report, but we should not be at all surprised to find it true, and we are perfectly certain that His Excellency will carry with him the warm sympathy of the three Settlements." If true, this action will, we presume, have been taken in view of home disapproval of his policy with regard to annexing or "administering" Perak.—*China Mail*

We understand that a new supply of subsidiary coins for the Colony will be ordered from home. They prove such a convenience that a large quantity of these coins, especially the 5-cent and 10-cent pieces, is carried into the mainland of China, and as a proof of their currency in the interior, they have reached a high premium, while the Hongkong dollars are at a discount of more than ten per cent.—*China Mail.*

SPIRIT OF THE JAPANESE PRESS.

A Buddhist view of the Fall of Man.

(Horki Sodan.)

A friend of mine asked me some little time ago to explain to him the passage in the book of Genesis which relates to the eating of the forbidden fruit. I replied that the narration was purely legendary, and that it could be regarded in no light by accurate thinkers. My friend, however, showed some displeasure at this, and said, "There are no countries more enlightened than England and America and Christianity prevails in them. If what you say be true, how can the people of these enlightened countries believe in it?" I replied that the same question had long since occurred to myself, and having recently discovered the explanation of it, I would propose to give it to him. This I did somewhat in these words :—

"There are very many stories of wonderful miracles narrated in the Bible, and that of the eating of the forbidden fruit is by no means the sole passage which is out of harmony with reason. The Old Testament contains more of such stories than the New. The process by which ignorant people are are led to believe in these doctrines is that being desirous to go to heaven after death, their hearts are moved by the story of the resurrection of Christ, and thus their eyes are blinded and they believe everything which they read in the Bible. The reason why learned men do not dispel these views is that these religious doctrines conduce to the preservation of morality and peace among the lower classes of Society. For reason, men must go to science, to Astronomy, Geography, Natural Philosophy, Chemistry, &c. But science and religion are two different things. The former gives positive knowledge ; the latter simply acts upon the feeling of men. The development of science is quite recent, but the religion has prevailed from the most remote ages, and it is now generally held among the learned that it is better to leave religion to do its duty, which is to soften the hearts of men, than to subvert it by science and controversy. This being the case, whether the learned believe in religion or not, they pay it an outward show of respect, and this is why foreigners all appear as believers and religion seems in so flourishing a state."

My friend then asked me whether I could explain in what respects these legendary details were not in harmony with reason. I complied and said :—

"It is unnecessary for us to search far in the Bible for matter which is inconsistent with reason, for there is hardly any part of it which is not so. In the story of the creation it is narrated that God made all things in six day, and that on the first day He said, 'Let there be light and there was light. And God saw the light that it was good, and God divided light from darkness, and God called the light Day and darkness he called Night.' But day and night are caused by our facing or not facing the sun. When there was no sun how could there be any division of day and night?" On the second day, God said, "Let there be a firmament in the midst of the waters, and let it divide the waters from the waters. And God made the firmament and divided waters which were under the firmament from the waters which were above the firmament ; and it was so. And God called the firmament heaven." But what we call water is that fluid which flows on earth, while we call the blue vault above us heaven. Water is not a thing that can be divided into above and below, nor do we imagine that heaven is made of water. On the third day, after separating the sea from the dry land, God said "Let the earth bring forth grass, the herb yielding seed and the fruit tree yielding fruit after his kind, whose seed is in itself upon the earth. And it was so. And the earth brought forth grass and herb yielding seed after his kind and tree yielding fruit, whose seed was in itself, after his kind." On the fourth day God said, "Let there be lights in the firmament of the heaven to divide the day from the night, and let them be signs for seasons and for days and for years, and let them be lights in the firmament of the heaven to give light upon the earth, and it was so. And God made two great lights, the greater light to rule the day and the lesser light to rule the night, he made stars also." Now the earth and the other planets are kept in their respective places by the attraction of the sun, and to say that the land, the sea, the grass and trees were made previous to the sun is the same as saying that children and grandchildren were made before their fathers and grandfathers. We find it stated that the sun and moon were made to give light to the earth. But this is like ranking a master and servant as belonging to the same class. On the fifth day, God said, "Let the waters bring forth abundantly the moving creature that hath life, and fowl that may fly above the earth in the open firmament of heaven. And God created great whales and every creature that moveth, which the waters brought forth abundantly, after their kind and every winged fowl after his kind." On the sixth day, after making beasts, cattle, and every thing that creepeth upon the earth God said, "Let us make man in our own image, after our likeness ; and let them have dominion over the fish of the sea and over cattle and over all the creeping thing that creepeth upon the earth. So God created man in his own image, in the image of God created he him ; male and female created he them." But should God have an image, as the Bible itself says, we cannot say that he is a spirit and formless, and when the matter is put thus, I do not see how it can be proved to be wrong."

"The story about the eating of the fruit is still further confused and resembles the talk of children. I will try to explain it. God created a man and called him Adam, and "took the man and put him into the garden of Eden to dress it and keep it." And the Lord God commanded the man, saying, "Of every tree of the the garden thou mayest eat, but the tree of knowledge of good and evil, thou shalt not eat of it, for in the day that thou eatest thereof thou shalt surely die. And God said it is not good that man should be alone ; I will make him a help meet for him. And God caused a deep sleep fall upon Adam, and as he slept, he took one of his ribs, and closed up the flesh instead thereof. And the rib which the Lord God had taken from man, made he a woman, and brought her unto man, and they were both naked, the man and his wife, and were not ashamed." Then it came to pass that a serpent tempted Eve to eat the forbidden fruit by saying, "Ye shall not surely die. God does not know that on the day ye eat thereof your eyes shall be opened and ye shall be as gods, knowing good and evil." "And the woman took of the fruit thereof and did eat and gave also unto her husband with her and he did eat. And the eyes of both of them were opened, and they knew that they were naked, and they sewed fig leaves together and made themselves aprons." God was then very angry, and punished the serpent by cursing him and said, "Upon thy belly shalt thou go, and dust shall then eat all the days of life." Unto the woman he said, "I will greatly multiply thy sorrow and thy conception, in sorrow thou shalt bring forth children." Unto Adam he said, "Because thou hast hearkened unto the voice of thy wife, and hast eaten of the fruit of which I commanded thee, saying, thou shalt not eat of it, cursed is the ground for thy sake, in sorrow shalt thou eat of it all the days of thy life. Thorns also and thistles shall it bring forth to thee, and thou shalt eat of the herb of the field. In the sweat of thy face shall thou eat bread, until thou return unto the ground ; for out of it wast thou taken : for dust thou art and unto dust shalt thou return." God then became jealous of man and said, "Behold man is become as one of us, to know good and evil: And now, lest he put forth his hand, and take also of the tree of life and eat, and live for ever ; therefore the Lord God sent him forth from the garden of Eden, to till the ground from whence he was taken.', Thus, according to this account, the bearing of children and the necessity for work are the consequences of the sins of Adam and Eve and these were entailed on all future generations."

"I have extracted these accounts from the second and third chapters of Genesis. Their confusion and absurdity are immense and may be seen at the first glance. Such things cannot be believed in an enlightened society."

My friend still pressed me to enlarge on this subject and I did so as follows :—

"Adam and Eve ate the forbidden fruit because they saw "that the tree was good for food," and if it was not good for this purpose, it ought not to have been made at all, for this is like making an invisible pit as a trap. Yet when man fell into it God's wrath was kindled and man punished. An ancient Chinese writer says that a ruler who puts temptations before his subjects and then punishes them for yielding to them is like one who sets a concealed trap and punishes those who are caught in it. Should God be less just than this Chinese philosopher? It is said that God is omnipresent and omniscient, and thus he must have seen the serpent tempting Eve. But if he did not show her how to resist the temptation, and yet punished both for yielding to it, it seems very cruel. If it be pleaded that God did not know when she ate the fruit, it follows that there are things which God does not know."

"Was the serpent made by God, or did it make itself? If the former, it is the same as if God tempted Eve himself, and this makes him the origin of evil : if the latter, the statement that God made all things is directly impugned."

"It is the sublime attribute of the human intellect to know good from evil, and this it is which distinguishes man from the beast,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Thus we cannot divine the reason why the eating of this fruit, which it is said tended to enlarge man's reason, was forbidden. God also spoke as if man's immediate death would follow upon the eating of the fruit—very probably to frighten him—and we do not know how old Adam was when he did so. But it is certain that he lived nine hundred and twenty years, and this throws doubts upon the statements which God makes."

"Before our first parents had eaten of the forbidden fruit they were not aware of their nakedness. Afterwards their eyes were opened and they were ashamed of it. They then made garments of leaves, which shows that their knowledge was increasing and is the evidence of a dawning civilization. But God was displeased with this, and laid upon Eve the pangs of maternity. But the females of all living things produce offspring. What sin have they committed?"

"It is said that the serpent was punished by having to creep upon his belly. Whom did the earthworms and such like creatures tempt that they should be condemned to the same attitude?"

When man came to a knowledge of good and evil God conceived an enmity towards him and said "man has become as one of us." He feared that man would put forth his hand and eat of the tree of life and thus secure immortality and happiness, and so he banished him from Eden. But if man resembles God, God must resemble man. Now we find that man was banished from Eden for ever because he resembled God, who must therefore be cruel and jealous. And this punishment was not inflicted upon Adam and Eve alone. It still affects all mankind whose eternal curse it is. Is not this cruel? Both in China and Japan, and even while both were in a barbarous state, it has ever been held that the punishment of a crime should not extend beyond the perpetrator of it; and now that we are more enlightened, not only is this still the spirit of our law, but we find that if two men have committed a crime, one of whom planned it, the other only aiding in its execution, the former is more heavily punished than the latter. If man acts in this manner, how is it conceiveable that God should visit the sin of Adam to all eternity upon mankind?"

"The legend of original sin is the explanation of the whole theory of the cause of Christ's crucifixion, and when we find the foundation so confused and absurd, we conclude that the rest of the Bible is out of all harmony with reason."

"Christians who are perplexed on this question try in many ways to explain it, but I have not found any whose answers were satisfactory. Some of them say "These are the ways of God and man cannot understand them. God has the power of punishing man, but man has not the power to judge or censure the ways of God." Others say, "Rewards and punishments are potent means in governing men and God deals with us as a ruler with his subjects. It is not that God did not know at the time that they were taking the fruit and committing a sin, but he did not speak until the deed was done because he wished to show how he deals with those who break his commandments. He purposely was silent before the sin, but punished it severely afterwards, not only for the purpose of warning Adam, but all his descendants. God did not make the tree of knowledge without reference to the benefit man might derive from it, but he punished Adam for eating of it until such time as he was permitted to do so."

"Such are the explanations of the Christians, who wrest the story to all manner of meanings. The above two modes may be accepted by the believers in this religion, but were they offered to an unbeliever they would only convict the teacher of an ignorance of reasoning. In arguing with unbelievers, if reasons are not grounded upon established facts, the whole superstructure disappears. The explanation which pleads that rewards and punishments are useful instruments in governing men makes God lower than man. A righteous ruler is grieved when even one of his subjects falls into trouble, and he only punishes where such a course is unavoidable. Inasmuch as men are not wholly good, so, when one of these laws is broken the offender alone is punished for the purpose of example and warning. But as a human ruler is not a being who has created his subjects, if any one of them violates his laws he has no alternative but to punish him. But God is the Creator of men, and therefore if he desired that none should disobey his commandments he should have created beings incapable of sin. Yet not only did God fail in making man good; he purposely permitted him to sin, and not only punished Adam and Eve, but permitted their guilt to taint all their descendants. Wherefore this cruelty? How incalculably greater than the disposition of the present rulers of nations to make their people suffer, does that of Jehovah himself appear!"

"At the same time I told my friend that I should only argue in the above manner with those who hold in a bigoted manner to the words of the Bible, and who therefore miss its deeper meaning. For if we take whole chapters together and do not permit ourselves to be perplexed by mere words—(the meanings of legends underlie the words in which they are narrated: it is wholly idle to say that the words of the Bible are the words of God, and, with this, to forbid further enquiry) we shall find that the story is not so absurd. When I meditate over these passages its seems to me * * * * * * * * * *

(Here the writer speculates upon the probable nature of the sin of our first parents, and comes to conclusions very familiar to those who have made the acquaintance of the patristic writings, analogies for which he finds in the national legends of the Kojiki.)

Looked at in the above light, there appears no serious difficulty in explaining the enigma. But religious people get themselves entangled in the words and do not penetrate to their hidden meaning, and in this puzzled state they give absurd explanations of obscure passages. If we are held strictly to the letter, not only is the story of the forbidden fruit impossible to be explained, but other difficulties become unmeasureably increased. For example; when we read the Old Testment not only do we find that people were cruelly punished, but that they were often unmercifully destroyed by great floods, showers of fire, pestilence, famines and droughts, and we have in this book a fearful record of God's anger and jealousy. He treats the Israelites with a marked partiality and other nations with great cruelty. We are told that the Deity at other times caused bloodshed among his chosen people by inciting their enemies against them when he was wronged, and God himself says that he is a jealous God. This does not appear to me the true thought of a divine being. Floods, fires and pestilence either come to pass according to natural laws, or they are caused by the evil dispositions or ignorance of man. A victory in battle depends on the intelligence of the general and the efficiency of his troops, it can in no sense be said primarily to be the work of God; and the reason why such things were directly attributed to God is because the prophets desired that the people should regard everything as directly depending on the will of the Deity exercised on their behalf for the maintenance or punishment of the nation. For Judæa was a small country encircled by powerful nations, and without some such cause of union as this it could not have preserved its independence or retaken what had been snatched from it by enemies. These doctrines were therefore inculcated by the prophets to rally the people round some central power, but they are out of vogue in these more enlightened days though in themselves admirable and patriotic. And although these doctrines involve the employment of falsehood, they were so conducive to the interests of the nation that I do not think even God himself would censure them. I doubt indeed whether the explanations I have given will afford much satisfaction to the Christians, yet they form so large a body that some will surely be found to admit the justice and truth of my views."

Here my friend smiled, and thanking me for the trouble I had taken, departed, apparently satisfied with the result of our interview.

Prince Bismarck—The Dangers of Imitation.

(Choya Shimbun.)

Is Prince Bismarck, Prime Minister of Prussia, one of the most powerful countries in the world, truly a hero? Not only is his fame universal throughout Europe and America, but his reputation has extended even to Eastern lands, so much so that he who accomplishes any act of greatness is spoken of as a Bismarck, and every public man of note is emulous of attaining his vast and highly-honoured reputation.

Now we have no desire to deny Bismarck's greatness. But, on the other hand, we are just as little inclined to admit him to be an object for our esteem and honour, or a model to which our countrymen should endeavour to conform; for should they try to imitate him they may fall into the mistake of the artist who produced a dog when he had intended to represent a tiger. Moreover the imitation of such models may cause much misery and annoyance to our people. Bismarck holds the most honoured position in his country; the administration indeed of the Government may be said to be vested in him and his power is unbounded. And how has he used the people? If we may judge from the reports that have come to our ears he has employed his intellect and influence to deprive the people of their natural rights and liberty, he wages cruel and exterminating wars without regard to the misery they entail, visits with harsh punishment the objects of his personal animosity, and, with infernal and subtle eloquence, wins over his political adversaries. It is further

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

said that so great is his loyalty to his sovereign that he denies the rights of the people, asserting that the Monarch of Prussia has received his authority from above, and is a deputy of the Divine Being. He treats statesmen and *savans* with great *hauteur* and even severity, and has imprisoned many who ventured to write against him. A lamentable case is reported from Hanover, where the editor of a newspaper was arrested and died of ill treatment on his journey to prison. The very thought of this barbarity makes us tremble with fear and apprehension; how much more then must it affect the people of Prussia? This statesman has also suppressed the exercise of the Roman Catholic religion and has prohibited emigration. Can there be greater tyranny? Some may allege that though Bismarck's acts are characterised by injustice and cruelty, and exhibit his indifference to the freedom of the people, the energy he has displayed in bringing the governments of Germany within one confederation, and his success against the French, obtaining from them so enormous a sum in satisfaction of German losses, stamp him as one of the greatest statesmen of modern times, and that to imitate a career crowned with such complete success can occasion no injury to a country but may rather be productive of much benefit. To this we reply that the success of Bismarck, being the result of a cruel and tyrannous policy, is but momentary and will not endure. The nation protests inwardly against his despotism, though outwardly succumbing to the influence of the statesman. The French, too, are improving their army with the intention doubtless of attacking Prussia on the veteran's death, and we hear that the welfare of that great Empire hangs upon his life, and that life threatened by old age and infirmity. With his death the Government itself will fall, and the great man's name will soon pass into oblivion leaving only a bitter memory in the minds of the French.

Now what does this teach us? That the success of despotic governments is but short and temporary, and that however flourishing their rule for a time it soon passes away. This is the lesson impressed upon us by Bismarck's career, and it is for this reason a cause of sorrow and apprehension to us to find so many ready and desirous to imitate him in our own country. He accomplished much by the power of a great intellect, though all would seem to be for the transient glory of the moment, but we fail to see what is to be gained by his imitators. Their experiments in government are likely to end in deplorable results to the country and its people.

Correspondence.

THE LATE INQUEST.

To the Editor of the "Japan Weekly Mail."

Yokohama, Japan, February 22nd, 1876.

Sir,—The note in your issue of February 19th signed "An Englishman," while exceedingly complimentary to me, does by implication a serious injustice to the other medical witnesses in the case of the unfortunate Mrs. Hatton, and, as it is endorsed editorially, demands some notice. The note in question commends me for the performance of an unpleasant, but imperative duty, and insinuates that such performance of duty by a medical man, is something unusual and, therefore, worthy of special approbation. The simple fact is that from my position as medical attendant immediately prior to and at the time of the woman's death, the duty of testifying as to suspicious facts in the case rested upon me, or rather upon myself and Dr. Goertz, who saw Mrs. Hatton in consultation with me; and upon us alone; and a reference to the testimony will show that upon every point within his knowledge my evidence was corroborated by that of Dr. Goertz.

The other medical witnesses examined were called to testify simply to the *post mortem* appearances observed by them. Of any facts antecedent to the death of the woman they had, and could have had, no personal knowledge whatever.

Now these *post mortem* appearances, as shown by the combined testimony of all the medical witnesses examined, including that of Dr. Goertz and myself, while clearly indicating the immediate cause of death, threw no certain light on the more remote causation of the diseased conditions observed at the autopsy. Evidence as to these remote causes was only to be found in the dying statement of the woman herself, the statement presented by the accused, and the testimony as to condition shortly before death which was given by Dr. Goertz and myself. The medical men examined could only testify to the facts within their personal observation; the possible connection of these facts it was the business of the Court to establish.

Had the office of attending the last days of the deceased fallen upon any of the medical witnesses other than Dr. Goertz and myself, their duty in the case would have been the same as ours, and would, I am convinced, have been performed in essentially the same manner. I observed no indication of any desire on the part of any medical witness to "gloss over" the affair, nor can I believe such a wish to have existed. No question was evaded, no fact concealed; but at the same time, and properly, there was no hazarding of conjectures calculated to unfairly prejudice the minds of the jury as to the case, which, so far as the Inquest went, was to be tried simply on the bare facts as educed from the evidence, and as to these facts there was perfect unanimity of professional testimony.

I have just stated that the evidence before the Coroner's Inquest was properly confined to facts, without any unsolicited expression of opinion by the medical witnesses as to the connection of these facts. Upon this point "Beck's Medical Jurisprudence" one of the standard authorities upon legal medicine, the combined work of a physician and a lawyer, is clear and explicit. "In cases of violent death, and these are the most important as well as the most common in which professional witnesses are summoned, their duties may be considered under two divisions, first, before the Coroner's Inquest, and secondly, before the Court and Jury that is to try the supposed criminal. In other words, the *facts* that are to govern are elicited before the former, while before the latter these facts are to be stated and *opinions* are to be advanced which frequently decide the fate of the accusation." (Beck's medical Jurisprudence 5th Ed. p. 954: the italics are mine.)

In reference to the part taken by Dr. Goertz and myself, the injunctions of another universally accepted authority are equally clear. Dr. Taylor, taking wounds or poison as typical of violent death, says "When the case is likely to prove fatal, it is the duty of the medical man to warn the patient in the presence of his relatives or friends of his dangerous condition. If the wound or poison is not likely to prove rapidly fatal, the attendance of a magistrate to take down the statement in due legal form would relieve the medical man of all responsibility. Should any statement, however, be made to him under these circumstances, it is his duty to make, on the spot, a note of the words actually used, there should be no paraphrase or translation of them, but they should be the *ipsissima verba* of the dying man. It is not for the witness but for the Court to interpret what is thus stated."

"Professional etiquette" simply inculcates all charity as to errors of judgment on the part of our brethren, but nothing more. To conceal such a crime as that of which Dr. Klotz has been accused, or to endeavor to screen the culprit from the consequences of his crime, would be not only a neglect of the responsibilities of the citizen, incumbent upon medical men as on all others, but would be a violation of the sacred obligation to preserve intact the purity of his profession, which is imposed upon every practitioner of medicine.

Permit me to say that in cases where medical men are accused of crime or malpractice, the public seldom judges the medical witnesses fairly.

A widespread opinion exists that members of the medical profession feel it incumbent on them to support each other through thick and thin, *per fas et nefas*. That we do not hastily condemn each other in matters concerning which a man may honestly, and with every desire to do his full duty, commit what we may believe to have been an error of judgment, is true; and this arises from the fact that our science, grand and progressive as it is, is as yet inexact; and from our knowledge that it is often almost an impossibility that a third party should form a correct opinion in matters medical from hearsay evidence alone. I believe it to be, however, impossible that a respectable medical man should knowingly protect a criminal or unworthy brother from the consequences of deliberate wrong-doing, more especially when such wrong-doing involves the prostitution of the resources of our beneficent profession.

It is a well known principle in law, as in morals, that the accused should receive the benefit of all doubts as to his guilt.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Can medical men do otherwise than apply this principle to any of their own number who may be accused of crime?

I beg leave further to call your attention to the fact that all the medical witnesses were not examined as to the propriety or exorbitancy of the fee admitted to have been demanded by Dr. Klotz in the case.

I am, Sir,
Truly yours,
STUART ELDRIDGE, M.D.

GOLD MINING IN JAPAN.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

SIR,—Will you kindly grant me a portion of your valuable space to make a slight correction in the otherwise accurate report of the discussion upon Dr. Geerts' paper "Gold" at the last meeting of the Asiatic Society in Tokio. From figures quoted from Mr. Plunkett's report, showing that only a very small amount of profit is obtained by working the mines, I am made to conclude that Japan "could not therefore be rich in gold." What I did say was that at present this country could not be ranked as a gold-producing region, seeing that the total profit of 50,000 *yen* (in 1874) was divided amongst 89 mines.

The question as to whether Japan is rich in gold or not, is one which cannot be decided with the present information. From the results obtained by Mr. Munroe in his examination of the gold-fields of Yezo, the only conclusion to be arrived at is that they are too poor to be worked with profit, but as Dr. Antisell pointed out, Mr. Munroe's examination was limited to the surface washings which have probably been worked repeatedly. It is not unlikely that by working the bed rock, with the help of improved methods, better results might be obtained.

I am, Sir,
Yours obediently,
R. W. ATKINSON.

Kai-sei Gakko, Tokio.
February, 21st 1876.

STREET LIGHTING.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, 25th February, 1876.

SIR,—A paragraph in your issue of the 19th instant, with regard to the street-lighting, seems to demand some little explanation from us.

In order to render this explanation lucid, it is necessary to go back to the commencement of last year, when the agreement between Takashimaya and the community was entered into. According to this agreement the charge for 100 lamps was fixed at $467 per month. After a great deal of trouble, and personal application to some who seemed reluctant to pay their share, we succeeded in getting subscriptions to the amount of $475.34 per month, although a great portion of these were not secured till the second quarter of the year.

From a statement made out at the time we find an estimated surplus for the year of $75.06; and this was to be applied in part payment of our joint promissory note for $100. This note was given to secure the expense of lighting the streets from 25th December, 1874 to 1st January, 1875, for which period no subscription was asked. Thus, had every amount promised, been actually paid, we should still have been liable (had the Gas Company chosen to press us) for the sum of $24.94 being balance of the said $100, in addition to some $40 or so which we had previously disbursed for printing, &c.

From the above statement it will be seen that, *provided there was no default in payment*, a barely sufficien sum would have been contributed. But, owing to removals, fires and other causes during the year, at least $300 of the sum promised was never actually paid. As however by the last clause in the Agreement, the Gas Company bound themselves to accept anything over ninety per cent of the sum fixed, the loss caused by this short payment falls upon them.

This Agreement terminated on 31st December last, and feeling sure that the community as a body were not prepared to pay as much as they did last year (yet, with the idea that, at a slight reduction in the price of the gas it might be possible to obtain the required amount) we made the Machigaisho, who are the present proprietors of the gasworks, the following proposition:—"If you will agree to a reduction of ten per cent in charge, we will assist you as far as lays in our power to to a fresh agreement; if not, we must leave you to draw up the agreement, and while we should not wish to throw any actual obstacle in the way of its being adopted, we shall feel bound to withhold from it our cordial support."

The refusal of this overture, and the consequent darkness, we need not dwell upon.

In conclusion, we have merely to say, that while your idea of paying five and twenty shillings for light if it cannot be got for a guinea, may be all very well in print; yet it becomes a difficult one to carry out when buyers of the commodity in question, only appear willing to pay fifteen shillings. The curses, not loud but deep seem to us us to have been equally divided between DARKNESS and HIGH CHARGES.

As some however may be sanguine enough to believe that subscriptions can be easily obtained, we take this opportunity of saying that our appointment as a Committee virtually lapses when the first Agreement was concluded; and that while we merely continued in office, hoping to be able to render some service to the community, it was quite open to anyone to relieve us of duties which have entailed as much trouble and which have resulted in so little permanent good to the settlement.

We are Sir,
Your obedient Servants,
ARTHUR WINSTANLEY.
A. J. WILKIN.
EVERS.
C. PIQUET.
} *Gas Committee.*

[We are somewhat in the position described by Puff, who pleads that one of his actors could not possibly be aware of a number of important circumstances, for the simple reason that he was not informed of them. It would perhaps have been more gracious had we put our remarks of last week interrogatively, but we can regret nothing which has brought a very reasonable explanation from the Committee of all the circumstances of the case, the difficulties they have had to contend with, and their method of meeting them.—ED. *J. W. M.*]

Law & Police

IN THE GERMAN CONSULAR COURT.

Before A. SCHAEFFER, Esq., Acting-Consul
and
Messrs. J PELTZER and H. FRANCKE, assessors.
Tuesday, 22nd February, 1876.

Carl Frederick Jarnick, a German subject, formerly a seaman on board the *Shalimar*, was accused of having, on the 8th instant, stolen a pair of boots from a Japanese house in the native town.

Prisoner pleaded not guilty. He stated that he was born in the neighbourhood of Dantzic, and that he had never before been punished for or accused of any crime. The boots, which were old boots, were lying before the house door on a board. Prisoner passed in company with a Japanese. who told him that these boots belonged to him (the Japanese), and that he should take them along. Prisoner accordingly took the boots; but when they had walked about 15 paces further a Japanese came after them, claimed the boots, and took them away. The other Japanese who was in prisoner's company, and by whose orders prisoner had taken the boots, now disappeared, saying that he had forgotten something at home. Prisoner would be able to recognise that Japanese if he saw him, but did not know where he lived. He had made his acquaintance in the streets of Homura.

The Court called prisoner's attention to the improbability of his statement; but he adhered to the same, adding that he, at that time, was somewhat drunk.

A Japanese policeman deposed that at about half-past two p.m. he was on duty in the street. He saw two Japanese and a foreigner lying on the ground. He ran to the spot, and in reply to his inquiry, he was told that the foreigner had stolen a pair of boots. He took the two Japanese and the foreigner to the Police

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Station. He did not see any Japanese at that time running away from the place where the foreigner was. The prisoner was drunk.

Kochimachobe, a Japanese tea merchant, stated that he had put his boots down inside his friend's door. He was certain that the boots were inside, and not, as stated by prisoner, outside, because it was raining that day. The place where the prisoner fell down was about half a *cho*, or 180 feet, from his friend's house. He did not see any Japanese leave the prisoner at that time.

Ginziro, a Japanese tea merchant, stated that the former witness came to his house on business, and had put his boots inside the door. The prisoner passed and took away the boots. Witness and Kochimachobe ran after him, and took the boots away from him. Prisoner fell down on the ground. Witness did not see any Japanese leaving the prisoner at that time.

Prisoner, when asked if he desired to cross-examine the witnesses, declared that he had nothing to say against their evidence; but he repeated that he was innocent of the charge, and that it was not his intention to keep the boots for himself.

The Court considered the charge proved against prisoner, and condemned him to four weeks imprisonment and costs.

GOETHE IN YOUTH.*

(Pall Mall Gazette.)

The publisher of these volumes has long been known as an enthusiastic collector of manuscripts by Goethe and of early editions of his works. So rich has the collection become that for a time Herr Hirzel thought of issuing a complete edition of the writings of his favourite author. After due reflection this design was given up, partly, as Herr Bernays informs us in his introduction, because the task was too ambitious for one or even two editors, and partly because a satisfactory complete edition is impossible until free access is obtained to the manuscripts Goethe left behind him: which have hitherto been guarded with jealous care. It seemed, however, to Herr Hirzel and Herr Bernays that it would not be beyond them to issue a thoroughly critical edition of the works of some one period of Goethe's life; and they very properly, selected that of his youth. We say very properly because there is no other period so distinctly marked, and which therefore can be easily studied apart from the other stages of his development. It closes, so far as literary effort is concerned, with Goethe's settlement at Weimar almost exactly a hundred years ago. He had then acquired fame as the author of "Goetz," "Whither," a number of lyrics, and several dramas of minor interest. For about ten years afterwards he published nothing of importance; and when he did again appear before the world as a poet, it was in so wholly new a character that his style could scarcely be recognized. His letters also indicate a profound change in his aims and impulses. It was, therefore, quite possible to bring together the writings of these earlier years without reference to those of a later time; and we think it will be admitted by all who carefully go through the volumes that the work could not have been better done than it has been done by Herr Hirzel and Herr Bernays, who have acted as joint-editors. Goethe was in the habit all through life of altering his published works, sometimes so much as almost completely to destroy their original form. These changes occasionally from an artistic standpoint, are an improvement; but if we wish to understand the poet himself when he wrote, we must of course go back to his first conceptions. The editors, fully alive to this fact, have reproduced the earliest impressions; and in several cases they have been able to print from Goethe's handwriting. So scrupulous are they to give us exactly what he wrote, that they retain even faulty spelling and punctuation. For scientific students of Goethe the edition has thus a unique value; for by comparing it with editions that contain his last touches, they may perceive at a glance the ideas and expressions which did not commend themselves to his riper judgment; and an interesting inquiry is often suggested as to the grounds of his alterations. The letters which, like the works, are arranged as nearly as possible in chronological order, include several never before published; and a good many—for instance, those addressed to Lavater—appear for the first time complete. They indicate the temper in which Goethe entered on his various undertakings, and afford us the best means of reducing to its real proportions the somewhat ideal figure presented by him when, in the dignified calm of old age, he tried to recall the days of stormy and passionate youth.

The merest glance through these volumes suffices to suggest various points in which young Goethe differed from the Goethe of later years, with whom the world is now most familiar. When he had been some time at Weimar he notoriously withdrew as much as possible from contemporary influence; and so throughly did he isolate himself that, when Germany was overrun by French armies, he continued unmoved his literary and scientific work. He had not even a word of hope or encouragement for the nation when it rose in a fever of patriotic excitement against Napoleon. For this indifference he is still bitterly attacked by Radical writers, while those who, to use the current phrase, worship art for art's sake think it one of his chief merits that he did not allow his energies to be distracted from the highest objects. Whichever view is right, he cannot be praised or blamed for like indifference in youth. He was then in the fullest sympathy with the struggles and aspirations of his time. Even in the tiresome early play, "Die Mitschuldigen," there is a reference of much interest to Paoli, whom young Goethe admired quite as warmly, although not so demonstratively, as young Boswell. In "Goetz" a remote period is represented: but that period was selected mainly because there was so much in its wild turbulence that had affinity with the intellectual anarchy of his own time. "Werther," as every one knows, owed its enormous popularily chiefly to the fact that it gave expression to feelings and ideas which were profoundly stirring the younger generation of Germans. "Clavigo," a good acting play, was less influenced by the prevalent spirit; but "Prometheus" and "Stella," with very different degrees of power, are full of that tone of protest against everything divine and human which is to be found in so many other writings of the day.

In order to understand young Goethe, therefore, it is necessary to understand his era; and Herr Bernays would have greatly increased the value of his excellent introductory essay if he had given some account of this in the light of the latest investigations. The immediately preceding period may be best described as that in which the influence of Frederick the Grest made itself felt throughout Germany. Long before the Seven Years' War he had done much indirectly to stimulate intellectual activity; for he was the sole German Sovereign who endeavoured to rule as an enlightened philosopher; and the spectacle of his untiring devotion to what he considered the national interests, combined with his love for "things of the mind," moved to some extent the whole German people. His influence reached its highest point during the Seven Years' War, when at last Germany had the satisfaction of seeing one of the rulers, by his courage, endurance, and farreaching plans, excite the admiration of Europe. New energy was infused into the nation, and for a time literature shared the general advance. Lessing, who was for the thought of this time what Frederick was for its politics, strove to deliver his countrymen from slavish imitation of foreign models; and in his "Literary Letters," "Laocoon," and dramaturgie," while insisting on the right of individual genius, he expounded the laws by which alone genius can achieve products of enduring worth. In "Minna von Barnhelm" and "Emilia Galotti" he gave examples of dramatic work performed with the aims and in the spirit he recommended to others. In a very short time after the great war Frederick's influence showed signs of waning; the principles with which he began his reign were no longer novel, and he could give them fresh applications only within a very limited area. Unluckily, the energy he had evoked was not controlled and steadied by practical political life; it soon, therefore, manifested itself in all sorts of strange and exaggerated forms. While Lessing had been grappling with the great problems of art, Klopstock and Wieland had been working in wholly different directions; and they now stepped into the foreground, the former as the representative of an imposing but often hollow sentimentalism, the latter of extreme epicureanism. Foreign influences also helped to divert the national sympathies from the channel into which Lessing had striven to turn them. Rousseau, in whom the qualities of Klopstock and Wieland were combined, became almost as popular in Germany as in France; and Ossian was read with a rapture which would have made Dr. Johnson, if he had known anything of German literature, think poorly indeed of its prospects. What is strangest of all is that Shakspeare became the idol of young Germans. They were under the impression that, scorning the trammels of art, he had followed only the impulses of a vague something called "nature;" and it was this supposed freedom from restraint that induced them to place him in the front rank of poets. It is almost impossible to conceive the intellectual extravagance to which these and allied influences gave rise. The "man of genius" would submit to no rule; he demanded room for the development of every whim, however fantastic; the world of his own fancies was deemed infinitely grander and more suggestive than that of actual

UNIVERSITY OF CALIFORNIA

existence. He was filled with a vague longing for enjoyment larger than that which comes through the ordinary channels, for knowledge more intimate and mysterious than that attained by science, philosophy, or theology. The wild play, "Sturm und Drang," which has given its name to this unquiet epoch, affords a fair conception of its lawlessness; but young Goethe in the works we have named presents a far more full and impressive picture. In addition to these, he began "Faust;" and, although it afterwards assumed a very different shape, it retains in its latest form many traces of the earlier time. Herr Bernays, in common with the majority of German critics, praises the high artistic quality of these first efforts; but it is precisely here that most of them essentially differ from Goethe's riper achievements. In youth he was without any large conception of dramatic art. There was not in Germany, as there was in France, a literary tradition to curb individual eccentricity; and he had not yet deeply studied the masterpieces of foreign literature, nor had sculpture and painting suggested to him the need for that severe restraint which became so marked a quality in his writings after his famous visit to Italy. The secret of the attraction of these early works lies in their exuberant imagination; character is vividly drawn, and there is a boundless wealth of incident. But the various elements are in none of his more ambitious writings combined into a perfectly harmonious whole. "Goetz" presents us with a series of life-like scenes; but there is often nothing to connect one scene with another, and some have absolutely no bearing on what is by courtesy called the plot. As a work of art, "Werther" ranks higher, and here and there passages occur which for power and beauty Goethe never surpassed. But there is no adequate motive for the act in which the interest of the story ought to culminate. Our pity and admiration are not aroused by the spectacle of a brave but hopeless struggle with destiny; we are simply amazed that any one should have sunk to so low a depth of sentimentalism. "Prometheus" might have been a really great drama; but it is only a splendid fragment. As for "Stella," it contains so few good qualities of any kind that it is perhaps needless to condemn it for inartistic. The hero is unfortunate enough to have both a wife and a mistress; and as all three meet in the same house awkward misunderstandings ensue. These, however, after a vast amount of talk and weepings are cleared away by the two ladies agreeing each to regard him as hers. Subsequently the play was transformed into a tragedy; but the change hardly renders the general effect less ridiculous. Had Goethe possessed humour he might have been saved from half the literary faults of his youth; but humour was a quality he almost wholly lacked, and the result was that until he had thoroughly disciplined his intellect he often failed to distinguish sublimity from bathos.

There is, however, one class of his early writings not only highly imaginative but conceived and executed in the true spirit of art; we mean his lyrics. Here he was almost from the beginning a master; and it would be possible to maintain that it was in this department he gave thoughout life the most unmistakable proofs of the highest genius. Towards the end of the seventeenth and the beginning of the eighteenth century many German writers composed songs and odes; but of the whole crowd of versifiers hardly one, if we except Gunther, whose power Goethe acknowledged, produced anything that can now be read with pleasure. Goethe, however, at once struck a note that might have reminded his contemporaries of the perfect grace and sweetness of Walther von der Vogelweide if he and other Minnesänger had not long ago vanished from the memory of their countrymen. The charm of Goethe's lyrics is partly due to the air of reality that pervades them. He does not sing of imaginary joys and sorrows; his verses are wholly based on the facts of his own life. He himself tells us how deep was the impulse which moved him to give melodious utterance to every powerful emotion; and his emotions were too intense and varied for him to try to express what he had not actually felt. It is noteworthy that while his lyrics have thus their root in his own experience, our enjoyment of them is very little enhanced by knowledge of the particular circumstances which gave rise to them. It is of comparatively slight importance to be told whether Frederika or Lili is the subject of a particular poem. In giving artistic shape to a special mood he purified and generalized it, so that the poem interests us not for the light it throws on the mind of the poet, but for its own noble qualities. It is almost needless, therefore, to say that the thought and expression are in perfect harmony; to alter a word is often to mar the spirit of the whole production. Lessing had shown that in skilful hands German prose might be clear, terse, and vigorous; but he was unable to remove the impression that the language was too crude and unwieldy for the finer effects of poetry. Goethe convinced his readers that even in poetry it might be made to catch the most subtle and refined shades of meaning. And this result he achieved by unpretending means. He always preferred simple forms of speech, but they are used with exquisite appropriateness, saying neither more nor nor less than the writer intends. So completely does he exclude every element that would not be in keeping with the general tone, that even when dealing with themes of passionate interest his lyrics convey the impression of a certain dignity and repose. In these days, when poetry contains so much of what by a somewhat forced metaphor is called "colour," it may be worth while to point out that neither in his earlier nor later lyrics did Goethe attempt to present elaborate images of natural beauty. He shared all the enthusiasm of his age for nature, and by a few touches often conveys the feeling of one who is breathing the atmosphere of spring or confronting the splendours of the dawn. But formal pictures he seldom or never endeavours to paint. He had learned too well the lesson of Lessing's "Laocoon" to seek to rival by the instruments of one art the peculiar triumphs of another.

THE LESSON OF THE "GOLIATH."

(The Spectator.)

The Dean of Westminister was fortunate in having to preach his yearly sermon to children within a week of the burning of the 'Goliath.' He could add to the examples of Scripture and history an example taken from the newspapers of the day. David's combat with the lion and bear, and the endurance of Agnes under Roman torture, have drifted away into that region where facts have no more power than fables to stir the young mind to high resolutions. But in the *Times* of Friday and Saturday there was the proof that children have not lost the power to do noble things any more than they have lost the power to dream them. These little boys on board the 'Goliath' showed the highest form of military courage, the courage that comes of discipline and training, that is independent of excitement, that is as ready to await death in the appointed place as to rush elsewhere to meet it. It was a theme that might have moved almost any man to eloquence, in the hands of the Dean of Westminister it lost none of its force. No child who listened to his sermon can hereafter plead that calmness in danger and the sacrifice of self to others are virtues that can only be possessed by grown people. In the promptitude with which every boy on board the 'Goliath' ran to his post at the sound of the fire-bell; in the steadiness with which "Billy Bolton," a lad of 13, checked the eagerness of some smaller boys to push away from the flames, and kept the barge into which he had jumped alongside the ship until all who were within reach of her had come on board; in the wish of the boys who last left the ship that Captain Bourchier should go first; in the tearful exclamation of the little fellow, when this prayer was refused, "You'll be burnt, Captain," are the counterparts of all the many heroic deeds that have made history something better than the mere lifeless record which it would be if we were all as selfish as we seem. If these boys were children in age, they were men in resolution and disregard of danger. To be suddenly confronted, in the half-light of a December morning with death in one of its most fearful forms, and to show that though strong to destroy it was powerless to terrify, is an opportunity which many a grown soldier and sailor will long to have so used.

But besides the lesson which the preacher could find in the burning of the 'Goliath,' there is also a lesson for the politician. These children had, it is true, been thoroughly well trained, and it is this training that converted them from a disorderly crowd into a compact body of soldiers, each knowing his duty, and each determined to do it. Still, admirable as was the training they had undergone, it had not been seconded by any previous training at home. These boys were mere workhouse children, children left without home or parents, and destined, but for the 'Goliath,' to starve or steal, or at best, to become willing paupers. They were of the same stuff of which "street Arabs" are made, of which "gutter children" are made, of which "waifs and strays" are made. The roughs who frighten society by showing how cheap they hold other people's lives, the useless labourers who fall from one depth of poverty to another because they have not head enough either to obey orders or to do without them, the drunkards who buy a momentary pleasure at the cost of subsequent wretchedness to themselves and to all connected with them, have all sprung from the same class as these boys on board the 'Goliath.' The police reports and the assize reports show plainly enough what is the fate ordinarily reserved

or workhouse children and for children outside the workhouse with the same origin and the same early history. Moralists of many schools and many tempers have mourned over their inevitable lapse into crime, or into the recklessness which is only saved from crime by lack of the rudimentary cleverness which crime ordinarily needs. The education which is picked up in the streets, or from bad parents, or amidst the corrupting associations of the workhouse, has been thoroughly mapped out, and every philanthropist who is not led away by his own theories has confessed, under his breath, that he does not see how the intellectual influences of school are to counteract the moral influences of home, or that which stands in the place of home. To all who have despaired upon this head, the burning of the 'Goliath' speaks in terms that cannot be mistaken. It solves one at least of the seemingly hopeless problems connected with pauperism and education. There is no longer any doubt that the raw material out of which English criminals and English paupers are made can be put to a very different use. Down to the morning of the 22nd of December, the 'Goliath' was only a hopeful experiment. Before noon on that day she was an accomplished success. Managers and friends had visited the boys; inspectors had tested their school progress, and reported well of their look and bearing: one by one, reports had come of the good service the boys that had been trained in her were doing in the Army or on board ship. But all these things had only furnished grounds for believing that at last the Poor-Law Authorities had got on the right track. Some striking and incontestable evidence of what could be done by a well-managed training ship was still wanting, something that should apply to all the boys, not merely to selected boys; something that should prove what they were when taken unawares, with no time for practice in view of an inspection; something that should in a moment put to a test which could neither be disputed nor evaded the merits of the system under which they had for more or fewer years been living. The fire was a test which answered to all these requirements, and the manner in which it was sustained went beyond the highest hopes that the advocates of the system could have entertained. If the boys on board the 'Goliath' had been picked from every great school in England, they could have done no more than than they did. To rise above fear of personal danger, or desire of personal safety, to obey orders and maintain discipline in the immediate prospect of death, to leave the ship only at their Captain's bidding, and then to set his safety above their own,—these, surely, are the virtues which in every age have marked "the gentleman and the soldier." They might have been expected from boys who had the advantage of good congenital habits, and had inherited from their parents a vast treasury of instincts. These boys of the 'Goliath' had, to all appearance, inherited nothing of the kind. They owed whatever virtues they had to the action of good training upon natures not yet altogether corrupted, and the result has shown that, at all events until human nature gets worse that it has yet become, there is no need to despair of the children's teeth because the fathers have eaten sour grapes.

This, we repeat, is a discovery of immense value. Hitherto there have been two lines of inquiry open to us; now one of them is happily closed. Hitherto we have had to ask ourselves not only how children can be got away from evil influences, but to what better influences it is possible to subject them with any reasonable prospect of improving them. There have not been wanting advisers to warn us that nothing can take the place of home, and consequently, that do what we will for the children who have either no homes or bad homes, no solid result can be looked for. It is plain now that these warnings were not needed. What workhouse boys have become on board the 'Goliath,' they may, if the same care is taken with them, become on board other ships. What workhouse boys have become, boys sprung from the same class and having similar antecedents may become under similar training. And that in becoming this they have silenced objectors is equally plain. What is the chance that boys who behaved as well as these did during the fire will hereafter return to the workhouse as paupers or go to gaol as criminals? Just that amount of probability that there is of boys in the classes above them doing these things. A man can become a pauper without having the hereditary pauper taint in him. A man can become a criminal without having derived any criminal tendencies from his parents. But we know that if he belongs to a class which has escaped these disadvantages, the chances of his becoming either are infinitely fewer. The boys of the 'Golath' have been emancipated from these disadvantages, and they have shown that in future the freedman and the free man will stand on the same level. The difficulty is narrowed, therefore, to the consideration in what ways the system of the 'Goliath' can be extended. We can but indicate one or two directions in which the attempt to extend it may be made. First, there is the multiplication of training ships for workhouse boys. We see no reason why what is now the rare exception should not become the rule, why a boy who is thrown on the parish should not, as a matter of course, be sent to a training-ship, unless there is some special reason to the contrary? In the next place, some machinery might be devised for getting hold of children who are not actually orphans, though for any benefit that the parental relationship confers on them they might as well be. Of course there are serious difficulties in the way of any adoption of this policy on at all a large scale, but they are partly difficulties which might be provided against by legislation, and partly difficulties upon which a new light has been thrown by this proof of what good training can do. The respect due to the rights of even vicious parents over their children belongs to the former class; the supposed danger of tempting parents to improvidence by taking their children off their hands belongs to the latter class. Thirdly, of all the ways in which private charity can exert itself with a prospect of doing good to its objects and to the community, instead of, as is so often the case now, doing harm to both, we know of none so promising as helping to send boys to trainingships, under circumstances which might not justify the expenditure of public money. Some legislation would probably be required to facilitate this last-mentioned process, but the object in view is important enough to justify a resort to Parliament.

THE VENDÔME COLUMN.

(Saturday Review.)

The Vendôme Column having been restored, preparations are now being made to crown the edifice, and put the statue of Napoleon at the top. Persons of very varying political opinions in France recognize that this is right, that a column so familiar to Parisians ought to be set up again, and that the hero of Austerlitz should figure at the summit. Even those who most dislike the memory of Napoleon own that he played a prominent part in French history, and that the Vendôme Column may be looked on as a monument significant of the continuity of national life. The Communists started with announcing their wish to break entirely with the past, and they had a new order of things entirely their own in which they invited or forced other men to live. But most Frenchmen, feel that they are Frenchmen, and they will not turn their backs on anything that is or has been French, and has given France distinctiveness or eminence. Still the particular time at which it accidentally happens that Napoleon is going to be put once more on his high pedestal must suggest some curious thoughts to those passing by the restored column. This tribute to his glory is being paid to Napoleon just at the moment when M. Lanfrey has been made a Senator, and when M. Thiers has won a political victory of the kind which he considers best calculated to keep the family of Napoleon from reigning. Whether M. Thiers and his supporters may be in the long run successful or not, and whether France is or is not to see a third Empire, the mode in which Napoleon will be regarded in France can never again be that in which he used to be regarded. The hero of Austerlitz was placed on a pedestal built by imagination and passion, to which, having been once taken down by criticism and experience, nothing can restore him. He will be judged, and he will perhaps be judged more and more fairly as time goes on, but still he will be judged. For a long time he was not judged. He was the subject of regret, hatred, praise, and blame, all equally unreasoning; and when an affectionate nephew gravely informed the world that Napoleon had been a sort of Messiah, many Frenchmen were not quite certain whether to treat the statement as a joke or as the neat expression of an unapprehended mystery. But as time goes on, as fresh materials for judgment are accumulated, and new political changes permit free discussion, which itself is aided by experience continually more varied, Napoleon sinks into an ordinary historical character to be valued according to the usual historical standards. We in England long ago went through the same process with regard to Napoleon which the French are going through now. It was easier for us to go through it, as we naturally knew, felt, and cared much less about him, and so arrived without much trouble at the conclusions of common sense. We had no Beranger to fascinate us by hymns in his honour; no eminent historian like M. Thiers inventing a policy for Louis Philippe under the disguise of history; no adventurous exile using the name of his uncle as the key to power. Our misunderstandings about Napoleon were of a rough and rude kind. Writers who composed under the influence of the

Digitized by Google UNIVERSITY OF CALIFORNIA

old war-feeling simply painted him as a sort of foolish fiend; and other writers exalted him to the skies as a subtle means of convincing Tory politicians what poor creatures they were. Obscurities of judgment arising from such sources are soon dispelled; and there was perhaps something consolatory to the mass of mankind in the discovery that it did not need any very great amount of intellect to arrive at a tolerably fair and just estimate of Napoleon. There is strong reason to suppose that the ultimate estimate of Napoleon in history will not greatly vary from that which was formed by Sir Archibald Alison.

Napoleon may be regarded in two aspects; as a man with a personal career, aims, and character, and as the inventor of a political system. French criticism has set itself to work so as effectually to study him under both these heads. No one can for a moment pretend to doubt that Napoleon was a man of wonderful gifts; one of the greatest commanders that ever lived; full of inventiveness, pursuing aims sometimes wise and always grandiose; and possessing as consummate a knowledge of mankind as can be attained by a thorough contempt for the human race. Nor can it be doubted that he had qualities of heart and manner which conciliated the warm and lasting attachment of those whose attachment he cultivated or permitted. In spite of all his brutality towards her, Josephine to the last regarded him with all the fondness which a frivolous woman is capable of feeling: and the companions of his exile were under no temptation that can throw suspicion on the sincerity of their affectionate worship. But Napoleon acted in a great variety of capacities, and came into various relations with very various people. His faults must be taken into account as well as his excellences; and how great his faults were Frenchmen are now being enabled to judge by reading the History of M. Lanfrey. Of M. Lanfrey's work it is difficult to speak justly without seeming to speak too highly. To say that it is brilliant is not saying much, for if it were not brilliant it could not be spoken of at all as coming up to the highest French standard. It is not only brilliant; it is pitilessly just. Perhaps it does not attain that high degree of complete fairness in which every surrounding circumstance is taken into account, and credit is given, not only for good done, but for all the good that it can be supposed was intended to be done; but within its range it is as just as it is severe. M. Lanfrey rests not on opinions or fancies, but on documents published under the Second Empire, or then suppressed and since given to the world. The picture he thus paints is the picture of a man to whom scruples were utterly unknown. That Napoleon was unscrupulous was no new revelation. His admirers always said he was unscrupulous, but urged that a man in his position cannot be expected to be scrupulous. He must do strong things and wrong things in order to give others the benefit of his existence and his government. The world is never deaf to such a plea. Most persons, for example who admitted that it had to be urged in favour of Prince Bismarck would think that it could be reasonably accepted as valid. Bot it is only by going into details and examining what a particular person really saw and did that we can understand what in his case unscrupulousness means. The unscrupulousness of Napoleon meant that he had absolutely no regard for truth, and that he based almost every action of his life on his contempt for his fellow-men. It was not merely that he made some false statements. He soared far above so lowly a level, and may be safely pronounced to be the most prodigious liar known to history. It was not merely that he had that poor opinion of mankind which men much conversant with affairs in troubled times often deduce from a sad experience. He entertained a profound and unswerving conviction that all men were born to be slaves, and that any one who saw this with the requisite clearness, and could take advantage of his perception with the requisite audacity, was fully entitled to make any use he pleased of the vile bodies and viler minds of his fellows. This is what the unscrupulousness of Napoleon amounted to; and it may be said without hesitation that it is unscrupulousness of a kind which at least unfits a man to be looked on as a Messiah. The idolatry of Napoleon is not likely to vanish merely under demonstrations of the inutility or folly of military glory. It is perhaps silly for nations to like to be conquering other nations, but, after all, nations do like it. But to go on idolizing Napoleon after reading M. Lanfrey would seem to be impossible to Frenchmen unless their eyes are closed, and their ears deafened, and their hearts hardened, by party fanaticism.

The catastrophe of Sedan might be thought to be in itself sufficient to condemn attempts to reproduce the policy and government of the First Empire. And to some extent this is true, but it is unfair to treat the catastrophe of Sedan as a condemnation of the Empire simply because it was a catastrophe. Under every system of government military catastrophes are found to occur. Jena was such a catastrophe; but Jena was the defeat of an hereditary monarchy, firmly established, and resting on the support of a powerful aristocracy and a willing people. England, the freest and richest of European nations, had to witness the blunders and mismanagement of the Crimean war, and does not at this moment feel sure whether it has or has not got an army or a navy worthy of the name. What made the catastrophe of Sedan a condemnation of the Empire was the evidence it gave of the essential insecurity of the Imperial system. The First Empire was always insecure, and Napoleon never concealed from himself that his power might vanish as suddenly as it had arisen. He thought no person too humble to persecute and no person too respectable to annoy, because he never knew from what quarter danger would come. The *Coup d' état* of Louis Napoleon was quite in the true Imperial style, and was perfectly legitimate from the Imperialist point of view; but from the date of its accomplishment Louis Napoleon knew perfectly well that he was always sitting on a barrel of gunpowder. The Empire never has meant anything and never can mean anything but the unscrupulous use of force to secure material prosperity, and other good things, such as the preponderance of the established religion, which are compatible with, or conduce to, material prosperity. The advocates of Imperialism say that this is exactly what the French really long for; that they want to make money, and to keep at least a fair proportion of their women pious and respectable; that they like everything being done for them, and hate the petty quarrels and foolish talk of Assemblies. What they desire above all things is security. Whether this is a true account of the French or not, it is precisely security which the Empire does not and cannot give them. The Empire gives such security as it gives by existing, but its existence depends on success, and Governments cannot always succeed. The Emperor Francis spoke a homely but significant truth when he said that Napoleon was a much greater man than he was in other respects, but that in one way he was a greater man than Napoleon, as he could go back to his own capital with the certainty of a respectful welcome after a defeat like Austerlitz. Why the Empire is essentially insecure would lead into a long, though by no means difficult, inquiry. It is enough to say that on the two occasions when it has been tried it it has been manifestly insecure. On each occasion it has throughout its duration visibly contained the germs of its own destruction. Each Emperor has had to do things which he knew might ruin him, because he thought he was certain to be ruined if he did not do them. Englishmen often talk in a strain of gushing Imperialism, and at the bottom of their discourse is found to lie the meaning that they think that, if there was a new Empire, Paris would be gay and pleasant for a few years, and that if anything unpleasant happened, they could run over to London and wait comfortably till things got better. This, however, is not a very attractive prospect for Frenchmen; and if Frenchmen want to avoid it, they cannot do better than repair to the Venôme Column and meditate on what they see there. They will see, if they look high enough, the image of a man who in many ways was wonderful and great, but who, after all, was a very mendacious tyrant, and who led France into constant misery and struggles because his Governnent was radically and perpetually insecure.

Alluding to the subject of the export of arms from England destined for China the *Army and Navy Gazette* says:—

Extensive orders have been received by private firms in England, through agents of the Chinese Imperial Government, for detached portions of Martini-Henry rifles in the rough, which are to be made ready for transmission to the East with as little delay as possible. They will be "assembled" and finished in the various arsenals belonging to China, to which we adverted in our columns a short time since. We have reason for believing, moreover, that it is in contemplation by the Celestial authorities to obtain a further and larger number of these weapons of precision in a similar manner. This intelligence, following so closely upon that received only two months ago as to the landing at Shanghai of a vast quantity of ball ammunition for Martini-Henry rifles, fully corroborates all we said regarding the efforts which are being made by the Chinese Government to organise a well-armed and well-equipped military force. Such facts also, coupled with the intention expressed by the Imperial Viceroy at Peking not to despatch a commissioner to the Court of Great Britain certainly until the ensuing summer, may well justify an uncertainty of feeling as to the probable issue of the present expedition to Yunnan. Fortunately, however, the route which has been adopted is that usually preferred by mercantile parties and travellers, and the cities and individuals that will be passed through or encountered on the way will have been accustomed to the sight of strange faces.

DOUBLE ACROSTIC.*

1

With quip and jest I moved amidst the throng
And threw the dice and drank the sparkling wine,
And woman's smile, and poet's honied song,
And favour of a crowned king were mine.

2

In me the Pageant and the Pride of State
Have swept through painted hall and gilded room;
Yet have I sternest warnings to the great,
And memories of a Day of Death and Doom.

I.—The varied blooms of every clime,
The trees and plants of East and West,
And all the science of the time
Draw to my bowers many a guest.

II.—I'm not so tall as the cowslip stalk
That yokes Titania's cars;
But I go to make up the Alp that rears
Its shimmering crest to the stars.

III.—We rest upon the azure seas,
Fair children of the Ocean Sire!
And from our cliffs behold afar,
Sicilia's towering mount of fire.

IV.—The Prayer of Ajax was for me
The first fruits of Creative Power,
And all men pray that I may grow
Purer and brighter every hour.

V.—The waters gird me round
With a murmurous mystic sound,
And poet's verse and fond regret
Call me "a gem in silver set."

VI.—You oft have read my ancient name
In sacred Bible Story,
But my slain champion's martial fame
Alone preserves my glory.

VII.—A word of infamy,
By red hot passion flung,
The Voice that cannot lie
Forbids me to the tongue.

VIII.—In every human heart I'm found,
And cannot be concealed;
But of my origin and source
But little is revealed.

IX.—Make me with all the care you can,
And call in men the best reputed
So dubious is the law of man
I'm nearly sure to be disputed.

B.

—*Celestial Empire.*

* The arrival of the last issue of the *Celestial Empire* proves the solution given by "Three Owls" of the Double Acrostic of the 12th February to be correct, with the exception of the word "Nullity," for which the *Empire* gives "Nobody." The difference is trivial.

Shipping Intelligence.

ARRIVALS.

Feb. 20, *John Mackean*, British schooner, Jordan, 198, from San Francisco, General, to Walsh, Hall & Co.

Feb 22, *Jonathan Chase*, American barque, Curtis, 693, from Newcastle, N S W. Dec. 15, 1875 Coals, to O. & O. Co

Feb. 22, *City of Peking*, American steamer, Tanner, 5,079, from Hongkong, Feb. 15, General, to P. M. S S. Co.

Feb. 22, *Volga*, French steamer, Nondedeu, 960, from Hongkong, Feb. 11, Mails and General, to M. M Co.

Feb. 25, *Cyclop*, German gun-boat, Captain Reiche, 360, from Kobe, Feb. 22.

Feb 25, *Sunda*, British steamer, Edmonds, 1,680, from Hongkong, Mails and General, to P. & O, Co.

Feb 26, *Courser*, American barque, Killman, 495, from Philadelphia, June 19, 1875, Petroleum.

DEPARTURES.

Feb. 21, *Traviata*, German 3-masted schooner, Brackwelde, 270, for Takao, Ballast, despatched by Captain.

Feb. 21, *Genoa*, British steamer, Corrigall, 1,215, for Kobe, General, despatched by Jardine, Matheson & Co.

Feb. 22 *Bombay*, British steamer, Smith, 1,325, for Hongkong, Mails and General, despatched by P. & O. Co.

Feb 22. *Auguste*, British 3-masted schooner, Thompson, 210, for Takao, Ballast, despatched by F. Knoblauch.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics and Yarns.—Our market for *Cotton Goods* continues quiet. *Grey Shirtings* are moving only in small lots at about previous prices; and it must of course be borne in mind, that the further decline in exchange makes the position of importers worse from day to day. 16 24 *Yarns* are in good demand and a small advance is obtainable; other counts are difficult to sell. 7 lbs. *T. Cloth* are in moderate enquiry; 6 lbs. neglected. For *Velvets* the demand seems satisfied at present, and only small sales are reported. *Drills* in small enquiry. *Taffachelass* is unsaleable.

Grey Shirtings:—				White Shirtings:—		
7 lbs.	38½ yds.	39 in.	per pce.... $1.90 to $2.20	60 to 64 reed	40 yds.	35 in. nom. per pce. ... 2.10 to 2.30
8 lbs.	38½ yds.	44 in.	„ ... 2 20 to 2 50	Turkey Reds	24 yds.	30 in. 2¼—3 lb. per lb... 0 75 to 1 02½
8 lbs. 4 to 8 lbs.	38½ „	39 in.	„ ... 2 20 to 2 50	Black Velvets	... ...	... 8.50 to 9.25
9 lbs.	38½ „	44 in.	„ ... 2.47½ to 2 90	English Drills 15 lb.	40 yds,	30 in.... ... ... 3.30 to 3.45
				Taffachelass	12 yds,	43 in.... *nom.* 2.00

Yarns.—

No. 16 to 24 ... ...per picul..	$30 50 to 33 50	No. 38 to 42... ... ...per picul...	$42 00 to 45.00
No. 28 to 32 ... ...per picul..	$33 50 to 39.00	Reverse Twist ... 16-24 ... „ ..	$33.50

Woollens.—Business in this staple still leaves very much to be desired, the transactions amounting in the aggregate to much less than in the two previous years. This applies, however, chiefly to Bradford manufactures, while light French goods seem on the contrary daily increasing in favor or find by means of their comparative cheapness a larger field for distribution. Plain *Mousseline de Laine* is the only article of which a ready sale could be effected during the whole season, notwithstanding the very large arrivals. *Printed* and *Striped Mousselines*, though of far less importance, are saleable in instances where holders submit to a concession, while for *Chimagoro, China figures* and other fancy Bradford productions, sales, always slow, are at present quite impossible, whatever the sacrifice may be; in plain black *Orleans* and black *Italian Cloth* transactions are of a trifling nature and limited to a few standard qualities. Cloths of all descriptions, and Blankets have fallen into their former inactivity.

Plain Orleans	40—42 yds.	32 in....	6 50 to 8.00	Figured Mousseline de Laine...	30 yds.	30 in... 0.25 to 0.28
Figured Orleans	29—30 yds.	31 in....	4 75 to 5.25	Multicolored „ ...	30 yds.	30 in... 0.35 to 0.40
Chimagoro	30 yds.	30 in....	5.25 to 5.75	Cloth, all wool plain or fancy..	48 in. to	52 in... 0.80 to 1 20
Italian Cloth	—30 yds	32 in....	0 25 to 0 33	Presidents	54 in. to	56 in... 0.60 to 0.70
Camlet Cords	29—30 yds	32 in....	6 25 to 7 25	Pilots	54 in. to	56 in... 0.40 to 0 45
Camlets Asstd.	56—58 yds.	31 in ...	18 50 to 19 00	Union	54 in. to	56 in... 0.40 to 0 65
Lastings, Japan	22—30 yds.	32 in....	13 00 to 14 50	Blankets, scarlet & green	7 to 8 lbs.	...per lb... 0.40 to 0.41
Plain Mousseline de Laine	—30 yds.	30 in,...	0.19 to 0.20			

Sugar.—Of *Formosa Sugar* no further arrivals have occurred since the 19th inst., nor are any sales reported. The market is firm at quotations with small stocks in first hands. There is no quotable alteration in China Sugars.

Sugar:—Formosa in bag ... ...per picul....	3.65 to 3.75	China No. 5 Kong-fun ... ...per picul ...	4.10 to 4.60
in Basket ... ... „ ...	3 50 to 3 60	„ No. 6 E-pak ... ... „ ...	3 60 to 3 90

„ No. 3 Ke-pak ... ... „ ...	5 70 to 6 20	Japan Rice ... ... „ ...	
„ No. 4 Kook-fah... ... ... „ ...	5.00 to 5 50	Kerosine Oil ... ... per case ...	2.40

EXPORTS.

Silk.—Our fortnightly report dated 23rd instant was to the following effect:—

Not only has the advance in prices reported on the 12th inst. been steadily maintained, but the Japanese show very little disposition to dispose of their stocks at our quotations of that date which we repeat, some of them being however quite nominal; for instance, no Hanks, however inferior, can be bought at $400. There is no lack of Kikai silks in the market, but they are for the most part held at prices which, compared with the present value of European raws, check business.

Settlements are 170 bales of Hanks and 120 of Oshiu, and other sorts, leaving a stock of 600 bales.

The shipments of the fortnight are 232 bales making the total export since 1st July, 10,815 bales against 8,389 last year for the corresponding period.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fellaby that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unrivalled purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says "I had with me a quantity of Holloway's Ointment. I "gave some to the people, and in healing cuts exceed their gratitude; "and, in consequence, rice, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

May 17th, 1873. 6m.

THE

Japan Weekly Mail

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 10.] YOKOHAMA, SATURDAY, MARCH, 4, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

Intelligence arrived by telegraph on Wednesday shortly after mid-day, that the negotiations with Corea had been successful, that a treaty had been signed on the 27th ultimo, and that the squadron would return immediately. The news has caused great general satisfaction and dispelled much apprehension and anxiety. The envoys are expected to arrive here to-night or to-morrow morning, and preparations are being made to receive them with due honour. The whole affair is in a high degree creditable to the Government, the envoys, and the nation, and constitutes a very noteworthy triumph, on which all may be congratulated.

Exchange still continues to decline, and this movement may soon be expected to bring about its natural consequences, viz, the rise of everything of which silver is the measure of value. Both imports and exports will command higher rates, unless affected in a contrary direction by other causes, and, with the same proviso, real estate must also eventually share the movement, though to a smaller extent. Such of our readers as are not directly concerned in trade may be interested to learn that this alarming fall in the price of a metal which, up to three years ago, used to fluctuate very little in value, except under some such extraordinary demands for the East as occurred in 1853, 1856, and during the period of the American civil war, is due mainly to two causes, the first, the demonetization of silver by Germany, which has adopted a gold currency; and second, the large quantities of silver which have lately been discovered in Nevada and thrown upon the European markets. The value of the silver liberated from circulation in Germany, where gold has never hitherto been seen, must be enormous, perhaps as much as twenty-five millions of pounds sterling; while the lavish production of the American mines has inopportunely helped to swell the stocks created by the release of the thalers and gulden. Of course, the operation upon which Germany is now entering, the change of her standard of value, will take some years to effect. But the coming event has cast its shadow before it, and has to a greater or less extent affected the markets of Asia, which is the great absorber of silver. It is impossible to say how long the decline may continue, or what its further extent may be. We should be disposed to think that there will be some reaction before very long, even though the value of silver may yet fall somewhat. The mines of Mexico, which have hitherto been only worked to a moderate profit, must be closed under this prodigious fall, as they no longer will pay the expense of working. Against this it may be contended that as a larger number of miners will be attracted to Nevada by the brilliant results which mining enterprise there has already given, the diminution of the supplies from the old sources will be more than counterbalanced by the wealth of the new. Nor is it possible, without further information than we have yet seen published, to deny the force of this contention. Some help will come from the increased employment of silver in the arts, though it may be doubted whether this will avail very much. The quantity of the precious metals absorbed in this manner is extremely small in comparison with that demanded by the movements of trade; and fashion and good sense alike have so completely sanctioned the use of electro-plate of late years for household purposes, that the employment of silver in this manner has not in any way kept pace with the growth of the wealth of Europe. Some few of us remember the days anterior to the discovery of the art of electro-plating, and can recall the abundant use of silver in houses of even very moderate pretensions. The change in this respect wrought by the advance of this art during the last twenty-five years, has greatly diminished one of the sources of anxiety to housekeeepers, but has also kept the trade of the smith who dealt in pure silver in a state of very moderate activity—compared, of course, with the growth of the world's wealth. It is quite possible that we may see a permanent decline in the value of the metal. The tendency of the wealthier nations is to work upon a gold basis. England has long done so. Theoretically, America does so, and is now about to resume specie payments as soon as circumstances admit the practicability of it. Holland and Germany have followed this lead. France alone has a double standard, which she finds good reason for maintaining, unmoved by the arguments to the contrary of the English economists. It has been said that Germany will not be able to retain her gold, though we do not see on what sufficient grounds. Forty millions of people, growing richer every year, require a large amount of coin for the purposes of every day life. They are not, as was until recently the case in Austria, deluged with paper money as a substitute for a coinage; and having retained their silver hitherto, which would have run away had it been required to redress an uneven balance of trade, we see no reason why they should not retain their gold, which has only been adopted as a more convenient measure of value.

We are hardly bound to take notice of Dr. Faulds' own defence of his lecture as it was not addressed to ourselves. But we have neither wish nor reason to evade any issues between us. He says we called the *Principles* of Darwinism *processes*. This is quite a mistake. Darwin shows the processes by which Nature brings about modifications of recognized types of animal and vegetable life, and to these we referred in the following sentence:—"In his preliminary recapitulation of the *processes* which result in modifications of recognized types of life," &c. We spoke of the "idea of the creation of special invariable types"—not *the ideas* as Mr. Faulds makes us say by putting the phrase in inverted commas, as if we referred to the pre-existing ideas in the Divine mind, instead of the idea existing in the common belief—and it is surely true

Digitized by Google
UNIVERSITY OF CALIFORNIA

that the prevailing belief on the subject of creation is that certain specific forms came perfect from the hand, as it were, of the Creator, and have been perpetuated by descent down to the present time.

Dr. Faulds seems disposed to begrudge us our faith in the Deity, as an illogical source of comfort, because we do not accept his own views of the Divine *modus operandi*. Is this quite fair?

> Our little systems have their day,
> They have their day and cease to be,
> They are but broken lights of Thee,
> And thou, O Lord, art more than they.

Is his broken light so much better than ours? We know not. His last paragraph is so kindly intended towards us that we are in no humour to reply to his sarcasms. But it is only fair to make one remark. If we were rather hard on his lecture—a little ungracious, we would even say—does he set us any good example in return by ironically calling us "pious" and "omniscient"? There has been no affectation of piety in these columns, while no single word of disrespect for it or for religion can be found in them. Our teleology is not that of Dr. Faulds, perhaps, but will his explain the existence of the Thugs? If so, they will have found their first defender outside their sect. He twits us—quite justly—with a mistake in a recent mathematical illustration. Was this quite wise in view of his own late appearance before the public? So far as we know of life, the hard riders get most falls, and he who fights many battles will sustain many defeats. If Dr. Faulds will come and take our place for a month, we can promise him many a spill.

A Bill has passed its first reading in the English House of Commons for conferring upon the Queen the title of Empress of India, and though it may be expected to meet with some opposition from the men who are ranked as the philosophical radicals—an opposition which, even if not convincing, will be very able and received with much respect,—it will, in all probability, be carried through both Houses without much difficulty. The title must be allowed to be legitimate enough when we consider that the Queen, in addition to the possessions in India which she rules of absolute right, is the suzerain of about (we speak from memory) one hundred and fifty-three mediatized princes, administering their own revenues and commanding their own armies. The total member of her subjects in India, according to the census taken last year, is 234,000,000, embracing men of very various tongues, religions and customs. It thus seems in accordance with reason that she should hold a title which implies, indeed, involves, some such relations as those in which the native princes stand towards her; and the East, which is much governed through the imagination, will be pervaded by a stronger and more abiding sense of the relations in which it stands to the European Power exercising the chief influence in it. The principal and most legitimate source of pride which Englishmen feel in this, is that it promotes freedom, right and justice, and that the testimony of every intelligent traveller of other nationalities bears witness that these are the characteristics of our rule in India.

It was the intention of H. M. The Mikado to visit the Naval College in the early part of this year, but he was prevented by illness from doing so. It had been arranged that he should on this occasion personally convey to Lieut. Hawes, R. M. L. I. his satisfaction at the zeal and assiduity with which this officer had discharged his duties as Instructor of the Japanese force of Marines. In lieu of this, Lieut. Hawes was instructed by the Minister of Marine to attend at Hamagoten on the 24th ultimo, to receive a message from His Majesty. This he did, and was honoured with the expression of His Majesty's approval of his long and efficient services, supplemented by the Imperial thanks for the efficiency of the corps which those services had produced.

The dangers attending the incautious use of the charcoal heated Japanese *furo* received a fresh illustration a few days since in the capital. A foreigner who was enjoying this pleasant mode of "tubbing" became aware of approaching giddiness and loss of consciousness, and made an effort to quit the bath and to summon his servant. He had barely succeeded in accomplishing this when he fell insensible on the floor, exhibiting all the symptoms of asphyxiation. Assistance being at hand he was at once removed and recovered under the exhibition of the usual restoratives.

A new line of telegraph wire, some twenty-one miles in length, which has recently been set up between Yokohama and Yokoska Dockyard will be opened to the public, we understand, on the 20th instant. The line has been constructed by native labour exclusively, under foreign superintendence, and, so far as may be seen, the work—more especially at the point where the wires cross the Kanasawa river on lofty poles—has been admirably executed and reflects much credit upon all concerned.

The Tokio *Fu* has verbally notified to the *Kucho* and *Kocho* the wish that the day of return of the Corean Envoys should be celebrated as one of rejoicing. The national flag should be generally displayed and people of all classes are encouraged to give fitting welcome to the successful Ambassadors.

We had hoped to give copious translations from the native papers of the articles devoted to the Corean success, but must defer this until next week. Generally it may be said that the papers are loud and unanimous in their praise and congratulation.

The following is the result of this afternoon's paper chase: Messrs. Watson (1) Walker (2) Esdaile (3). Messrs. Dare and Hamilton were hares, and owing to the effect of a prevailing strong wind experienced some difficulty in following the course.

From the "Japan Mail Daily Advertiser."

A heavy sentence, indicative of the growing severity of the penalties, is reported by the *Saifu Shimbun* for an offence against the press laws on the part of their acting editor. He has been sentenced to a term of imprisonment of two years and a-half, while a correspondent of the same journal is awarded three months and condemned to a fine of 20 *yen*.

Five persons who were recently arrested on the accusation of attempting to enter a house with a view to the assassination of its inmates have been discharged. Four of them were from Kumamoto and one from Kagoshima.

The Kiôtô Exhibition will, we observe, be opened on the 1st April.

The Messageries Maritimes s. s. *Tanais*, sailed from Hongkong for this port at 7 a.m. on the 28th instant. She brings mails from London to the 14th and Marseilles to the 16th of January.

Thirty-five houses were destroyed by fire at Nagoya in the province of Owari on the 21st instant.

The *Hochi Shimbun* says the new Exhibition Hall in Uyeno, Yedo is rapidly growing under the builder's hands. It is in contemplation to connect it with the Sumida river by means of a short canal.

The foot-ball match of Saturday resulted in a drawn game.

We regret to observe from a paragraph in the *Nichi Nichi* that a pestilence which broke out in the herds of the department of Agriculture at Koganehara has swept off about 100 head of neat cattle, chiefly, we believe, imported stock. The disease appears to have been rinderpest.

On the 23rd instant, says the *Hochi Shimbun*, two Chinese arrived in Japan, having been engaged by the Department of Public Industry to explain the mode of raising geese to farmers and others. They have brought 100 breeding birds with them.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

The *Nichi Nichi* hears that all publications issued henceforth will be sent to the Public Library in Yedo.

The *Nichi Nichi* notices also a heavy fall in the price of fish oil, in consequence of a very large take of herrings at Kujiukuri in Kadzusa recently.

Many of the accountants engaged in the *Okurasho* have been for some time past going through a course of instruction in the foreign method of book-keeping with considerable success. On and after the 1st July next the Public Accounts will, it is understood, be kept after the foreign system, and it is presumable that this will in due course be adopted generally by all Government departments and, later on, by all traders.

The *Saifu Shimbun* gives as a current rumour the statement that the late Tycoon, together with Arisugawa and the Prince of Bizen are about to be constituted *Daijin*. We venture to express a doubt that there is the smallest ground for this report, so far at least as it refers to the first-named personage.

The *Hochi Shimbun* announces some further infractions of the Press Regulations. As a consequence, five public writers connected with the *Hioron Shimbun* (a new journal of strongly marked proclivities), including its two editors, were tried at the Yedo *Saibansho* on Sunday last. The editor of the *Hochi* also appeared in answer to a similar charge yesterday. The results of the enquiries are not given.

An act for the regulation of the interest to be paid on loans of money is, says the *Choya Shimbun*, in course of preparation by the Government.

The same journal alludes to the growing premium on gold and the consequent depreciation of paper money.

The *Nichi Nichi* notices the resumption of publication by the *Osaka Nippo*, a journal which suspended its issues in the course of last summer, presumably from want of support.

A notice was pasted on the walls at various points in the capital on the 27th instant, signed by 'Twenty-seven righteous *samurai*' which ran as follows:—

"Many of the inhabitants of this country are at this moment grievously afflicted in mind by the circumstances of the times. Let all such, who may desire to represent their grievances to the Tokio *Fu*, assemble at Monzeki Tsukiji, Asakusa no Monzeki, Uyeno, and at the temple of Hachiman at Ichigaya between the hours of noon and four o'clock p.m. on the 28th instant. We shall fire a gun which will serve as signal for a simultaneous march to the Tokio *Fu*."

This is not improbably an experimental effort to test the temper of the populace and guage their disposition for active insurrection. Whether, however, owing to indifference to the cause, or to the preparations made by the police for preventing a tumultuous assemblage, the proposed movement would seem to have collapsed.

The Agent of the Great Northern Telegraph Company announces the successful laying of the cable between Sydney, New South Wales and New Zealand. The distance is about 1,150 miles.

His Majesty the Mikado visited the *Se In* yesterday morning, and on leaving proceeded to the Imperial Pleasure Grounds at Shiba.

The former Editor of the *Yokohama Daily News* has been summoned to the *Saibansho*.

Okubo, Minister for the Home Department, accompanied by the Heads of the Police Force, inspected the various Police Stations of the capital on Monday last. They were shown the mode of working the fire engines.

The P. & O. s. s. *Malacca*, bringing English mails via *Brindisi*, to the 21st January, sailed from Hongkong, for this port at 6 a.m., on the 1st instant.

Aided by darkness and the helplessness of the police, some thieves succeeded in obtaining access to the premises of Messrs. Schnine and Francke on Tuesday evening, and carried off goods to the value of some $100. The property was of considerable bulk, but the police offered no opposition to its removal.

The *Echo du Japon* published a telegram on Thursday afternoon, formally announcing the conclusion of peace between Corea and Japan on the 27th instant at Seoul.

We yesterday reported that the *Great Republic* had met a British vessel in distress making for this port. H. M. S. *Charybdis* has proceeded to her relief.

The body of a Japanese youth, some fifteen years of age was discovered on Wednesday in a rice box in the house of his former employer. The youth, it would seem, had accompanied his master, a money changer, on that day to a foreign bank, and was returning home with a large quantity of coin when he met with his former employer who induced him to accompany him to his house. There, with the assistance of his wife, he strangled the lad and hid his body. Suspicions having arisen, a search was made and the murderous couple have been arrested.

The *Yokohama Daily News* relates that a *samurai* of the Shidzoka *ken*, who formerly resided in Rokuchome, Yokohama, assisted by a person living in Yedo, caused a seal to be cut, imitating closely that attached to its documents by the Navy Department. This seal he appended to a letter, purporting to be issued by the Naval authorities, ordering the purchase of a steamship from a foreign firm in Yokohama and by its means succeeded in obtaining a sum of $300 from certain persons. The rogues were arrested on the 25th of last month.

The *Nichi Nichi* has heard that a small party of *samurai*—a deputation, probably, of the twenty-eight "righteous" complainants,—from a certain south-western province, attended at the Tokio *Fu*, on the 28th instant, for the purpose of explaining to the authorities the shameful grievances under which the people were now labouring. The arrest of some forty people who have made themselves prominent in advocating popular rights in the Kumamoto *ken* is also noticed by the same journal.

Yano, acting-Editor of the *Saifu Shimbun* has been condemned to imprisonment for a term of ten months and to a fine of one hundred *yen* for a violation of the newspaper regulations. This journal would appear to be the hydra of the Japanese press. We have already seen numberless editors and writers put *hors de combat*, but as readily replaced by brethren of the same faith.

Excellent coal is now being obtained from the mines of Saghalin under Russian direction.

The Yokohama *Mainichi Shimbun* notices a collection which is being made throughout the Empire for the purpose of restoring the temple of Minobu San in the province of Kôshu, the chief temple of the "Nichi Ren" sect, recently destroyed by fire. Some 6,000 *yen* have already been collected towards its rebuilding, but of this sum only some 6¼ *sen* have been contributed by the pious of the province of Satsuma.

The serious *fracas* which so frequently occur between the soldiery and the police in Yedo, has called forth a special order from the Army Department, prohibiting the soldiers from fighting. It would be more to the purpose were they forbidden to wear their side-arms, as is the case with English troops in garrison towns, and the institution of a strong military patrol would be of no small assistance in stopping these unseemly brawls.

The inhabitants of the province of Mito purpose to celebrate this day in a solemn manner, it being the anniversary of the assassination of Ii Kamon no Kami, prime Minister, or Regent, of the Tokugawa family seventeen years since. The *Hochi Shimbun* adds that the people of Hikoné, his native province, will offer prayers for the repose of his soul. The following reference to his assassination is taken from Mr. E. M. Satow's translation of *Kinsé Shiriaku*.

When Ii Kamon no kami punished the princes of Owari, Mito and Echizen all classes held their breath and looked on in silent affright. From that moment his power increased daily, but a few *rônins* conspired to assassinate him, and watching for an opportunity, approached his palanquin one day as he was proceeding to the castle, under the pretence of presenting a petition. Snow happened to be falling heavily, and rendered every object indistinct, so that the escort taking the men to be

Digitized by Google
UNIVERSITY OF CALIFORNIA

ordinary petitioners, scarcely noticed them. Suddenly the head of the train was attacked, and the commotion which ensued in that quarter drew away the attention of the guards at the side of the palanquin. The petitioner profited by his opportunity to cut down the bearers, and to reach the palanquin, and a number of confederates sprang up instantly, who succeeded in slaying the Chief Minister and in escaping with his head. The escort engaged the men who had attacked the front of the train, and fought vigorously. Four, including Nagoshi Genji and Kusakabé Naiki, were killed on the spot while Kusakri and nineteen others were wounded. The affair occurred so suddenly that they were unable to assist their master, and on looking round were horrified to see what had happened. They pursued the *rônins*, but could not overtake them. This affair, known as the Sakurada outrage, occurred on the 3rd day of the month (March 23)."

The following is published in the *Hochi Shimbun*:—

To *In*, *Sho*, *Shi*, *Cho*, *Fu* and *Ken*.

It is hereby notified that a telegraphic despatch has been received from Kuroda, our Ambassador to the King of Corea, announcing that on the 27th February he had succeeded in settling the terms of peace with that country.

(Signed) SANJO SANEYOSHI.
Prime Minister

The punishments awarded to refractory editors forms the staple of the news given by the Japanese newspapers. One writer has been condemned to fine and imprisonment, one to fine only and three others are undergoing examination before the *Saibansho*.

An escape of water from one of the boilers of the s.s. *Japan* occurred yesterday when the engineer was getting up steam. A Japanese fireman was severely scalded and is since dead, and a Chinaman was also to some extent hurt.

We are indebted to the publishers for a copy of the *North China Hong List*, a well compiled, printed and bound directory of North China and Japan.

A report was in circulation yesterday afternoon that the P. & O. Company's steamer *Orissa*, which sailed hence for Shanghai on the 26th ultimo, had been lost in the Inland Sea. Enquiry was at once made at the Company's Office, the only trustworthy source of information, but as no intelligence had been received by the local agent it was justly assumed that the report was without foundation. We are glad to learn that a telegram received from Nagasaki last evening places the safety of the vessel beyond all doubt; she sailed from that port for Shanghai at 4 P.M., yesterday afternoon, all well. There is a prevailing impression that the story was fabricated with a disingenuous and improper intention. Though it is of course difficult to trace it to its source, sufficient reprobation can hardly, in such case, be awarded to the person who for an obviously insufficient motive has not hesitated to play so heartlessly with the feelings of those who are interested in her living freight.

A fire occurred at about 5 p.m. yesterday afternoon at No 175 Bluff, the residence of Judge Goodwin. The fire engines were not slow to arrive and succeeded in confining the fire to the kitchen, an out-building, in which it originated.

STUART ELDRIDGE, M.D.

COREA.

IN the happy result of the late negotiations with Corea Japan has achieved a complete and most legitimate triumph. Whether the terms she has made are more or less advantageous—and of these nothing is yet known—it cannot be denied, and should be cordially acknowledged, that the determination, prudence and moderation she has has shewn have averted a war, and, in all probability, paved the way to a more or less profitable new branch of foreign trade. It is unquestionable that the victory is all the greater for having been secured without a resort to force except in the passive form of demonstration. Had the negotiations failed and war broken out, the Japanese would in all probability have won the day eventually. But they would have done so at an expense out of all proportion to the utmost advantages which complete victory could possibly have produced. War would have drained the country of its treasure, and necessitated a large additional issue of paper money. The occasional reverses which would probably have attended it, could not have failed to shake the position of the administration, and increase the discontent which is generally believed to exist in the country in dangerous, if not alarming, proportions. It would also have done serious injury to the reputation of the Empire by inducing the belief that it was restless and quarrelsome, and that while all the energies of its statesmen should be bestowed on completing and consolidating the reforms of the past seven years, and reducing to harmony the many conflicting and disturbing forces on the orderly play of which progress and tranquillity depend, it was wasting its time and powers on external wars equally dangerous and unprofitable. China would have rejoiced at reverses vicariously avenging her humiliation in the Formosa affair. Money would have been diverted from the public works and educational purposes. Additional taxation would have increased already existing discontent and disaffection, and the credit of the nation would have suffered in the unpleasant form of a depreciation of its stock. All these evils have been averted, and this, by a skilful display of promptitude, determination and sagacity. The triumph is most undoubtedly one of which the Government and the nation may be proud. Its extent must hereafter be measured by the terms of the treaty just announced as having been concluded between the two countries. But so far as its quality is concerned, it presents no single point for unfavourable criticism, and many for warm admiration.

In analysing the movement which has secured this victory, it will be well to compare it with the skilful and really statesman-like plan drawn up by the Government for the guidance of its Envoys, and published in these columns on the 8th January last.* The directness, simplicity and excellent sense of this document appealed so forcibly to us on its first appearance, that we drew special attention to it in our Yearly Summary, adding these words, which it will not be denied that events have amply justified:—"The policy of the Government on this question is characterised by great moderation and wisdom, and should command the entire sympathy of the western governments."

So far as is known, the squadron which formed the escort of the Envoys was preceded, agreeably to the plan of operations referred to, by a message sent from the Japanese Agency at Fusankai, announcing the approaching visit of a mission. Very shortly after this, the

* Vide *Japan Weekly Mail*, 8th January, p. 31; a translation headed "Corea," from the *Hiorom Shimbun*.

Digitized by Google UNIVERSITY OF CALIFORNIA

squadron made its appearance off the coast and anchored quietly in a convenient spot. From this it again moved nearer to the probable place of negotiation, overtures to which had been invited by the first communications. Great care seems to have been taken to avoid any demonstrations calculated to inflame the people or irritate the Government, while the presence and attitude of the squadron showed that the question submitted for consideration was one which did not admit of any evasion or much delay. From this point in the history of the mission we have no facts to guide us. All we know for certain is that the negotiations, once opened, were prosecuted with success, and resulted in a treaty which was signed on the 27th of February, but whether at Seoul, the capital, at Kokwa, or at Fusankai, we do not know. The presumption is that the treaty is one of friendship and commerce, possibly opening three ports to Japanese trade, on some bases then or hereafter to be arranged. But what is very clear is that the plan laid down was followed up with method, and that nothing was trusted to the chapter of accidents. It is observable, too, that though Mr. MORI was despatched to China, most probably with the view of discovering what course the Cabinet of Peking had resolved to take in the quarrel, the squadron was despatched for Corea long before any news could have been received from him as to what this course would probably be. The position, therefore, of the Japanese was this: We have determined that the Coreans shall answer for this outrage at Kokwa, and we will at once demand reparation for it. We will do so without bluster, or more menace than is implied in the presence of a small force as an escort to the Envoys. We will make preparations for the worst and trust nothing to accident. We will send to China in order to learn her views regarding the conduct of her Tributary, and her possible intentions in case we attack him. If she threaten interference, so much the worse for us, and we must make additional preparations. But whatever she may threaten to do, or do, our resolve is taken that Corea shall answer for her late act.

The result has amply justified the determination of the Cabinet, and the steps by which it has been translated into action.

It is probable, however, that the Japanese have not only been wise, but fortunate as well. The accounts which have reached us from time to time of the condition of political affairs in Corea render the presumption reasonable that the negotiation which have terminated so peaceably might have had a very different issue. The Regent, in whom the powers of the Throne are vested during the minority of the rightful heir, is bitterly opposed to all that we understand by the word progress, to all western ideas, and to the approach of all foreign influence. But so he is also extremely unpopular, and is kept in check by a party which, if not more enlightened, has apparently enough power to thwart him. The parallel may be fanciful, but it is probable that Corea is at this moment in much the same condition as Japan was at the period when Commodore PERRY arrived here. The antagonism of parties was more than a question of who was in and who out. One of those critical periods had arrived out of which events spring which mark epochs in the history of nations. And thus we think it has been with Corea. The divisions between parties were wide enough to allow the Japanese an opportunity of slipping in between them, and, as is often the case, good fortune played into the hands of courage and skill.

And now we ought certainly to see a people more united among themselves, more disposed to trust the Government, and a Government anxious and wise enough to turn its present successes to account. Its glaring defect is its want of harmony with the popular mind, and its special oriental vice of obscurantism—working in the dark, and managing everything by a concealed machinery the very successes of which excite no sympathy or devotion. Some efficient means should be found by which the popular voice can make itself heard, and the popular will make itself felt. All these Press prosecutions are bad indications. The true way to disarm the Press and convert it into an efficient aid to government is to place in responsible hands the powers which the Press too lightly and almost irresponsibly wields. Every instinct we possess rebels against these Press-laws, and nothing but an unmoved conviction of the necessity for them has enabled us defend them. But in proportion as this is strong, so is our conviction that a more serious, responsible and effective utterance of the voice of the people should be permitted and arranged for. There can be no unity, no contentment, no strength and no real solid advance without this. Japan is but now beginning her new civilization. If she does so by incorporating into it that spirit of freedom which has been the magical secret of England's political success, she will, like England, find it not only a medicine potent in case of disease, but a preventive to disease, and an elixir of eternal youth and vigour.

EDUCATIONAL DEPARTMENT.

(Enclosure in Notification No. 217 of Council of State.)

The constitution, and rules for the conduct of business, of this Department having been revised as shewn in the annexed paper, the same is hereby notified.

(Signed) SANJÔ SANEYOSHI,
Daijô Daijin.

Meiji 8th year, 11th Month 25th day,
November, 25th, 1875.

CONSTITUTION AND RULES FOR THE CONDUCT OF BUSINESS OF THE EDUCATIONAL DEPARTMENT.

The Educational Department is a place for the management of the educational matters of the whole country and its jurisdiction is as follows:—

1.—Office of Educational Inspection.
2.—Schools.

CONSTITUTION.

Kiyô.—One officer.

I.—He will exercise authority over the officials of the Head Office. He will have the direction of all affairs of the department, and will have the management of the educational matters of the whole country.

II.—With regard to the appointment and dismissal, the promotion and degradation of officials of the 2nd Official Grade attached to the department, he will report on these (to the Council of State); in the case of officials of the 3rd Official Grade and below that he will take independent action.

Taiyû, Shôyû.

They will assist the *Kiyô* in the discharge of his duties, and in the case of there being any reason in regard to the *Kiyô* (preventing his attendance at office) they will take his place in the direction of all affairs of the department.

Daijô, Gondaijô, Shojô, Gonshojô.

They will receive the orders of the *Kiyô* and they will have the management of public correspondence.

Dairoku, Gondairoku, Chiuroku, Gonchiuroku, Shôroku Gonshoroku, Hissei,* and *Shôshô.*

Dairokugaku (Educational Inspector of 1st grade.)
Chintokugaku (Do. of 2nd grade.)
Shôtokugaku (Do. of 3rd grade.)

* For equivalents see Tsuzu. *Home Department.*

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

They will take their orders from the *Kiyô* and conduct educational inspection.

Daishigaku, Shôshigaku. (Minor Inspectors.)

They will conduct inspection into educational matters in the various Educational Divisions and Sub-divisions.

Daishoki, Chiushoki, Shôshoki.

They will discharge their duties in conformity with the orders of the Inspectors of the three grades.

RULES FOR THE CONDUCT OF BUSINESS.

The Business of the Department is divided into two Heads—i.e. cases of Primary, and cases of Secondary Importance. In cases of Primary Importance, the *Kiyô* will draw up a document stating his views, and present it (to the Council of State), and his recommendation will be carried into effect (only) after a favorable decision has been passed upon them. Cases of secondary importance will be decided by the *Kiyô* in accordance with his own views. All responsibility, both in cases of primary and in cases of secondary, importance will rest with the *Kiyô*.

CASES OF PRIMARY IMPORTANCE.

Article I.—The construction of laws affecting all Educational matters.

Article II.—The Revision of Educational measures.

Article III.—The re-adjustment of Educational Divisions.

Article IV.—The Revision of the limits of ages in connection with Government Schools.

Article V.—The Revision of Hand Books essential for universal education.

Article VI.—The fixing of Educational Fees.

Article VII.—The re-adjustment of the amounts of Governments grants of money as pecuniary aid to Educational Divisions.

Article VIII.—The re adjustment of previously determined estimates.

Article IX.—The establishment and abolition of Government Schools.

Article X.—The despatch abroad of officials of the department.

CASES OF SECONDARY IMPORTANCE.

Article XI.—The presentation of Bills on matters connected with education.

Article XII.—The marking out of the limits of and establishing Educational sub-divisions and lesser divisions.

Article XIII.—The universal notification of points connected with Department matters; or the communication of these to the Local Authorities (only.)

Article XIV.—The institution of investigation as to whether the Local Officials do or do not encourage.

Article XV.—The obtaining of Reports from Local Officials on various subjects connected with Educational matters.

Article XVI.—The taking of action in respect to the establishment or abolition of National Schools.

Article XVII.—The causing of action to be taken in respect to the establishment or abolition of Private Schools.

Article XVIII.—The granting of suitable permission according to the report of Local Officials for the institution of measures for the investigation of cases in which children who have reached the educational standard of age do not attend school, and for the due exhortation (of the parents of the same).

Article XIX.—The framing and putting into force of regulations for the education of the poor.

Article XX.—The bestowing of official rank on officers engaged in the schools.

Article XXI.—The dismissal of Government Teachers.

Article XXII.—The presentation of a report containing a calculation of the sum required for the fixed estimate.

Article XXIII.—The establishment of rules for the payment of the money given as Government grants to Educational Divisions, and the handing over of such amounts to the Local Officials (for distribution).

Article XXIV.—The granting of permission, in accordance with the Report of the Local Officials, for the establishment of rules for the collection of Educational fees.

Article XXV.—The acceptance of contributions and donations connected with Educational affairs, of coin of the realm, paper-money, goods, or land.

Article XXVI.—The keeping of accounts of the various expenditure and making a public Report of the same.

Article XXVII.—The preservation of books and articles which are essential to the conduct of Educational matters.

Article XXVIII.—The making known by notification in a general manner the main intent and purposes of Education.

The collection from all quarters of rules and essays bearing upon Education and the compiling of these and the publishing of them generally.

Article XXX.—The issue of a Public Report containing the transactions of the Department, the aspect of Education throughout the whole country, and a general Review and Summary of Educational matters.

Article XXXI.—The printing of a magazine containing Official Reports.

Article XXXII.—The direction of the performance of the duties of exercising control over Educational Divisions.

Article XXXIII.—The assembling of Educational Inspectors and the division of Educational matters.

Article XXXIV.—The assembling of Heads of Government Schools.

Article XXXV.—The assembling of Government Teachers.

Article XXXVI.—The assembling of learned men and the discussion of educational matters.

Article XXXVII.—The building of the various offices in the jurisdiction of the department and of Government schools.

Article XXXVIII.—The framing and revision of Rules of Government schools.

Article XXXIX.—The handing over to Heads of schools the Government grants of money to Government schools.

Article XL.—The purchase of land required for Government schools, and the sale of the same.

Article XLI.—The appointment of scholars whose expenses are paid by the Government to Government schools.

Article XLII.—The despatch of students sent to study abroad, and the taking of action in regard to these.

Article XLIII.—The engagement of natives, foreigners, and the increase or diminution of their salaries.

Article XLIV.—The conduct of correspondence with natives or foreigners.

Article XLV.—The giving of rewards to officers of the department, and to native and foreign Teachers.

Article XLVI.—The discussion and carrying out of measures relating to the various officers.

Article XLVII.—The establishment or abolition of the various Branches of Department.

Article XLVIII.—The appointment of officials, from the *Taiyu* downwards, to positions where they will temporarily fulfil acting duties.

Article XLIX.—The despatch of officers from those of the 2nd official grade downwards to various localities throughout the country.

FINANCE DEPARTMENT.

(Enclosure in Notification, No. 217, of Council of State.)

The Constitution, and rules for the conduct of business, of the Department having been revised as shewn in the annexed paper the same is hereby notified.

(Signed) SANJÔ SANEYOSHI,
Daijô Daijin.

Meiji 8th year 11th month 25th day, (November, 25 1875.)

CONSTITUTION, AND RULES FOR THE CONDUCT OF BUSINESS OF THE FINANCE DEPARTMENT.

The Finance Department is a place for the management of the National Finance; its business is divided amongst eight sub-departments.

Public Department. }
Records Department. }

CONSTITUTION.

Kiyô.—One officer.

He will exercise authority over the officials of the Head Office and of the various sub-departments. He will have control over the annual Revenue and Expenditure, and will have the supreme direction of all financial matters both great and small. With regard to the appointment and dismissal the promotion and degradation of officials of the 2nd Official Grade attached to the Head Office and various sub-departments, he will report on these (to the Council of State) and ask for instructions ; in the case of officials of the 3rd Official Grade and those of more subordinate rank he will take independent action.

Taiyu, Shôyu.

They will assist the *Kiyô* in the discharge of his duties, and in the case of there being any reason in regard to the *Kiyô*, (preventing his attendance at office) they will take his place in the direction of all affairs of the department.

Daijô, Gondaijo, Shôjô, Gonshôjô.

They will receive the orders of the *Kiyô* and conduct the various business of the department, and they will have the management of public correspondence.

†*Dairoku, Gondairoku, Chiuroku, Gonchiuroku, Shôroku, Gonshôroku, Hissei, Shôshô.*

RULES FOR THE CONDUCT OF BUSINESS.

The business of the Department is divided into two heads *i.e.* cases of primary and cases of secondary importance. In cases of primary importance the *Kiyô* will draw up a document stating his views and present it (to the Council of State), and his views will be carried into effect (only) after a favourable decision has been pronounced upon them. Cases of secondary importance will be decided by the *Kiyô* in accordance with his own views. All responsibility both in cases of primary and in cases of secondary importance will rest with the *Kiyô*.

CASES OF PRIMARY IMPORTANCE.

Article I.—The drawing up of estimates for the yearly Revenue and the determining of the amount of the Public Expenditure (for the same year).

Article II.—The creation and abolition of various Taxes, and the revision, and supplementing and curtailing of the system of taxation.

Article III.—The re-adjustment of the weight of coins and the carrying out of changes in their shape.

Article IV.—The increasing or decreasing of the quantity of paper money (in circulation), and the carrying out of changes in the form of the same.

Article V.—The publishing of the Government Budget.

Article VI.—The Revision of rules for the payment of the National Debt and for the redemption of the Paper Currency.

Article VII.—The Revision of laws bearing upon the Revenue and Expenditure in Money and Grain.‡

Article VIII.—The Revision of laws connected with the payment of Taxes.

Article IX.—The meeting of any Incidental expenditure required by *In, Shô, Shi, Fu* and *Ken*, apart from the fixed estimates for each.

Article X.—The Revision of rules affecting the payment of salaries, travelling expenses and various gratuities.

Article XI.—The raising of Loans both at home and abroad, and the fixing of the date at which these are to be paid off, and the interest payable on the same.

Article XII.—The Revision of laws bearing upon Bonds for various National Debts, and of the forms which such Bonds are to take.

Article XIII.—The Revision, supplementing and curtailment of laws for the regulation of National Banks, Common Banks, and other companies of a similar nature.

Article XIV.—The fixing of a scale of weights and measures.

Article XV.—The despatch of Officers of the Department to Foreign Countries.

CASES OF SECONDARY IMPORTANCE.

Article I.—The collection of taxes.

Article II.—The distribution of the sums of fixed expenditure.

Article III.—The fixing of the order in which action shall be taken in respect to the collection of revenue from Natives and Foreigners in accordance with the various laws and regulations bearing upon this subject.

Article IV.—The coining of money and the issue of the same.

Article V.—The manufacture of paper-currency within the limits of the amount previously determined upon, and the exchange of this for old paper-currency.

Article VI.—The establishment of rules for the exchange and loaning out of Government money, and the conducting of control over the same.

Article VII.—The Revision of the Register of the Revenue and Expenditure in Money and Grain * in accordance with the laws and regulations relating to the same.

Article VIII.—The summoning to the Head office, in connection with the accounts of Revenue and Expenditure, or in connection with any other affairs over which the Department has control, from *In, Shô, Shi, Fu* or *Ken*, of the office charged with the particular business in question.

Article IX.—The payment, within the limits of the amount previously determined, of money required by *In, Shô, Shi, Fu* or *Ken* to defray incidental expenditure over and above the fixed estimates.

Article X.—The distribution in a suitable manner of sums within the limits of the fixed estimates, which are prepared by taking the actual condition of the exisiting expenditure in *In, Shô, Shi, Fu*, or *Ken*, and in accordance with the report presented after consultation by the chief of the same.

Article XI.—The fixing of the order in which action is to be taken in respect to the National Debt in accordance with the laws and regulations bearing upon them.

Article XII.—The manufacture of Public Debt Bonds, and the issue of these in accordance with the laws and regulations bearing upon the same.

Article XIII.—The repayment of principal and interest in the case of native and foreign Loans within the periods previously determined.

Article XIV.—The manufacture and distribution of implements for determining weights and measures, or the granting of permission to persons to manufacture and sell the same.

Article XV.—The preservation of Records relating to paper currency, Public Debt Bonds and the receipts of Revenue and Expenditure.

Article XVI.—The revision of Regulations relating to the preservation of Registers belonging to the Department.

Article XVII.—The despatch (for temporary purposes) of officials of the Department from those of the 2nd official grade downwards to various localities, or the appointing of the same to permanent posts.

Article XVIII.—The printing of documents which are to serve as notifications and the granting of permission for the sale of these.

Article XIX.—The establishment of Rules for the conduct of business for the various sub-departments and sub-offices, and the Revision of the same.

Article XX.—The fixing of the order in which action shall be taken, and the taking of such action, in respect to pensions and allowances granted as rewards, in accordance with the previously determined rules bearing on this subject.

Article XXI.—The fixing of the order in which action shall be taken, and the taking of such action, in respect to the gradual diminution or the concession of Government grants to Shrines and Temples.

Article XXII.—The granting of permission in the case of applications for the formation of national Banks,

† For equivalent see Translation of Rules of Home Department.

‡ Rice is of course meant.

* i. e. Rice.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

common Banks, and other Companies of similar nature; and the investigation of such cases, and according to circumstances the abolition, or the granting of permission, in compliance with petitions, for the dissolution of such companies.

Article XXIII.—The presentation (to the Dajôkuwan) of calculations of estimates for Annual Revenue and Expenditure.

Article XXIV.—The compilation of Statistics of native and Foreign Produce and the shewing of the rise or decline of commerce by this means.

Article XXV.—The notification throughout the whole country of Rules having universal application to cases of special business, or the communication of these (only) to the various Public Offices.

Article XXVI.—The interchange in the most suitable manner (in different localities) of the use of money or *grain following in this respect the convenience of the accounts.

Aricle XXVII.—The fixing of the orders in which action is to be taken in respect to salaries, travelling expenses, and various gratuities, in accordance with the system obtaining.

Article XXVIII.—The establishment of rules for the increase or diminution of the Reserve Fund.

Article XXIX.—The increase and diminution of the salaries, differing according to rank, of the artizans of the Mint.

HOME DEPARTMENT.

(Enclosure in Notification No. 217 of Council of State.)

The Constitution and Rules for the conduct of business, of this Department having been revised as shewn in the annexed paper the same is hereby notified.

(Signed) Sanjô Saneyoshi,
Daijô Daijin.

Meiji 8th year 11th month 25th day. (November 25, 1875.)

Constitution and Rules for the Conduct of Business of the Home Department.

The Home Department is a place for the management of affairs relating to the tranquillity of the country and the protection of the people; its business is divided amongst seven Sub-Departments.

Viz:—Board of Industry.	1st class Sub-Departments.
Postal Service Office.	
Registrar's Office.	2nd class Sub-Departments.
Bureau of Police.	
Dóbôkuriô.*	
Geographical Department.	
Hydrographers.	

Constitution.

Kiyô.—One officer.

I.—He will exercise authority over the officials of the Head office and the officials of the various sub-departments. He will have the direction of the affairs of the Departments, he will take measures for the tranquillity of the whole country, he will encourage the several industries of the people, and he will preside over matters relating to Local Police administration, etc., etc.

II.—With regard to the appointment and dismissal, the promotion, and degradation of officials of the 2nd Official grade attached to the Head office, and various sub-departments, he will report on these (to the Council of State); in the case of officials of the 3rd Official grade and those of more subordinate rank he will take independent action.

III.—He will be concerned in the appointment and dismissal, the promotion and degradation of local officials of the 2nd Official grade.

Taiyu, Shôyu.

They will assist the *Kiyô* in the discharge of his duties, and in the case of there being any reason in regard to the *Kiyô* (preventing his attendance at office) they will take his place in the direction of all affairs of the Department.

Daijô, Gondaijô, Shôjô, Gonshôjô.

They will receive the orders of the *Kiyô*, and conduct the various business of the department, and they will have the management of public correspondence.

†*Dairoku, Gondairoku, Chiuroku, Gonchiuroku, Shôroku, Gonshôroku,* ‡*Hiseii,* ‖*Shôshô.*

Rules for the conduct of Business.

The business of the Department is divided into two Heads—i.e. cases of primary and cases of secondary importance. In cases of primary importance the *Kiyô* will draw up a document stating his views and present it (to the Council of State), and his recommendations will be carried into effect (only) after a favorable decision has been pronounced upon them. Cases of secondary importance will be decided by the *Kiyô* in accordance with his own views. All responsibility both in cases of primary and of secondary importance will rest with the *Kiyô.*

Cases of Primary importance.

Article I.—The revision of Registration Laws, and Regulation of Police Administration.

Article II.—The abolition and construction of Poor-houses, Hospitals and various institutions of charity, and the framing and revision of Regulations for the working of these.

Article III.—The framing and revision of laws for the dispensation of rewards and charitable alms.

Article IV.—The framing and revision of Regulations for Agricultural Schools and various companies for the Promotion of Industries.

Article V.—The framing of Land Regulations, and the re-adjustment of the boundaries of provinces and districts.

Article VI.—The re-arangement of the sites of Local Offices.

Article VII.—The increasing or decreasing of § the amount of expense to be defrayed by the Local Offices, and borne by the people respectively.

Article VIII.—The construction of new roads, and of new bridges and dykes for sea and river purposes, or the establishment of the system (to be observed) in regard to these.

Article IX.—The framing and revision of Postal Regulations.

Article X.—The framing of Regulations for ships of both Native and Foreign build.

Article XI.—¶ The framing of Regulations for hills and forest, and of systems for thickening and thinning woods.

Article XII.—The bringing into operation of (a system) of almsgiving and loaning money for which hitherto there has been no precedent.

Article XIII.—The increasing or decreasing of the numbers of the officials of the Head Office, and of the various sub-departments.

Article XIV.—The framing and revision of Regulations for Gaols and Penal servitude.

Article XV.—The increasing or decreasing of the fixed estimates for the Department.

Article XVI.—The framing and revision of Regulations for the publication of newspapers.

Article XVII.—The framing and revision of Regulations for the medical profession and for the sale of drugs.

Article XVIII.—The framing and revision of Regulations for all companies except those which issue Bank notes.

Article XIX.—The despatch abroad of officials of the Head Office and of the various sub-departments.

Article XX.—The framing and revision of Regulations for various places of entertainment and for Public Gardens.

Cases of Secondary Importance.

Article XXI.—The preservation of native records, maps and books.

* The *Dobokuriô* was formerly the name of a Department which corresponded to our Office of Works. Now however, most of the duties of this office have been taken over by the *Board of Works*, and the *Dobokuriô* only retains its old name and a few of its old duties such as the supply of building materials for Government Buildings, &c.

Article XXII.—The preservation of relics of antiquity* in various localities.

Article XXIII.—The putting in force of a system of Land and Sea Transport.

Article XXIV.—The enforcing of Rules for the regulation of Theatres and Places of Entertainment.

Article XXV.—The distribution of rewards already fixed.

Article XXVI.—The distribution of loans and dispensation of alms already determined upon.

Article XXVII.—The granting of permission for the formation of various companies with the exception of those which issue Banknotes.

Article XXVIII.—The dealing with cases of absconsion and re-registering, and of the bringing up of castaways, as established by precedent.

Article XXIX.—The measurement of land, and the compilation of Land Registers.

Article XXX.—The taking of action in regard to cases of land owned by the Government, of land belonging to the people, and of land held jointly by the Government and the people; and the inspection of land swept away (by some catastrophe).

Article XXXI.—The investigation of cases of loss of life, cattle, land, houses, or effects, occasioned by the occurrence of some catastrophe, and the granting of relief as established by precedent.

Article XXXII.—The abolition and establishment of Branch offices in various localities.

Article XXXIII.—The taking of proper action in regard to the repair of roads, and of dykes and bridges for river and sea purposes.

Article XXXIV.—The carrying out of changes in village roads which are not connected with taxes or with Government Expenditure.

Article XXXV.—The issue of universal notifications on points connected with the business of the department, or the issue of these notifications to the Local Officials (only).

Article XXXVI.—The preparation and presentation of a calculation of the estimated expenditure of the department.

Article XXXVII.—The dealing with matters of business appertaining to gaols, and penal servitude, as laid down by rule.

Article XXXVIII.—The enforcement of Regulations for (local) Government and police administration.

Article XXXIX.—The enforcement of Regulations for the publication of Newspapers etc.

Article XL.—The enforcement of Regulations for the medical profession and for the sale of drugs.

Article XLI.—The maintenance of the exhibition.

Article XLII.—The granting of permission for the sale of almanacks.

Article XLIII.—The preparation of accounts of the various expenditure (of the Department) and making a public report on the same.

Article XLIV.—The making of a public report on the transactions of the department, on the condition of national agriculture and trade, and on the result of efforts for the promotion of Industry.

Article XLV.—The employment of Natives and Foreigners, and the increasing and decreasing of salaries.

Article XLVI.—The conduct of correspondence with Natives and Foreigners on matters connected with the Department.

Article XLVII.—The receipt of Memorials from Local Officials.

Article XLVIII.—The discussion of and dealing with cases connected with the various (local) offices.

Article XLIX.—The abolition and establishment of various minor branches in the department.

Article L.—The establishment of rules for the conduct of business throughout the various sub-departments in the department, and the revision of the same.

Article LI.—The distribution throughout the different localities in the country of officials of the 3rd official grade and downwards.

BOARD OF WORKS.

(Enclosure in Notification, No. 217, of Council of State.)

The Constitution and Rules for the conduct of the business of this Department having been revised as shewn in the annexed paper, the same is hereby notified.

(Signed) SANJÔ SANEYOSHI,
Daijiô Daijin.

Meiji 8th year, 11th month, 25th day,
(November, 25th 1875.)

CONSTITUTION AND RULES FOR THE CONDUCT OF BUSINESS OF THE BOARD OF WORKS.

The Board of Works is a place for the management of all matters connected with Public Works; its business is divided amongst seven sub-departments.

viz:—Mining Department, Railway Department — 1st class, sub-departments.
Lighthouse Department, Telegraph Department, Department of Manufactures, Building & Repairs Department, College of Engineering — 2nd class, sub-departments.

CONSTITUTION.

Kiyô.—One officer.

I.—He will exercise authority over the officials of the Head Office, he will distribute work to the various sub-departments, and will have the general direction of Government Works throughout the whole country.

II.—He will report on the appointment and dismissal, the promotion and degradation of officials of the 2nd official grade belonging to the Head Office and various sub-departments; in the case of officers of the 3rd official grade and below that, he will take independent action.

Taiyu, Shôyu.

They will assist the *Kiyô* in the discharge of his duties, and in the case of there being any reason in regard to the *Kiyô* (preventing his attendance at office) they will take his place in the direction of all affairs of the department.

Daijô, Gondaijô, Shôjô, Gonshôjô.

They will receive the orders of the *Kiyô*, and they will have the management of public correspondence.

†*Dairoku, Gondairoku, Chiuroku, Gonchiuroku, Shôroku, Gonshôroku, Hissei* and *Shôshô.*

RULES FOR THE CONDUCT OF BUSINESS.

The business of the Department is divided into two Heads—*i.e.* cases of Primary and cases of Secondary Importance. In cases of Primary Importance the *Kiyô* will draw up a document stating his views and present it (to the Council of State), and his recommendations will be carried into effect (only) after a favorable decision has been passed upon them. Cases of secondary importance will be decided by the *Kiyô* in accordance with his own views. All responsibility both in cases of Primary and in cases of Secondary importance will rest with the *Kiyô.*

CASES OF PRIMARY IMPORTANCE.

Article I.—The institution and abolition of public works and manufactures on a large scale.

Article II.—The fixing of the course of Railway and Telegraph lines and the determining of places for the erection of Lighthouses.

Article IV.—The despatch of officials of the Head Office, and of students abroad.

Article V.—The alteration of previously fixed estimates.

Article VI.—The establishment, and abolition, the separation or amalgamation of sub-department and offices.

Article VII.—The framing of Regulations and Penal clauses connected with the business over which the department presides.

Article VIII.—The fixing of places where mines shall be opened and the extraction of ore.

CASES OF SECONDARY IMPORTANCE.

Article IX.—The conduct of Land and Marine Surveys in the interests of public works.

Article X.—The conduct of deliberations, having for their object the surveying of Railroads and lines of Telegraph, in the offices having jurisdiction over (the locali-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

ties affected) and the removal of obstructions in the shape of bamboos or trees.

Article XI.—The establishment in a suitable manner of temporary agencies either at home or abroad for the sake of opening mines, instituting manufactures, or building ships.

Article XII.—The changing of the locality of dwellings after deliberation in the offices having jurisdiction over the places concerned, in order to facilitate the establishment or construction of Railways, Telegraphs, Lighthouses and Manufactures.

Article XIII.—The communicating directly with the local officials, and taking action in cases of the purchase or surrender of land connected with lines of Railway.

Article XIV.—The purchase, in the case of private property, and the occupation, in the case of Government property, after consultation with the Home Department and local officials, of land required for works which have received official sanction, and also for works with respect to which independent action has been taken.

Article XV. –The notification of the lighting of lighthouses, and of the opening of the Railways, Telegraph Lines, &c.

Article XVI.—The fixing of Railway Fares and Telegraph charges.

Article XVII.—The suitable revision after construction of the course of telegraph lines and the establishment, abolition, and removal from place to place of the local Branch Telegraph Offices.

Article XVIII.—The presentation of a report, after action has been taken, in the case of these notifications issued respecting affairs over which the Department has jurisdiction which bear on statutes and laws.

Article XIX.—The construction or repair of merchant vessels or men-of-war on the demand of natives or foreigners.

Article XX.—The sale to natives and foreigners of machinery and goods manufactured within the jurisdiction of the Department for the purposes of sale.

Article XXI.—The education (of officers) in engineering.

Article XXII.—The carrying out of buildings or repairs required for purposes of engineering, or for official residences.

Article XXIII.—The calculation of the urgency, or otherwise, and the profit or loss likely to accrue from various public works, and the making of the fixed estimates interchangeable; (for instance diminishing the estimates of the Mining Department and increasing those of the Railways, or diminishing the estimates for Telegraphs and increasing those for manufactures).

Article XXIV.—The engagement of Natives and Foreigners, and the increase or diminution of their salaries.

Article XXV.—The giving of rewards to employés up to the sum of 500 *yen* in consideration of services performed.

Article XXVI.—The discussion of, and taking action in, matters connected with the various Offices.

Article XXVII.—The conduct of correspondence with Natives and Foreigners.

Article XXVIII.—The establishment and abolition of various sub-departments and offices in the Department.

Article XXIX.—The Revision of the Rules for the conduct of business of the various sub-departments in the Department.

COLONIZATION DEPARTMENT.

(Enclosure in Notification No. 217 of Council of State.)

The Constitution and Rules for the conduct of Business of this Department having been revised as shown in the annexed paper, the same is hereby notified.

(Signed) Sanjô Saneyoshi,
Daijô Daijin.

Meiji 8th year, 11th month 25th day,
November 25, 1875.

Constitution and Rules for the conduct of Business of the Colonization Department.

The Colonization Department is a place for the management of affairs relating to the Colonization of Yezo and the adjoining islands; the province of its jurisdiction is divided into four chief divisions; Sapporo is fixed as the locality for the Head Office, and branch offices have been established at Hakodate, Nemoro &c—; a special branch office has also been created at Tôkiô.

Constitution.

Chô-kuan.—One officer.

I.—He will exercise authority over the officers of the Head Office, he will superintend all the business of the department, and he will have the direction of affairs relating to the development of the population, the police administration over the same, and the promotion of industries.

II.—With regard to the appointment and dismissal, the promotion and degradation, of officials of the Head Office of the second official grade, he will report on these (to the Council of State); in the case of officials of the third official grade and below that, he will take independent action.

Gikwan (Asst. Chief)—One officer.

He will assist the *Chôkwan* in the discharge of his duties, and in the case of there being any reason in regard to the *Chôkwan* (preventing his attendance at office) he will take his place in the direction of all affairs of the department.

Daihangwan, Chiuhan wan, Shôhangwan.

They will receive the orders of the *Chôkwan* and have charge of the business of the department, and they will conduct public correspondence.

Kanji, Gonkanji.

They will receive the orders of the *Chôkwan* and discharge the duties of the various offices.

Daishiuten, Gondaishiuten, Chiushiuten, Gonchiushiuten, Shôshiuten, Gonshôshiuten.

They will prepare drafts of documents.

Shijô.

They will make fair copies of public documents.

*Shishô.**

Rules for the conduct of Business.

The business of the department is divided into two heads—i.e.-cases of primary and cases of secondary importance. In cases of primary importance the *Chôkwan* will draw up a document stating his views and present it (to the Council of State) and his recommendations will be carried into effect (only) after a favorable decision has been pronounced upon them. Cases of secondary importance will be decided by the *Chôkwan* in accordance with his own views. All responsibility both in primary and in cases of secondary Importance will rest with the *Chôkwan.*

Cases of Primary Importance.

Article I.—The revision of boundaries of provinces and districts.

Article II.—The fixing or alteration of the names of provinces and districts.

Article III.—The establishment and abolition of sub-departments and offices.

Article IV.—The establishment and abolition of Postal Stations and the institution of Postal Service.

Article V.—The framing and revision of Taxation Laws.

Article VI.—The establishment and abolition of temples and shrines.

Article VII.—The construction of Railways and Telegraphs.

Article VIII.—The erection of Lighthouses and the placing of Buoys.

Article IX.—The establishment or abolition of Government Schools.

Article X.—The granting of monopolies in the case of new inventions.

Article XI.—The despatch of officials of this Department abroad.

Cases of Secondary Importance.

Article XII.—The establishment of villages and hamlets.

Article XIII.—The adjustment of Registrary matters.

Article XIV.—The construction and repair of roads and bridges.

* Office messengers and ushers.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Article XV.—The encouragement of national industries and the establishment of a system for the development of products.

Article XVI.—The granting of permission for a change of residence to *Shidzoku* and *Heimin*, and the sale and lease of land.

Article XVII.—Engagement of Foreigners and the increase or diminution of their salaries.

Article XVIII.—The opening and working of mines.

Article XIX.—The construction of canals.

Article XX.—The removal of obstructions in the shape of sand and dirt to the flow of rivers.

Article XXI.—The adjustment of coolie, and horse-rates, boat-hire, and bridge-tolls.

Article XXII.—The construction of horticultural gardens.

Article XXIII.—The framing of rules for the keeping and rearing of cattle.

Article XXIV.—The establishment of places for the conduct of engineering and of manufactures.

Article XXV.—The establishment and abolition of public and private schools.

Article XXVI.—The construction and repair of Offices and Agencies.

Article XXVII.—The sale of products.

Article XXIX.—The presentation of a report containing a calculation for fixed estimates.

Article XXX.—The keeping accounts of all expenditure and publishing a report on the same.

Article XXXI.—To publish a report containing the transactions of the Department (for the past year), the aspect of things within its jurisdiction, and a general review of its administration.

Article XXXII.—The discussion of, and taking of action in, matters concerning the various offices.

Article XXXIII.—The granting of pecuniary aid to colonists in accordance with the Regulations.

Article XXXIV.—The establishment of reserve store-houses and the giving of aid in time of famine.

Article XXXV.—The granting of assistance to the poor in accordance with the provisions of fixed Regulations.

Article XXXVI.—The granting of rewards in accordance with the provisions of fixed Rules.

Article XXXVII.—The creation and abolition of a police force.

Article XXXVIII.—The purchase of such articles as are required from Foreign Countries.

Article XXXIX.—The taking of action in the case of all Taxes as Regulations.

Article XL.—The taking of action in the matter of colonization within the limits of fixed estimates, having regard to the urgency or otherwise of individual cases.

Article XLI.—The increase or diminution of officials of the 3rd official grade and below that.

Article XLII.—The passing of sentences up to ten years hard labour, except in those districts which are subject to the jurisdiction of Hakodate.

SPIRIT OF THE JAPANESE PRESS.

The Success of the Corean Embassy.

(Nichi Nichi Shimbun.)

On the 2nd instant the good news was made public that our ambassadors to Corea, Kuroda and Inouyé, had carried to a satisfactory result the negotiations with which they where charged by the Government. Our special correspondent at Shimonoseki informs us by telegraph that "a treaty of peace had been concluded with Corea and that the envoys had left that port on the 2nd instant for Yokohama where they may be expected to arrive on the afternoon of the 5th instant *en route* for the capital. The full details of the treaty cannot of course be known until the envoys have returned, but the fact of a peaceful solution having been arrived at is satisfactory evidence that they have accomplished the wishes of the Government. When the attack was made upon the *Unyokan* last year the spirit of the nation was roused and a war was demanded; indeed another insurrection in Saga appeared far from improbable. In this demand for hostilities, however, the press took but a small share. Its conductors, influenced by a wiser and calmer spirit, combated the hot arguments of those who wished to wipe out the insult in blood and succeeded in convincing the nation of the advantages of peace. The question was referred to the Sovereign of Corea for adjustment, and a happy issue to our negotiations has crowned the efforts of the envoys with success. So far therefore our views in favour of absolute non-intervention may be deemed erroneous, * though we venture to think that they modified the demand for reprisals which followed upon the announcement of the insult to our flag. The interval which has elapsed since the departure of the Ambassadors has been one of much anxiety to all, and necessarily so to our Ministers. But we must not blame our envoys because they have kept us in the dark as to their movements. Armed with full power to act in case of need, and according to the nature of the circumstances, no reference to their Government has been necessary, and they wisely abstained from making any communication until they were in a position to report the issue of their negotiations. After one short month of conference this has been accomplished, owing, we do not doubt, to the reputation of our Emperor and the sagacity of those who were charged to represent his views. So complete a success in such a brief period is surely unparalleled in the recent annals of statesmanship! The treaties of Crimea, Vienna, Paris and Tientsin were only adjusted after much war and shedding of blood. Commodore Perry's treaty was effected only after a lengthy sojourn in Japan, and Lord Elgin, whose duty it simply was to repeat the proceedings of his predecessor, was warmly praised for having brought his negotiations to a close in the short space of five weeks. Now Corea is an uncivilised country, and seeing the difficulties under which our Ambassadors must have laboured in their negotiations their great success entitles them justly to much praise. The return of Okubo from China was celebrated by the Government and nation with rejoicing, and we shall not fail to hail the return of Kuroda and Inouye with equal warmth and satisfaction.

Peace!

(Hochi Shimbun.)

But a few months since and the heavens were lurid and threatening, the atmosphere was thick, and blood-red clouds appeared to be drifting towards us from the direction of the north-west. But happpily all has changed. The sky above is now transparently clear and placid, the air is laden with pleasant odours, and a soft and gentle breeze bears to us from the south tidings of peace and good will instead of the dreaded trumpet-call to arms.

On Kuroda's departure on his mission we did not, we must admit, anticipate so fortunate or so speedy a conclusion to his mission. We knew the Coreans to be ignorant and uncouth, and dreaded lest these barbarians should commit some act of insolence which would compel our Ambassador to determine relations with them and force us to inglorious bloodshed. But, by the aid of Heaven, the virtues of our Sovereign and the wisdom and prudence of our envoys have prevailed, the Coreans have admitted the justice of our cause, and a peaceful conclusion has crowned our mission with success. The treaty has been made according to the terms sought by our Government, and it is said that an embassy from Corea will visit Japan shortly. But we cannot speak of these matters with any certainty until our envoys have returned.

* The most influential organs of the Press seemed unanimous in recommending that Corea should be left alone. The *Akebono Shimbun* alone urged the desirability of despatching an embassy to that country. —[Ed. J.W.M.]

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

When our ships of war were attacked by the Coreans at Fusan last year it was the opinion of many that war should be immediately declared, though the majority of the nation earnestly desired the continuance of peace. Preparations were of course made in case hostilities should be forced upon us, but it was in the interest of peace that our embassy was despatched. The crews of English, French and American ships had been previously ill-treated by the semi-civilised people upon whose coasts they were thrown, but were satisfied to punish them on the spot, deeming them unworthy of diplomatic relations. That Japan should have succeeded in obtaining redress without bloodshed evidences the skill of her negotiations and the wisdom of those who were sent to represent her. And in this we conceive the true success of our Embassy lies, that there has been an absence of bloodshed. Okubo succeeded also in restoring friendly relations with China; but how many lives had not already been sacrificed to the deadly climate of Formosa? The news of peace may not, it is true, be equally agreeable to all. We have among us some ardent natures whose blood boils for the fray, and whose fingers itch to grasp the sword, but with such malcontents we feel sure the Government will know how to deal and they need expect no response to their clamours from the Public. It may be alleged that the success of the embassy reflects no credit upon our prophecies, and it is true that when its departure was decided on, we, fearing war, deprecated interference with our barbarous neighbours. But we conceive that our arguments were not wholly without weight. They reflected the sense of the nation and the strong desire for peace, and strengthened the action of both our Government and Envoys in securing the continuance of that inestimable blessing to Japan.

The Southward Progress of Russia.

(Choya Shimbun.)

Although we have still on our hands the unsettled question with Corea we were greatly rejoiced to learn that the transfer of Saghalin had been amicably settled with the Emperor of Russia. But the narrative of one of our friends, who has recently returned from a visit to those Northern Regions, while showing the progress of Russia, warns us to be on our guard against the further encroachments of that ambitious country. He writes to us "When the Russians were on the northern side of the River Amour their Government settlement was fixed at Petropaulovski in Kamtschatka. They then advanced Southward, and crossing the Amour, removed their head-quarters to Nicolaievsk; and since then have established the seat of Government at Kashiukotan and Vladiwostock. The first named of these settlements is the southernmost and the best port in the island of Saghalin, opposite to Yezo, and here a Government office has been established. Vladiwostock is at the extreme southern edge of the Russian possessions in Asia and on the frontier of Corea, the population has for the past two or three years received many accessions. Some hundreds of Russian troops and many ships of war are always stationed there and the relations of Japan and Corea are at the present moment, and have, for many years past, been anxiously scanned by the local authorities."

Such is the tenor of our friend's report.

Russia, which about one hundred years since (?) was an insignificant and unhonoured country in Europe, has, by the zeal of Peter and Catherine and its later rulers, developed into a first-class power. The aims of its rulers has been invariably to draw all bordering countries within its limits. Its first conquest was that of Siberia which was gradually accomplished. To this succeeded the Kuriles and Saghalin, nor has an inch of territory been permitted to escape their grasp. About twenty years since (?) when a difficulty arose between England and China on the subject of the opium question, Russia made a movement to the south and joined boundary with the kingdom of Corea. While thus extending southwards we find Russia selling its possessions in North America to the United States of America and employing the money so obtained in developing itself in the direction of Manchuria and in the colonisation of Saghalin. Here then we may perceive the tendency and the aims of that great Empire, and why she is so resolutely bent upon an advance southward. Large though her territory is, it is chiefly situated in the bleak and inhospitable regions of the cold north where the soil is sterile and unproductive. Hence not long ago she made an attempt to subjugate Turkey, but was foiled in her efforts by the combined forces of England and France. She subsequently gave her attention to Central Asia where the vast deserts obstructed the progress of her armies, and as a last resource now turns to China and Japan, for outlets to the south, a look all the more anxious as she sees these powers emerging from their comparative inactivity and joining in the march onward to a higher civilization. Corea, it is true, bars her career, but Russia has doubtless marked it for her own. Should our difficulties with that kingdom be amicably solved it will be well, but if war should result we can scarcely believe that Russia will be passive or refrain from throwing herself into the fray. She is now one of the most powerful nations in the world, and it is hardly necessary to say that it behoves Japan to watch her action and her progress with a jealous vigilance. Poor as we are, we should not hesitate to confront the joined armies of China and Corea. But we are unresisting when we behold the cruel eye and sharp talons of the two-headed eagle, and, should we now weaken Corea, we shall but the more certainly accelerate the fatal hour when the hungry eagle will swoop upon it and Russian outposts be advanced one step further on their southernward progress.

The Limit of Forbearance.

(Choya Shimbun.)

Were the question asked who are the most forbearing people in the world, the unanimous reply would be, the English. We, however, should say, the Japanese. The public, on hearing this, may say that we only give utterance to this ridiculous sentiment to excite astonishment. But this is not the case, and we have arrived at our conclusion after long and thoughtful consideration.

There are many things which cannot be tolerated, and the hardest among them is the oppression of a government, for this is against the laws of nature. It is more difficult to sleep amidst thorns or to sit on needles than to be compelled to observe unjust laws. The English and Americans who are notorious for their forbearance, could not tolerate this. The former warned their kings to desist from injustice, and the latter underwent war for seven years to escape from it; and these facts are considered as mostimportant in the annals of foreign countries. The events themselves owed their origin rather to the impossibility of submitting to arbitrary authority, than to any active feeling of desire to revolt against it.

We now propose to show why the Japanese may be considered as the most forbearing people in the world. We shall not go back to ancient times, but shall confine ourselves to the period of the Tokugawa rule which lasted two hundred years. The people lived tranquilly under that rule without showing any signs of resistance to it, and though they had tongues and hands to express their ideas, they did not do so for fear of persecution and punishment. The Tokugawa rule was without parallel for its arbitrary character, and real tranquillity among the people is incompatible with an oppressive and arbitrary government. Thus when we see that tranquillity did prevail during these two hundred years, we are justified in saying that the Japanese are the most forbearing people in the world, and we hold that it is impossible to deny this. Let us suppose that those nations who are so notorious for their forbearance had come into existence under the Tokugawa rule, we do not think they would have submitted to it for a miuute, or that peace could possibly have been preserved. The blood of the martyrs would have flowed perpetually, revolution would have broken out, and men would not have waited until the restoration of the Mikado to institute a new government. When we see that these oppressions were tolerated for two hundred years by the Japanese, it is fair to conclude that they have a hundred times as much power of forbearance in them as the English or Americans.

Forbearance is not by any means a bad quality, but, as with all other things, there should be limits to it. A man cannot be said to have done his whole duty simply by showing forbearance, and men are likely to be called slaves if they carry this virtue beyond a certain point. And thus it is that when the limit of forbearance has been reached, the people who live under arbitrary governments warn their rulers that oppression must cease and threaten them with the consequences of perservering in it. Then, if the government does not yield to the demand of the people, and there appears no alternative, revolutions begin for the purpose of overthrowing the old rule and establishing a better one. Thus there appears no reason why people should force themselves into excessive forbearance of what ought not to be forborne, and if any one replies to us that all this is unsound and mistaken, we say that then the Magna Charta was also a mistake. But an event which has been made the foundation of liberty and civilization, and which is universally considered as one of the most important events in the history of the world, cannot thus be called a mistake.

We doubt not that most men are now familiar with this line of argument; but we write these words in case any should still be ignorant of it.

The Fruits of Ignorance and Indolence.

(Hochi Shimbun.)

Ignorance and idleness are causes of corruption and meanness. We see this in the present condition of the *Shidzoku*, who are, with the exception of the nobles, the highest class in Japan. From the middle ages downwards the *Samurai* formed a class of proud noblemen, but since the Revolution they have had no duties to perform. Yet so strongly have they become habituated to the idea of living without work, that the cessation of their duties has caused no charge of mind in them. The public writers have therefore censured them as dependents and burdens on the country. This naturally excited a feeling of shame among them and they thereupon resolved upon returning their pensions to the Government and becoming farmers and merchants, or earning their livelihood in some other manner. But being ignorant and indolent, they could not cultivate the soil as the farmers do, or employ themselves profitably in mercantile business, so that the small capital with which they ventured into commerce soon disappeared. Thus they find that all the avenues except one by which they can gain a living, are closed to them, and this exception consists in getting a small office under the Government. Yet they find this no easy thing to obtain, and thus they lose their former pride and begin to flatter the higher officials, by which means they gain an office, though mostly without rank. When once appointed, they forget their old views and seek only how they may please the higher officials, deeming it none of their duty to work for the welfare of the people. This is the state of mind of seven or eight out of every ten public servants. This cannot be called good, and it all arises from the fall of the *Samurai* into poverty, which again arises from their ignorance and indolence. These, therefore, are the root of corruption and meanness.

A nation is an assemblage of individuals, and when there is even one among them who betrays meanness, he disgraces all. How much more so is this the case when there are three hundred thousand of them? Being of a higher class than the average of the people, they ought surely to try to earn their own living, and, for this purpose, ought to be taught some avocation. But they have no serious aims. Without recognizing their own meanness in being dependents, they look down upon all men engaged in trade, and imagine there is something noble in becoming officials. We do not argue that official life is ignoble, but we would have them consider that, unlike themselves, all men in trade make their own living independently. But so long as the *Samurai* think as they now do, they will not learn a trade, and thus cannot gain an independent livelihood. Thus mean feelings are perpetuated among us, which, unless dispelled by some means or another, will retard our progress in civilization for some years to come.

YOKOHAMA CRICKET CLUB.

Yesterday afternoon the annual general meeting of the Yokohama Cricket Club was held at the Grand Hotel.

Mr. E. J. Fraser took the chair, and requested the Honorary Secretary, Mr. C. H. Cobden, to read the minutes of the last general meeting. The minutes were accordingly read, and adopted.

The Secretary then submitted the accounts for the last year, which show a balance of $305.04 deposited in the Hongkong and Shanghai Bank, from which balance, however, is to be deducted an amount of $13.58 expended by the Secretary during the months of January and February this year, and not yet drawn from the bank, thus making the real balance in favour of the Club $291.46.

A proposal that the affairs of the Club be henceforth managed by a committee of five members, three of them to form a quorum, and the committee to appoint its own officers, was carried *nem. con.*

At the voting for committee members, Messrs. Kirkwood Fraser, Robertson, Dodds, and Cobden obtained the majority of votes, and were declared duly elected,

The following alteration in the hitherto existing rules of the Club were then proposed and carried:—

Rule 7—That non resident naval and military officers and visitors be eligible as honorary members, free of subscription for one month, and for a further period on payment of a subscription of $1 per month, without entrance fee.

Rule 8—That the election of members and honorary members be by ballot of the committee, one black ball to exclude.

The committee was authorised to ascertain from the Lawn Tennis Club and the Football Club how far they are willing to contribute towards the expenses of maintaining the ground, which is used by them as well as by the Cricket Club. The committee to report the result of its interview to the members of the Cricket Club.

The committee was further authorised to return $5 per share to the original subscribers to the Club, in part repayment of the debt incurred by the Club to them for their outlay on the cricket ground, and to take into consideration what further return could be made with the same object.

After passing the usual vote of thanks, the meeting then dissolved.

Correspondence.

DR. FAULDS ON "DARWINISM."

To the Editor of the "Japan Weekly Mail."

Yokohama, 29th February, 1876.

Sir,—As one who was present at the Lecture of last Friday evening, and who felt that Dr. Faulds must have expended a great of his probably scanty leisure and much labor, in the preparation of it, I cannot allow it to be supposed that all his audience give their consent by silence to the remarks which appear in your last issue. It seems to me that for some reason of which I have no knowledge, an animus either against the lecturer or the lecture pervades the mind of the writer of your review, and I look upon it as very far from generous, when such self-denying efforts are made for the public behoof, that a public paper should reward the worker with what I think must be designated as scornful sneers. Surely it must have been evident that Dr. Faulds' composition was so much more than the mere culling from handbooks and encyclopædias, that it might have commanded at least a respectful regard from your reviewer. Even if the matter of the lecture were beyond the reading and the apprehension of the audience, this was no fault of the lecturer, and if his manner of putting that matter were not of the most lucid, that is surely an offence which can be passed without such grave reprehension.

It must not be forgotten, too, that owing to the shortness of the time available for delivery, Dr. Faulds was compelled to cut out much of the second portion of his lecture—a circumstance you do not take cognizance of—and without a knowledge of the lecture in its entirety, I do not see how a critic can fairly pronounce upon it.

But while I say that such remarks as appear in your paper are not generous, I submit further that they are not just. In the first place you say that Dr. Faulds was "called to give an address on Darwinism." I happen to know that he was not *called* to speak on that subject, but that he *selected* it for himself. However, let that pass; it is minor matter, and you are entitled again to the plea of *Puff*. But the next point is somewhat graver: you say he was called to "curse the common enemy." Now the title of the Lecture was "Some thoughts on Development and the Deity; or the "truth of God in Darwinism." For my part I went, after reading this title, with the idea that Dr. Faulds proposed to shew that the theory of "development" was not inconsistent with Revealed Truth, and that it did not militate against the idea of a creative Jehovah, and it seems to me inexcusable that the writer in your paper, should, with this title before him, say that the lecturer was expected to "expose Darwinism."

When your reviewer says of the audience, that they "must have come away in a state of the most hopeless confusion of mind"—that they "were cruelly disappointed,"—that they "had made up their minds on the subject without any investigation," that they were "almost horrified," &c., it is to be presumed that he had taken the pains to acquaint himself with the views of at least some considerable portion of those present:—otherwise such remarks are as unjustfiable as they are inappropriate.

Is it not possible that there is some confusion in the reviewer's own mind when he asserts that Europe has accepted

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the hypothesis of Darwin? Does he not mean that Europe has accepted the *discoveries* of Darwin?

In conclusion, I should not have troubled you with these remarks, were it not that, feeling as I do, that but little is done amongst us toward promoting scientific and the higher literary pursuits, I deem those who, like Dr. Faulds, exert themselves to supply this lack, worthy of our warmest acknowledgments, instead of an ungracious criticism.

I am, Sir,

Yours obediently,

A. J. WILKIN.

[Does the question of generosity exactly come in here? Our review of the lecture in question was the fair reflection of a serious disappointment. We can understand the position of Agassiz on the one side, who rejects Darwinism on scientific grounds; or, on the other, of those who accept it and think that it gives a finishing blow to the exploded argument from design—an argument we cannot be induced to abandon. But we failed to understand the lecturer's position, which, if we do not unintentionally misrepresent it, was that Darwin had rendered invaluable service to science, but that his doctrine of development was untrue and played into the hands of the evolutionists, whom Dr Faulds ridiculed without stint. Even, however, if it were true, it was not new; that its principles were to be found in the Mosaic cosmogony; that Lamarck had all but made good the same position; and that Darwin had concealed his obligations to Owen. As to any "thoughts on the Deity," beyond the theological bearing of the essay, we did not recognize any special thought in this direction. Perhaps we might have said a word or two more than we did on that part of Dr. Faulds' lecture which evinced his ability, and his *résumé* of the principles of Darwinism possibly deserved this. But we submit that this was not greatly our business. There are always profuse thanks and compliments from committees and the chair on these occasions. The reviewer has to deal with the matter under review, its teaching, style, decoration, &c. Let us see for a moment what comes of leaving these duties to partial hands. Our course—we avow it—is a little malicious, but human nature is weak. In a neat little record of the doings of the Young Men's Christian Association of Yokohama, with which Mr. Wilkin is prominently identified, put into our hands on the evening of Dr. Faulds' lecture, we find the following critique of a lecture on Socrates delivered under the auspices of the Society. "The lecture was a most *elaborate* one, *chaste in style* and full of interest, and was listened to by a large and appreciative audience." Now we were present at that lecture; we devoted a very considerable space in our columns to an analysis of it; and we challenge any man of moderate education and reading to deny that it was for the most part taken in blocks from Grote's chapter on Socrates, and that where the lecturer trusted to himself, far from exhibiting any 'chasteness' of style, his overloaded ornamentation was exactly like a tragedy-queen's stage dress by daylight. Never was such a mass of tawdry allusion and mock literary jewelry put together, as those who care to turn back to our critique may gather from the record made at the time. In other words the lecture was not 'elaborate' and was not 'chaste in style'—an odious epithet, by the way. The word 'large,' as applied to an audience or to anything, else, is relative; and the word 'appreciative' is equivocal. A very moderate sized room in the upper floor of the Temperance Hall was large enough for the audience; and one at least of the number—possibly many more—appreciated the lecture at about its true value, though this certainly was not the meaning which was intended to be conveyed in the Report. This is the kind of criticism which is to be found in the Reports of Societies, and we make bold to say that, in this case, it is, with much more of the matter with which it appears in company, wholly unworthy of an association of educated men. Either what is written is true, means to be true, and is written by those who are capable of estimating the value of words and applying them correctly to the subject matter treated, or it is not true and is not so written; and we say very unequivocally that these words are not true. The objects of the Society are beyond praise, but it will forfeit the respect of every sensible man if its second Report is not purged of the antiquated jargon and untruthful criticism which the most cursory reading of the first convinced us were among its leading features. All this, however, is by the way. As regards the anticipations of the audience as to the line Dr. Faulds was expected to take, we may be right or wrong, but all antecedent probabilities are in our favour. Mr. Wilkin says he went prepared to hear what of, or in, Darwinism was compatible with revealed truth, agreeably to the announcement previously made of the lecture. Did he hear this? We did not. The only attempt made in this direction was when Dr. Faulds pleaded that the Mosaic cosmogony was a tribute to the truth of Darwinism. Will not Mr. Wilkin forgive us everything in consideration of such enormous provocation? We would ask him in conclusion, to acquit us of any such feeling as *animus* against the lecturer. We had and have none: but even if we had, school-boy days remind us that a fight at starting often makes an admirable foundation for a permanent friendship, especially in cases where a little blood has been drawn on both sides. —Ed. *J. W. M.*]

Law Report.

OFFICIAL COURT OF ENQUIRY.

IN THE U. S. CONSULAR-GENERAL COURT.

Before Gen. T. B. Van Buren, Consul-General, and Messrs. J. G. Walsh and H. Allen, Jr., Assessors.

Tuesday, 29th Feb., 1876.

The enquiry into the circumstances under which the American ship *Surprise* became a wreck, which was adjourned on the 22nd instant, was resumed to-day.

Captain Fredrik Johnson, sworn: I was master of the *Surprise*. She belonged to New York, which place she left on the 25th September last, loaded with kerosine, hardware, coal, slates, and copper. We entered the harbour of Yokohama on the 3rd instant, about 7 o'clock p.m. I sent up lights for a pilot. About 8 o'clock a pilot boat came off. I asked the pilot how many years he had been a pilot at Yokohama, and he said 10 years. He further said he was a partner of Mr. Cook, and had his boat. I knew Mr. Cook, and thought that a man a partner with him must be a good pilot, and I engaged him. He then took charge of the ship, which was lying-to when he came on board. The wind was between N.N.W. and N. N. E. It blew very fresh during the night. Next morning we got as far as Mississippi Bay. There came on a very hard gale from N. We could not tack the ship with the canvass she had on. According to the pilot's opinion, it was going to blow very hard. I asked him if it was not the safest to anchor in Mississippi Bay. He said she might drag her anchors; the place was not safe at all. I did not want to force him. He told me Kaneda Bry was a safe place, and I answered, if that was the case, I had no objection to go there. Anchors were kept ready to let go. We commenced reducing sails, and braced the foreyard up ready to get round the Plymouth Rock, and into Kaneda. During all this time I was with the pilot. I just went down for a minute, and at that moment I found the bottom of the ship began to touch. We were going 8 to 9 knots an hour. I knew from the way in which the vessel struck she must

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

have a hole in her. The pilot gave orders to back the yards in order to back the ship off the rock. The wind was then between N. and N. E.; but in about two minutes I found 3 feet of water in the ship, and she was then lying on her beam ends, so that at other parts there must have been 6 feet. The ship was not backed for this reason, that if she had gone off the rock she would have sunk with all of us. I then gave orders to get the boats ready. The port side was then in the water. I found that the ship did not settle any more, that she was firmly settled fore and aft. I then said to the pilot. "The only thing I can do is to go for assistance. You stay by the ship with the officers." He promised to take care of the ship. I then entered my boat, and got a guide to show the way to Yokoska. I saw the officers of Yokoska Dockyard, and asked for a steamer to stay alongside the ship, and give me what assistance it could. They said they had no steamer, but would give me a small launch to go to Yokohama, and get assistance. I came here in the night, and went immediately to my consignee, Mr. Cruickshank, of Mourilyan, Heimann & Co. He went with me to Captain Scott, Lloyds' surveyor. We called that night on Lane, Crawford & Co., to ask for their steamer. But we could not have her, as she was not in Yokohama. We then saw Mr. Rickett, but his steamer was also engaged. We then went to Mr. Douglas, to get his compradore boat to return to the ship. About 2 a.m. we started in Mr. Douglas's boat,—Mr. Cruickshank, Capt. Scott, Mr. Douglas, and myself. On our arrival at the ship, Capt. Scott held a survey of her. He advised me immediately to send down rigging and masts from fear that the ship might list over. The captain of the Japanese training ship *Fusiyama*, lying at Uraga, gave me men for assistance. My own crew was at that time ashore in Kuriyama. The men of the *Fusiyama* did all the work on board during the 5th and 6th of February. I got all the yards sent down, and then Mr. Cruickshank and myself went on shore to get lighters to save the cargo, but could get none. We then went to Yokohama to see the Japanese Governor, and an interpreter was sent down to assist us. He arranged for men to go out to save cargo. On the 7th came on a very heavy gale from the South, and a very heavy sea, so that no lighter could come. During the night the wind increased, and rolled the ship off the rock; she drifted and stranded again on the sand, lying on her beam ends. As soon as the wind moderated, we got out with anchors, and hawsers from the Japanese man-of-war, to secure her where she lay. We also sent off coolies and lighters, as many as could work on the ship. The hatches were all under water, and we had to cut through the side of the ship to get at the cargo. From then and until the day of auction, the 26th, we worked at the ship's cargo with all possible speed. We got out a little more than half. The whole was sold at auction, as was also the wreck. This is the third time I have been in this port. The rock on which the ship struck is not laid down on my chart. The way we had the wind, the ship could have been kept clear of the rock. I have never seen the pilot before. I did not notice anything peculiar about the pilot. He was sober when he came on board and on board he could not get anything to drink. He handled the ship remarkably well. When he first came on board. I remonstrated with him for handling the sails too quickly, as he did not know the ship. I had no occasion to caution him against coming too near to the rocks, as I had no idea about a rock being there. I had no conversation with the pilot about the state of the market. He brought me no newspapers, nor any letters or message of any description. I do not know how much the ship was insured for. The rock is not on the English Admiralty chart of 1869. If the ship had gone a little further inside, it would have gone clear of the rock. The pilot's name is Shields. It is a great trouble in this port that the pilots have no certificates. It is in my instructions wherever a pilot can be had, to take one for the safety of the ship.

The Court here adjourned until 2 p.m.

The Court reassembled at 2 o'clock.

Captain Johnson:—When I returned from Yokohama, I found the officers and crew of the *Fusiyama* on board. I did not take my papers with me, when I left the ship. I left them in my cabin in a tin-box. When I returned, I did not find them. The cabin was half full of water. I found the tin-box, but the papers were missing. I have tried to find them, but I have not found them, nor heard of them. For the moment when I left the ship I only thought of the safety of the ship. I left my own things behind. [The captain produced his chart and remarked that he had made a mistake when he said that it was from he year 1869; it is only corrected up to the year 1867. He pointed out the place of the sunken rock on which his ship stranded; it is about 1½ mile from Plymouth Rock, which is 5 feet above high water.]

Rudolph Erickson: I was chief officer on board the *Surprise*. I have heard the testimony of the captain. The said testimony is correct and I have got nothing to add to it. In order to go into Kaneda Bay it was not necessary to go so near Plymouth Rock. I think the pilot was nearsighted. We took a pilot below Sagami light just about 8 p.m. We made 35 tacks from the time we took the pilot until 9 o'clock the next morning when we returned. The wind was about N.N.E. when we put about; it blew very strong. The breakers were ahead of us. My opinion is that we should have beaten up, or, if that was not possible, gone to anchor where we were. We had a good crew on board, they were on deck the whole night. I myself had no sleep for 48 hours. I have heard that in coming back the captain told the pilot not to go too close.

Captain Johnson, re-called: It was the pilot's idea to go back; I had to carry sail in order to work the ship. I consulted my chart the whole way.

The *Consul General* here remarked that he had wanted the presence of the pilot Shields, but had been informed that he was away from town. He would adjourn the enquiry until the pilot could be present, and would give the assessors due notice.

ON BOARD A TRAINING SHIP.

(Pall Mall Gazette.)

The aggregate number of boys now being brought up to a sea life in our school-ships, training-ships, and reformatories is about 6,000. Of twenty-three ships, ten—now that the *Goliath* and *Warspite* are destroyed—are devoted to the reception of poor but not criminal boys, and contain about 2,300 inmates. With one exception they have all been established within the last twelve years. Four are supported entirely by voluntary contributions; seven are under the Industrial Schools Act; and one—the *Goliath*—was filled from the wards of workhouses.

In this class of ships the internal arrangements and daily routine are nearly alike. Although they never quit their moorings they are furnished with three masts and all the principal spars and ropes, so that their inmates may become familiar with the more important parts of a ship's rigging. The upper deck serves as a play and drill ground, being open to the sky except at the fore end, where the washhouse, the kitchen, and other offices are situated. The main deck is the principal part of the ship, where the boys have their meals and lessons, and where most of their time is passed. The lower deck is the dormitory, and the hold contains water-tanks, fuel, and ballast. The captain-superintendent has a staff of seamen instructors who, like himself, have all seen service afloat. There is also the schoolmaster and his assistant, the carpenter, and the cook. All the boys are numbered, even numbers belonging to the port, odd numbers to the starboard watch; so that a boy's number fixes his place in the ship and his station on all occasions so long as he remains on board.

Descending to the lower deck a little before 6 A.M., we see by the flicker of a lamp, which burns here all night, four rows of hammocks slung athwartships. They are very close together, and in each is a sleeper wrapped in his red blanket, his clothes being hung over the hammock lashing at his feet. Presently we hear "four bells," for time afloat is marked by striking the ship's bell every half-hour, one stroke being added for each half-hour elapsed since four, eight, or twelve o'clock. At the sound every boy tumbles out, rolls his hammock and blanket into a neat bundle, and marches off to the upper deck to stow it in the "nettings"—a receptacle in the bulwarks. There is a busy scene in the washhouse, and if it be washing-day, the time is half an hour earlier and the scene still busier, each boy washing his own clothes and bedding in the long troughs. His simple toilet is quickly made, and he sets about his work at once. All ports are opened, the boats lowered from the davits, and the cooks are busy in the "galley." The lower deck is swept, and, being clear from end to end, a current of air circulates freely and keeps it dry and wholesome. The signal for meals is a bugle-call, at the sound of which the empty main deck becomes suddenly furnished with tables and forms that were before invisible, they being stowed between the beams overhead and along the sides. Each table accommodates fourteen or sixteen boys, one of whom is rated petty officer and is responsible for good order at his mess. Breakfast consists of a bowl of oatmeal porridge or cocoa and a biscuit. Fresh or salt meat is given for dinner every day—sometimes

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

with potatoes or "duff," sometimes in stew or soup; and tea consists of tea and biscuit, bread being occasionally substituted.

At 8 A.M. the band plays the National Anthem, topgallant masts and yards are sent aloft, and the ship is up for the day. The ship's company next prepare for "divisions," a full muster at which every boy is inspected. Then comes morning prayer, with a brief passage of Scripture and a hymn. At nine o'clock one side of the main deck becomes a long schoolroom, a canvas screen being stretched amidships. The port and starboard watches go into school on alternate days, the watch not in school being told off for the service of the ship. Some of the boys work under the carpenter, and do all the repairs and painting required by the ship and her boats. Some are tailors and some are cooks, each being appointed to the work for which he has most aptitude. The boats find plenty to do in keeping up communication with the pier and bringing provisions and water. At the same time instruction in knotting, splicing, and rowing goes on, also exercise aloft, and sail drill, when the weather is suitable, every boy being obliged to acquire some proficiency in these. In school the principal lessons are in reading and writing. Half-past twelve is the dinner hour, and recommences at half-past one. During the afternoon the bandmaster arrives to train his band, which is composed of boys who are found to possess some musical capacity. School being over at four o'clock, the band plays on deck, and its music is of no small value in breaking the monotony of ship life. Until six the crew is occupied in bringing up water and fuel for next day's requirements, in exercise aloft, and sending down topgallant masts and yards. Then comes tea; and three evenings a week are devoted to singing, two to learning the compass and the rule of the road at sea, and one is "play-night." At eight-bells the deck is cleared and the boats hauled up. Afterwards the crew musters for evening prayers, and by 9 P. M. all are in their hammocks except the anchor watch—a petty officer and four boys—who patrol decks during the night, being relieved every two hours.

On Saturdays clothes are mended and decks scrubbed, and the drill on this day is "man overboard" and "fire quarters." Sunday is a day of rest, but not of idleness. The inspection at "divi-"sions" is unusually strict, for the ship and everybody belonging to her must appear in their best trim. Church service is conducted on the main deck, morning and evening, and "all hands" join in the anthems and hymns. The afternoon is devoted to a Scripture lesson and to reading. Among the books and periodicals provided, those containing pictures are the favourites; for the taste of the majority is not literary, and the evening is shortened by "turning in" early.

This daily and weekly routine continues throughout the year, and is only varied with a holiday when some kind people offer a day's excursion or a visit to a place of amusement. Most of the ships have a floating bath moored near them, in which the boys learn to swim. At Christmas the main deck is decorated with evergreens and cut paper, and the messes club their pence and vie with each other in ornate devices. Visitors are specially welcome at this time. A respectful bearing is of the one things inculcated on board, but the gentle manners of many of these poor boys—often observable in cases where it might be least expected—must be innate. A strong inducement to good behaviour is the hope of promotion to the rating of petty officer. Some substantial prizes are also given for good conduct, but firmness is found to be quite as necessary as kindness for the maintenance of discipline. The penance for transgressions varies from a few journeys up and down the rigging to bread-and-water diet and confinement, but only the gravest offences are punished with flogging as a last resort. A frolicsome humour is the most frequent cause of trouble, insubordination is almost unknown, and the few desertions occur chiefly among fresh arrivals who have not settled down to their new life. The average of health in these ships, we are informed, is exceptionally good, and "sick bay" is often untenanted. Some of the oldest established, it is stated, have never been invaded by any epidemic. Cleanliness and sufficient food and clothing may account for this; but plenty of exercise and constant occupation have probably a great deal to do with it.

On certain mornings a group of new-comers may be seen standing near the gangway. They are unlike the boys in the ship, and they are unlike each other. One, perhaps, is received from another institution, and is neat and clean. A second comes dirty and tattered from some miserable home, or from no home at all; while the hands of some poor mother or sister have made a third as presentable as penury will allow for his first appearance among strangers. The new boy is first treated with soap and water, and put into the ship's uniform. He receives the rest of his kit and his mess traps, and a senior boy is put in charge of him till he has learned the ways of the ship and can take his own part among his messmates. He soon finds his level among them; he becomes alert and confident, and he generally improves so much in size and looks that before six months are over his friends would scarcely know him. After two or three years in the training-ship he goes to sea. There is no difficulty in finding ships for such boys—indeed, the demand for them sometimes exceeds the supply. Some go as cabin-boys, under-stewards, or cooks, but the majority enter as ordinary seamen. Apprenticeship scarcely suits this class of lads, even when they are willing to be bound for a term. After a few voyages they find others, probably not older nor better sailors than themselves, earning good wages as seamen, while they are receiving little more than their food. Many become discontented with the poverty and apparent injustice of their lot and break their indentures. It is therefore better that they should commence on a lower level rather than be exposed at the outset to the risk of a false step, which is often the beginning of recklessness, and only the most steady and intelligent of them should be indentured.

In some of the ships there are boys evidently too young and weak for the life we have described. It is not only hard upon such children, but, experience having proved that they can be maintained for less in a house than in a ship, it is a waste of power to keep them three or four years at the same annual cost that would be required for boys thirteen or fourteen years old. Two years of training would be enough for such boys, and plenty of them would be forthcoming if better arrangements were made between the committees of the training-ships and those of the orphanages, refuges, and workhouses, and also the school-boards, not only of the seaports where they are stationed, but of inland towns. This plan has been put in practice to some extent, and has succeeded so well with many of the ships that it might advantageously be pushed further by them all. The *Goliath* and the *Warspite* will doubtless be replaced, but until the existing training-ships are filled, and that with the right material, Government can scarcely be urged fairly to add to their number on the plea of increasing our supply of seamen.

THE DUKE D'AUMALE.

(Spectator.)

It is becoming important to Frenchmen to understand the character of the Duc d'Aumale, for unless a great many symptoms, all leading to the same conclusion, are all misread, he will soon be the most prominent aspirant for the Presidency. It has long been said by French Conservatives that if the Republic or the Interregnum is to continue, the best alternative for Marshal MacMahon, as Chief of the State, would be the Duc d'Aumale, and now his friends are putting his name forward on all occasions, as if he were about to become the head of a new party, or as if they expected that a vacancy would speedily arrive. He himself has declined to be a candidate either for the Chamber or the Senate, and as he is not without ambition, that must mean that he has higher pretensions yet. The account of his position in France given on Wednesday by a French correspondent of the *Times* is obviously intended to have a reflex effect in France itself, and may, we presume, be safely accepted as condensing the opinions of those who desire to accept him as their chief. The language used is that of a manifesto by responsible French politicians, rather than of a newspaper correspondent, however well informed. The writer assures us that the Republic can be safe only in the hands of a Prince who will "repress and temper" the "exigencies and excesses" of Democracy; who would establish a system allowing of steady progress, "untroubled by social struggles and Utopian aspirations"; who "would not allow good manners and elegance to be treated as unpatriotic crimes," and who "would never terrify capital, disturb confidence, banish elegance, or arrest the prosperity of the country." This "son of a King presiding over a Republic without any idea of violating or strangling it, bringing to the task acknowledged capacity and knowledge, giving that unity of view without which there is no real Government: extricating France from everlasting and paltry minor competitions, making it resume its place in the political sphere,—this personality, around whom may prevail calm, but not indifference, certainly appears capable of founding after Marshal MacMahon a prosperous Government which will terrify nobody." The writer declares that the Duke has already a party behind him of men who are "rich and influential, honoured, honest, and generally of an age which opposes the follies of passion." He is a favourite alike of the nobility and the middle-classes, and "the Army ranges itself with pride behind one of its own members, the issue of the blood-royal." The writer even hints that the Duke

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

has obtained the adhesion of the entire Orleanist party, who consider the Comte de Chambord impossible, and fear that the Comte de Paris has imbibed the principles of Legitimacy. "The Comte de Paris said one day in my presence that he wished by the step he took to hand back to France the precious principle of legitimate hereditary Monarchy."

There is an odd mixture in this declaration of two sets of feelings,—the desire to see the Government modern in its ideas and aspirations, and even form, for the writer accepts the Republic, since Republic there must be; and the desire to be ruled by a man "of the blood-royal of France," a man who will not allow the lees to come to the top, who will not proscribe elegance—that idea is repeated twice—and who will have a position in Europe other than that which of necessity belongs to a President of the French Republic, and the mixture which would seem natural enough in England may not be equally acceptable in France. The *Times'* Correspondent, who speaks so kindly of the rich, and the elegant, and the bourgeoisie, and the army, never once mentions the People, who have some interest in his proposal and some voice in deciding whether it shall be accepted or not. The days are passed, if they ever existed, when any class of civilians could call a Pretender to power in France, and the Army, which might do it, is not yet proved to be devoted to the Duke d'Aumale. That error, however, may be due to the deficiencies of an individual; and if it is, if the letter does not conceal a desire for the establishment of a *regime* in which the people are to be nothing and the respectables everthing, we see no reason, the condition of the Duke's honesty being granted, to regret the action of his friends, even if they include all the Orleanists and Moderate Republicans of France. It is a very good thing that, in the event of any sudden vacancy in the Presidential chair, they should have a name to produce which all Frenchmen will have heard before, and which will convey to their minds some definite ideas. The writer speaks, of course, with the decorum of his school, only of the vacancy which must arise in 1880; but he does not mentally forget that the Marshal President is mortal, or that he may be sick, or that he may not choose either to work with a Republican Assembly, or to incur the execration which would follow an attempt to strike a *coup d'etat* either in his own name or in that of the Prince Imperial. Many contingencies might arise in which it would be necessary to name a President at once, and in which neither M. Gambetta, nor M. Grevy, nor any now unknown personage then leading in the Assembly would be convenient; and to be prepared with the Duke d'Aumale is one condition, as before, being granted a gain in practical power. If the situation were such that France could not be consulted freely and with time to make up her mind, we should, on the whole, the condition being granted again, prefer the Duke d'Aumale, man for man, to Marshal MacMahon as President. He would be at least as Conservative in the best sense of the word, while he might be more Constitutional, and certainly would be less repressive. He is less favourable to the Clerical party, he has received a much wider education, both from books and circumstances, and he has had the advantage—enjoyed, however, also by Louis Philippe and Napoleon—of residing many years in England, He attracted much admiration by his management of the Bazaine trial, he has governed his command, it is said, creditably, and whether he has capacity for administration or not—a point on which there is as yet little evidence—he would have the assistance of some of the ablest men in France, the "Reasonable Republicans," as they desire to call themselves. His rank, though no guarantee of his merit, is a guarantee against some conceivable offences in a President, and his European position, though it would not make France great, would save him from some jealousies and fears not unlikely to ruffle Continental politics. Republican propagandism could scarcely be his *rôle*. Nor is his otherwise premature candidature without compensating advantages. It is one of the difficulties of all true Conservatism in France that Marshal MacMahon should always be able to say, "You must tolerate me, for lacking me you have no guarantee for Conservatism;" while the Marshal himself might prefer such a successor to the indefinite guiltiness that might be involved in a *coup d'etat*, whether successful or the reverse.

But there is the old "condition," which all who esteem Republican institutions have to take for granted when they name the Duke d'Aumale for the Presidential chair,—would the Duke be honest in accepting the Presidency?—that is to say, would he use his power to make the Republic strong, or would he use it to found a throne? The French Presidency differs from the American Presidency at any time, and just now it is exposed to one extraordinary temptation. The French President has more power than most Monarchs, he has an immense army, a numerous bureaucracy at his orders, and he has among the people large classes who would rather prefer that he should use his resources to establish a throne. Moreover, in 1880 he will be the head of a nation fully re-established in material strength, and eager to wipe out a discreditable, or at all events, a very humiliating period in her history. The next President may be in a situation to recover Alsace and Lorraine, whether by war or diplomacy, and to the President who recovered them France would refuse nothing. Is the Duke d'Aumale likely to resist that temptation, and to refrain from using the popularity gained by victory to re-establish the Bourbons on the throne of France? His admirers reply that he has no interest in doing it, that he is not devoted to his nephew, whose visit to Frohsdorf he disapproved, and whose clerical leanings he distrusts; that he has no prejudice for Monarchy against Presidency, and that his very fault, if it be a fault, his personal ambition, will make him faithful to the Republic. He may wish the re-establishment of the Bourbons without intriguing for it. Those arguments are sound enough, and perhaps in any case the temptation to a Prince to elevate his family or himself to a throne is not so great as the temptation to another President, with genius and ambition, to declare himself a Cæsar; but there is another form of distrust which, if the Duke d'Aumale is in earnest, requires to be removed. There are those who believe that he has been misread, that he himself is as ambitious as any Pretender, and that if he saw his opportunity he would declare war with the intention, if he succeeded, of placing himself upon the throne as King and Cæsar too. He might not be restrained either by fidelity to the Republic or to the family, which almost throughout its history has suffered from the intrigues of some dangerous cadet branch. It is nonsense to reply to this, which is a political argument, by loud asseverations about the honour of the Duke. His duty is to do the best he can for France, and he may think that the best,—and it is his opinion, not his honour, which is in question. What Republicans would require from him before they would support his election is a distinct declaration that, in his judgment, the time has arrived for a Republic; and a distinct promise that while, if France desires it, he will not oppose a Monarchy, whether he be himself the monarch, or his nephew, he will not use the powers of the Presidency to transmute the Republic into a kingdom or an empire. It is this suspicion which it is necessary to remove before he can be supported heartily by Republicans, and it will not be removed by the mere assurances of friends whose opinions do not bind their leader in the least. What is the opinion of the Duc d'Aumale as to the permanent form of government for France? Is it to be a Monarchy, or a Republic, or a perfectly conceivable compromise,—a Republic in which some member of the "House of France" is always to have a preferential claim to the Presidential Chair?

PRESIDENT GRANT ON SPECIE PAYMENTS.

(The Economist.)

The United States seem destined to solve satisfactorily—though to them most expensively—a most important economical experiment. At certain stages of their history, very many nations have a natural craving for an economical paper currency. Rude colonies almost always have it. There is a great difficulty in procuring the precious metals which constitute the money of the world, and there is, therefore, a natural wish to find a sort of money which is independent of, and can be substituted for them. In later times—after a panic or during a war—all countries are liable to similar desires; the old medium of interchange is very difficult to obtain, and in consequence an eager longing arises for a new one. Mere reasoning is scarcely sufficient—especially, perhaps, with persons of English descent, who are naturally impatient of reasoning—to overcome this imperious wish; something more than argument is wanted—and America has given us that something more. She has tried the experiment on the greatest scale on which it is ever likely to be tried, and has found that it does not answer. Slowly and painfully she is abandoning it, and is returning to gold and silver—the old currency of the old world. And other nations, especially all other colonies of England which are like the United States in nature though less in size and power, will be inclined to shun a path which she has had to leave.

We hardly realise in this country the efforts which America has made to return to specie payments. She has borne for years the evil of a rapidly appreciating currency. At the close of the civil war the premium on the gold was 50; it now is 14. And this is only another way of describing a great rise in the value of paper as compared with gold. This rise must have been a great burden on the producing classes,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

for it tends to produce low prices and a high interest, which must be injurious to those who must sell and usually borrow; and it is very creditable to the American people that it has borne the evil so patiently, though it has been aggravated by the effect of a panic. The rise has been in part effected by a contraction of the paper currency. At the end of the war the amount of greenbacks in circulation, excluding fractional currency and minor issues, was 83,000,000*l*; it now is 74,000,000*l*, being a reduction of 9,000,000*l*. But of itself this would have been much too small to produce such an effect; in reality it is only a minor cause in the matter. The principal cause is the vast increase of American transactions. In the last ten years the industry and commerce of America have augmented exceedingly; if their "money" had been gold and silver, no doubt it would have augumented proportionately, but as it is an inconvertible paper, it has not increased but has rather diminished; the value of it has so much risen because the work to be done—which causes a demand for it—has so much augmented. Probably if it had not been for what we may call a European accident, this growth of the country would, before now, have brought "greenbacks" up to par. They continued to rise till the autumn of 1871. But then, as we believe, the value of gold rose in consequence of the change in the German coinage and the great sudden demand for it. The Americans have continued to suffer the evil of a currency appreciating, as compared with gold; but it has not produced any effect on the gold premium because gold itself has been appreciating.

Last year Congress wisely determined to put an end to these fluctuations altogether, and fixed the 1st of January, 1879, as the time at which specie payments should be resumed. And since that time there has been much discussion, both in the press and among financial persons, as to the best mode of preparing for it. President Grant now proposes three measures:—

First, that the Secretary of the Treasury shall be authorised to contract the volume of inconvertible paper at the rate of 2.000,000 dols a month, by issuing long-dated bonds—which would be of no use as currency—in exchange for them. And this is clearly wise. What may be the changes in the value of gold, owing to European or cosmopolitan demand, is uncertain. The first duty of the American Government, in contemplation of specie payments, is to raise the value of the paper to the level of the coin. Care should, of course, be taken not to do this too rapidly, but, in principle, it is the only sound and expedient course.

Secondly, President Grant recommends that the Treasury be authorised to increase its store of gold. It already has 15,000,000*l*, which might seem nearly enough for almost anything. But that amount is not by any means, as a whole, applicable to the uses of the Government. Much of it is held in trust for the national banks, or may be demanded by the holders of coin certificates in return for what they have deposited. And it is necessary that the Government should have a large sum at its absolute disposal when specie payments are recommenced, which it can use in paying off such notes as may be asked for. That necessity will indeed be a permanent one, for the Government must at all times hereafter be ready to meet any demands on it, whether caused by an unfavourable exchange or otherwise. It will keep, as seems probable, the one great store of gold in the country, and it must have enough to satisfy those who come to it. At any rate, the holders of a vast number of promises to pay will, when they choose, be able to come to it.

But President Grant's last recommendation is much more open to dispute. He proposes that "greenbacks" should cease to be a legal tender, "say not later than the 1st of January, 1877," though specie payments are not to be resumed till two years later—till 1st of January, 1879. But this is contrary to all principle. A "greenback" is a promissory note of the United States, which it was not convenient to pay at once, and to obtain the currency of which, without such immediate payment, it was made "legal tender." The advantage of its being a compulsory tender, of being something with which any one could pay a debt, was substituted for the advantage of being payable at the option of the holder; it was not a complete equivalent, but it was a partial compensation.

But now the President proposes to take away the equivalent and to leave the evil. On a particular day greenbacks are to cease to be compulsory tender—that is to say, after that the holders will not be able to pass them away and will be compelled to keep them; but they will not be payable on demand for two years afterwards. Whoever, therefore, on the 1st of January, 1877, is a holder of greenbacks, will most probably suffer more or less loss, for the value of greenbacks will fall when they cease to be legal tender, and when no one is obliged to receive them. Scarcely any act of monetary tyranny can be more complete than first to give an unkept promise a fictitious value, and then to take from it that value without keeping the promise.

The President says that the effect of his measure would be good. "We should then have quotations at real values, not fictitious "ones. Gold would no longer be at a premium, but currency at a "discount. A healthy reaction would set in at once, and with it "a desire to make the currency equal to what it purports to be. "The merchants, manufacturers, and tradesmen of every calling "could do business on a fair margin of profit, the money to be "received having an unvarying value. Labourers and all others "who work for a stipulated pay or salary would receive more for "their income, because extra profits would no longer be charged "by the capitalist to compensate for the risk of a downward "fluctuation in the value of the currency."

But there is no difference between "gold being at a premium" "as compared with currency, and "currency being at a discount" "as compared with gold; the two are only names for the same thing, and the difference, call it which you like, will be augmented, not diminished, by the proposed change in the "greenback." The lower value will be made of less value than it was before, its particular advantage having been taken away from it. A "healthy reaction" will therefore *not* set in, for the deviation of the current paper from the standard metal will be greater than before, and the fluctuations will be quicker and worse—the greenback whose defects cause them being made even more faulty than before.

As the subject has been much discussed in America, and is beginning to be well understood there, we feel little doubt but that Congress will reject this third recommendation of President Grant, and will pass some Act embodying his two former ones, viz., an increased contraction of paper and an increased accumulation of gold, which are the necessary safeguards of a return to specie payments and the true preparations for it.

OPIUM CULTIVATION IN MANCHURIA.

(The Celestial Empire.)

Writing on the subject of the opium trade in the month of August, 1874, we drew attention to the enormous increase in the cultivation of the native drug which was observable in various part of the Chinese Empire. Szechuen seemed to be the chief producing province; the warmth and geniality of the climate, the richness of the soil—producing as many as three crops annually—and the infinitely greater profit accruing from the industry than from the raising of cereals, all combined to encourage the inhabitants in its pursuit. But the practice was not confined to Szechuen. The poppy, we said, was even then becoming a regular domestic crop in the North of China, where "acres upon acres, which until a "short time previously were clothed in the soft green of the "springing corn and rice plants, were now all aglow with millions "of purple flowers." The increase here noted has continued since we wrote, and the growth of the poppy has spread. We do not now propose to treat the question from a moral point of view: but it is undeniable that as a matter of political economy its importance is supreme. The facts to which testimony is borne by such travellers as Ney Elias and Dr. Legge, and which are supported in nearly every particular by the recently published Consular and Customs' reports, dealing principally with the parts of China bordering on Manchuria, are we take it, such as cannot fail before long to have a very serious influence upon our Indian trade, and the aspect of affairs generally is such as to invite investigation. A few remarks will suffice to bear out what we say.

The portion of the Empire where, we believe, the influence upon foreign trade of the native growth of opium will be the soonest felt, is Manchuria; in which neighbourhood the cultivation of the poppy is spreading with a rapidity that is simply marvellous. Every farmer, every cottager, however poor, now grows his little plot of opium, which yields him treble the return which cereals have hitherto produced. The soil, not being so rich as that in the southern provinces of China, may not give him three crops a year; but two may generally be counted upon, and the income of the farmer is thereby increased eight, nine, and even ten-fold. The labour involved is light, and not in any way unpleasant; and the only drawback, as far as we can discover, to the new culture, seems to be a tendency on the part of the poppy-plant to impoverish the soil. This, however, may be obviated to a great extent by occasionally sowing an intermediate crop of millet or some other cereal, the roots of which, decaying in the earth, enrich it and provide a stratum of good manure for the succeeding crop of poppies. And whatever the Government of China may think or may have thought about the question of the opium-trade

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

and the consumption of the drug by its lieges generally, we have reason to believe that it is fully alive to the fact that the habit has already taken root too deeply to be incontinently put a stop to. Therefore we find Li Hungchang, as Governor of Chihli, giving every encouragement to the cultivation of the native plant, and aiding its production to the utmost of his power. Only last year, the poppy-fields of Manchuria yielded no less than four thousand piculs of opium, and had not the weather been unpropitious the harvest would have been the fate of the foreign opium trade between Newchwang and India? Or rather, what is perhaps a still more practical question, what are the future prospects of that trade? The native drug will soon be almost, if not quite, equal to Malwa. Hitherto this branch of agriculture has been in its infancy, and the drug has been clumsily prepared for consumption. Leaves and other unsuitable elements of adulteration have been boiled down in it, and the result, as far as flavour and effect are concerned, has been a failure. But the native growers are getting wiser in their generation, and are taking other and more suitable leaves out of the book of their Indian colleagues. They are now acquiring the art of adding a judicious admixture of sugar, cardamums and other ingredients of similarly agreeable taste, which impart the favourite smack to the Indian drug: and, as the cultivation becomes more and more extended, and more generally recognised as a branch of industry in the country, the greater care that will be taken in its doctoring, and the greater skill acquired in its growth will combine to produce a very serious and radical change in the prospects of the Indian trade.

Now all this is not mere theory. At present of course the injury to foreign commerce is a mere flea bite. But we have to look to the future; and when we see the native produce, even now, surely though slowly elbowing the imported drug out of the market - supplanting it in the estimation of the common people, creating a demand which at the same time it supplies in all abundance, offering a cheaper luxury than has hitherto been obtainable, opening up a new and eminently lucrative field of labour to the husbandman, and, above all, encouraged by the Provincial Government, does it require the gift of prophetic sight to foretel the inevitable result in the course of ten or fifteen years? There is not the slightest reason why China should not grow for herself all the opium that she can possibly consume. Her acreage is broad enough; her soil is rich enough; her peasantry are eager, to all appearance, to cultivate it for themselves. If, then, in these ten or fifteen years we lose a portion of our trade with China which has hitherto been worth six millions sterling a year to England, and gone so far towards increasing the stake we at present hold in China, what is likely to be the natural result? With an interest amounting to upwards of 80 per cent of China's entire foreign trade, we probably have more influence to-day than we should have were we to lose so large a slice as that which seems to be threatening to slip away from us. China has everything to gain by making the change that now impends—we have everything to lose. Of course the resources of India could be developed in other directions; and, though this would doubtless be a work of time, we imagine that the revolution will prove sooner or later inevitable. As far as the Government of China, and its action in the matter, are concerned, we simply see another proof of the continuous but unceasing efforts it is making to shake off the influence of foreigners generally and the English in particular; and it could hardly have selected a more practical method of doing so than by encouraging the Chinese people to grow for themselves an article of consumption, the trade in which has been so lucrative to the British nation and which has formed, so to speak, the most galling link in the chain of intercourse they seem so anxious to break in twain.

ACROSTICS.

Answer to the Double Acrostic from the *Celestial Empire*, in the *Japan Weekly Mail* of the 26th instant.

THE WORDS.

Killigrew.
Whitehall.

No. 1. K e W.
„ 2. I nc H.
„ 3. L ipar I.
„ 4. L igh T.
„ 5. I sl E.
„ 6. G at H.
„ 7. R ac A.
„ 8. E vi L.
„ 9. W il L.

(This answer has reached us from several different quarters.)

In the following Solution the answer has been ingeniously thrown into verse.

THE WORDS.

When *Killigrew* amused the thoughtless crowd,
And Charles from vice to folly tossed the ball,
Surely the very walls might cry aloud,
Remembering the other Charles, *Whitehall*.

No. 1.—*Kew* borrows beauty from all climes,
„ 2. And *inch* on inch uprise the Alps in height:
„ 3.—*Lipari* isles upon the blue sea shine:
„ 4.—Our prayer, like that of Ajax, is for *light*:
„ 5.—Our own dear *isle* "set in the silver sea:"
„ 6.—But for Goliath, *Gath* forgot would be:
„ 7. *Race* forbidden by him whose laws are right,:
„ 8. *Evil* is plain, its source is hid in night.
„ 9.—And who shall make a *will* o'er which men cannot fight?

ANOTHER OWL.

Shipping Intelligence.

ARRIVALS.

Feb. 27, *Rurie*, Russian barque, Bergeland, 530, from Newcastle N.S.W., Jan 7, Coal, to Order.

March 2, *Great Republic*, American steamer, Cobb, from San Francisco, Feb. 1, Mails and General, to P. M. S. S. Co.

March 2 *Hoshima Maru*, Japanese steamer, Furber, 1 870, from Shanghai and ports, Feb 24, Mails and General, to M. B. Co.

March 2, *Ulrick*, British barque, Rennie, 780, from London, Oct. 6, 1875, General, to Kniffler & Co.

March 2 *Stadt Amsterdam*, Dutch steamer, Boon, 1,720, from Liverpool via Shanghai, Dec. 25, General, to Jardie, Matheson & Co.,

Mar. 3 *Pelham*, British brig., Bifron, 254, from Takao, Feb. 1, Sugar, to L. Kniffler & Co.

DEPARTURES.

Feb. 26, *Orissa*, British steamer, 1,647, for Shanghai and ports General, despatched by P. & O. Co.

Feb. 26, *Tokio Maru*, Japanese steamer, Dunn, 2,119, for Shanghai and ports, Mails and General, despatched by M. B. Co.

Feb. 28, *Chitose Maru*, Japanese steamer, Dubois, 429, for Hakodate, General, despatched by M. B. Co.

Feb. 28, *Pallas*, German barque, Luders, 493, for Chefoo, Ballast, despatched by Captain.

Feb. 29, *Courier*, American barque, Killman, 495, for Kobe, Kerosene, despatched by Captain.

Feb. 29, *Menzaleh*, French steamer, Pasqualini, 1,008, for Hongkong, Mails and General, despatch by M. M. Co.

Feb. 29, *Mary Blair*, British barque, Riddle 328, for Australia,- Rice. Wilkin and Robison.

March 3, *August*, British 3-masted schooner, Thomson, 230, for Chefoo, Ballast, despatched by F. Knoblauch.

Mar. 3, *Great Republic*, American steamer, Cobb, for Hongkong, Mails and General, despatched by P. M. S. S Co.

Mar. 3, *Nevada*, American steamer, Williams, 2,145, for Shanghai and ports, Mails and General, despatched by Mitsu Bishi Co.

Mar. 4, *Western Chief*, British ship, Hill, 750, for Kobe, General, despatched by Wilkin and Robison.

PASSENGERS.

Per Steamship *Orissa* for Shanghai and ports.—Mrs. Aldrich and 2 children, Miss Plumb, and 5 Japanese in the cabin, 223 in the steerage.

Per Steamship *Tokio Maru* for Shanghai and ports.—For Kobe: Messrs Ozaki, Emura, Emura Jr., Ekowa, Shigesa, Toryo, Takishita, Uyebashi, Nakayama, Tamura E. C. Kirby, Rappazell, Ullman, W. H. Doyle, Yoshida Nakagane, Ishiwara, Shiriki, Shimadzu, Chusa, Shibuza, Ishimoro, Hashigawa, Takuwara, Tochiwara, Kohary, You

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics and Yarns.—The demand for 16/24 Twist continues, and dealers are paying better prices; 28/32 is in small enquiry and 38/42 neglected. In *Shirtings* only a limited business has been done at about previous rates. *T. Cloth*, 7 lbs. is moving in small lots; 6 lbs. unsaleable. *Velvets* are in moderate enquiry. In *Drills* nothing is doing, and for *Taffachelass* there is no enquiry.

Foreign exchanges have not further declined, but the tendency is towards lower rates. It must be observed, that though Yarns show some improvement, this is by no means sufficient to compensate for the heavy drop of exchange during the past few weeks.

Grey Shirtings:—				White Shirtings:—			
7 lbs.	38½ yds. 39 in. per pce.	$1.90	to $2.20	60 to 64 reed 40 yds. 35 in. nom. per pce.	2.10	to	2.30
8 lbs.	38½ yds. 44 in. „	2.20	to 2.50	Turkey Reds 24 yds. 30 in. 2¼—3 lb. per lb	0.75	to	1.02½
8 lbs. 4 to 8 lbs.	38½ „ 39 in. „	2.20	to 2.50	Black Velvets	8.50	to	9.25
9 lbs.	38½ „ 44 in. „	2.50	to 2.90	English Drills 15 lb. 40 yds, 30 in.	3.30	to	3.45
				Taffachelass 12 yds, 43 in.	nom. 2.00		

Yarns.—

No. 16 to 24 ...per picul	$30 75	to	34 25	No. 38 to 42 ...per picul	$41.00	to	45.00
No. 28 to 32 ...per picul	$33 50	to	39.55	Reverse Twist 16-24 „	$33.00 nom.		

Woollens.—Owing to the trifling advance asked by importers to cover the continuing loss on remittances, business has apparently come to an utter standstill which is shared by *Mousselines de Laine*. Enquiry for good military cloth on the part of the War Department has resulted in some extensive transactions, which, however, have been passed at very low rates.

Plain Orleans 40—42 yds. 32 in.	6 50	to	8.00	Figured Mousseline de Laine...30 yds. 30 in.	0.25	to	0.28
Figured Orleans 29—30 yds. 31 in.	4 75	to	5.25	Multicolored „ ...30 yds. 30 in.	0.35	to	0.40
Chimagoro 30 yds. 30 in.	5.25	to	5.75	Cloth, all wool plain or fancy..48 in. to 52 in.	0.80	to	1.20
Italian Cloth —30 yds. 32 in.	0 25	to	0.33	Presidents ...54 in. to 56 in.	0.60	to	0.70
Camlet Cords 29—30 yds. 32 in.	6.25	to	7 25	Pilots ...54 in. to 56 in.	0.40	to	0.45
Camlets Assted. 56—58 yds. 31 in.	18 50	to	19.00	Union ...54 in. to 56 in.	0.40	to	0.65
Lastings, Japan... 22—30 yds. 32 in.	13.00	to	14 50	Blankets, scarlet & green 7 to 8 lbs.....per lb	0.40	to	0.41
Plain Mousseline de Laine —30 yds. 30 in.	0.19	to	0.20				

Sugar.—Since the 26th ulto. the market has been firm for *Formosa* sugar, but it closes easier at $3.60 to $3.70 for bags. One vessel has arrived bringing stocks up to about 11,000 piculs.

China kinds are unchanged.

Kerosene Oil.—Sales are trifling, the stocks being held firmly for higher rates.

Sugar:—Formosa in bag ...per picul	3.60	to	3.70	China No. 5 Kong-fun ...per picul	4.10	to	4.60
in Basket „	3.40	to	3 50	„ No. 6 E-pak „	3 60	to	3 90
China No. 1 Ping fah „	7 20	to	7 30	Swatow „	2.40	to	2.60
„ No. 2 Ching-pak „	6.40	to	6 80	Daitong „	2 80	to	3.00
„ No. 3 Ke-pak „	5 70	to	6 20	Japan Rice „			
„ No. 4 Kook-fah... „	5.00	to	5 50	Kerosine Oil ...per case	2.70		

EXPORTS.

Silk.—Since the 23rd ultimo, arrivals are 146 bales, and deliveries about 400 piculs. Sellers endeavour to get the benefit of the decline in foreign exchange and prices especially for Hanks are firmly maintained at previous quotations.

Steam filature	None		Common No. 3	$390	to 410
Other do. (Kiku)			Inferior No. 4 & 5		
1st order, nom			Oshius—Best	$500	to 520
2nd do.	$480	to 640	„ Good to Medium	$470	to 490
3rd and 4th do,			Hamatski, 1 to 2	$450	to 460
Hanks—			„ 3 to 4	$420	to 440
Best No. 1 to 2	$460	to 475	Kaheda, Best	$550	to 570
Goods No. 2	$440	to 450	„ Good	$500	to 540
Medium No. 3½	$420	to 435			

Tea.—Settlements during the past week of fully 1,000 piculs have to be noted, arrivals from the interior having just about kept pace with the demand.

Prices appear to be somewhat easier, owing no doubt to a continuance of discouraging telegrams from New York.

The last steamer took:

For New York	75,715 lbs.
„ San Francisco	65,646 „
„ Chicago and other Ports	52,845 „
Total	194,106 lbs.

Common	$14.00	to 18 00	Fine	Nominal.	
Good Common	19.00	to 22 00	Finest	„	
Medium	24 00	to 26.00	Choice	„	
Good Medium	28.00	to 30 00			

EXCHANGE AND BULLION.

Exchange.—There has been again a steady decline in sterling rates with very little business doing. *Gold Yen* touched 7¾ per cent premium, but are slightly lower again.

Rates close as follows:—

London, Bank—at sight		3s. 8½d.	San Francisco, Bank—at sight		92½
Do.	6 m/s	3s. 9½d.	Private	3 d/s	94½

MISCELLANEOUS.

CAUTION.

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore, persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)

"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

BASS & Co.,
London, and Burton-on-Trent.

REFERRING TO THE ABOVE.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.
May 17th, 1873. 6m.

CONSUMPTION,

INDIGESTION AND WASTING DISEASES
The most approved REMEDIES are
PANCREATIC EMULSION & PANCREATINE.
The Original and Genuine prepared only by SAVORY & MOORE, 143, New Bond-street, London.
Sold by them, and all Chemists and Storekeepers throughout the World.

June 5, 1875. 1f. 26ins.

MISCELLANEOUS.

FRAUD.

On the 27th June, 1866, MOTEEWALLAH, a Printer, was convicted at the Supreme Court, Calcutta, of counterfeiting the

LABELS

Of Messrs. Crosse & Blackwell,

London, and was sentenced by Mr. Justice Phear to

TWO YEARS RIGOROUS IMPRISONMENT:

And on the 30th of the same month, for

SELLING SPURIOUS ARTICLES

bearing Labels in imitation of Messrs. CROSSE & BLACKWELL'S SHAIK BACHOO was sentenced, by the Suburban Magistrate at Sealdah, to

TWO YEARS RIGOROUS IMPRISONMENT.

CAUTION.—Any one *selling spurious oilmen's stores*, under Crosse & Blackwell's name, will be liable to the same punishment, and will be vigorously prosecuted. Purchasers are recommended to examine all goods carefully upon taking delivery of them, and to destroy all bottles and jars when emptied. The GENUINE Manufactures, the corks of which are all branded with Crosse & Blackwell's name, may be had from EVERY RESPECTABLE DEALER in India.

June 12, 1875. f. 12ms.

JOSEPH GILLOTT'S
CELEBRATED
STEEL PENS.

Sold by all Dealers throughout the World.

January 1, 1876. 52ins.

THE FOLLOWING

IS AN

EXTRACT FROM A LETTER

dated 15th May, 1872, from an old inhabitant of Horningsham, near Warminster, Wilts:—

"I must also beg to say that your Pills are an excellent medicine for me, and I certainly do enjoy good health, sound sleep and a good appetite; this is owing to taking your Pills. I am 78 years old.

"Remaining, Gentlemen, yours very respectfully,
To the Proprietors of L. S.

NORTON'S CAMOMILE PILLS, London.

THE BEST INVESTMENT OF THE DAY FOR A SMALL OUTLAY.

And where there is no previous knowledge of the business required, is a Lemonade, Ginger Beer, and Soda Water Machine, as the public taste is so much on the increase for Aerated Drinks. The book of 90 pages of illustrations and information forwarded free.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 11.] YOKOHAMA, SATURDAY, MARCH, 11, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTHS.

At 36, Arundel Gardens, Notting Hill, London, on the 3rd January, the wife of JOHN HUDSON, Esq., of a son.

On the 8th of March, at No. 54, Mrs. C. ILLIES, of a son.

MARRIAGE.

At Yokohama, March 4th, JOHN CAREY HALL, Esq., of H. B. M.'s Consular Service, to AGNES, daughter of CHARLES WYCLIFFE GOODWIN, Esq., Assistant Judge in H. B. M.'s Supreme Court.

Notes of the Week.

It is strange that the text of the treaty with Corea has not been published, and useless to speculate on the cause of the omission. What is certain is that the affair has caused abundant satisfaction throughout the country, and greatly added to the strength and *prestige* of the Government. The Satsuma clan will be gratified to find their own man—it is said the man of their own choice—so successful. Choshiu divides the honours equally with Satsuma, and the services of a man of unquestionable ability, accustomed to office, have been again made available to the State.

Among the minor incidents attaching to the intercourse of nations there are few more gratifying than the acknowledgments which are occasionally demanded and made for services rendered in cases of danger or distress. An instance of this recently occurred in the case of the assistance rendered by a Japanese man-of-war, the *Fusiyama*, to the *Surprise*, an American ship which was wrecked near the Hayumaru Rocks a few weeks back. General Van Buren, the U. S. Consul-General, paid an official visit some days ago to the Captain of the *Fusiyama* to express the thanks of his Government for the service rendered to the *Surprise*, and left a thousand *yen* for distribution among the crew of the Japanese man-of-war. Abundant mention has been made of some of the facts in the local newspapers, but there yet remains some justice to be done. If we are not wrongly informed, the suggestion to save the *Surprise*, her crew, and cargo, came from one whose name has never been mentioned from first to last in the whole affair. It was James Willoughby, a boatswain in the Royal Navy, and Adviser and Instructor to the Captain, Officers and crew of the *Fusiyama*, who insisted to the Captain on the necessity of going to the assistance of the *Surprise*, then on the rocks. He overcame all objections, not unnaturally urged on account of the gale of wind blowing and high sea running at the time, and, very properly, went in charge of the ship's cutter to the assistance of the wrecked vessel. Under his subsequent directions, and with the assistance of three other instructors, named respectively Nicholls, Smith and Collins, the necessary work was done upon and to the vessel, both while on the rock and afterwards when she was blown ashore in Uraga Bay. The Japanese crews worked well with him and his companions, and there is no intention of saying a word which lessens their claim to the gratitude of the American Government, the underwriters or owners of the vessel and cargo. But it was Willoughby who led the rescue, and who "engineered" the whole affair from first to last; and we are quite sure that when the circumstances of the case are investigated they will be found to bear out everything we have stated, and that justice will be done to those to whom it is due. The first thought of truly chivalrous men is to disclaim praise for themselves even where it is due. To accept it where it is not due, or to refuse to share it with those who have done most to deserve it, is simply despicable.

Whatever may be the rights and wrongs of Mr. Pass's case now before the Kanagawa Kencho, there is one feature in it which demands immediate attention, viz, that he was dragged off to the Custom House by some Japanese official—not a police-man—and very narrowly escaped being locked up for the night, in wet clothes. There is not the slightest evidence that Mr. Pass was at all concerned in the scrimmage which took place on board the *Bombay*, and he seems to have behaved with a patience, under the attacks of the frenzied creature who ran a-muck at him, which is truly surprising. The marvel is he did not pound him into a mummy. But what is not to be tolerated is that a foreigner is to be hustled off to the Custom-House to be put through an examination, or something worse, by a Japanese official at the simple demand of another Japanese. Mr. Pass might have been asked for, and would have given, his name. He was with Hodges, who is perfectly well known as the Constable of the British Consulate. No difficulty could possibly exist in finding or identifying either of them, or getting a summons next day against Mr. Pass. On what grounds, then, was he dragged off to the Custom House? Hodges says in his evidence—naturally enough—"Had he attempted to arrest me I should certainly have resisted him, considering the state of mind he was in." Mr. Pass did resist an attempt to arrest him, and nearly lost his life in consequence, for he would infallibly have been drowned but for the assistance rendered him by Hodges—certain Japanese, by the way, standing by and attempting to dissuade him from an act of as clear obligation as any act could be. We hope this feature of the case to which we have drawn attention will be dealt with a strong and firm hand. It is one not to be minimized by any contentions about the case itself—its rights or wrongs. What we protest is that no foreigner should be subject to arrest and detention of this nature and under these circumstances.

The attention of the Board of Consuls is urgently demanded to the question of having a properly certificated body of Pilots for this port. In the late case of the wreck of the *Surprise*, which was attributed by the Court of Enquiry appointed to sit on the case, to the incompetency of David Shields, then in charge of the vessel, David Christian, a witness, gave testimony in regard to Shields, which, if true, proves him absolutely disqualified for such an avocation as that of a pilot. It may be argued that we rarely hear of accidents to

Digitized by Google

Original from UNIVERSITY OF CALIFORNIA

vessels coming up the Bay, and the contention must be received as worth something. But the Court of Enquiry recorded its sense of the great importance of ascertaining the competency of the men who act as pilots on this coast, and called the attention of the Board of Consuls to the subject. It is to be hoped that this will produce the desired result.

Among the passengers who left Japan by the mail of Friday last was Mr. R.H. Brunton, the engineer and constructor of the Lighthouses on this coast—a zealous, intelligent, sturdy and honest servant of this Government, whose works will remain for generations as beneficent monuments of his labours—pillars of cloud by day and of fire by night. Mr. Brunton's services were acknowledged just prior to his departure by a complimentary letter from the Minister of Public Works and a present of two thousand *yen* from the public purse. The Japanese act handsomely in these matters.

A notification from H. B. M. Chargé d'Affaires will be found elsewhere calling attention to one issued by the Prime Minister to the effect that the Trade Dollar and the *yen* of the old coinage will henceforward be received as of equal value in the payment of Custom's and all other dues.

The Messageries Maritimes S. S. *Menzaleh*, left Hongkong for this port at 10 a.m. this morning. She brings London mails to the 28th January.

From the "Japan Mail Daily Advertiser."

Intelligence arrived on the 1st instant that the negotiations with Corea had been successful, a treaty signed, and that the squadron would leave immediately. Since then the Envoys have returned to Tokio where they were received with demonstrations of lively satisfaction. They were honoured with audiences of the Mikado, who expressed to them his warm appreciation of their successful services. The following is an outline of the Treaty, which was signed on the 27th ulto. The full text has not yet been published.

Art.—I.—Corea is to be recognised as an independent country. No more tribute is to be paid to Japan.

II.—Opens three ports to trade. Fusan to be open from this date.

Second port to be opened in fifteen months.

The third port to be open in twenty months.

Ports 2 and 3 to be hereafter selected.

All Japanese vessels wrecked on the coast are to receive every assistance, both to people and property.

III.—The Japanese Government has permission to survey the Corean Coast with the vessels of the Japanese Navy.

IV.—The Regulations for Trade are to be arranged within six months.

V.—The Corean Officials shall not interfere with the commerce between the two nations. A Corean Legation to be opened in Yedo. A Japanese Legation to be opened in Konfa.

The Ambassadors to Corea, Kuroda and Inouyé, reached Tokio unexpectedly on Saturday, in the *Kuroda Maru*, after a rapid passage of about 50 hours from Shimonoseki. Yesterday morning, on arrival at the Shinbashi Station, they were received by some of the high officials of the Empire with military honours and escorted by a guard of honour to the palace where they were received in state by the Mikado.

The particulars of the treaty are not yet published, but it is understood that within six months a port is to be opened for trade, and that Corean Envoys are expected to confer with the Japanese Government as to the most suitable port as for this purpose.

Mr. J. R. Davidson, Legal Adviser to the Board of Public Works, was entertained at Hamagoten on the occasion of his approaching departure from Japan, on Saturday last by the Minister of Public Works and Officials of that Department. Several foreigners were present, and the usual complimentary speeches were addressed to the guest of the evening.

During their stay in Corea, we read in the *Nichi Nichi Shimbun*, the Japanese embassy occupied the vice-general's castle at Kokuwa-Fu. The terms of the treaty were discussed with the Prime Minister Shinken, and another high official named Injisho on behalf of the Corean Government.

The Government has received a telegram from the Japanese Ambassador in London, reporting the overthrow of the Carlist forces in Spain. The troops are said to have fled to France and to England (?) for refuge from the conquerors.

A Lecture on "Indigo" was delivered at the Horaisha Rooms in Yedo on Saturday afternoon (last) by Professor Atkinson, of the Kaiseigakko.

The staff of employees of the *Hochi Shimbun* was entertained by the proprietors of that journal on the 1st instant at a tea-house in high repute named Nakamuraya at the Riogoku-Bashi. Some seventy *geisha* enlivened the scene.

A severe fire is reported to have occurred at Kodzuchimura, a large village in the province of Rikuchu, on the 1st instant. Before it could be mastered it had destroyed some 304 houses.

The editor of the *Saifu Shimbun* who was recently condemned to two and a-half years imprisonment for a violation of the Press-laws has appealed to the *Dai-Shin-In*.

It is alleged that the unexpected news of peace has caused much disappointment to the rice speculators, who have made heavy losses.

A fire at Nagoya on the 3rd instant, destroyed about 130 houses.

A Buddhist priest named Ô-oka of the Shinshu Sect has begun to issue a newspaper known as the *Shinshu Sekkio Soroku*, devoted to the interests of the sect with which he is connected.

The *Choya Shimbun*, on the strength of private information it may be presumed, but described by the journal as a "street rumour" gives a sketch of the negotiation which took place in Corea. On being questioned, the Corean officials admitted having fired upon a Japanese man-of-war, and of having refused to receive the Commissioners that had been sent to them from this country. But they said, "We did not know the man-of-war to be from your country. As to your Commissioners, our country was in too disturbed a condition to allow of our receiving them." On being pressed to enter upon a treaty, the officials showed some reluctance and the Japanese retired to their vessels. The Coreans besought them to wait ten days longer, which was refused; then five days, which was also refused. Finally the Envoys agreed to remain four days longer on the understanding that the terms of their proposed treaty would be acceded to, and on its signature sailed back to Shimonoseki on the 27th February.

Eight month ago, we read in the *Hochi Shimbun*, a German sailing vessel was lost on the coast of the Loo Choo group. The natives exhibited great kindness and hospitality to the shipwrecked men and supplied all their immediate wants. The Prussian man-of-war *Cecrop* has now sailed to the islands for the purpose of thanking the islanders, and carries as passengers Mazumura, an official of the *Gaimusho* and a number of the Loo Chooans who have of late resided in the capital.

The *Hochi Shimbun* notices the arrival of the *Stadt Amsterdam*, a Dutch steamer which has brought out from Europé a large quantity of trucks, rails and some locomotives. These are being loaded on the M. B. Companys steamship *Sumida Maru* for Kameisha, in Oshiu, with the view of forming a mineral tramroad, not, as our contemporary supposes, an ordinary railway.

The *Nichi Nichi* in noticing the fact that more than one-half of the shops lying between the 1st and 4th streets of the Honchô-Dori in the capital are occupied by apothecaries, observes that, with the desire of self improvement, they have invited a certain Kobayashi to give them lectures on chemistry in one of the buildings situated in that quarter.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The following trait of the habits of the official class in Corea is related by the *Akebono Shimbun*. It evidences the stimulating qualities of the Corean atmosphere, or may, not improbably, prove to be a form of courtesy hitherto unknown to bureaucrats.

At an entertainment given to the Japanese in Corea, one of the guests after satisfying his appetite for a particular dish opened the door and threw the fragments outside. A respectable-looking Corean, apparently a member of the official class, who chanced to be in waiting, seized upon the *beaux restes* which he ate with much satisfaction.

The *Hioron Shimbun* refers to the difficulty the officials experience in dealing with many of the *shidzoku*, who being without the means of living endeavour to create political disturbances in various districts of the interior. Patriotism, apparently, is the last refuge of the *samurai*.

The Corean Treaty is said to comprise twelve clauses. Among these is an undertaking on the part of Corea to open three ports to commerce, to afford relief to Japanese mariners wrecked on the shores of that country, and providing for the residence of a Japanese Ambassador at the Capital.

Among our late telegrams we observe the intelligence that the Comptoir d'Escompte de Paris has declared a dividend for the half year at the rate of eight per cent per annum.

The report of a dinner at Hamagoten given in our yesterday's issue on the authority of a native journal, is, we regret to find, inaccurate. The dinner was given in honour of no special event, nor were speeches of any kind made in the course of the evening.

We read in the *Hochi Shimbun* :—

A reporter who is employed, in our branch office at Ôsaka has just been awarded 20 days imprisonment for having forwarded to us correspondence in which the police force of that city was unfavourably reflected on. This the *Hochi Shimbun* thinks, is the first case of punishment of a reporter.

The distressed barque *Truth*, bound to San Francisco with a cargo of sugar from Samarang, was towed into port yesterday by the tug *Sea Gull*.

In the Yamagata *Ken*, the *Saifu Shimbun* is informed, eight or nine of every ten *Kôcho* are unable to read the Government Notifications, while about the same proportion of these officials continue to observe the old calendar. It must thus be considered, it thinks, the least "civilized" *Ken* in the empire.

The *Nichi Nichi* has heard that the eight persons recently arrested on suspicion of having attempted to excite an insurrectionary movement have been under examination at the *Daishinin* since the 4th instant.

The authorities of the Kanagawa Kencho would appear to have unguardedly permitted a report of the proceedings in the case of Mr. S. C. Pass on Tuesday last, and declined to allow the presence of reporters during its hearing yesterday. The result will no doubt be communicated.

The province of Yetchigo, which is said to be unusually subject to snow storms, has been comparatively exempt from them during the last winter. The Japanese believe that more snow falls in that province than in any other part of the Empire.

The remainder of the Japanese Officials composing the Commission to the Philadelphia Exhibition will, we understand, proceed by the *Oceanic* this morning to San Francisco.

The *Nichi Nichi Shimbun* reports the discovery of a coal mine of apparently much promise by two Yedo men at Kawanishimura in Ashigara.

The *Hochi Shimbun* in referring to the opposing Steam Ship lines to the Ports and China, mentions the report that the P. & O. Company is likely to receive the support of certain Japanese merchants.

Further infringements of the press regulations and their penalties are reported in the *Hochi Shimbun*.

The *Choya Shimbun* notices the arrest in the capital of many persons of late for political offences. They are charged with exciting the population by, raising the cry of *zankan* (kill the knaves) and *tenpaku* (overthrow *i.e.* the government). Throughout the interior, as well as in Osaka and Kioto, the offence has been rife, and many persons have been imprisoned by the authorities, presumably on this charge.

We alluded some months since to the extensive growth of valuable coral which had been discovered on the south-eastern coast. A Japanese newspaper relates that a large piece weighing about one thousand pounds has been obtained near Kishu and may now be seen in Yedo. The coral is understood to be of the most highly prized variety.

A former Governor of Ômi and his son have just been arrested in Kioto on the suspicion of having endeavoured to promote an insurrection. He is supposed to have been supported by a person named Nakanuma, at one time a tutor of the Mikado, and two others, together with correspondents who act in concert with them in Ôsaka and in the province of Tamba. The order for their arrest has just been received from Yedo.

The following Notification has been transmitted to the Foreign Consuls by the Tokio *Fu* :—

With reference to the paper currencies of Daijokwan and Minbusho, such as one *rio*, two *bu*, one *bu*, half *bu*, and one quarter *bu*, it was notified in the eighth year of Meiji that the period for exchanging them has been prolonged until the 31st of the 5th month of this year; but spoiled papers of new currencies have much increased, and the papers to exchange them have not been made yet, and, moreover, a great quantity of small silver and copper coins cannot be minted for a short time, consequently the Financial Department, on the 25th ultimo, notified publicly that the time for exchanging the abovementioned paper currencies having been again prolonged until the 30th day of the 6th month of next (10th) year of Meiji, they shall be current without any hindrance until the said date.

Be so good as to notify the foregoing to your countrymen residing at Tokio.

With respect and consideration,

KUSMOTO MASATAKA,
Tokio Fu Gon Chiji.

The British ship *City of Quebec* with a cargo of 10,493 piculs of rice is about to leave Shinagawa for London.

It is intended, we observe, to open another railway station between Shinagawa and Kawasaki with the view of accomodating the people of the district. The village is named Hakkezaka.

A foot paper chase will start from the Eastern Club at 4.30 p.m. this afternoon, finishing at the same place.

A person named Samino has been arrested at Kiôto on suspicion of being concerned in exciting rebellion against the Government in the south. Eighteen *samurai* living in the Kameoka *Ken*, having incurred the suspicion of the authorities, have also been arrested.

The *Nichi Nichi Shimbun* gives the intelligence that the Department of Public Industry has decided to send twelve young Japanese to India—Assam presumably—with a view to their acquiring a knowledge of the mode of manipulating black tea. They are to leave by the next mail steamer.

The February number of *Punch* was published only yesterday, owing, it may be supposed, to the general lateness of the season. Though smaller in number, the subjects of some of the caricatures are happily chosen, and we may especially commend the "Meeting of the Asiatic Society at Kawasaki" and the snuffer and extinguisher *pas de quatre* of the Gas Committee as bits of excellent fooling in the artist's best manner. The new press proclamation, the departure of the chiefs of the Corean army of invasion on a mission of peace, and the rivalry of the steam-ship companies form subjects for other cartoons.

We find the following related in the *British Mercantile Gazette* :

In illustration of the shifts to which the keenness of foreign competition is reducing the manufacturers the following in-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

cident may be mentioned; A manufacturer of a certain class of heavy hardwares in South Staffordshire lately received an order for a quantity of goods at a price which he could not accept if he produced them himself. He knew, however, at what rate he could buy iron made in the North of England, and he knew likewise upon what terms this could be worked up into the required products in a Belgian manufactory. Accordingly, he bought iron in the North of England and had it shipped to Belgium and made up into the hardware specified. These he received at his own manufactory, and then despatched them to his customer, realising upon the transaction a profit even at the very low terms upon which alone the customer would buy.

Last Saturday morning the remains of Mr. William Harris of the U. S. Naval Depot, Nagasaki, who died very suddenly on the preceding morning, were borne to their resting place. A detachment from the U. S *Saco* followed his remains to the grave, while the flags of the different men-of-war in harbour were lowered until after the funeral. The deceased was only 36 years of age.—*Rising Sun.*

We learn that numbers of cattle are dying along the Southern Coast, more especially between Kagoshima and Kumamoto, from a pestilential scourge with which they are attacked. The local Government has issued a proclamation prohibiting the slaying of cattle for food unless they pass a successful examination before an inspector and be pronounced free from disease.—*Rising Sun.*

The machinery of the Takashima Mine got disabled on Sunday last. It is not expected that the necessary repairs can be executed before a fortnight at the least. The accident will not cause an advance in the price of coal, but serious inconvenience to ships now awaiting cargo.—*Cosmopolitan Press.*

The last mail from the Cape brings the announcement that Mr. Ross Johnson, M.L.A., is about to proceed to China to make arrangements for the importation of coolie labour. The Government will allow £7 each for every Chinaman delivered at the Cape up to 1,000.—*L. and C. Express.*

COREA.

SO far as we know, the text of the treaty lately negotiated between Japan and Corea has not been published by the Government, but we have reasonable assurance that the outline of it published in our daily issue of the 8th instant, and reproduced elsewhere, will be found correct. There may be other clauses of which nothing is publicly known at present, and when the notification of the Prime Minister appears giving the complete text, it will doubtless be found either to embody, or to be accompanied by, some explanation and apology for the insult at Kokwa which led to the late proceedings. But the opening of three ports to trade; the permission to survey the Corean waters; the establishment of Regulations for the conduct of the trade—which we hope will be such as really to conduce to the development of commercial relations; the establishment of legations on both sides—consulates would do just as well and be far less expensive—are good points, and all has been gained which was sought. It is said that the Coreans were anxious to entangle the Japanese into an offensive and defensive alliance in view of possible quarrels with other nations. Their cautious visitors, however, were too wise to accept any such position, and made no scruple of refusing the request at once and absolutely. The Coreans at first struggled for a far longer delay in giving their answer to the Japanese than the latter thought expedient, and the first and second requests for time were rejected. A third, the terms of which were considered reasonable, was granted. The small force at the disposal of the Envoys was ingeniously and skilfully made as much of as possible, and perhaps no nation in so insolent a frame of mind was ever reduced to submission by means so simple and so actually inexpensive.

The country is bare of timber, barren, unattractive and inhospitable looking, the soil having a red appearance, and the hills a hummock kind of form. The food of the inhabitants is of the simplest kind—fish, rice and poor vegetables. There is no silver in general circulation as currency, and copper cash, the material of which comes from Japan, is the only coin known. Doubtless the Sycee silver of China is employed in the larger mercantile transactions. There are said to be gold deposits, though this statement can hardly have been verified. But $130,000 in gold dust—a very large sum for so poor a nation—is said to be sent annually as tribute to China, and this is collected from the washings at the foot of the mountain ranges. The reigning dynasty is of Manchu origin. The *personnel* of the army does not seem so striking as we had been to led to imagine, the Coreans having always been held as a fine stalwart race of men. Its equipment is miserably antiquated and inefficient. There are some old-fashioned guns in the forts which guard the approaches to the capital, but beyond these few specimens of ordnance of any kind are to be seen. The gunpowder in use ignites so tardily as to create no surprise that unreasonable delays were urgently requested. Speaking generally, it is not easy to conceive a nation less prepared for defence than the Coreans at this moment; and we are probably not wrong in saying that the country presents no such attractions, or the army any such appearance of material out of which glory could be coined, as would have compensated for the loss of a single Japanese life.

The general impression made on the members of the mission seems to be highly unfavourable to any prospect of a valuable trade springing up between the two countries. Corea is represented as betraying unmistakeable

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

signs of great poverty. The dwellings, food and clothing of the people generally are miserably poor, they are filthily dirty in their persons, and their habits and manners are those of a nation in an extremely low state of civilization. They appear to have yielded to the demands of the Japanese without any great pressure, recognizing in them members, though perhaps somewhat distant, of the same family of the human race. But it is said that they are bitterly and obstinately opposed to all intercourse with Europeans, whose approaches they are determined to resist at all hazards. This resolve seems to have its origin in the recollection of certain alleged outrages committed upon the graves of their Kings by some of the foreigners who have visited them—for whatever purpose—and is so strong as to unite the people in a spirit of fierce antagonism to all the western nations. Whatever may be the origin of these recollections and the determination founded on them, they are much to be deplored. Doubtless they have some substantial grounds of existence in former violations of sacred precincts, or even in the disturbance of human remains. The dislike of the poorer Chinese to have their burial places interfered with may be commonly appeased by a very moderate offer of money when the ground is required for secular purposes; but the commercial instinct may be less developed among the Coreans, who, as one of our translations to-day opportunely shows, are still full of reverence for the doctrines and precepts of Confucius, the great inculcator of ancestral worship.

It may be greatly doubted whether there is much to attract the European nations towards Corea The Coreans have certainly much to gain from us, if there is firmness of consistency enough in the nation to remain uninjured by contact with us. They are, of course, in a deplorable state of ignorance, and might begin to take easy lessons in the realities of things. But the chances are that society would be gradually decomposed by contact with the European, and that in a few years the nation would forfeit its independence to some western power. A stationary civilization represented only by four or five millions of people must inevitably give way sooner or later before the mordant solvent of our own restless activity. The Coreans probably do not possess that adaptability to new forms of social and political life of which we see such marked evidence among the Japanese. The lust of territory is represented by one power which possesses boundaries conterminous with Corea, while the desire for commercial extension, represented by other powers, may produce something of the same effect, although by different means. The safeguards of China are her enormous mass, the intelligence, industry and commercial spirit of her people, the certainty that before many years are over she will adapt these qualities to a new order of things, and her great material resources in the shape of coal and iron. All these safeguards are wanting in Corea, which seems to have done, and to be capable of doing, little in the world's economy.

But if any approaches are made by the western nations in this direction, we sincerely hope they will result in what a writer in the *Choya Shimbun* calls brain-victories, and not sword-victories. If made with discretion, and persuasive announcements of our real intentions, which are solely those of trade, apprehension may be soothed and violent antagonism disarmed. Before we can in strict justice punish even outrage, we ought to be sure that we have done nothing to provoke it. The contumacy which arises from ignorance should be dealt with tenderly, especially when the strength which it defies is so utterly unknown and so overwhelming. If Corea is to be opened to the western nations, it must be done without bloodshed.

THE PROSPECTS OF THE SILVER MARKET.

THE Mining Review of the year 1875 published in the San Francisco *Commercial Herald* of the 13th January, contains some interesting particulars of the results of mining enterprise in the Western States of America during the year lately closed, and in view of the important effects which they are assisting to produce upon trade, in the form of the rapid decline in Exchange on which we commented last week, it may be well to give a short *résumé* of the article.

The year 1875 appears to have been one of general prosperity in the mines on the Pacific coast. Profits have been large, and the aggregate production of the precious metals greater than ever before by some ten millions of dollars. The total yield of the gold and silver mines is rated at $85,000,000; towards which California contributed $20,000,000; Nevada $40,000,000; Colorado $9,000,000; the remainder coming from seven other States. In addition to this British Columbia contributed $2,000,000, and Lower California $500,000, while about $1,500,000 seems to have found its way to San Francisco from the north-western coast of Mexico.

There appears to be some dispute regarding the total production of Colorado, which is estimated by the local mining journals at $16,000,000 for 1875 and $20,000,000 for the present year. These figures are disputed by the *Commercial Herald*, which believes, however, that though incorrect in respect of the value of the precious metals raised in the State, they are probably correct if allowed to embrace all its mineral productions, as coal, lead, copper and "matte," all of which it produces in considerable abundance.

Of California we are told that the working of auriferous quartz is now carried on to a greater or less extent in every mining country of the State, and vein-mining is being prosecuted with fair and often large returns along the great gold-bearing range which extends north and south for a distance of six hundred miles. During the summer a number of new argentiferous lodes were discovered, justifying the reasonable expectation that silver mining may grow into a profitable industry in the remoter sections of the State. We are told of one claim of auriferous rock, cut into last summer, in which "free gold" has been found in great abundance. So early as 1851 part of the claim had been worked, and upwards of a million and a half of dollars worth of gold taken out with picks and hand-mortars. Its great wealth led to acts of violence and bloodshed, resulting in serious loss of life, and afterwards to prolonged litigation, work on the mine being arrested while the ownership was in abeyance. It is characteristic of the uncertain nature of mining enterprise that one of the contestants for the whole or a large part of this rich claim, after having his ownership admitted in the courts, forfeited it through the neglect of his friends, to whom he had committed its care, to pay the sum of $15.50 for improvements made upon it, and the present owner purchased it at the sheriff's sale. Near this are some gold and silver claims of amazing richness, which have given returns from $12,000 to $58,000 per ton. Larger and less closely selected portions of the ore have yielded from $3,685 to $11,000 per ton. In Inyo county, which lies to the east of the Sierra Nevada Mountains, we hear of a district in which the lodes crop out boldly, are well defined, and carry such quantities of

Digitized by Google
UNIVERSITY OF CALIFORNIA

rich ores and virgin silver as point to a great wealth of that metal below. Some of the ores of this claim yield as much as seventy-five per cent of pure silver, and no better exhibit has ever yet been made in any mining of like depth, some of the assays giving $20,000 to $30,000 per ton, while entire lots of ore promiscuously taken out have given from $300 to $800 per ton. As soon as the requisite works have been erected on this claim, a large out-turn of silver may be immediately expected.

In Nevada the yield of last year exceeded that of any previous year by $5,000,000, and amounted, as already stated, to $40,000,000, of which the famous Cumstock mines contributed $25,000,000—less by three or four millions than would have been the case but for a fire which destroyed a considerable portion of the mills and hoisting works of the leading mines. The best authorities credit Nevada with a prospective yield of $50,000,000 for this year, while many believe that it will largely exceed that amount. This anticipated increase is not founded upon the favourable prospects presented by the Cumstock mines alone, but is justified by the condition of many others situated elsewhere in the State. The Northern Belle mine—the name of which, by the way, is not untouched by that spirit of romance with which the readers of Bret Harte are familiar—is producing bullion at the rate of $1,500,000 per annum, giving a profit of $500,000. On the Eagle lode, a deposit of silver-bearing ore was discovered last year of such dimensions and grade as to justify the most brilliant hopes. On the Spanish Belt, in Nye county, deposits of extraordinary promise have also been found; while of another deposit we read that it is opening up such quantities of rich ore and masses of virgin silver as have never been surpassed on the Pacific Coast, and are equalled only by the celebrated "Gun-sight" mine. In all these districts improvement is being fast made in the application of labor, in the economy of expenditure, a closer working of the ores, and in many related matters which are vital to mining industry. The most marked feature of the records of the year is the astonishing extent and wealth of the Cumstock mines, with regard to which the most sanguine and even extravagant anticipations bid fair to be realized.

In attempting to estimate the probable effect of this great and growing addition to the existing stock of silver in the world, one important fact has to be taken into consideration, which is, that this dazzling record has already been taken into account by the commercial world, though it may be new to any one section of it The price of any article at any given moment is the reduction to figures of the conflicting hopes and fears of the buyers and sellers. London is the great bullion market of the world, and to the bullion dealers all these facts have long been well known, so that they are actually represented in the present value of silver. The same remark holds good in regard to the enormous stocks of this metal now held by the German Government, which has the silver market practically in its own hands at present. But the Germans manage their national financial affairs with great thoughtfulness and prudence, and know as well what they are about in this conversion of their currency as any one can tell them. Their policy has for many months formed the subject of comment in their own, the French, and the English journals which deal with subjects of this nature. The two former we have not been so fortunate as to see, but *The Economist* has constantly treated the question with the clearness and marked ability which have gained for it the great reputation it justly enjoys. It has closely watched all the steps of the operation, and commented upon them as they were taken. Now, the Germans have a strong interest in buying their gold as cheaply as possible, in other words, of selling their silver as dearly as possible. It is, of course, true that all the good management in the world will not prevent a decline in the value of an article which is produced in excess of the world's wants. At a given price a certain quantity of a given article can be used or absorbed, and any excess of that quantity can only be taken off on condition of a reduction of price. But it is equally clear that if a large holder of any commodity insists upon disposing of the whole of his stock at once, or, in other words, when the market does not require the whole of it, he must submit to a reduction of price, which thus represents his needs or his fears. The speculator then comes in, and stronger or bolder men hold their stocks; both reaping the benefit of the subsequent rise of price, the money which the unskilful holder thus loses going into the pocket of the speculator. The German Government will certainly not force the sale of its silver. It can afford to hold, and only requires gold as fast as it can coin it, or within the time which it has fixed as the limit of the period when the silver tokens—of which the German currency largely consists—will be taken at their present value.

If it be true that the production of silver is increasing, the same is true of the trade and population of the world, to which each succeeding year adds largely. We do not think that we shall see silver again at its old value for many years, unless some extraordinary circumstances should occur to increase the volume of the constant stream which flows eastward. But the price at which we have seen it lately appears to us to reflect something of panic, and we therefore look forward to a change in favour of somewhat higher rates.

NOTIFICATION.

The undersigned publishes for the information of British subjects in Japan the following Notification communicated to him by the Japanese Minister for Foreign Affairs altering the comparative values of the Trade Dollar and the Standard Coinage.

F. W. PLUNKETT,
H. B. M.'s Chargé d'Affaires.

H. B. M. Legation,
Yedo, March 11, 1876.

[TRANSLATION.]

NOTIFICATION No. 27.

In Paragraph 6 of the Currency Regulations published in Notification No. 108 of June 1875, limiting the conditions under which coins are current, the comparative values of the trade dollar and standard coinage were temporarily fixed. It is now notified that these comparative values have been altered as below.

(Signed) SANJO SANEYOSHI,
Daijo Daijin.

Paragraph No. 6 of the Currency Regulations limiting the conditions under which coins are current.

In reference to the receipt of customs and all other dues paid by foreigners, the comparative values of the trade dollar—including both the old and new patterns—and of the standard coinage are to be calculated as one hundred dollars being equivalent to one hundred yen.

SPIRIT OF THE JAPANESE PRESS.

Miscellaneous precis of articles in respect to the Treaty with Corea.

(From the "*Choya Shimbun*," March, 5th 1876).

We had understood that the two high commissioners, chief and vice, would have arrived in Yokohama this day, but their voyage proved speedier than had been anticipated and they arrived in the *Genbun-Maru*, at Shinagawa at about 10 o'clock yesterday forenoon. They landed at once. The men-of-war that attended them (to Corea) will probably arrive in two or three days. The intended ceremony to receive them was thus rendered abortive, and, instead, another ceremony was held to welcome them at the Railway Station at Shimbashi. The two high commissioners proceeded in a carriage together with the Prime Minister to the Council of State and the Emperor received them on the dais in the Hall of the Office. He then caused them to proceed into an inner apartment and thanked them for their services. On coming out again he caused them to read in the presence of the Prime Minister and Councillor of State the answer that had been received from Corea, and on the conclusion of the ceremony gave each of the two High Commissioners a cup of wine in congratulation.

As we have heard these things we joyfully publish them along with our fellow writers, and congratulate our thirty millions of brethren on the lustre that has been given to our country.

(Leading Article.)

The two high commissioners who were despatched to Corea return to Yedo this 5th day of March, 2536 years from the time of Jimmu Tenno, having completely fulfilled their mission and carried out their instructions. A happy end is thus put to our disputes for years past with Corea, and the glory of our flag displayed to all Asiatic countries. Even advocates of war must rejoice, and much more must we who have always urged peace. Conquests, such as this, achieved by peace are of a far higher order than those by force of arms. Every one of our countrymen must therefore rejoice at the news.

Last year when in the month of September, the affair at Kokwa occurred, and it seemed likely that an assault would be made on Corea, we newspapers writers generally wrote against such and exerted all our strength in explaining our reasons. It seemed, however, that war must be made; two envoys were chosen and sent, accompanied by several men-of-war and hundreds of soldiers. Rumours were abundant, soldiers were moved from Hiroshima and Kumamoto to Chosiu and and Kokura, the Minister for War went to Shimonoseki, the steamers of the Mitsubishi Co. were chartered, and every military and naval preparation made, and people seeing all these imagined war was at hand. The rice dealers of Osaka and Kiyoto and other speculative persons were looking forward to large gains and appeared to be waiting quietly for the commencement of the war. The happy and peaceful termination of matters that has now been secured is beyond the expectations of all. There is an English proverb to the effect that the way to obtain peace is to make preparations for war and this principle seems to have guided our Government in the present instance.

Though the termination of the negotiations is so successful, that it has been so is to be ascribed to the eloquence and abilities of those who went on the mission, and therefore the first share of the praise must be given to them. Our numerous negotiations hitherto with Corea, carried on at Fusankai, exactly resemble those which foreigners use to hold with us at Nagasaki in the old days, and our going to the capital on this occasion, and negotiating direct with the Government, is to be compared to the conclusion of the treaty at Yokohama, by Perry, after elaborate negotiation. If Corea now comes to be opened up and enters into friendly relations with the different foreign countries, and makes gradual advances in civilization, the Coreans will regard us with gratitude, and we shall be to them as America is to us.

We had previously heard that Corea had sent an embassy to Peking and reported the plight they were in and asked for assistance in case an expedition should be sent against them, and that they received an answer to effect that no assistance whatsoever, in the shape of officers or men could be given to them, (as was becoming seeing that China is a country at peace with us) but that some money and rice would be granted. (This would have been very improper as even grants of rice and money could not but be called assistance.) They (the Chinese Government) stated to the Corean ambassador that, large as their own country was, they could not close it to foreigners, and they had therefore protected themselves (from foreign aggression) by entering into friendly relations with foreign countries. That a country so poor and weak as Corea could not maintain itself in opposition to the countries of the world, and that it should therefore avail itself of the present occasion to enter into friendly relations with those Governments. The Corean Government, having thus had their only hope of assistance taken away, decided on peace, forsook their old customs, and the friendly negotiation was the result. The story is probably true, and if so is one reason for the establishment of peace.

This Corean affair dates from the despatch of an envoy to that country in 1870. In 1873 it was finally discussed in the privy council, but in the following year there was the disturbance in Saga, followed by the expedition to Formosa, the negotiations at Peking, and these have all influenced it. There has since been an incessant discussion among all classes of all opinions on the subject, and it is only now after the lapse of seven years that a final result has been attained. This Corean business will certainly be a matter of great trouble to the future historian of the period of Meiji.

By this peaceful settlement we have not alone escaped seeing the slaughter of our soldiers throughout Corea, but have avoided complications with China and Russia. All the intelligence and money which our Government has hitherto devoted to the Corean difficulty can now be diverted to internal affairs—to the spread of education and laws, and to the advancement of new lines of civilization. I have penned this stupid article with these hopes.

("*Choya Shimbun*," March, 7th 1876.)

At about 9 o'clock on the morning of the day before yesterday there was a revised ceremonial to meet the two envoys to Corea. Sanjo, Bojo (Lord High Chamberlain), Kido and Ito went to the Shimbashi Station to meet them. A guard of honor of one battalion of the Yedo garrison and one and half companies of cavalry attended. Sanjo proceeded in one carriage with the two envoys, preceded and followed by the cavalry escort, and arrived at the Sei-in where the Emperor was at 10 o'clock, who in a private apartment thanked them for their services. After hearing the answer from Corea, His Majesty pledged them in a cup of wine in congratulation.

The weather was fine, and the national flag, hung over every door, fluttered gaily in the eastern wind and everything bore the appearance of peace. The treaty made by the Envoys has not as yet been published to the world, but according to street conversation, when they landed in Corea, their first duty was to investigate the attack on the *Unyōkwan*, and then they had to insist on their proceeding to the capital. This was opposed by the Corean Ministers on the ground that the opinions of the country upon that point were not settled, and, as to the attack on the *Unyōkwan*, they did not know what was her nationality at the time. During the conferences the two Envoys pressed for the conclusion of a treaty but it was not decided upon, and they put an end to the discussion and returned to their ship. Two high Corean Ministers Shinken—Hanchiu sūfuji, and Jishō—Tosō fuku so kwanin, came to the ship and begged the two Envoys to land again, and asked them to wait for a period of ten days for an answer. They, however, refused and they treated a request for a delay of five days in like manner. However, on a promise that their wishes would be observed, they assented to a delay of four days. Having again landed, negotiations were completed and a provisional treaty interchanged. They then sailed at once (on the 27th February), and arrived at Shimonoseki on the 1st instant.

A brief resumé of the provisional treaty shows that both countries are to preserve their equal rights as towards each other, that three ports are to be opened in Corea, that trade and commerce are to be allowed, shipwrecked persons to be assisted, the coast to be surveyed, a legation to be established in the capital and ratifications to be exchanged within six months from date, that a Minister is to be sent from here after a period of twelve months, that the power of trial is to be held by the respective officials of both countries, and that an Envoy may be sent from Corea at any time whatsoever.

Further news will be published from time to time.

The two Envoys presented to the Corean Government, one Gatling gun, three mitrailleurs (?) three swords, some bronze and wine; and received from them fifty or sixty tiger or panther skins, some cutlery and pens.

(Substance of an Article from the "Hôchi Shimbun" of March 8, 1876.)

No persons of sense rejoice in warfare; it is only adventurers and those who hope to gain something by hostilities who desire war. Thus, when the *Unyôkan* was fired upon, all writers of the better class steadily maintained that Japan should not commence fighting with Corea.

The Government, however, sent two commissioners as an embassy to Corea, to enquire into the circumstances. We were all in a state of anxiety about the possible result, but we now rejoice at the happy news that the Mission has been successfully terminated.

It is indeed fortunate that our country has been spared the evils attendant upon a war. By reason of the enquiry into the matter, some slight loss has no doubt been caused to our people, but that is nothing to be at all compared with the ills that would have arisen on account of actual hostilities. This, too, is a subject for congratulation.

It is not only on the ground of expense that we hold war to be prejudicial to the prosperity of a country, but it is on account of many other evils. For, in time of war, what becomes of commerce, manufactures, and educational measures? Even though the harm may not be caused all at once, it is sure to be felt sooner or later.

In any country whatever war expenses would be very heavy, but in Japan exceptionally so, as we have to purchase from foreign lands all our vessels of war, guns, &c. Such expenses would have to be defrayed by borrowing money in the name of the whole Japanese people, and the repayment of the interest on sums so borrowed would be the same as throwing away money into the sea. If again, the money were borrowed by the Government from our own people, we should lose thereby the amounts that should have been used for the development of our national produce and resources. Thus, in either case, great injuries would have been caused us, for by the repayment of the principal and interest our people would have been certain to suffer.

The above evils would be those caused immediately. The later ones would be many in number. And even though we had not actually commenced hostilities we should have suffered. Already the price of rice has gone up considerably, and capitalists have held back their money instead of letting it go into circulation; and on this account we have been in fear lest even worse events should come to pass.

Thus, evil has been caused, in our case, merely by the dread of war,—not by war itself. To what extent, then, might not our losses have gone had we really gone to war with Corea! We have sustained a mere temporary injury, but were this to happen year by year it would become very serious. We trust that no such calamity may be in store for us.

("Nichi Nichi Shimbun" of March 9th, 1876.)

We published yesterday a general account of the first negotiations held at the city of Kôk'wa on February 10th between our two High Commissioners, Kuroda and Inouyé, and the two Corean High Commissioners.

On the following day, the 11th, an interview was commenced at 1 o'clock p.m., at the *Rem-hu-dô*, which terminated at about 4 o'clock on that day. Afterwards a banquet took place, and at about 5 o'clock, our two High Commissioners accompanied by their attendant officials returned to their Legation. The food offered at the entertainment consisted of ten *K'eisuri*, raw chestnuts, dried persimons, coloured *mochi*, preserved fruits, pears, boiled eggs, buckwheat with chicken broth, &c., some eleven or twelve courses in all. The buckwheat was served in brass basins, all the other edibles were piled up on dishes some six or seven inches in diameter. With the exception of the buckwheat, the rest of the food was afterwards sent to the Legation. On the following day, the 12th, there was again an interview at 1 o'clock, at an office called the *Shiutsu-ji-chô*;—the two High Commissioners returning to the Legation at 5.45. On both the 11th and the 12th, they took with them not a single soldier, only two or three subordinate officials. From this day, in accordance with the request of the Coreans, it was decided that the negotiations should be put off for the space of ten days. On the 13th, however, for certain reasons, another interview was held; but still it would appear that this was not anything very important, as the Commissioners returned to the Legation at 3 o'clock. After this a delay of ten days took place, during which period, however, several communications were made by the Coreans. When the 20th instant arrived, they stated that they finally did not fall in with the ideas of our two High Commissioners, and in consequence the latter sent that night a messenger to ask for an interview with the Corean Commissioners. The interview at once took place, at about 7.30 p.m. at the *Shin-tsuji-chô*, from which they returned to the Legation at past 12 o'clock. On the next day,—the 21st,—all our baggage was sent back to the island of *Chô-zan*, and on the morning of the 22nd our two High Commissioners were just about finally to set out from the Legation, when the two Corean Commissioners, *Shin* and *In*, came in person to the Legation, and begged our Commissioners to stay for several days,—but without avail. Only some two or three subordinate officers were left behind,—and the Legation was left ultimately at about 11 o'clock, all returning on board of the vessels anchored at the island of *Chô-zan*. Word was left that we would wait for four days, and that the Coreans were to consider well and make communications through the subordinate officials stationed on the spot. Upon this the two Corean Commissioners were thrown into great alarm, and at once communicated with subordinate officials left behind, to the effect that they had a request to make of our two Commissioners. Thus affairs for the first time returned to a proper course, and so, on the 26th inst., our two Commissioners went back again to the Legation at *Fuku-sui-yei*. On the following day, the 27th, at 9.35 a.m., an amicable arrangement was effected at the *Rem-hu-dô*, and the signature of the Treaty was completed. On this day both our two Commissioners and all their attendant *Sô-nin* officials went to the place of meeting in full dress, and an escort of troops, in dress uniform, also went with them. In front of the *Rem-hu-dô*, there were drawn up on the right and the left Corean military bandsmen who performed music; and in addition a banquet was served, as on the 11th inst. Our two Commissioners merely took part in the ceremony, and immediately left the *Rem-hu-dô* and, at about 11.30, embarked from the *Chin-kai* gate in small boats towed by a steam-launch, and so returned to the place of anchorage at the island of *Chô-zan*. Next day, the 28th, we at once sailed from Corea.

We have borrowed some drawings sketched by Mr. Suyématsu, the former editor of this journal, and here produce from among them a copy of his delineation of the *Rem-hu-dô*, the spot where the Treaty was signed. Was not the 27th, indeed a fortunate day for us!

THE SAME.

(Akebono Shimbun.)

There can be no doubt that much anxiety was felt regarding the probable result of the Corean negotiations, and now that the good news has come of their having been peacefully concluded, every man throughout the Empire must needs rejoice most heartily. As to ourselves, having urged last year that an Envoy should be sent to Corea to enquire into, and, if possible, adjust our causes of difference, we find with great satisfaction that this course has been successfully pursued. It is now six years since this Corean agitation began, and the settlement of it is a good thing both for China and Corea. If the three countries should now bind themselves in ties of friendship in order that each should assist the other in time of need, the devastating storms which were expected to blow in these eastern regions, will be exchanged for clear skies and calm weather, and thus civilization and enlightenment will progress. Our impression is that the Coreans must have argued somewhat after this manner:—"It would be vain to attempt to defend ourselves against Japan, so that it will be best to concede the terms imposed," and thus their obstinacy gave way and they yielded to our demands. From this we may infer that there are some sagacious men among them, and that they cannot be as barbarous as many suppose. From this time forward Corea may be expected to regard enlightenment and civilization with respect, and begin to understand the advantages of freedom and independence. It will be in consonance with the laws of nature that they become industrious in order to secure these conditions. As for ourselves, it is necessary that we also should advance, in order that the time may never arrive when we need fear shame in the eyes of the Coreans.

Let us glance for a moment at the past history of our relations with Corea. Jingo Kogo* went over to Shiura, and, after fighting many battles, succeeded in making Kutara and Koma† tributaries to Japan. In this state matters remained for about a thousand years,

* A famous Empress who went over to Corea, commanding the Japanese troops in person, and was victorious over the Coreans about the year A. D. 200.

† Corea was at that time divided into three independent kingdoms, Shiura, Kutari and Koma; from the latter the name Corea is probably derived.—*Tran.*

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

during which time the doctrines of Confucius and Sakya Mouni, the Chinese characters, and many arts were brought from Corea to civilize this country and all that we gave them in return was the lesson how to take a beating. Corea had learned her arts and her faith from China, and the reason that we taught her nothing is that we had nothing to teach. Again, about twelve hundred years after the time of Jingo Kogo, Toyotomi Taiko, being ambitious of conquering China, asked permission of the Coreans to allow Japanese troops to pass through their country. But this was refused. Taiko declared war against Corea in consequence, and he and his generals overran and ruined the country shortly afterwards. But this was no benefit to us. On the contrary, indeed: for we spent a vast sum of money in carrying on the war, which impoverished us enormously. Now, however, that our Envoys have brought the Coreans to terms, much benefit should result on both sides. The nation which formerly taught us such civilization as we then possessed, may in its turn learn from us that it is good for nations to promote mutual intercourse.

Our Government has preserved the honour of the country and brought peace to the people. This is a cause for exceeding joy.

The Corean Treaty.

(Mainichi Shimbun.)

There are two modes of gaining a victory: one by battles, the other by wisdom. The former demands blood and sword; the latter brains and reason. The victories of the Crimea, of the Franco-Prussian and Anglo-Chinese wars were of the former kind, while those of the latter are comparatively scarce because more difficult to obtain. We have lately gained a glorious brain victory over an enemy. In September 1875, one of our war ships was attacked at Kokwa, and when the news arrived here many thought that the matter must be seriously taken up, ourselves among the number. The Government, holding the same view, sent envoys to Corea to investigate the affair, and, if possible, to make a treaty. In this they succeeded, as Commodore Perry did with Japan; and this is the victory gained by our brains. Some thirty years ago the Coreans killed a priest belonging to a nation renowned up to the year 1870, for its military prowess. Napoleon sent ships of war to Corea to inflict punishment on the offenders. But the discussion on the whole subject had lasted twenty years, and ended in a war without any satisfactory result. Our Envoys, however, Kuroda and Enouye, succeeded in making a treaty with Corea without firing a shot. Many of our contemporaries said, "It is utterly useless to try to do anything with the Coreans, and it is absurd for Japan to attempt what both France and America failed in doing. They contended that the land in Corea is so poor that the opening of her ports would avail nothing to take it, and that the opening of her ports would be equally idle because the Coreans are too poor to trade. Thus, they said, if we attempt to do anything in Corea, we may embroil ourselves with China and Russia, so that the best thing we can do is to leave her alone. But now that the Envoys have returned victorious they cry "Joy, joy," and their hapiness knows no bounds. Truly, the minds of our contemporaries appear somewhat changeable. We, on the other hand, urged that the matter should be taken up, and persisted in this view. And now we see that our idea has been realized by the wisdom of our Government and the skill of our Envoys. With a true heart, therefore, we may rejoice over this happy result.

The Same.

(Akebono Shimbun.)

We have heard the following story narrated, which shows how obstinate the Coreans are.

During the course of the negotiations between our Envoys and the Corean plenipotentiaries, the latter persisted in making one set of replies until the Envoys lost all patience and returned on board ship. The Coreans then thought that all was concluded, and that our Envoys would return home. It occurred, however, to one of them, more thoughtful than the others, to say "The Japanese will soon be back again and declare war if we do not agree to their terms." At these words the others were greatly alarmed, and went off and asked the Envoys to remain a little longer. The result was that the Treaty was concluded. But one of the Coreans came subsequently to the Japanese privately and said: "Had you left without this making this Treaty, the Coreans would have thought themselves the most powerful nation in the world, and, in all probability would not have opened the country to foreigners for many years." He then expressed his satisfaction at the conclusion which had been arrived at, saying "Heaven decreed that Corea should be opened by the Japanese."

Our Envoys presented a watch and a gun to the Corean king, but they were refused because inscribed with Roman letters. Then, one of our Envoys showed the new coins of Japan, and represented that the presents were of our own manufacture, and that we even put Roman letters upon our coins. This induced the Coreans to accept the presents. They seem to be much displeased at finding out how greatly the Japanese have relaxed in their attitude towards the Confucian doctrines, and among all the presents they made to the Envoys they deemed nothing so precious as the book containing the doctrines of Confucius. In proof of their reverence for the Chinese sage, the only buildings with tiled roofs in Kokua are the Government offices and the temple of Confucius.

The Same.

(Choya Shimbun.)

Our Envoys who have succeeded so well in bringing the Coreans to terms returned to the capital on the 4th inst., and all the inhabitants of Tokio celebrated the occasion with abundant rejoicing. An irritated feeling has existed for some years between Corea and Japan, and the peaceful removal of it is a matter worthy to appear in history and to be made known to the world. Those who were clamorous for war will, in all probability, be satisfied, while those who were against war are greatly gratified. After our flag was fired upon last year by the Coreans there was a loud cry for immediate revenge. We thought that this was not our best policy and argued for peace. The Government came to the conclusion that the affair could not be dropped, and sent over Envoys under an escort of ships of war prepared for all emergencies. Ample preparations, too, for war were made after their departure, but, happily, they have proved unnecessary. This proves the value of the old English saying "If you wish for peace, prepare for war."* Had not the plans of the Government been wisely laid, and the Envoys been determined and skilful, these happy results now celebrated would not have been attained. Let both therefore be praised.

The limitation of our people to Fusan in Corea was like the confinement of foreigners formerly to Nagasaki, and the arrival of our Envoys at Kokwa resembles the advent of Commodore Perry in Yedo Bay. If Corea advances in enlightenment as we have done since that time, the Coreans will honour our Envoys as we now honour Perry.

We hear that the Coreans sent an Envoy to Peking asking for assistance in case of war, and that China said she could do no more than promise money and provisions. She added that China is a large Empire, and had found by experience that she could not close her gates against foreign intercourse, and that in view of the much smaller extent of Corea it could not hope to succeed in such a policy? It must open its ports. On this view the Coreans gave way.

The late Corean trouble dates as far back as the third year of Meiji (1870) and has been the root of many evils—the Saga insurrection, the Formosa Expedition, &c., and now after more or less irritation during six years, it has been peacefully settled. Had the issue been different, we should have become involved in a war which might have embroiled us with China and Russia. Let us now imagine that such a war might have arisen, and spend the money it would have cost us upon the promotion of our internal interests.

Judicial Torture.

(Nichi Nichi Shimbun.)

On the 25th, August 1874, the Minister of Justice issued a notification to the following effect:

"Torture has hitherto been employed in examining persons who were charged with criminal offences. But as it would be grossly unjust that the innocent should suffer through a confession extorted from their fears or their agony, it is desirable that henceforward this mode of criminal investigation should cease. Should any case, however, present itself in which the use of torture appears necessary, the circumstances should be reported to the *Shihosho* (Judicial Department) monthly."

I believe that judicial torture is now no longer recognised in civilised countries, and I am sure that under all circumstances there can no longer exist any reason for its continuance. In former times we believed it to be essential to judicial enquiry, and thousands of innocent persons have no doubt died under it. We had reason to believe that the foregoing notification announced

* It is only fair to tell the Japanese writer that this is a Roman not an English saying.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

its abolition, but our expectations have been disappointed, it would seem, though I cannot imagine that the complete discontinuance of this sad blot upon our administration of justice is far distant. A judge has recently said in my hearing, "Torture has been proved to be of no benefit, while it does much and cruel harm. The Minister of Justice is about to order its discontinuance, but as the apparatus by which it is executed in the Criminal Courts still remains ,it is used to a greater or less extent. It will shortly be altogether abolished."

[The argument for the continuance of Judicial Torture because the implements are still in good order and the executioners practised in their business may be commended as eminently novel.]

This has greatly pleased me. When this happy day arrives, I have little doubt that foreigners also will be satisfied to place themselves under our jurisdiction which, will be reformed in all its processes so as to secure a fair, impartial and discriminating administration of justice to all who may seek it in our Courts.

TANI ICHIZO.

OUR NEIGHBOURHOOD.

Upon that restless human tide which ebbs and flows around a *matsuri* or religious festival, many a curious waif and stray may occasionally be encountered; strange beings who make a scanty and precarious living out of crowds, and to whom a holiday is a harvest, plentiful or otherwise, according as the weather's bright or gloomy and the spirits of their patrons elevated or depressed in consequence. What a motley crew of mountebanks is there! Peripatetic professors of everything, from elocution to the polite art of letter writing. Petty merchants whose wares and properties,—aye, and their household goods and chattels too, for the matter of that, if cooking utensils and fireboxes, and padded quilts and coats for the frosty weather, mean anything—are kept stowed away in boxes marvellously capacious for their size, and ready to be transported hither and thither as opportunities for sale present themselves or the calendar of holidays directs. Artists, whose canvas is the high-road and a bag or two of coloured sand their stock of pigments. Fortune-tellers, whose trade must be a thriving one to judge from the number of its votaries, not to mention a certain rotundity of person and a contented twinkle of the eye, which are generally characteristic of the fraternity. Long-faced cheiromantics, solemn-visaged, lean of person, and mysterious-looking in their huge reed hats, who ply their trade in corners and shady places out of ear-shot of the crowd. How diverting it is to watch these fellows! With what exceeding gravity they scrutinize the lines upon an enquirer's hand, turning their magnifying glasses now this way and now that, for better light it may be, or by a shew of zeal to earn a better fee perhaps. How bewildered does the client look, who never knew till now how full of fate his horny palm turns out to be, and whose dull brain may, for all one knows, be none the sounder for the future for the whispered fables which find their way into his silly ears from underneath the shadow of that hat, fables none the less impressive probably from a certain unreality, an impersonality, so to speak, attaching to an individual who professes to deal with things occult and delivers himself with his face concealed. See that country wench, for instance, with *obi* scarcely redder than her wind-blown face, and the piece of yellow tinsel in her brown black hair. What a mixture of emotions may be noticed in her features as she kneels beside you vagabond, and, with half averted face, drinks in his words. Her ears are his, but her restless eye is on the shifting crowd, as though she sees in every passer by a diviner of her secret. Ah, ha! the glow upon her face has deepened by a shade or two, a love-sick smile has chased away the semi-terrified expression which till now she wore and occupied its place upon her brow and in her foolish hanging lip. Why does she fumble at the bosom of her dress, with the hand that's disengaged? Is she tired of listening or has the low-toned rogue beside her found a marriage mark upon her hand? Who knows? And who can tell either whether it is the chuckle of a crow which salutes her ears as she runs away, or the laugh of a cunning impostor, who, as he puts a slice of her hard earnings in his pouch, rejoices that his knowledge of human nature has enabled him to extract her little fetish from the hidden chamber of her heart, and pass it back to her again dressed out and decked to resemble something new.

Jugglers in numbers are always present at these gatherings. They are very popular apparently and perhaps deservedly. If proficiency in the art of deceiving is a claim to public favour, (and who shall affirm to the contrary?) then the juggler has very tolerable claims to consideration. He knows his business, and is generally a nimble-fingered fellow, quaintly visaged and full of antics.

Nor is the *matsuri* indebted solely to the various genera of the human species who abound there for instruction and amusement. That would be to some but variegated dullness, intolerable from its monotony, and wanting some relief. For such sour fellows, a refuge from their kind is always open amongst the performing dogs and monkeys—to the misanthrope, however, these latter may not always recommend themselves as having so much in common with humanity—bears there are in plenty too, and snakes of gigantic size and ferocious cast of countenance, to judge by their portraiture outside. Fanciful, however, as are these sketches, they are unembellished likenesses beside the ornamental pictures presented to the public by the respective owners of the booths. Their eloquence is amazing and their effrontery incredible. A snake twenty-four feet long at the door of a stall, not unfrequently dwindling to half the number of inches inside, and, like the Afrite in the Arabian Nights becoming sufficiently portable to be contained in a bottle; or a terrific encounter between a bear and a tiger, hyper-sanguinary from an over-liberal allowance of red paint, horrible on canvas, but awakening no greater emotion after paying the fee for admittance than a not unnatural dread of contracting an opthalmia from bringing the eye in contact with the blurred and dirty lens of the showman's box, through which a feeble and faded copy of the daub outside is presented to the deluded observer. Deluded, did you say, sir? Well, what if he is? Serve him right too. A holiday gathering, with a beaming sun above, and a crowd of joyous laughter-loving lads and lasses round about, a crowd as gay as pretty dresses and bright colors and shining eyes can make it, is no place for blood. So, move along, and let your next door neighbour have your place; he's dying for a peep. We'd hand you back your coin, but it's against our rules.

"Do you suffer from a toothache, or are you threatened with "an apoplexy? Is the dropsy in your family or did you ever "have the megrims? If you'er been so afflicted, then here's the "very potion for your ailments. You've never suffered, say "you? What then, you never know the moment when you "may find yourself upon your back, and the drug come in "quite handy. If you omit to purchase now you may never "have the chance again, as I'm going to give up business. "Come along, my friends; buy the great specific, buy the uni-"versal remedy!" And so on, from vendor of quack nostrums to mountebanks, posturers and the thousand and one purveyors of food and potables, sways the happy, laughing, jostling crowd in pursuit of pleasure, filling the frosty air with sounds of merriment and confusion.

But where's the ratsbane man? It'll never do to leave him out, and yet he was near being overlooked in such a throng. Oh! here he comes, with his standard in his right hand and in his left a tray of slaughtered vermin. What a burly fellow he is, to be sure, and with a right royal stride too! That he has no lack of confidence in his poisons may be gathered from the vigor of his advertisement. "In the wallet "on my back is an article no less remarkable for "its exceeding cheapness than for its extraordinary potency. "Without the vermin exterminator no householder can exist "in comfort, and yet so small a sum will procure a store thereof "that no householder need be without it. It is none of your "make-believes or shams, like that, for instance, which is being "at this moment foisted on the public by the shameless rascal "at the corner. He'd have you think—the rogue—that the bits "of fur upon his table are real rats; but they're nought but

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"dummies and his poison has no power. None other's genuine "but my vermin exterminator. My word upon it that mine "alone possesses the true flavor that the rat delights in, and "which it has cost me years of labor to discover. Buy the "vermin exterminator; it will kill not only all your own rats, "but all your neighbour's also, and save you in a month its "price a hundred times told down."

Besides these regular practitioners whose faces are familiar at every *matsuri*, and on whom the showman's mantle sits without a crease or wrinkle, who are, so to speak, to the manner born, there may now and then be encountered a pretender or two to the cap and bells. These are none of your brazen-faced fellows: rather might they be considered timid vagabonds, outside quacks, no-property men, mean fellows. Past-masters in the Art of Vagrancy, it might be said, and yet not qualified for the chair. Filibusters; filchers of stray farthings; sucking mountebanks who are not yet free of the company. Their assumptions of assurance are not natural; they ill become them, their looks betray them. They wander on the outside circle of the crowd before they can pluck up courage to slip into a vacant space inside, and essay their little part. In such a category is the old man with the bundle.

LONDON, 28th February, 1876.

A Spanish Envoy is going to China to arrange the question of shipment of Coolies to Cuba.

LONDON, 25th February, 1876.

After two days debate the Commons negatived by 293 to 248 a motion of Mr. Whitbread censuring the Government for the Slave Circular.

Dufaure succeeds Buffet in the French Ministry.

LONDON, 25th February, 1876.

At an important Meeting of Tea Merchants, Brokers, and Warehouse-keepers, rules were agreed to, relating to Weight Notes and Warrants.

LONDON, 22nd February, 1876.

The purchase of the Canal Shares has been voted without a division.

Gladstone and Lowe attacked the details and Disraeli defended the purchase as a political act calculated to strengthen the Empire.

The Alfonsists are triumphant and the Carlists flying to the frontier.

The French elections are a triumph for the moderate Republican party; only 61 Monarchists and 55 Bonapartists have been returned.

Buffet was defeated and has resigned.

General Schenck has resigned on account of the impending Emma Mine trial.

The absence of any information concerning the progress of the Yunnan Mission gives rise to many rumours regarding the safety of its members. We learn from a Chinese source, usually most reliable, that Mr. Grosvenor has died of fever, while something serious has happened to Messrs. Baber and Davenport. Though slow to place reliance on the report —we give it for what it is worth—it appears to have some foundation, and it may probably turn out that a lesser disaster has actually befallen the Mission. The reason assigned by our native informant, why there may be some truth in the rumour is, the fact that an arrangement made between the English and Chinese Governments provided for couriers arriving every seven days with intelligence from the Mission, while it is now seven weeks since any direct news was received. The aspect of things, says our informant, is looked upon as by no means re-assuring; and the fear of active hostilities is again freely spoken of in native circles, if no early news comes to hand. We may add with regret that the news received from the North to-day is considered serious in well-informed circles, and more than confirms the fears above expressed.—*China Mail.*

Law Report.

IN H. B. M.'s CONSULAR COURT.

Before RUSSELL ROBERTSON, ESQ., H. B. M.'s Consul.

Monday, March the 6th, 1876.

MORITZ HOLSTEIN *vs.* MACKECHNIE, Master of British ship *Lochleven Castle.*

This was a charge of assault and battery. Mr. W. H. Litchfield, barrister-at-law appeared for the plaintiff. Defendant appeared without counsel.

Counsel for plaintiff stated that plaintiff is a storekeeper at No. 186. It is part of his business to supply sailors with clothing. He is therefore in the habit of boarding ships on their arrival, and applies to the captain for leave to deal with the sailors under the captain's guarantee. He had done so on the *Lochleven Castle*, and on the first of this month he presented his bill. The next day he went on board to collect the bill. He then met the captain, some words occurred between them, and in the presence of the crew the captain struck him in the face. Plaintiff at once told the captain that he would sue him for it.

The captain charged the plaintiff with having contrary to their agreement supplied his sailors with drink or money wherewith to buy drink; this would certainly be contrary to the agreement between the captain and plaintiff. But plaintiff had done no such thing. However, even if he had, that would not justify the defendant in his assaults.

He then proceeded to examine Moritz Holstein. [The plaintiff was sworn according to mosaic rites.] I am a storekeeper, living at No. 186, I boarded the *Lochleven Castle* when she came in port. She was flying the English flag. I asked the captain if he would allow me to supply the crew with clothes. He gave me leave to do so and he promised to see me paid to the extent of one month's wages. I have supplied the men with clothes, and I have also at one man's instance lent him $2. I have not supplied any man with drink. On the 1st of this month I brought my bill to the captain. Next morning I again went on board to collect the amount of the bill. I met the captain aft. He called all the sailors aft, and in their presence he struck me in the face. I fell down and have yet pains in my face. The captain asked me before he struck me: "why do you give my men drink?" I took out a summons against him the same day.

Mr. Litchfield next called as witness:

A Japanese boy, who stated that he went on board the *Lochleven Castle* on the 2nd instant, together with plaintiff, and saw defendant strike plaintiff so that the latter fell down. Witness has been in plaintiff's employ during 3 years and has never known him to supply sailors with drink, nor does he know that plaintiff has done so in this instance.

Defendant called as witness,

The chief officer of the *Lochleven Castle*. The agreement with plaintiff was he might supply the sailors to the extent of one month's wages, but on no account supply them with money or drink. I did not see the captain strike the plaintiff, but only push him. The crew have come drunk on board, and they stated distinctly in the plaintiff's presence that plaintiff had supplied them with drink. The plaintiff denied this and the captain grew excited and pushed the plaintiff.

Cross-examined by Mr. Litchfield.—It was a push, not a blow nor a smack in the face. I suppose it was more from fear than anything else that the plaintiff fell down. I have seen plaintiff coming in his boat, and although I have watched him very sharply I have never seen him bring grog on board. But the men have had leave and got grog ashore. Four sailors went ashore without leave on a Sunday, and only came on board the next Tuesday. They were then drunk and incapable.

The next witness called by defendant was Charles Ackers, cook on board *Lochleven Castle*, sworn:—I have gone ashore without leave; I have visited plaintiff's house in Yokohama. I have received from him about $6 in cash money and 3 bottles of gin. I know there have been disturbances on board arising from the men coming on board drunk, and the drink they got in the plaintiff's house. I did not see the captain strike the plaintiff. I know the agreement between the captain and the plaintiff.

Cross-examined by Mr. Litchfield:—We were three who went ashore together; we went to plaintiff's house to get money because we had no money; my bill amounts to about $15. There is $3 in the bill for a coat, but I never had the coat. I got dollars instead of the coat. The coat I have on now I got in Liverpool. I have never had leave here to go ashore, but I have been ashore more than once without leave. I

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

had the $3 the first time I went to plaintiff's house. I had grog in plaintiff's house and have also carried grog away with me from there. My monthly wages are £3.10s.

To the Court: I have been ashore four or five times, and with one exception always without leave. Others of the crew have also been ashore without leave.

Defendant stated that when the plaintiff's bum-boat came alongside, he advised his men strongly to have nothing to do with it. But the men wished to deal with plaintiff. Defendant told plaintiff that he could advance each man clothes up to $12, but supply neither grog nor money. The plaintiff accepted my conditions. But the consequence was that the men came drunk on board and got up disturbances. The men have distinctly told me that they got grog in plaintiff's house. When the plaintiff came on board to collect his bills, I asked the men if the bills were correct. Some said, yes; some said they did not know. I asked the plaintiff in the men's presence if he had supplied them with grog, but he denied it. On the other hand, the men distinctly told me that they several times had got grog in the plaintiff's house.

Mr. Litchfield insisted upon the aggravating nature of the assault as it had taken place in the presence of the crew, whom plaintiff had been supplying. Plaintiff had acknowledged to have supplied the men with money, but distinctly denied having supplied them with grog. He adhered to his opinion that the defendant was by no means justified in taking the law into his own hands.

Defendant sentenced to pay a fine of $1 and costs.

OFFICIAL COURT OF ENQUIRY.

In the U. S. Consular-General Court.

Before Gen. T. B. Van Buren, Consul-General, and Messrs. J. G. Walsh and H. Allen, Jr., Assessors.

Tuesday, 7th March, 1876.

The enquiry into the circumstances of the wreck of the American ship *Surprise*, which was adjourned on the 29th ult., was resumed to-day.

David Shields, sworn:—I am a pilot in general. I came here as 2nd officer of the American ship *Sarah* from Tientsin. Ever since then I have off and on acted as a pilot. I learned my duties as pilot from the charts and from Mr. Craven, a pilot, now dead, with whom I was for a short time. I cannot say how many vessels I have piloted. There have been a good many. I do not keep any books. I was born in Sydney, N. S. W. I sailed out of New Bedford, Mass. for fourteen years, and was naturalized there. My papers were lost by shipwreck. I was naturalized in 1839 or 1840. I remember the ship *Surprise*. I spoke her on the evening of the 3rd February last off Misaki, between there and Fuvisaki. I went out from Matsura that evening after dusk. When I boarded her it was blowing strong from the North. I stood over to the eastward at first and kept beating all night. At daybreak we were abreast Kanonsaki and tacked to the westward. The breeze increasing, we shortened sail. Finding it still increasing I judged it imprudent to stand on at this time of year, but thought it better to run for Kaneda Bay. We were then about a mile to windward of Saratoga Spit buoy. I think this was between 8 and 9 o'clock a.m. It was hazy with a strong Northerly gale, clear above but misty on the water. We shortened sail and kept the vessel away for Kaneda Bay. Whilst rounding Plymouth Rock, the vessel struck on a sunken rock, not marked on any chart that I have ever seen. It was necessary to round these rocks to get into Kaneda Bay, It could be entered from the inside but with a large vessel the proper track is outside. I never knew of these sunken rocks or of any vessel being lost on them. I have known of a steamer going on the Plymouth Rocks, but not on the sunken rock on which the *Surprise* struck. When we struck I gave orders to back the sails, but the captain thought that it was not prudent, as if the vessel had stove a hole in her bottom, and slipped off to the rock, she might sink and everything be lost. The boats were got out, the captain left, and I stopped until they were all out and went in the last one. I tried to find Japanese to go off to the vessel but could not. I then walked to Yokohama and back again. I asked for a boat but they laughed at me. I then went to Misaki and thence to Yokohama and went out boar hunting with a party to whom I had been engaged, and returned on Saturday afternoon. When I returned I did not know that I was wanted. I had been at Matsiva two or three days trying to get up to Yokohama before I boarded the *Surprise*, but could not succeed on account of the wind. I did not know the *Surprise* was coming. I had had no communication about her with anybody. I knew by the papers that she had sailed from New York, but did not expect her so soon. When we tried to go to Kaneda Bay, I could not go to Mississippi Bay because it was to windward. The wind was at Northwest when it blew the heaviest. I have no certificate as a pilot. None of the pilots here have them. I was a seaman on a whaler when I sailed from New Bedford. I lost my papers in the *Glenoon* in a typhoon in the China seas. (Witness here produced a paper which he said was a duplicate of the one he had lost, also two certificates of competency as chief officer.) When we bore up for Kaneda Bay we were about a mile to windward of Saratoga Spit. We could not beat up to Yokohama because the ship was under short canvass, and there was a very high wind and strong ebb tide. This ship would make no ground. The wind was blowing a regular "duster." A brig was some distance ahead of us on the Eastern shore. I think she had less wind than we had. I did not say to the captain that I was a partner of Cook or Christian. He must have misunderstood me. I said I was in their boat. I was a kind of boat-keeper. Had I piloted a vessel I would receive one-half. I had not been down the bay for six months before, because I was sick. Last summer I was down in the Inland Sea and off the coast of Corea. When Christian or Cook piloted a vessel I got no part of it. When I piloted a vessel I got one half of the pilotage. I never had a certificate except from a large Dutch ship, the *Queen of the Netherlands*, which I took out. I cannot tell what has become of it.

Court adjourned until to-day at 11 a.m.

Wednesday, March 8, 1876.

The inquiry into the circumstances of the loss of the *Surprise* was resumed to-day.

Abraham Christian, sworn: I am pilot; have formerly been master of a vessel; have also kept a general store. I am well acquainted with the Plymouth Rocks. I have partly read the account of the loss of the *Surprise*. I know the sunken rock, a cable and a half E. S. E of Plymouth Rocks on which the *Surprise* was lost. At high water there is about 12 feet of water on the rock; at low water you can see the breakers on it. The steamer *Hayo Maro* was lost on this rock in June, 1869. I know David Shields, but not as a pilot. I believe he is able to command a ship as master, but I have never authorised him as a pilot. As to his habits, he is a drunkard. He was in my boat. He was brought down to the pilot station at Mizawa by Mr. Douglas' runner. I had given him my boat to bring to Yokohama, but instead of going to Yokohama he kept knocking about Mizawa, and finally, when the *Surprise* hove in sight, he boarded her. Any pilot would have given the Plymouth Rocks a wide berth. The day the *Surprise* was lost I was in Yokohama. I have no certificate as pilot. I have got several references from vessels which I have piloted. Now I do not ask for any references.

Frederick Hartmann, sworn: I am owner of a schooner. I was quartermaster in the *Hayo Maro* when she was lost. She was lost on the 17th of June, 1869, in the evening, on her passage from here to Kobe. She was lost on a sunken rock to the eastward of Plymouth Rock. She struck on the rock, and the captain backed her off; she sunk inside the rock. After the loss of the *Hayo Maro*, I heard that another vessel some years before had been lost on the same rock. After the loss of the *Hayo Maro* a beacon was put on the rock but it is not there now.

Verdict.

After a careful hearing of the evidence in this case, the Court is of opinion that the loss of the *Surprise* is to be attributed to the incompetency of the pilot, Mr. David Shields, in whose charge the vessel was at the time.

We deem it of the utmost importance for the safety of vessels entering this harbour, that some mode of ascertaining the competency of men acting as pilots in these waters should be ascertained; and, therefore, we earnestly request the Board of Foreign Consuls and the Chamber of Commerce to take action in the matter.

We also consider it necessary that a buoy should be placed upon the sunken rock upon which the *Surprise* and other vessels have been lost, to replace the beacon which the testimony shows was there for two years after the loss of the *Hayo Maro*.

IN THE KANAGAWA KENCHO.

Before the GOVERNOR OF KANAGAWA.

Tuesday, March 7th, 1876.

This was an inquiry into a complaint made by Mr. S. C. Pass, a British subject, of having been assaulted by a Japanese Custom House officer on 21st February last. H. B. M.'s Consul, Mr. Russell Robertson, was present, and watched the proceedings; The Superintendent of Customs, and the Chief of Police were present likewise.

Mr. Pass deposed: On the 21st of February I went on board the *Bombay* to see an acquaintance, Capt. Taylor, depart. I went in company with Mr. Hodges and Mr. Sutherland. After having bid good-bye to Capt. Taylor, we came ashore in the same boat. We landed at the French Hatoba when it was already dark. We found the first gate shut, and we then went to the boathouse gate. I was there assaulted by a Japanese Custom House official, who is present here in Court (Mr. Pass pointed him out). He seized me by the coat, and threatened to take me to the Saibansho. As I saw no reason why I should be taken there, I beat him off. But the Japanese attacked me again, and struck me several times on the head with his fists. I passed through the boathouse gate into the street, and was following Mr. Hodges to go home. The Japanese followed me, and seized me several times by the coat. Opposite the French Hospital he made a sudden rush at me, and ran his head against my stomach so violently, that I was thrown backwards over the wall of the bund into the sea. How long I lay there I cannot say; I became insensible. Mr. Hodges came and assisted me to get up. After getting on to the road again, the same Japanese still insisted that we should go to the Saiban-sho. We went with him to the Custom House, where we were detained about an hour, and where he entered a charge against me. From there we were taken to the Police Station, where the Japanese repeated his charge against me, and insisted that I should be locked up. But Mr. Hodges told the police officers that they could not lock me up; and after a detention of another hour, and with great difficulty, we were dismissed. I was not intoxicated at all. I had two glasses of port wine on board. I had to strike the Japanese official, whose name is Mr. Kunoma, several times, in order to make him loosen his hold of me. I did not notice Mr. Kunoma on board the *Bombay*.

Mr. Hodges stated: As constable of the British Consulate, I was ordered to bring a seaman, named Taylor, on board the *Bombay*. I took the necessary papers with me to his residence, No. 31, about 6 o'clock on the evening of the 21st Feb. I was accompanied by another officer from the Consulate, Mr. White. The man was very much distressed at having to leave this country and it took a great deal of persuasion to induce him to go. There were present besides myself Mr. Pass, Mr. White, Mr. Sutherland, and one person more whose name I do not know. Mr. Taylor had to be bodily carried into the boat. After some difficulty, we got him down the slope at the French Hatoba, his effects into the boat, and we then all went in the same boat. Taylor was lying in the bottom of the boat covered with some fur. When we got to the *Bombay* I went to see the captain with my papers concerning Taylor. I told the captain the state of the man, and the captain sent for the doctor. Mr. Pass Mr. Sutherland, and Mr. Black, assisted by one of the crew, carried Mr. Taylor up the ladder, and two of the crew took him into a second-class cabin, and placed him in a bunk. As soon as I had seen him placed in the bunk, I went to the boat to look for his effects. I found Mr. Pass at the ladder superintending the hoisting on board of Mr. Taylor's luggage. When I came back to the cabin, I found Mr. Sutherland, Mr. Black, the steward and second officer of the *Bombay* there, and I understood from them that the steward had turned Mr. Kunoma out of the cabin, and refused him a light. The steward said that he thought the deck was the proper place for the Custom House officers. The second officer said that he thought they were entitled to a cabin, and he gave the steward orders to give Mr. Kunoma a light and a cabin. Mr. Kunoma was walking backwards and forwards in the cabin in a very excited manner. Mr. Sutherland remarked, "These d—d Japanese are always making a row." This remark was, however, not addressed to Mr. Kunoma, and I do not think Mr. Sutherland had any idea that Mr. Kunoma understood him. But on the remark being made, Mr. Kunoma turned round, brought his face close to Mr. Sutherland and said in an excited manner: "why you speak God d——d Japanese?" Sutherland drew back, but he was followed by Mr. Kunoma, and Sutherland pushed him back telling him to mind his own business. Mr. Kunoma then turned round to me, and as far as I know calling me by my name he asked me: "You speak Japanese?" I told him, no, and that if he minded his own business he would not be interfered with. He then again turned round to Sutherland in the same excited manner, vociferating in Japanese. Sutherland then became also excited. I told Sutherland to take no notice of him. Wine was now ordered and all parties partook of it. I, for my part, had two small glasses, and I do not think any one had more. We then bid Mr. Taylor good-bye and started to return. But Mr. Kunoma tried to prevent Mr. Sutherland from going up the steps to the deck; Sutherland pushed him away. We went to the gangway, and here Mr. Sutherland and Mr. Black were again accosted by Kunoma, who tried to prevent them from going down the ladder. They pushed by him, but the disturbance on deck had called forth the captain, who came forward to ask what was the matter. I remarked to the captain that I thought that the Japanese had been drinking. Mr. Kunoma was standing on the last step of the ladder trying to get into the boat. But when I had got in, the boat was pushed of, and we went to the French Hatoba. Mr. Pass got out first and I second; I thought that Mr. Sutherland and Mr. Black were following, but when I had scrambled up the loose stones and arrived on the level of the Hatoba, I did not see him, and when I shouted I received no reply; so I said to Mr. Pass, They must have gone. I found the first gate shut, which rather surprised me, and I then went to the large gate. There I found Mr. Kunoma standing and was going to pass him when he stopped me and told me that I must wait. I asked him, Why? and he then told me in a very excited tone that I had insulted him on board. I asked him "I?" to which he answered: "No, not you, but your friend." At this moment Mr. Pass came up and pushed him away from the gate. He now got very angry, although I tried all I could to pacify him and told him who I was, but nothing made any impression on him; he continued his struggle with Mr. Pass for about 60 yards down the Bund. In the struggle Mr. Kunoma fell on the top of the Bund and Mr. Pass fell over him into the sea. Mr. Kunoma was at that time quite beside himself with rage: if he had attempted to arrest me I should certainly have resisted him on account of the state of mind in which he was. When Mr. Pass fell into the sea I did not know whether the tide was in or out, but on my endeavoring to get down to the sea some Japanese who were lurking about tried to induce me not to do so. When I came down to the sea, I found Mr. Pass lying on his back in about 2 feet of water and insensible. with difficulty I got him raised and brought to his senses. I tried to persuade the Japanese, who were there, to come and assist me, but they were unwilling to do so. When I had got Mr. Pass up on the Bund I found Mr. Kunoma, who now had got assistance in the shape of more Japanese. They told us that we must go with them to the Custom House, I tried to persuade them to allow me to take Mr. Pass home or to a doctor. They persisted, however, and I had to give in. So we went to the Custom House, where we were shown into an office and an officer was sent for who after some time made his appearance. Mr. Kunoma made his statement to this officer, but it was not taken down in writing. Mr. Fleury, an officer of the Custom House department, was fetched to him. I protested againstour detention and asked him tell the Japanese officer that if there was any charge against Mr. Pass, he could be prosecuted in the British Consulate. Mr. Fleury wrote down what I said, and communicated it to the Japanese officer, who sent us to the Police Station. There the Custom House officer and Mr. Kunoma made their statements to the Police Inspector, who disappeared, and another Police Officer came forward, to whom the statement were repeated. At this stage Sergeant Lockston was called and it was intimated to him that Mr. Pass should be locked up. I, however, protested against this, and after Mr. Pass had written down his name and address, adding that he was a British subject, we left the Station. I arrived at my house at 2 a.m. and laid a complaint before the British Consul later in the morning.

Enquiry was adjourned until this morning at 9 a.m.

IN THE FRENCH CONSULAR COURT.

Before EMILE KRAETZER, Esq., Acting French Consul;
and
Messrs. A. CONIL and E. PIQUET, assessors.

Friday, March 10, 1876.

Kanayama Kinchiro (carpenter), Iriyo Kohucho (mason), and Sasaki Kuyo (stone-cutter), *vs.* the Catholic Mission, as proprietors of the lot and house No. 84.

In this case the plaintiffs claimed from the defendants for extra work done at the building No. 84, the sum of 1,674 *yen* 52 *sen*.

Digitized by Google
Digitized by UNIVERSITY OF CALIFORNIA

Mr. Piquet, who had been appointed by the Court to survey the buildings and the work, handed in his report, and in conformity with the same the defendants were ordered to pay to plaintiffs the amount of 534 *yen* 48 *sen*; and the plaintiffs to finish the work within 30 days under a penalty of $10 for every day they are in arrear.

Defendants paid at once into Court the amount ordered.

ISOSAKI OTCHIKO and the girl O-ME *vs.* GEORGE MANUEL.

Defendant in this case, who is a Greek under French protection, living at No. 133, was charged with having forcibly dragged the girl O-me to his house, where she had formerly been residing, and there to have cut off a part of her hair.

Defendant did not appear. He was sentenced to pay a fine of $3, and $5 damages to the girl O-me, or in default, be imprisoned for five days.

IN H. B. M.'S SUPREME COURT FOR CHINA AND JAPAN.

ON APPEAL FROM HER MAJESTY'S COURT AT YEDO.

Shanghai. February 26, 1876.

WILLIAM H. DOYLE, HAYASHI TOBUEYIYEMON, and YOUKURA (plaintiffs), appellants; THOMAS BOTTOMLEY (defendant), respondent.

JUDGMENT.

It is quite clear that Vice-Consul Dohmen was right in admitting the parol evidence to explain the circumstances under which the words "I accept the substance of the above" were written, and what meaning was to be attached to them; and in doing so he in no way transgressed the rule, that parol evidence is inadmissable to vary a written contract. That the parties attached some meaning to these words is clear, for they were added advisedly, and if without meaning, were simply a useless addition.

Then what does the parol evidence amount to? If it is worthy of credit, it amounts to this: that the plaintiff Doyle sketched out an agreement; that he handed it to the defendant for his consideration; that the defendant did consider it, and signed it, and on taking it back to the plaintiff mentioned his wish that the date should be changed from the first day of June to the first day of May,—the signature so far as it bound the defendant was contemporaneous with the mention of the change he desired should be made when the agreement should be more formally drawn out, and, therefore, the signature must be considered as subject to this qualification; that he accepted the substance of the arrangement if the date were altered to the 1st of May,—and it is clear that the date was the only objection he had, and that it was an objection which the plaintiff Doyle and he discussed, - and that the result of its being made, and of the discussion that ensued on it, was, that at or without the suggestion of the plaintiff Doyle, but in his presence, the defendant added the words, "I accept the substance of the above," which, if they mean anything, mean, that there was a point, of perhaps comparative unimportance, not yet determined, but which was to be referred by the plaintiff to his partners.

If, then, the parol evidence establishes so much—and it appears to me that at the least it certainly does—then the signature, coupled with the words, is not a final and unconditional acceptance of the terms offered in the contract, but a simple acceptance of the substance of them,—barring the question of date from when the contract should commence, and in this sense is not a final contract upon which this action can be maintained, but a qualified acceptance of certain terms only, leaving a term unascertained and not agreed upon, and still to be decided on; and, therefore, it is not such a contract upon which such an action as the present will lie.

Under these circumstances, I consider that the judgment of the Vice-Consul is right, and I confirm it with costs, which, so far as the appeal is concerned, I fix at $25, exclusive of Court fees.

EDMUND HORNBY,
Chief Judge.

A circular issued by Messrs. Bavier, Frères, and Co., at Yokohama, states that on the 1st Jan. they would open a branch agency of their business at Paris, and that their friends, Messrs. F. Vogel and Co., of that city, on account of their increasing business with them, have taken an interest in the house.—*L. & C. Express.*

THE BRITISH MINISTER'S NOTIFICATION.

(Shanghai Courier.)

The recent Notification from Sir Harry Parkes suppressing the foreign-edited Japanese newspaper *Bankoku Shimbun* and making it a criminal offence for any British subject to publish a journal in the native language has, not unnaturally, created a great stir in Yokohama. The daily papers have lost no time in expressing their unbounded indignation at what they consider so arbitary and tyrannical a measure, and belabour the Minister soundly for taking so extreme an advantage of "the extraordinary and unconstitutional "powers conferred upon him by the Orders in Council." The *Japan Mail* adopts the opposite view, and reasons in favour of the justice and propriety of the step. Correspondents have plunged into the controversy, and the divergence or rather variety of their opinions adds to the interest of the discussion. For the question is a most interesting one; one indeed which affects our liberties as Englishmen no less than our exterritorial reghts and privileges as residents living under peculiar conditions in a foreign country. But it is also a question of many sides; let us look at it from every point of view, and strive to arrive at a just and unbiassed conclusion upon its merits.

The facts of the case are, we take it, briefly as follow. The Government of Japan, sharing a weakness with many European Governments which renders it dangerous to permit the existence of an entirely free press, frames a code of press-laws which, however desirable in themselves, are brought to bear upon the native journalists in a singularly irritating and vexatious manner. Fines, imprisonments and suspensions are lavishly bestowed in acknowledgment of any article which has had the honour of annoying the powers that be, and the editors appear to have grown restive under the infliction. An Englishman thereupon seizes the opportunity to establish a newspaper himself in the vernacular, which, enjoying the same protection as as other journals owned and edited by his countrymen, shall yet enable the Japanese to air the views and grievances which, published in a purely native newspaper, would subject the editor to legal penalties. The Government watch the phenomenon with nervousness and perturbation, and at last lay the matter before the representative of England, who with one stroke of his pen, crushes Mr. Black's attempt and renders it a criminal offence for any British subject to follow his example. It is not pretended, so far as we know, that the newspaper in question was a source of mischief. We never met with it ourselves, but no instances have been adduced in which it had betrayed a seditious or injurious tendency. It may have been of the highest class, calculated to instruct and enlighten its readers, and even to inculcate in them sentiments of loyalty towards their Government. As far as has been represented, it was at least innocent. But the authorities saw in it a grave danger. It was not a direct infraction, but it might involve an ingenious and, to them, fatal evasion of the law, and they appealed to the British Minister to protect them from so indisputable a connivance at civil misdemeanour. As far as they were concerned, they acted logically. Their demand was a fair one. We do not now go into the broad, outlying question of whether their press-laws were judiciously framed or wisely administered. The matter was simply: shall a British subject be be allowed to connive at a defiance of existing regulations, and that in a manner prejudicial to the interests of the country? and Sir Harry Parkes responded to their application with characteristic promptitude and good-will.

But then comes another view. How far does Sir Harry Parkes's remedy meet the case? It is a violent one; and there are some medicines which in curing one disease may throw the patient into a still sorer plight. The terms of the Notification are sweeping, all-inclusive. In order to prevent the Government from being annoyed or endangered by an irresponsible agent, an embargo is laid upon an entire range of literature, and possible friends are strangled with the same cord as a hypothetically-existing foe. [It is, or has been, the custom in China for an English newspaper to publish a Chinese issue; supposing it suited the Government that so valuable and so honest an ally as the *Japan Mail* should issue a Japanese edition of its print, with a view to instructing the officials and the populace in those matters most calculated to advance and refine their thoughts and to help on their education—how then?]* Where is the line to be drawn? A newspaper may be weekly or monthly: such are, presumably, the missionary periodicals published in Japanese: are all these to be suppressed? Yet the wording of the Edict admits of no compromise: Any British subject who shall, etc. etc., print or publish a newspaper in the Japanese language, shall be guiltly of an offence. If we are

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

justified in thus extending its operation it will but give rise to another 'evasion' of the law, for periodicals now published by Englishmen will simply be transferred to nominal American or Continental proprietors, and it remains to be seen whether the representatives of other Western Powers are inclined to adopt, supposing them to have the prerogative, the measure of their British colleague. Again, it has been urged that an Englishman taking advantage of his position as editor of a Japanese newspaper to indite seditious articles could be rendered amenable to his own authorities: but, as a contemporary points out, such an arrangement would entail, eventually, inextricable confusion of Japanese and English law. One almost wonders that the Minister did not draw up a code of Press-laws specially adapted to the class of journalism now under his ban; the Government evidently has sufficient confidence in him to rely upon his impartial administration! The dilemma is a nice one. Can we throw any light upon it by the analogy of our own position in China? Let us see.

The *Shen-pao* is now a paper of considerable circulation and influence. It is read by thousands in the provinces and at Peking. It has not scrupled to attack existing abuses, and to accuse local officials, of some standing, of serious faults. An attempt to stop its mouth, similar to that we are now considering, was once made: but the editor, as a British subject, was protected by his Consul. It is now, we believe, respected more or less by all classes; and why? Simply because it is conducted in a responsible and judicious manner: and this cannot be said of any Chinese newspaper which has yet appeared, conducted by a native. We cannot help thinking, therefore, that the Japanese Government has adopted a shortsighted policy in thus incontinently gagging the Anglo-Japanese press. We believe that as a matter of fact, the authorities would have far less to fear from a paper edited by an Englishman of culture and education, who could respect the weaknesses and pet traditions of the people while he had their interest at heart, than from the crude outpourings of native writers, whose opinions might act dangerously upon a class of readers unaccustomed to the expression of free thought. Of course the plea of a man in the position of Mr. Black that the English press is free, and therefore he is at liberty to publish an English newspaper in the Japanese language, is simply stupid. We only argue from the standpoint of expediency. We fully allow the force of all representations in favour of the Edict. We do not forget that England is almost the only nation in Europe that can afford an unbridled press. France, Germany, Russia, Spain—all these countries dread the influence of irresponsible writers either because their respective Governments are not sufficiently strong or because their respective peoples are not sufficiently accustomed to liberty to use it wisely and well: why then should we quarrel with Japan on account of similar timidity? For, for her there is more excuse. The subterfuge resorted to, we grant, was analogous to that of a foreigner in Shanghai who would ship goods for a Chinaman in order to help him to evade the payment of certain unpopular taxes to the Chinese Government, or lend him his name to import goods forbidden to be imported by a native. But none the less have the Mikado's advisers acted unwisely and precipitately. They might have gained more had they not done so much; and we cannot resist the conclusion that the Edict of Sir Harry Parkes, animated though it was by a sense of justice and of right, will prove a far more potent remedy than is compatible with the cure it is intended to effect.

* [In republishing this article the *Japan Herald* has thought proper to suppress by the aid of asterisks a passage which the reader will find restored to its context and placed, for distinction sake, within brackets. No excuse for its suppression is stated, but we can hardly imagine that the writer will be gratified to find that an important clause of his argument is struck out for no better reason than that it involved a compliment to the *Japan Mail*.

This is by no means the first case of the kind.—ED. *J. W. M.*]

THE JAPANESE PRESS.

(Hiogo News.)

To those who really take an interest in the political development of this country, few things among the current literature of the day are better worth reading than the articles which appear in the columns of the native newspapers. At present nearly all the editorial writing worthy of attention seems to be confined to the Capital—a consequence, presumably, of the centralising policy which circumstances have forced upon the present Government—and the *Japan Mail* has been doing good service for some time past, to those who care to study the people they live amongst, by the many translations of political articles which it continues to publish. Many of these articles, as might have been expected, contain statements and arguments which shew that the writers have a great deal to learn. The assumed facts are often not facts at all, the arguments based upon them could be knocked down like a house of cards, but many of the articles are not only well written, but shew an insight into the causes which produce political results which is most gratifying to those who are aware that the mental stamina of a people can perhaps be most easily gauged by the measure of intellectual power which is found distributed outside of official circles and influence. The translations in the *Mail* of the 19th ultimo are very fair specimens of what we mean. There is one from the *Hochi Shimbun* on that sore subject to Japanese pride—extraterritoriality. The writer quite sees that victories which vindicate Japanese power over Formosans and Coreans are no sufficient satisfaction for powerlessness over Western nations, as the former are at present inferior races, which the latter are not; and the argument of the *Hochi* is quite a maintainable one—that if foreigners come here for their own purposes they ought to be subjected to Japanese laws, which the writer does not deny might be better without allowing that the goodness of his argument is injured thereby, as Japan is a sovereign State. But he weakens his case by a number of absurd statements which he ought to be better informed than to make. "However unjustly foreigners may treat our people, we cannot punish them as they deserve." This is the sore point—that Japan does not do the punishing. But as to the actual fact of the punishing the *Hochi* makes the most wild and absurd statements. "..... .....whenever any of our people commit an act of injustice against foreigners they are severely punished for it. On the whole, foreigners certainly escape from the punishment of their offences, because the Japanese cannot prosecute them as they could wish." What the wishes of the Japanese may be as to the conduct of any suit, we do not pretend to know, but every foreigner resident in Japan knows how gross are the other misrepresentations contained in the above quotation. So gross indeed that while at the Consular Courts facilities are given to Japanese suitors which are not accorded to foreigners amongst themselves, it is the firm opinion of a large proportion of foreign residents that the notorious impossibility of getting redress by any foreigner at a Japanese Court is part of a plan to create a feeling among foreigners that if they were placed altogether under native jurisdiction they might perhaps have some chance of obtaining redress which is practically denied to them now. It cannot possibly tend to "the maintenance of friendly relations" that such writing as this should circulate amongst the Japanese, and all probability be believed by many of them, while no paper of the *Bankoku Shimbun* class can exist to lay any denial of such mischievous statements before the Japanese public—a trifling matter, no doubt unworthy the attention of a British Minister.

The next article is one on Japanese social and trading morality, but three which follow are of a different stamp and have an important political bearing. The subject is the system which obtains in this country of adopting heirs, and is of much importance from its relation to the *Samurai* question. Whenever a class has succeeded in obtaining hereditary privileges which enable it to live without working, there is a strong tendency of families in that class to die out for want of natural heirs. Statistics shew that this has been the case in England, for reasons which have no special local application; we should therefore expect to see the same law operative in Japan, and the articles before us bear evidence of the fact. The privileges of the *Samurai* caste are hereditary, and the condition attached to its position of worldly ease was military service, but it is stated that the only method of keeping up the strength of the class was by permitting the system of adopting a male heir, and therefore that system was under the Shogunate legalised, even the allowed practice of concubinage being found insufficient to meet the demand. In order that our readers may judge for themselves, we have reproduced the articles elsewhere. The *Nichi Nichi Shimbun* opens the argument, and from it we learn that the system flourished most under the Ashikaga Shoguns, and appears to have caused the Tokugawa family alarm after they got possession of the Shogunate, as they passed a law limiting the succession to estates and pensions to the true male heir only, who must have reached the age of seventeen years to enable him to inherit; but when many families became extinct under this system the opposition to it became so strong that theTokugawa law had to be repealed. A lively picture is then drawn of the evils produced by the law of entail, which

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

might have been written by any modern English satirist, so remarkably alike are the results in England and Japan. The article ends by stating that as since the Restoration revenues can be divided amongst children and females can inherit pensions, the incentive to adoption is less and that therefore there need be the less objection to abolish it by law altogether. The *Choya Shimbun* replies on the other side, pointing out the benefits to be obtained by the system of adoption—which may be all true enough, but which, while of certain benefit to particular families, are by no means necessarily benefits to the State. The *Hochi Shimbun* follows with an article in a judicial tone, exposing the arguments of the *Choya Shimbun* and giving a strong summing-up in favor of the abolition of adoption, arguing that the lack of offspring is a natural misfortune which shows that nature thinks it best to terminate the existence of a family so circumstanced, and denying that any sufficient case has been made out for interfering with the action of natural laws. The last paragraph is especially good.

The protection of neither families, industries nor anything else from the action of natural laws, however pleasant for the things protected, is good for the State, and these arguments directed from a scientific point of view against those barnacles, the *Samurai*, seem to shew that the Japanese newspapers are beginning to awake to the fact that in their power of spreading intelligence and education they have a weapon ready to their hands more powerful for good than any exposure, however eloquent, of official corruption, and a weapon which it will be far less easy for any official tyranny to deprive them of.

Shipping Intelligence.

ARRIVALS.

Mar. 6, *Tanais*, French steamer, Reynier, 1,626, from Hongkong Feb. 28, Mails and General, to M. M. Co.

Mar. 7, *Truth*, British barque, Evans, 329, from Samarang, bound for San Francisco. Sugar.

Mar. 7, *Columbian*, British steamer, 2,500, from Hongkong, General, to P. & O. Co.

Mar. 7, *Aarhuus*, Danish 3-masted schooner, Solling, 256, from Takao, Feb. 14, Sugar, to F. Knoblauch.

Mar. 7, *Oceanic*, British steamer, Parcell. 3,720, from Hongkong. Mar. 1, Mails and General, to O. & O. Co.

Mar. 8, *Sösterk*, Norwegian barque, Alm, 389, from Taiwanfoo, Feb. 6, Sugar.

Mar. 8, *Genkai Maru*, Japanese steamer, Conner, from Shanghai and ports, Mar. 1, Mails and General, to M. B. Co.

Mar. 9, *Malacca*, British steamer, Bernard, 1,683, from Hongkong, Mar. 1, Mails and General, to P. & O. Co.

Mar. 10, *Urio Maru*, Japanese steamer, from Yokaichi, province of Ise, General, to M. B. Co.

Mar. 11, *Belgic*, British steamer, Metcalfe, 2,950, from San Francisco, Feb. 16, Mails and General, to O. & O, Co.

DEPARTURES.

Mar. 5, *Cyclop*, German gun-boat, Captain Reiche, 460, for Formosa.
despatched by Wilkin and Robison.

Mar. 6, *Nightingale*, American ship, Palmer, 722, for Hongkong, General, despatched by J. D. Carroll & Co.

Mar. 7, *Sunda*, British steamer, Edmond, 1,682, for Hongkong, Mails and General, despatched by P. & O. Co.

Mar. 8, *Hiroshima Maru*, Japanese steamer, Furber, 1,870, for Shanghai and ports, Mails and General, despatched by M. B. Co.

REPORTS.

The British barque *Truth* from Samarang, bound to San Francisco, after leaving Port experienced variable winds with rain through the Java Sea. Passing into the Pacific through Dampier Strait, met with light winds and calms up to 6° North, thence to 26° N. carried S.E. trades, afterwards variable winds veering from N.W. to N.E., till the 24th of February, when in 34° N. and 146° East the weather became threatening and the Barometer began to fall with a northerly wind and a heavy confused sea. About 11 30 a.m., the bar. stood at 22-40, sky very threatning and the wind from the N.W. blowing very hard. Shortly after, the captain observed a small black cloud coming down from the N.N.W., and in a few minutes the vessel was struck by a hurricane, throwing her on her beam ends and rendering her completely helpless. The captain in order to lighten the ship cut away the mizen mast, with everything connected with it, but finding that insufficient, had to cut away the main mast also, after which she righted again. The water in the mean time gained acess to the hold through the quarter hatch, which the sea had lifted off, and through bolt holes in the side, while nearly all the provisions were damaged by water getting into the cabin. For two days after the accident the captain kept the vessel's head towards her port of destination, but the wind shifting to the Eastward, and provisions likely to run short beside the ship making water, he resolved to make for this port. After considerable difficulty, there being only the foremast standing, the *Truth* got close up to Cape Sigami, on the afternoon of the 6th, when by the kindness of the captain of a Japanese man-of-war whose vessel passed near them, a messenger was sent to Yokohama to procure the assistance of a tug steamer, by which she was towed up here and anchored safely on the morning of the 7th. From the quantity of water that must have got into the hold it is presumed that a considerable quantity of the cargo is damaged.

The Steamship *Malacca* reports. From Hongkong to Turnabout experienced strong monsoon with high sea and dull overcast weather: hence to Chikakoff, moderate gale from N.E to S.E. with high confused sea, thick weather and rain. Chikakoff to Osima strong N.E. breeze and high sea. Osima to Rock Island moderate gale from W.N.W. Rock Island to Yokohama steady breeze and fine. Passed Rock Island at — p.m., arrived Yokohama 7 a.m.

March 2, 0.15 p.m. exchanged colors with French Man-of-war anchored in Foosang Bay. March 4, noon Lat: 26° 52' N. Long: 122° 24' E. passed and exchanged colors with M.M. s.s. *Menzaleh*, bound S.W.

March 8.—10' E. Osima; passed s.s. *Sunda*, bound S.W.

The O. & O. Company's s.s. *Belgic* reports: Left San Francisco 0.12 Wednesday Feb 16th. Moderate fine weather thence to the 21st. Lat. 38.29 N. and 149.36 W. strong gale: thence to March 2nd, moderate weather with occasional fog. March 3rd severe squalls and rain. March 4th to 8th strong weather and variable gales, generally N.W. to S.S.W.; 8th to 10th fine. Passed Cape King at 3.30 p.m. Anchored off Yokohama Light-ship at 9 45 p.m.

"Berkeley, Sept 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

COMMERCIAL INTELLIGENCE.

Cotton Fabrics and Yarns.—We have to report an improved demand for these goods. *Twist* 16/24 and 28/32 are in good demand and saleable at higher rates, though 38/42 do not share in the improvement. There is greater enquiry for *Grey Shirtings* at previous rates. *Velvets* continue saleable at quotations. *T. Cloths* and *Drills* are without change and no business can be reported in *Taffachelass*. The arrest of the decline may no doubt be attributed to the falling rates of exchange, though these, for the moment, exhibit greater firmness.

Grey Shirtings:—					White Shirtings:—		
7 lbs.	38½ yds.	39 in.	per pce.	$1.90 to $2.20	60 to 64 reed 40 yds.	35 in. nom.	per pce. 2.10 to 2.30

No. 28 to 32	per picul	$34 00 to 40.00	Reverse Twist 16-24 „ $33.00 nom.

Woollens.—Owing to the trifling advance asked by importers to cover the continuing loss on remittances, business has apparently come to an utter standstill which is shared by *Mousselines de Laine*. Enquiry for good military cloth on the part of the War Department has resulted in some extensive transactions, which, however, have been passed at very low rates.

Plain Orleans	40—42 yds.	32 in.	6 50 to 8.00	Figured Mousseline de Laine	30 yds.	30 in.	0 25 to 0.28
Figured Orleans	29—30 yds.	31 in.	4 75 to 5.25	Multicolored „	20 yds.	30 in.	0.35 to 0.40

Plain Mousseline de Laine	—30 yds.	30 in.	0.19 to 0.20				

Sugar.—Two vessels have arrived since the 4th instant bringing further accessions to stocks, and other arrivals are expected. Prices have sustained a fall and the market closes dull at $3.50 to $3.55, for bags, for *Formosa*. In *Canton* descriptions trade is without any noticeable feature and prices are easier.

Kerosene Oil is firmly held for the quoted rate.

Sugar:—Formosa in bag	per picul	3.50 to 3.55	China No 5 Kong-fun	per picul	4.00 to 4.60

„ No. 3 Ke-pak	„	5.20 to 5 80	Japan Rice	„			
„ No. 4 Kook-fah	„	4.80 to 5 20	Kerosine Oil	per case	2 70		

Silk.—Our fortnightly report dated 10th inst. was to the following effect:

Since the 23rd ultimo, arrivals have been 213 bales and settlements 250 bales of Hanks and 350 of Oshius, leaving a stock of about 200 bales.

Business had been dragging on slowly, when, at the commencement of this month, large purchases were made by a few buyers especially of Oshiu silks, which enabled sellers to gain an advance of $10 to $20; on the other hand exchange was steadily declining, and the result is a somewhat lower cost than quoted in our last.

A parcel of the Nihonmatz (Oshiu) filature is reported to have been bought at from $650 to $670 for New York.

The shipments of this fortnight are 526 bales, making the total export, since 1st July, 11,341 bales against 8,837 last year for the corresponding period.

		At Exchange 3s. 10 in London.	*At Exchange 4.80 at 6 m.s. in Lyons.*

„ Good	...$500 to 540 17s.	6d. to 18s.	11d. frs. 48 to 52

Since the above was written arrivals are 10 bales and deliveries 49 piculs.

Tea.—The present season is drawing rapidly to a close, and there is therefore little of interest to report. Since the departure of the last mail, the settlements made amount only to 1,600 piculs. These consist, for the most part, of goods of inferior grades and exhibit a slight decline in values. Leaf with any pretension to quality is, however, scarce and fully maintains its value. We quote

Common	$14.00 to 16.00	Fine	$31 to 34
Good Common	17.00 to 19 00	Finest	35 to 38
Medium	22.00 to 24.00	Choice	40 upwards.
Good Medium	26.00 to 29 00		

The total export fram Yokohama from 1st May to date is 18,181,339 lbs. against 15,807,216 lbs. to the same date last season.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 12.] YOKOHAMA, SATURDAY, MARCH 18, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

At No. 222 B., Bluff, Yokohama, March 18th, the wife of Capt. PAUL A. DITHLEFSEN, of a daughter.

Notes of the Week.

It is passing strange that the text of the Corean Treaty has not been published, and there must be reasons for this of which the world—this little world, that is—knows and possibly suspects nothing: or perhaps, the publication will be delayed until the Treaty is formally ratified. Meanwhile the question arises: Is not Corea admittedly a tributary of China, and, if so, can she conclude a treaty? If so, too, how can any recognition of her independence be demanded on the one side and agreed to on the other? Her independence of Japan is intelligible enough; but surely she owes fealty to China. She may perhaps under these conditions be capable of making contracts or agreements, but hardly of making treaties. It is difficult to understand the exact relations in which she stands to China. Mr. Mori certainly went to Peking with a view of finding out in what light the Chinese Cabinet would regard the intention of his Government to send over a mission for the purpose of making certain overtures and demanding certain explanations. The chances are that he was instructed to ask whether China would justify or assume the responsibility of the acts of Corea. The Chinese are wily people. If the case be one of the possession of territory—as in the Formosa matter—they claim it. But if it is one of responsibility for the acts of those whom they had previously called their subjects, they disclaim it. "Your sixpence has no head, Sir." "Yours has no tail, Sir"—were the mutual recriminations of Box and Cox.

Apart from this question of the independence of Corea in respect of China, we think the view that Japan has failed in her late negotiations because she has conceded the independence of Corea, is singularly and perversely idle. What was the former relationship, or tributaryship, so to speak? It was a nominal thing on one side, wholly without tangible reality, yielding no revenue and certainly no honour, glory or prestige. It was an old fossil aureole hanging round the brows of Japan, chafing rather than adorning them. It meant nothing: it did nothing; and the only purpose it served was to excite insulting messages from Corea, which, however ridiculous, could hardly be taken serious notice of until the spirit which dictated them was translated into overt acts like that of the recent outrage at Kokwa. And, surely, in these more modern times a relation of this nature is absurd and out of date. The Japanese were quite wise to discard it as a foundationless and foolish thing. Rather in the spirit of the nineteenth century—with which, laugh at some of its exhibitions as we may, they have assuredly become imbued, though they may not, can not, yet have grasped all its power—they have said, "We will acknowledge your independence. We do not wish to keep up any useless fictions. Instead of these old relations which have lost all life and meaning, let us establish some new relations which will benefit us both. It is ridiculous for us to be standing on either side of a sea shaking our fists at each other. Let us come into a rational relationship, bring our respective subjects into contact, and see whether we cannot benefit each other by a trade which will certainly be mutually advantageous. The old trade as carried on by our people at Fusankai was—we admit it now that we have heard the particulars—a complete swindle, so far as completeness can be predicated of anything so feeble. Let us put this trade on a new footing, open two more ports, and behave on both sides like rational creatures." This seems to us the very essence of common sense. We have never yet soarred to those lofty heights at which everything done by the Japanese seems foolish. To our humble faculties they seem to have the makings of a sensible people, who are only in danger of going wrong by reason of a strong dash of vanity, which is certainly a dangerous feature in the national character. But to upbraid them for taking a practical, sensible view of a question on which this vanity might easily have misled them, seems to us silly as well as ungracious. There is, of course, no reason why a man should not be a Philistine, or why the Philistines should not have a congenial and sympathetic organ. But the blame of wisdom and the praise of folly are correlatives.

A notification is reported to have been issued by the Prime Minister abolishing the *Ichi-roku* holidays, and proclaiming that for the future the first day of the week shall be regarded as taking their place. Our readers at a distance need to be informed that the *Ichi-roku* days are those which have a 1 or 6 in their ordinal numbers. Thus the 1st, 6th, 11th, 16th, 21st, 26th and 31st of the month are holidays on which business at the public departments is suspended. It is obvious that this arrangement conflicts with the regular practice of the Christian nations, whose subjects or citizens in the service of the Japanese Government claim the Sunday as a day of rest—at least from work. It will readily be inferred by the people here or at home whom, for want of a better term, we must call the religious world, that this setting apart of the first day of the week as a day of rest, or rather, suspension of business in the Public Departments, is a foreshadowing of a further movement in favour of Christianity. Nor is it wholly without some such bearing. For, it is quite certain that the attitude of the Government and of a very large number of the people of this country towards Christianity has undergone a remarkable change during the past three or four years. Certainly they stand in no fear of it, and many think that in its adoption lies the only true hope for the future of the country. The Government, which had long and not unnaturally held it in such mortal terror, now pays little attention to the proceedings of those whose

avocation it is to inculcate its doctrines and principles, and very sensibly places no bar to the diffusion of translations of the Scriptures. There is a philosophical school, so to speak, which, while conceding the beauty of the Christian ethics, wholly rejects the Christian history as unveracious, which thinks that the ethics of Sakya Mouni are as good as those of the Gospels, and regards the superiority of the Christian races as the result of causes entirely unconnected with their faith. It is not uninstructive, too, that in conversing on this subject the adherents of this school politely but frankly say: "You foreigners cannot surely claim that the Bible exercises much influence over you. You are commanded to be temperate, sober, and chaste; to pay every man his due; to bear no malice or false witness; not to slander a neighbour; to do to others what you would have others do to you, and, *à fortiori*, not to do to others what you would not have them do to you; you are commanded not to curse or swear; you are enjoined to be not only exact, but punctual, in the discharge of all money obligations; to do justice, to love mercy and to walk humbly. Many, if not most of you fly straight in the face of these commands; so that, if you are superior to us, which, speaking without prejudice, we admit that you are—it does not arise from the special obedience you pay to your religion or the ethical code attached to it."*

It requires a large knowledge of Japanese and some powers as a casuist, to controvert this plausible position.

The probable causes for the notification alluded to are twofold. The first; the convenience of the Public Departments. The second; an approximation little by little to the customs, habits and observances of the western nations, in virtue of which the plea for jurisdiction over foreigners may be urged and ultimately obtained. It is curious to observe how this desire is moving the nation to strain every muscle of its organization in the desired direction. One is reminded of Lamarck's theory of the giraffe getting its long neck from the constant strain after the sweeter leaves of the upper branches. Of course it is in virtue of improvement that this will ultimately be obtained—improvement, however, which must be vital and organic, not merely external, and which cannot be acquired in a day or a year. The aim is admirable and should be encouraged in every way and by every one. But it should also be said that the reality of the fitness for jurisdiction will be, and should be, scrutinised in the most searching manner, so that every effort made in this direction should as real and sound and solid as possible.

We have not the advantage of reading the *Hongkong Daily Press*, but an extract from its correspondence published here this evening convinces us that it exercises a very lenient censorate upon the matter sent to it from abroad. The extract we refer to relates to the recent notification of Sir Harry Parkes. How any journal can put matter like this into type is to us wholly unintelligible, and we are really suprised to find that any section of the China Press, which, so far as we know and remember, has been both able and reputable, should deface its pages with stuff which tends seriously to impair the character of the Press of the colony generally. Here they would excite no astonishment, whatever other emotion they might arouse. But in China we should have imagined that they would bring some practical protests from subscribers unaccustomed to such vulgar and self-condemnatory trash.

A cap for him whom it may fit.

Corn. This is some fellow,
Who, having been prais'd for bluntness, doth affect
A saucy roughness; and constrains the garb,
Quite from his nature: He cannot flatter, he!—
An honest mind and plain,—he must speak truth:
An they will take it, so: if not, he's plain.
These kind of knaves I know, which in this plainness
Harbour more craft, and more corrupter ends,
Than twenty silly ducking observants,
That stretch their duties nicely.

* This is the substance of a remark made to us by a Japanese who is now exercising greater influence over the mind of the rising generation in this country than any other man.

There appears to be so much dispute about the true meaning of the notification from the Home Office on the subject of the Shooting Regulations, that no opinion upon it worth expressing can yet be formed. But it would seem to point to the waiving of all objections to foreigners shooting within treaty limits.

It is reported that Mr. Goble, who is understood to be now a missionary in this country unconnected with any of the parent missionary institutions in America, has invented a system of printing for the blind of Japan. If this be so, he deserves well of the nation.

From the "Japan Mail Daily Advertiser."

A sad accident occurred on the British ship *Lothair* which sailed hence for New York on the 29th of September last. On the 10th November, Brown, the Chief officer, and two seamen—an Englishman and a Swede—fell from the main top-sail yard during a heavy southerly gale. The sea running did not permit of any attempt being made to save them. The position of the ship at the time is not given.

The Japanese "Army and Navy Gazette" made its first appearance yesterday. It is named *Nai-zai-hegi Shimbun*.

The *Hochi* has reason to believe that ex-*Sadaijin* Shimadzu Saburô will shortly return to his native province.

A fire destroyed twenty-five houses at Shirakawa in Iwaki on the 11th instant.

The ship *Leicester* has accepted a rice charter although her cargo of coal is not yet discharged. Several others charters are offering for eligible vessels.

On enquiry from the Japanese Police this morning, we are informed that no case of burglary has been reported as occurring during the past night.

H. M. S. *Sylvia* will leave Yokohama for Corea to-morrow.

The editor of the *Choga Shimbun*, has been condemned to 12 months imprisonment for having published a correspondents' letter of an offensive character.

Erratum.—In an article on Corea in the last number of the *Japan Weekly Mail*, it is stated that $130,000 worth of gold-dust is sent yearly from that country as tribute to Pekin. But it is not so. The gold goes in the ordinary course of trade, and not as tribute.

The recent murder of the child who was sent by his employer to a Bank with money, formed for three days the exciting subject of a highly popular sensational play at one of the theatres in the native town. The various localities—the Exchange Bank, rice-box &c.—were represented with realistic accuracy, the strangling being given with all its ghastly details. The piece promised a successful run, but after the third night the authorities very wisely prohibited its performance.

The house of Mr. C. D. Moss, on lot No. 220, Bluff, was entered by thieves at about nine o'clock on Sunday night, who took away a sum of $575 in money, a quantity of other articles of clothing, jewellery &c. and several account books. The greater portion of the money has since been recovered.

The following notification refers to the forthcoming substitution of the European day of rest for the *ichi-roku* hitherto observed. It is not improbable, we conceive, that this change would have been made earlier but for the fear that it might be assumed as a recognition of a Christian holiday. The change will be hailed by all foreigners.

[Notification 27.]

(To *In*, *Sho*, *Shi*, *Cho*, *Fu*, and *Ken*.)

It is hereby notified that up to the present time the 1st and 6th days have been observed in the Government offices as the days of rest. But, from the 1st of April next, all Government offices will be closed on Sunday and will be open only until noon on Saturday.

Sanjô Saneyoshi,
Prime Minister.

March, 12th 1876.

The publication of the *Dômô Shimbun*, or boy's newspaper, a new journal, will be begun in Yedo on the 15th instant.

The *Nichi Nichi* has heard that it is intended to make Loo Choo henceforth a military station. A number of carpenters have been dispatched thither for the purpose of constructing barracks for the troops.

The *Hochi Shimbun* in noticing the recent importation of asses into this country from China, observes that these animals have found favour among the officials, who use them for purposes of draught in small pony carriages.

Two cases of punishment of the refractory editors of the *Saifu* and *Hioron Shimbun* are noticed in the native newspapers.

A certain Hirata of Okitama *ken* has returned from Germany, where he has been undergoing a course of education. The *Nichi Nichi* states that he has received the diploma of Doctor.

The Yokohama *Daily News* relates that the employer of the youth who was recently murdered has given the parents $25 for the expenses of his interment, and a further sum of 200 *yen* as compensation for the loss of his services.

We have authority for stating that arrangements have been concluded with H. M. Postmaster-General for the conveyance of the mails between Yokohama and Shanghai by the Steamships of the Peninsular and Oriental Company now running on that line.

A heavy list of the minor casualties which usually result from a gale of wind in this lightly-built settlement culminated in the capsize of the English brigantine *Mary Jane* when the storm was at its height at about half-past nine o'clock yesterday morning. Three men were on board when the event occurred: two of these were swimmers and found shelter on the neighbouring shipping; the other sought refuge in the rigging. An attempt to rescue him having been unsuccessfully made by a steam launch, Mr. Center, Agent of the P. M. S. S. Company, summoned his crew to man the whaleboat and with great courage and humanity proceeded in it to the seaman's relief, which with some difficulty was effected. But the return was by no means so easy owing to the violence of the storm, and it was only with the help of Messrs. Whitfield & Dowson's steam launch that they were able to reach the shore. The rescue was witnessed by a large number of spectators, one of whom has sent the sum of $30 to the crew in substantial recognition of their conduct. The *Mary Jane* lies on her side, apparently uninjured, and will no doubt be promptly restored to her position. There can be little doubt that the gale blew straight from its quarter. There were no indications of a cyclone.

There will be a celebration at the temple of Kobô Daishi, the inventor of the Japanese alphabet, at Kawasaki, on the opening of the shrine on the 5th May next, which may be expected to attract many visitors from the Capital and Yokohama.

The *Hochi Shimbun* estimates the recent export of rice as amounting to 40,000 piculs. A further similar quantity will soon be ready for shipment.

According to the *Hochi Shimbun* the Osaka and Kioto Railway is nearly ready and will very shortly be opened for traffic.

The Minister of the Interior will shortly visit Kiôto. There is a considerable number of troops quartered there, and the aspect of matters is thought by the *Hochi Shimbun* to be far from satisfactory.

A temple is to be erected to Taiko Sama in Kiôto on the former site of the Daibutz. It will be called Toyokuni.

In the province of Tosa, we read in the *Hioron Shimbun*, the two parties *Riushisha* and *Seikensha* have agreed to sink their differences and to join forces for their common benefit. It is also rumoured that Shimadzu Saburô and Saigo Kichinosuke show some evidence of a *rapprochement* in sentiment.

An interesting paper on the Bonin Islands was read at the Meeting of the Asiatic Society held at the Grand Hotel last evening by Russell Robertson Esq. The writer gave an account of the early history of the group, tracing it down to the present times. There was a large attendance.

The deliberations of the *Chihokuan Kuaigi* will be begun earlier in the present year than in 1875. The subjects for discussion are now said to be under consideration.

The telegraph on the Tokaido has been injured by the late heavy gale and is now under repair. We read in the *Yokohama Daily News* that more than twenty native houses were overthrown by the force of the wind: no loss of life, however, is reported.

A person named Kiso Gentaro has been arrested at Kioto on suspicion of being concerned in exciting an insurrectionary movement.

A notification from the Home Department orders the cases of foreigners arrested by the native police for refusing to abstain from shooting to be referred to the *Gaimusho*.

The *Hioron Shimbun* appears to be blessed with an inexhaustible preserve of writers willing to swell the records of the new martyrology. Two more of its editors have, we observe, been placed under police *surveillance*.

The Captain of the barque *Truth*, on arrival here, reported having seen two wrecks on Gough's Island, February 12th, one of them apparently having been but recently stranded. It is not possible that this should be the *Nettie Merryman* so long overdue from New York?

At about 8 o'clock last evening one of the residents at the Temperance Hall observed a person about to leave the house whose appearance was unknown to him, and suspecting some thing to be wrong, stopped him. On being examined, a coat and various other articles, which he was unable satisfactorily to account for, were found concealed on his person, and Mr. Clayton, Manager of the Hall, promptly handed him over to the police.

Notwithstanding the repressive law still in force there are symptoms of a fresh outbreak of the rabbit mania. The *Hochi Shimbun* sees indications of the coming fashion, and notes the sale of certain valuable English varieties "with fine eyes" at 300 *yen* each.

Over three hundred cases of exhibits have been sent to the Philadelphia Centennial Exhibition. They are said to weigh in all about 1,600 tons.

By a notification issued by the Prime Minister it is intimated that henceforth all documents prepared in the public offices should be written with the usual Indian ink. European ink may only be employed when foreign paper is in use.

Hitherto the Tokio Exhibition has been opened both on Sunday and the native *ichi-roku*. It is now intended to keep it open for sixty days from the 15th instant.

Assuming the population of the Empire to reach thirty three and a-half millions, the *Heiji Shimbun* computes the proportion of the army, which numbers 34,760 men, to the total population, to be as one in nine hundred.

Oka, editor of the *Hochi Shimbun*, has been condemned to a fine of 300 *yen* and eighteen months' imprisonment for having published an article which has been construed to be a slander of the Mikado. Two month's imprisonment has been awarded to a correspondent of the same journal. The editor of the *Saifu Shimbun* has been sent to prison for two months, and ordered to pay a fine of 20 *yen*.

Sir H. S. Parkes K. C. B. and Lady Parkes are among the passengers by the mail steamer *Menzaleh* which arrived this morning from Hong Kong.

It is announced that Okubo, Minister for the Home Department, has resolved to yield up the pension he has enjoyed in consideration of his services. It amounted to the equivalent of 450 *koku* of rice annually.

THE YOKOSKA ARSENAL.

THE retirement of M. L. Verny from the Superintendency of the Arsenal of Yokoska presents an opportunity of giving a brief history of that establishment, and recording the services it has rendered to Japanese and foreign navigation.

In the year 1864 the steam fleet of the Tycoon was in its infancy, and consisted of a few vessels which had been bought from foreign merchants and armed in Japan. When these vessels required repairing they had to be sent to Nagasaki, where the Japanese Government had established iron works of a certain importance under the direction of Dutch engineers. At this time the government was already in possession of a large quantity of machinery of all descriptions which had been purchased from time to time here and in Europe without definite plan or method, and which lay scattered in extreme confusion in its storehouses. In order to make use of this machinery the services had been engaged of a young officer retired from the French Navy, who built at the junction of two creeks running into the harbour of Yokohama, some extensive workshops which subsequently became dependencies of the Arsenal of Yokoska. As yet, however, no dry dock or slip was to be found in Japan, and the Tycoon's Government, foreseeing that the future growth of the Navy involved the creation of a Dockyard and Arsenal, communicated their views on the subject to the French Minister, Mr. L. Roches, in agreement with whom Admiral Jaurès, then in command of the French China Squadron, placed at their disposal M. L. Verny, a pupil of the *Ecole Polytechnique* and Naval Engineer in the French service, and engaged at that time in building gun-boats intended for the suppression of piracy on the coast of China. In February 1865 M. Verny repaired to Yedo to meet a special commission appointed by the Gorojiu, and composed of Messrs. Matzdaira, Yamaguchi Kinoshta, Kurimoto and Asano. After a preliminary survey, a small fishing village called Yokoska was chosen as the site of the future dockyard. Situated in the Gulf of Yedo and near the entrance to the Pacific, the deep and spacious bay of Yokoska enjoyed the advantage of being in the vicinity of Yedo, the capital of the Tycoon, or, as it is now called, Tokio, since its translation to the capital of the empire. Owing to the configuration of the entrance and that of the neighbouring heights, Yokoska is easily defensible. It was, indeed, surrounded by hills the slope of which down to the shore left little available space; but, being of moderate height, and the soil consisting of compact marl, they could easily be removed and yield excellent material for embankments. Finally, the nature of the soil rendered it admirably fitted for the excavation of dry docks.

The plan of the works to be executed was then agreed upon by the Commission and comprised two dry docks, three slips, the workshops and machinery required to construct steam-engines of 400 horse power, the total outlay upon which was estimated at $2,400,000.

In September 1865 a mission composed of Messrs. Shibata, Hinga no kami, Shioda and other subaltern officers, repaired to Paris to ask of the French Government the cooperation of a certain number of persons to be chosen from the Imperial Navy. This having been assented to, Mr. Verny, who had been attached to the mission, superintended the selection of the *personnel*, the purchase of the *matériel* being left entirely in the hands of the French Admiralty. When M. Verny returned to Yokoska to undertake the construction and management of the Arsenal his staff was composed as follows:—

3 Sub-engineers } with salaries of from $250 to $400
1 Accountant } per month.
11 Foremen with salaries of from $100 to $150 per month.
26 Workmen with salaries of from $60 to $90 per month.

Mr. Verny's salary was $10,000, and Dr. Savatier's $5,000 per annum.

Before leaving Japan M. Verny had given directions for the levelling and filling up of the ground. The levelling of the two hills which were to make room for the Arsenal was commenced in November 1865, and it is difficult for any one who had not visited Yokoska previously to this, to realize the extent of the work which has been accomplished in this direction. No less than 400,000 cubic metres of matter offering more or less resistance to the pickaxe were removed by Japanese contractors at prices varying according to the nature of the ground and the distance from the points to be filled up, from $0.45 to $2 per cubic *tsubo*.*

The excavation of the first dry dock was commenced in April 1867 and the stonework in October 1868. The concrete which forms the hidden masonry is composed of two parts of pebbles and one of hydraulic mortar. The stone which forms the facing came from the quarries of Odawara and Atami. The length of the dock is 118 metres by 25 in breadth and 7.20 in depth. The total cost was $165,000 and it was opened in March 1871.

Commenced in 1873, the other dry dock was completed in twenty months. It can only accommodate vessels of 80 metres in length, with a draft of 5 and a half metres. The general plan of construction was similar to that of the first dock, and it cost $70,000.

The first building, the Ropery, which is 276 metres long by 10 wide, was built in 1866-67. It was at first used as a temporary workshop for workmen of all crafts and a storehouse. In 1870 it was finally vacated and turned to its real purpose, viz., the manufacture and storage of ropes, sails and rigging. In 1868 the special workshops intended for the several metal and wood works were in course of erection when the Revolution broke out. The fall of the Tycoon and the restoration of the Mikado's government brought on a crisis, during which the very existence of all the creations of the former power was threatened. The naval and military schools were dissolved, and the Arsenal would have shared the same fate if the urgent need of its services, and the representations of M. Outrey, M. Roche's successor, had not overcome the spirit of reaction which marks all periods of civil strife.

It was on the 22nd of May 1868 that a special commission appointed by the new Government, and composed of Messrs. Higashi kuze, Abé, Prince of Fidzen, and Terashima, repaired to Yokoska to take formal possession of the Arsenal. No inventory was taken; none of the accounts and reports prepared by M. Verny were examined; the foreign staff was kept intact; and there was no other change than a general dismissal of the Japanese officials who had to make room for a new set of men. The Arsenal was placed temporarily under the command of the Governor of Kanagawa, and a sum of $25,000 monthly assigned for its monthly requirements. During 1868 and 1869 a great irregularity in the payments interfered with the works already undertaken. Another source of hindrance was the extraordinary inclemency of the weather, the pluviometer having in the course of those two years risen to 3.30 metres. A slip had, however, been

* The *tsubo* is a measure of 6 square Japanese feet. The Japanese foot is 3¼ centimetres, and nearly equal to the English foot.

Original from UNIVERSITY OF CALIFORNIA

completed in May 1868, and was at once made available for the requirements of the fleet.

The buildings erected at Yokoska consist for the most part of a wooden framework laid on a stone basement raised three or four feet above the ground, this basement again resting upon a solid foundation. The spaces between the uprights of the framework are filled in with brick masonry and the roof is of tiles laid on a bed of mortar. At first these buildings cost $30 to $36 per *tsubo*. But since 1869 they have been made by public contract and cost from $17 to $20. Water in Yokoska was formerly bad and scarce. Now an abundant and excellent supply is obtained from the springs of Kwannonsaki flowing through a conduit four and a half miles in length, into two larger vaulted tanks constructed of solid masonry.

The total number of ships which have have been repaired at Yokoska, according to the returns made up on the 31st December 1875, is 305; viz; 177 Japanese and 128 foreign. Those which have been built and equipped in the dockyard are:—

For the Japanese navy:

The *Sorio Maru*, a paddle steamer of 200 tons.
The *Hakodate Maru*, a screw steamer of 450 tons.
The *Seiki Kwan*, „ „ of 850 tons, and 700 indicated horse-power.

For the Japanese trade:

The *Komei-maru*, a paddle steamer of 200 tons.
The *Tonegawa*, Nos. 1 and 2, two steamers of 100 tons.

Those in course of construction are, the *Jige*, a transport of 1,250 tons and 1,400 indicated horse-power, and a gun-boat.

The total expenditure of the arsenal from its foundation to the present time, has been $4,014,793.

The total receipts for the same period have been:—

By building and repairing of ships	$1,263,048
By building of four Light-houses in the Bay of Yedo...	45,447
The inventory of the present stock of stores of all discriptions shows a value of.....	322,000
The ships now on the slips represent a value of	386,500
The Yokohama workshops have cost	62,800
The balance showing the total cost of the arsenal in its present state, is	1,934,998
	$4,014,793

The total present area of the arsenal is 47,000 *tsubo*; that of the space external to it, required for future extensions, is 24,000 *tsubo*.

The workshops cover an area of ... ... 4,513 *tsubo*.
The offices and storehouses ... ... 1,505 „
The dwellings of the foreign staff, the cost of which is included in the above schedule of expenditure... ... 600 „
The dwellings of the Japanese officials.... 1,100 „

The number of Japanese employed in the Arsenal is as follows:—

74 Officers.
121 Foremen (*Togai*).
27 Accountants.
30 Watchmen.
1,342 Matriculated workmen, in addition to whom must be reckoned an average of 250 men employed by the public contractors. The foreign staff is at present reduced to 25 persons.

In 1865 the village of Yokoska consisted of 213 houses and 1263 inhabitants. Its present population amounts to 3673 souls, and the number of dwellings has increased to 975. Its administrative jurisdiction has been extended to five neighbouring hamlets, the aggregate population of which is 2,943 persons. At the beginning of 1867 all right of interference in the administration of the village of Yokoska was withheld from the officers of the Arsenal, and it was unfortunately allowed to grow without plan into its present shapeless and irregular form.

The manufacture of bricks and hydraulic mortar was introduced into Japan by the Arsenal, where the latter is made with the mortar of Yashiu and the pozzolana of Idzu. The brick-making industry has made rapid progress in the country, and the price of bricks, which ten years ago was $12, is now from $4 to $6 per thousand according to quality. Most of the public edifices and whole quarters of the capital are now built of brick. As regards the peculiar style of building hitherto in vogue in the foreign settlement of Yokohama, the repairs, insurance, and sinking of the capital invested have proved so onerous that the general adoption of brick masonry is only a question of time.

By those who founded it, the Arsenal was intended not only to be a public workshop but a practical school at the same time. In the latter respect no definite plan had been incorporated in the original plan, but M. Verny never ceased to labour for the instruction of those around him. Unfortunately, the want of persistency in Ministerial Councils baffled his efforts. Organized three separate times, the Yokoska schools were as often dissolved, and in every quarter of the empire are to be found young men indebted to the Arsenal for their early instruction. At present, there is in Yokoska an elementary school (*école de maistrance*) in which purely technical teaching is given in the Japanese language. It comprises arithmetic, drawing, and the elements of geometry and mechanics. The pupils are chosen from among the workmen and foremen, who, for the most part, belong to the families of artisans. Some, however, are *samurai* who seek service in the Arsenal with the desire of bettering their condition. Their total number is fifty, and they are divided into three sections. There is, besides, a college to which *samurai* alone are admitted. The pupils, thirty-five in number, are divided into seven sections, under the tuition of French professors and instructors. The teaching is of a higher and more general character than in the former school. Finally, the Arsenal serves as a practical school for a certain number of pupils of the Tokio Naval College, who, under the tuition of their own instructors, are quartered in a separate building.

Among those whose cooperation has most efficiently supported M. Verny in the carrying out of his mission, are to be mentioned Mr. Takenouchi, who was one of the first governors of Yokoska; Mr. Masedzu, who resigned in 1868; Mr. Hida Hamagorô, a man of considerable ability as an administrator; M. Thibaudier who has been appointed successor to M. Verny; M. Gautrin; M. Florent, and Dr. Savatier, whose labours in the field of Natural History were the objects of recent comment in this journal.†

On the creation of State Departments which followed the Restoration, Yokoska was first made a dependency of the Home Office, and later of the Public Works. It is now under the control of the Admiralty. It was on his appointment to the Public Works Department that Mr. Okuma, now Minister of Finance, had the opportunity of making himself acquainted with the affairs of the Arsenal, to which he has ever since granted a firm, constant and

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

enlightened support. When on several occasions Yokoska was honoured by the visit of the Mikado and the Empress their Majesties have been accompanied by Mr. Okuma.

As early as 1866 the financial management of the Arsenal was divided among a number of boards at the head of each of which were placed three Japanese officers, forming a sort of administrative triumvirate without individual responsibility. M. Verny had the initiative and direction of the works. The Japanese workmen of all crafts received direct orders from the French superintendents, among whom the discipline and order of precedence of the French service were strictly maintained. All the accounts were kept both in Japanese and in French. This organization was upheld until the end of 1875, with the sole difference that shortly after the Restoration the Government placed at the head of the Arsenal an officer of high rank with the title of Governor.

It has already been observed that the disposition of the Japanese Government is to reduce the share formerly given to the foreigners in their service in the management of schools and public works. As far as Yokoska is concerned, it has been decided that the initiative in the works shall be taken by the Japanese authorities; their execution to be entrusted to the superintendents, most of whom are French, and a few Japanese. But the question of responsibility remains undetermined. In all probability it will revert to the Japanese administrators of the works, and the position of the French engineers will be that of advisers. Be this as it may, it is much to be hoped that the Educational Department will remain under the control of a naval engineer, in the same manner as, in the naval and military schools, it is placed under the superintendence of a competent foreigner. The sense of responsibility will doubtless prove a powerful incentive to the Japanese administration, but the future alone can show what will be the result of those changes which were being inangurated at the time M. Verny left the Arsenal.

Among the foreigners who have been engaged in the service of this Government, some have left lasting external marks of their industry. To what extent have they influenced the minds of the rising genetion? We have welcomed and applauded the movement which has impelled the Japanese nation towards a civilization superior to their own, and as experience proves that all such movements are attended with excesses, we experience no surprise that a reaction should apparently be setting in, and can only hope that it will be of short duration. There are still men in the councils of the Mikado who are wise enough to feel that the union of high scientific attainments with strict integrity is demanded for the service and welfare of this country.

† Vide *Japan Weekly Mail*, 11th February 1876.

As a make-weight to the rabbits and other "small deer" in favour among native fanciers an elephant is, we observe, to be expected shortly from Saigon. It has been bought by the Japanese Government.

Further arrests, says the *Hochi Shimbun*, continue to be made at Kiôto and in Tamba of persons suspected of inciting to rebellion. The district is evidently disaffected and seems to demand the vigilant attention of the local authorities.

We learn from a native journal that the Finance Department is about to erect a substantial new fire-proof building at the side of the present offices. From the description given, we infer that it is intended for the Public Treasure.

SPIRIT OF THE JAPANESE PRESS.

Corea—The Country, Manners and Customs.

(Hochi Shimbun.)

Having heard that Mr. Miyamoto of the Guaimusho had returned from Corea with the Envoys, we called upon him. As it is not within the sphere of his duty to give any information upon purely official matters, we did not seek for this. But the following observations made by him upon the state of the country and the habits and customs of the people, may prove interesting to our readers and we therefore publish them.

Having only seen Fusan and the south-western coast for about 500 *ri* and Kokwa and its neighbourhood, we cannot speak with accuracy regarding the whole country. But so far as we could see, the soil is poor, wears a reddish yellow appearance, is hard and ill suited for cultivation. About Fusan, Kokwa and the banks of the Kanko river, the ground is covered with hillocks givinga picturesque appearance to the country from a distance. This impression, however, disappears on closer acquaintance. The soil is harsh and the vegetation sparse and stunted. We saw pine trees, but they are crooked and ugly and not straight and graceful like those of our own country. This proves that the soil is poor, and lumber must be scarce and dear. At Kokwa we tried to get a cedar log of twenty feet in length, but without success. The principal building material is pine; neither cedar nor *hinoki (Retinispora obtusa)* are used.

It would appear that there is some law in Corea limiting the size of the houses of the common people, as they are all domiciled in dwellings about ten or twelve feet square and little better than dog kennels. The walls consist of a mixture of stone and earth, and the roofs of rice-straw thatch. The plaster which we use in Japan is apparently unknown, and there is but a scanty display of wood. The floors are made like our furnaces and of compact hardened earth. Oiled paper is placed over this, and on it the people sit. Few of the houses have ceilings, which consist merely of oiled paper stretched from the uprights supporting the roof. The shops are entered through doors on which are inscribed sayings of a graceful nature in the Chinese character. Under the floor and extending throughout its whole length, is a horizontal passage: at one end of this a fire is lighted, the smoke going out at the other, thus the house is warmed. It is difficult to preserve an even temperature. If too much wood is used the heat soon becomes excessive, and *vice versâ*—much the same, indeed, as with the use of our *kotatzu*.* This practice appears dangerous, for the soot hangs about the eaves and the exit of the smoke, and were the flames to catch the straw roof the houses would instantly be destroyed. The houses very much resemble the stoves used in Japan for roasting the sweet potato.

We saw no mats in the houses and the people sit on the earthen floor; but not as we do, for they keep their legs out straight. In one of the Government offices we found a chair, much resembling those on which the priests sit. When entering a house people leave their shoes outside.

The quantity of fuel consumed in these fire-places must be greater than that used in our own, but reeds and rushes are used for the purpose. We asked why the same materials were not employed for roofing purposes instead of rice straw, but were told that they might only be used for fuel. The neighbouring hills are covered with pines; there appear to be no old trees, the demand for fuel being such that they are not allowed to grow to maturity.

The Japanese office at Fusan has been in existence 150 years and stands on 20,000 *tsuboes* of ground. It is situated on the side of a hill. One of the ancestors of Sô Tsushima-no Kami had cherry and pine trees planted there, but they have never thriven, though they lend some appearance of life to the reddish barren country round them. It is said that in Loochoo there are no shops where goods are exposed for sale, and the same custom seems to obtain in Corea.

Though Kokwa is a fine place, the houses are not built in rows, but scattered here and there, and are only six or seven feet in height. Dried fish and persimmons, tobacco and straw sandles are apparently the chief objects of trade. Chairs seem to have been made for our special accommodation, but they were very rude and painted with persimmon juice. Skins of leopards were placed over them. All the Government offices have tiled roofs like our own, and being built of brick, are recognizable at a glance. They all have two gates, an outer and an inner, and in some respects

* *Kotatzu*: holes made in the floor in which a stone receiver for lighted charcoal is placed. A wooden frame lies above it, over which a quilt is spread to prevent the heat from escaping. This practice is common in some parts of Japan.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

resemble our temples. The tiles are of bad quality and the woodwork shows no skill. The frames of the paper doors are so clumsy and heavy that but very little light is admitted into the rooms, before each of which a board hangs. These boards are not very finely finished, but the Chinese characters upon them are skilfully cut. In respect of conveniences all these offices are very deficient, and, for similar reasons, the public roads are filthy.

The widest roads are from fifteen to twenty feet in breadth, the narrower ones from eight to nine. There is no provision at their sides for carrying off the rain, and they are apparently never repaired or improved. The streets are dirty, but are decorated with monuments raised to departed local officials.

The city walls of the Kokwa *Fu* are about five miles in circumference and run alongside of hills. They are only from two to three feet in height, partly constructed of mud and stone and partly of brick. There is a gate on each of the four sides. That which we first entered is called the Chinkai gate, the second the Kotoro gate and these resemble the gates in Japan. They seem to have been carefully painted in days long past, but have fallen out of repair. The houses within the walls are scattered irregularly and not built in rows.

As regards clothing, both the upper and lower garments of the people are of white, and are undyed and unornamented in any way. Some of the officials wear silk, but of very coarse texture. When approaching the land, and at some distance, the Coreans present the pretty appearance of snowy herons. But on closer inspection they resemble the lazy priests of our own temples, whose garments may once have been white, but are so no longer. Most of the higher officials dress in white silk, the lower grades wear garments of sky-blue colour, without sleeves. The long sleeve is the badge of higher rank and is always worn while on duty. The skirts of dresses resemble those of our own priests and are called "additional wings:" in some sense they may be said to resemble wings. The highest officials wear garments of shining silk of a light pink colour, and their head dresses are similar to those usually seen in the portraits of Taiko Sama. On their feet they carry large heavy shoes, proving that our ceremonial costume came from China in the time of To. The head-dress is a large round hat, fastened by means of strings passing under the chin and said to be made of horse hair by the native women. Custom exacts that the hat be placed on the head when greeting a friend. The Coreans do not shave the head, but wear the hair long and fasten it with pins into a bunch at the top of the head. These pins are made of silver or brass, and vary with the rank of the wearer. The children wear the hair braided or plaited like the Chinese, and we see that Tartar fashions are current in Corea. The women are said to be dressed something like Europeans, but as we did not see a single woman the whole time we were in Corea, it is impossible to speak positively. The dress of the men betrays less vanity than among ourselves.

(To be Continued.)

Advice to the *Shidzoku*.

(Nichi Nichi Shimbun.)

How is it that the *shidzoku* have not learned to make their own livings and to lay a foundation for the prosperity of their descendants? Why do they resemble children lost in the woods or rudderless ships on the wide ocean? It is probable that to these questions they would reply that they are seeking for the way in which to make their livings, but cannot find it. This does not appear to us to explain the matter. The true cause is that the spirit of industry does not exist among them. Were it otherwise, they would find out a way to gain their livings. As a class the *shidzoku* are better educated than the *heimin*, and yet though they they possess greater acquirements and talents they fail to earn a livelihood as every one of the *heimin* does. But the members of the more educated class seek to make their fortunes by speculation and not by steady industry, and thus of course they lose the capital with which they began and involve themselves deeply in debt.

Now there are three roads which the *shidzoku* apparently intend to follow in the pursuit of their fortunes, viz, salaries, pensions, and mercantile business. Some of them cannot rid themselves of the spirit of the old feudal times, and incessantly grieve over the reduction of their pensions. Thus they bear a grudge against the present Government, and some even are looking out for an opportunity by which they may revive the old *samurai* spirit of their former days and secure larger pensions to themselves. This however, does not appear to us a proper way of gaining a livelihood. These are they who choose what we have called the pension-road.

Next are they who seek to obtain some humble office under the Government and live on their salaries. These have already arrived at the conviction that it is useless to hope for their former pensions, and will never again see the revival of the feudal system. Thus it is that they seek to become officials. But the number of officials required is limited, while those who are seeking for office are very numerous. To gain their end, therefore, they flatter the higher officials, and seek to rise by subserviency and compliment. The *shidzoku* were up to this time men animated by an honourable sense of pride; but when they began to act as sycophants these noble features disappeared. Occasionally some of them, thanks to good fortune, do obtain places; but they often lose them again from absolute inability to discharge their duties. The little money they had has been spent in complimentary entertainments, and they are soon reduced to a state which makes them the laughing-stock of the common people.

The last class of which we wish to speak appear at first sight better than those who look to pensions and salaries. But on closer examination we find that they are not so. A few years ago the Government commuted their pensions for six years purchase, or sold lands at half the ordinary price to those who would surrender these pensions. This brought the *shidzoku* out of the towns with the idea of making money, even great fortunes, at a single bound. But they were duped by cunning merchants and soon lost their capital. Thus there are but few who have retained the sums for which their pensions were commuted. Leaving other places out of account, we see here in Tokio that enterprising *shidzoku*, on first leaving the provinces, join some company or lend money at high interest. In a short time it has all vanished. Then, scraping up such little money as they can get together, they go into such business as eating houses, medical baths, foreign fancy goods, sweetmeats, &c.; but in trying to do that which does not bring success even to those who have been all their lives at it, they not unnaturally lose all that was left to them. For want of energy and industry they never try to do a sound business. When we know that occupations of this nature require experience gained from the very period of boyhood, it is easy to understand how those who grow up to manhood without it do not succeed.

Now this is what the *shidzoku* have been doing down to the present moment, and they have neither benefited themselves nor laid any foundation for their descendants. We are convinced that there are other and better ways for earning a livelihood, and we would recommend them to the *shidzoku* in the belief that as we advance in civilization, the pursuit of these avocations will be found profitable. Such are farming, mechanical trades, and professional business. The *shidzoku* may at first imagine that professional pursuits, law, medicine and teaching, are the easiest to undertake. But the further we advance in enlightenment the more difficult do these become, for they demand an ever wider education. Mechanical trades and farming are easier. The Japanese are skilful enough at such mechanical trades, but they demand more or less capital, and we should recommend farming in preference, Wherever we go in this country we see that the soil yields abundant crops. Therefore though farming demands industry, it neither requires a large capital nor so much knowledge as professional business. We therefore recommend the *shidzoku* to turn farmers. If they do not like this they might become mechanics, or if this do not please them, they might adopt some profession. We dare say that these simple recommendations have not so much grandeur in them as the aspirations which are cherished by many of the class. But if men will but adopt them, they will lose their incessant anxiety about their daily welfare and the future of their sons and grandsons. Otherwise they will always feel themselves to be on the brink of ruin.

We entreat the *shidzoku* to take these words to heart!

Law Reform.

(Akebono Shimbun.)

The laws of a nation are part of the national property. They are by no means the private property of its rulers, and a country is in an uncivilized state when its rulers make what laws they please. If we examine into the past history of the oriental nations, we cannot say that they have had no laws, but we find that they have all proceeded from the arbitrary will of rulers, and the body of the nation has had no concern in making them. Such laws may almost be regarded as the personal property of the rulers, though they were given to the whole nation. And this being the case, the rulers could make or abolish what laws they pleased. If the rulers were wise, these laws secured tranquillity; otherwise, the country was thrown into a dangerous state, and then it mattered not whether the laws were good or bad. If we look to the crimi-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

nal law of China, we find that even wise rulers did injustice to their subjects. For example, Koso, a famous Emperor of the Kano period, and who was esteemed a very wise man, took no steps to punish his consort Riako when she killed the noble Kenshin. The Emperor Taiso, who is also famous for his wisdom, liberated all the prisoners in the country on the mere impulse of the moment. Japan also was subject to a vast amount of injustice down to the close of the Shogunate, for the rulers used to absolve the guilty or punish the innocent as they pleased. But, last year, reformed tribunals and a court of ultimate appeal were established, and any suitor who was dissatisfied with the decision given in the lower courts could appeal against it and carry it as high as the ultimate court; and since that time the amount of injustice has greatly diminished. For example, a farmer of the province of Oki, Shirai Kijiro by name, was condemned by a judge of the Kirashima *ken* to hard labour for twelve months, and appealed to the *Daishinin* against the decision, which was reversed and he was acquitted. There are still reforms which have yet to be made. Lawyers are not yet permitted to plead in criminal cases, and we ought to have juries and the law of Habeas Corpus. The *Shihosho* (Department of Justice) has lately established a college where law is taught, and we may hope that all these needful reforms will eventually be carried out.

THE BONIN ISLANDS.

By Russell Robertson, Esq.

Read before the Asiatic Society of Japan on the 15th March, 1876.

The Bonin Islands which lie between the parallels of 26.30 and 27.45 North are situated almost due South of Yokohama at a distance of about 500 miles, Port Lloyd situated in Lat. 27.5.35 N. and 142.11.30 East Longitude being distant 516 miles—the longitude of Port Lloyd has been fixed by a later authority at 142.16.30.

The Islands consist of three groups, the Northernmost and Southernmost of which are known respectively as the Parry and Bailey or Coffin groups. The centre group is made up of three Islands: Stapleton to the North, Peel Island to the South and Buckland Island in the centre. This middle group is 9¼ miles in length 4¼ of which are taken up by Peel Island.

Hillsboro' the largest of the Bailey or Coffin group is 7½ miles long and 1¼ miles broad.

From Japanese records it would appear that these Islands were known to Japan in the year 1593, if not before that, when they were held as a fief by the Daimio Ogasawara Sadayori and communication was maintained with them up to 1624. In Koempfers work the following mention is made of the Islands, "About the year 1675 "the Japanese accidentally discovered a very large island, "one of their barks having been forced there in a storm "from the Island Hachijo from which they computed it "to be 300 miles distant towards the East, they met with "no inhabitants but found it to be a very pleasant and "fruitful country, well supplied with fresh water and fur- "nished with plenty of plants and trees, particularly the "arrack tree, which however might give room to conjec- "ture that the Island lay rather to the South of Japan "than to the East, these trees growing only in hot coun- "tries. They called it Bune sima or the Island Bune "and because they found no inhabitants upon it they "marked it with the character of an uninhabited Island. "On the shores they found an incredible quantity of fish "and crabs, some of which were from four to six feet "long."

The turtle that abound at the Bonins were probably taken by the Japanese for enormous crabs.

A blank in the history of the Bonin Islands then follows until 1728, when communication was again established by a descendant of Sadayori Miyanouchi Sadayori by name, of short duration however, for after a long interval we find no further mention of the Islands in Japanese records until the close of 1861, when Japanese Commissioners were sent to Port Lloyd, the visit resulting in the establishment of a small colony under the governorship of Mr. Obana Sakusuke. The attempt was however a failure. Several of the colonists returned to Japan after a brief stay and the remnant was withdrawn early in 1863.

The Islands known to most of us by name have during the past few years excited not a little curiosity from the reports that have reached us from time to time as to the condition of the settlers there, and from surmises as to what steps might eventually be taken to establish them as the territory of one or other of the countries which it was supposed had claimed them.

In November of last year, 1875, the Japanese steamer *Meiji Maru,* having on board four Japanese officers as Commissioners, proceeded to Port Lloyd and in the same month and simultaneously with the *Meiji Maru* the Islands were visited by H. M. S. *Curlew,* Commander Church, R.N. on board of which vessel I was a passenger. The Bonins figure on some charts as the Arzobispo Islands, but again on others the Arzobispo appear as a distinct group. It is contended that the word Bunin is a corruption of the Japanese words *Munin "uninhabited,"* and this appellation would tend to confirm their first discovery by Japanese. Any way they are known generally as the Bonins, the slip from Bunin to Bonin being easily accounted for, though to Japanese they are more familiar as the Ogasawara-shima, or Ogasawara Islands.

From the name Arzobispo it is not improbable that the Islands were known to the Spaniards long since, the more so that they are not so very far from the Marianas or Ladrones group now settled by the Spaniards and known to navigators early in the 16th century. The object of this paper is not however to settle disputed points about prior occupancy, and I therefore pass on to the time when the Islands became more generally known to the outer world.

In the year 1823 they were visited by an American whale ship the *Transit,* Captain Coffin; whence we arrive at the name Coffin applied equally with Bailey to the Southern group. It is not clear however that the *Transit* visited either the centre or the Northern group. In 1825 the *Supply,* an English whaler, touched at Port Lloyd and left a record of her visit by nailing a board to a tree, afterwards found there by Captain Beechey R. N. of H. M.'s S. *Blossom* which vessel anchored in Port Lloyd on the 9th June 1827. It is to Captain Beechey that we are indebted for the admirable chart of the harbour of Port Lloyd now in use, and for much of the published information about the Bonins. H. M. S. *Blossom* a sloop carrying 16 guns and a complement of 122 all told had been dispatched from England on the 19th May 1825 with instructions to cooperate with Franklin's and Parry's Arctic Expeditions. Captain Beechey's instructions were that he should be at Behring's Straits in the autumn of 1826, and if he failed to meet either Franklin or Parry he was to leave Behring's Straits in October of the same year, repairing there again in the autumn of the ensuing year 1827—the intervals to be employed in cruising in the Pacific Ocean; at the close of 1827 the *Blossom* was to leave on her return voyage to England.

Captain Beechey having sailed as above narrated on the 19th May 1825 rounded Cape Horn, and touching at Tahit and the Sandwich Islands reached Behring's Straits in July 1826. In October the *Blossom,* failing to meet Franklin left Behring's Straits and proceeded to San Francisco where she anchored on or about the 6th November. On the 28th December 1826 Captain Beechey sailed from San Francisco and again visited the Sandwich Islands, proceeding from there to Canton and Macao at which latter place he arrived on or about April 30th 1827. After a brief stay the *Blossom* again set sail. making for Loochoo, and in due course, some time in May. 1827, she anchored off the town of Napha the capital of those Islands.

From here Captain Beechey took his departure on the 25th May, and shaping his course to the Eastward he reached on the evening of the 7th June the situation of the Bonin Islands as marked in Arrowsmith's chart in use at that time. The following day, the 8th, no land was in sight, and Captain Beechey was on the point of giving up the Islands as having no actual existence, when, after a few hours sail to the Eastward, several islands were seen extending in a North and South direction as far as the eye could discern. These were the Bonins. A full account of the *Blossom's* visit is formed in Captain Beechey's Bonins narcative, published in two volumes but.

It will suffice if I narrate here that the *Blossom* an-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

chored in Port Lloyd on the 9th June 1827, having first attempted to fetch the southernmost group, but finding wind and current against the ship and discovering in the nearest land an opening which appeared to give promise of a good harbour, Capt. Beechey made for this and anchored in Port Lloyd to which he gave this name out of regard to a late Bishop of Oxford.

Captain Beechey was much surprized to find here two Europeans who turned out to have been two of the crew of the English whaler *William*, which vessel had been wrecked in Port Lloyd some eight months previous to the *Blossom's* arrival. The name of one of the men was Wittrein; that of the other is not given.

According to the statement of these men it appears that after the wreck of the vessel the crew set to work to build a small schooner in order to find their way to Manilla, as the chances of their being picked off from Port Lloyd were somewhat remote; to their surprize however a whale ship the *Timor* appeared, and took off the crew of the wrecked vessel with the exception of these two men Wittrein and his companion.

The *Blossom* remained at Port Lloyd for six days, and the time was fully taken up with surveying the harbour, excursions in the immediate neighbourhood, and in circumnavigating the Island. To the Island in which Port Lloyd is situated Captain Beechey gave the name of Peel Island, in compliment to Sir Robert Peel, the then Secretary of State for the Home Department; and to the other two of the cluster he gave the names Stapleton and Buckland, the last mentioned after the then Professor of Geology at Oxford. A large bay at the South East angle of Peel Island is named Fitton Bay, after a late President of the Geological Society, whilst a bay to the Southwest angle of Buckland Island is called Walker Bay, after Mr. Walker at that time one of the officers of the Hydrographical Department.

To the Southern cluster of Islands Capt. Beechey gave the name of Bailey, after a former President of the Astronomical Society, but they are equally known as Coffin Islands from the name of the master of the American Whaler *Transit*, who it was believed was the first to visit them, excepting visits said to have been made by Japanese.

To the Northern group Capt. Beechey gave the name of Parry after the former Hydrographer to the Admiralty.

Capt. Beechey has pronounced Peel and surrounding Islands to be volcanic in their nature, which is borne out by Commodore Perry of the United States Navy, who when visiting the Islands later on 1853, writes of Port Lloyd as follows: "It would appear that Port Lloyd was "at one time the certain of an active volcano, from which "the surrounding hills had been thrown up, while the "present entrance to the harbour was formed by a deep "fissure in the side of the cone through which a torrent "of lava had poured into the sea, leaving after its "subsidence a space into which the waters subsequently "were emptied, bringing with them their usual deposits, "which together with the coral formation now forms the "bottom and sides of the harbour."

After leaving Port Lloyd on the 15th June, Captain Beechey made another attempt to reach the southern group, the Bailey or Coffin Islands, but finding the wind adverse he bore away to the north and fixed the position of the Parry Group.

This officer's remarks about the Bonins which appear in full in the work to which I have previously alluded furnished the only comparatively full information about them up to 1853 when they were visited by Commodore Perry. The narrative of the *Blossom's* cruise is a book seldom met with out here, and I am indebted to Captain St. John of H. M. S. *Sylvia*, for the loan of the work which has thus enabled me to give certain particulars about the Bonins without which this paper would have been incomplete. The sailing directions and notes with regard to the Bonins appearing in that valuable work the "China Pilot" are taken from the narratives of Beechey and Perry.

Before leaving, Captain Beechey affixed to a tree a sheet of copper nailed to a board, and on the sheet of of copper the following words were punctured:—

"H. M. S. *Blossom*, Captain Beechey, R.N., took pos- "session of this group of Islands in the name and on "behalf of His Majesty King George, the 14th June, "1827."

On the occasion of our visit in the *Curlew*, Captain Church and I came across this board in the house of one of the settlers, who parted with it for a trifling consideration. It was in a fair state of preservation, and the inscription as given above could be deciphered after a little trouble; the date appeared to us to be June 17th, but as the *Blossom* left on the 15th, the proper date is probably the 14th.

According to Captain Beechey the Japanese accounts of the Bonin Islands as appearing at that time in Mr. Klaproths "Mémoire sur la Chine," and by Mr. Abel Remusat in the "Journal des Savans" for September, 1817, it is said that the Islands of Bonin sima or Munin sima consist of eighty-nine Islands, of which two are large, four of middling size, four small and the remainder of the group consists of rocks. The two large Islands are said to be inhabited, and temples and villages appear in the Japanese chart published in the "Journal des Savans." Further, it is stated that these Japanese accounts, or I should more correctly say the translations of them, depict the Islands as extremely fertile, producing vegetable and all kinds of grain, sugar, cocoa nuts, lofty palm trees, sandal-wood, camphor and other trees.

From this description, Captain Beechey throws doubts upon the Islands visited by him as being identical with the Bonin sima of the Japanese, and to use his own words says "it may be doubted whether Bonin sima is not an imaginary Island."

In Captain Beechey's opinion the Islands corresponds with a group named Yslas del Arzo Bispo in a work published many years ago in Manila "Navigacion Especulativa y Pratica" and so much indeed that he has retained on the chart the name Arzobispo which was mentioned at the commencement of this paper, equally with that of the Bonins. It must be remembered, however, that neither the Northern nor Southern cluster, the Parry and Bailey or Coffin groups, were visited by Captain Beechey (by visiting I mean landed upon,) and Japanese have informed me that it was on the Southernmost group Bailey or Coffin, that the early Japanese settlers took up their abode, and where it is believed the remains of a few shrines are still to be found. Making allowance for exaggeration in the description appearing in the early native records, and considering, too, that vegetables, sugar cane, cocoa nuts, pine apple, &c., are now grown on Peel Island, also that among the trees there are palm and sandal wood, it is not unlikely that the Island, visited by the *Blossom* are the veritable Bonins or Munin sima of the Japanese.

We are now to witness the influence of the *Blossom's* visit to these Islands. Before taking leave of this little vessel with whose name and that of her Commander the Bonins cannot but always be associated, I should record that after leaving these Islands Captain Beechey, in pursuance of his original instructions to be at Behring's Straits in the autumn of 1827, again made for the Polar Seas, where he arrived in due course; but finding no trace of Franklin at the different rendezvous agreed upon he reluctantly left for England by way of San Francisco and Cape Horn and anchored at Spithead early in October 1828, after an absence of three years and a half during which the ship had sailed over 73,000 miles.

The Bonins now seem to have attracted attention at the Sandwich Islands where the news of the *Blossom's* visit was not long in reaching, and from whence a party of colonists sailed for Port Lloyd in 1830. Captain Charlton then British Consul at the Sandwich Islands taking a lively interest in the expedition.

The party as far as I can ascertain consisted of the following: Mateo Mazarro said to have been a native of Genoa, but I am inclined to think recognized as a British subject, John Millichamp an Englishman, Nathaniel Savory born in Massachusetts, United States, Alden B. Chapin also an American, and Charles Johnson a Dane. They had with them some Sandwich Island natives as labourers, some live stock and seeds and landing at Port Lloyd hoisted an English flag which had been given them by Captain Charlton.

Little is now heard of the Bonins until 1842, though doubtless in this long interval of 12 years Port Lloyd was

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

frequently visited by whalers and communication of some kind was thus kept up. In 1842 Mazarro returned to the Sandwich Islands. He described the settlement at Port Lloyd as flourishing, stated that he had hogs and goats in abundance and a few cattle, that he grew Indian corn and many vegetables and had all kinds of tropical fruits. Mazarro returned to Peel Island and eventually died there. His widow, to whom I shall here after refer, is still living at Port Lloyd.

I now pass over another interval of seven years until the year 1849 or 1850, when I find that Port Lloyd was visited by the U. S. Surveying Brig *Dolphin*, but she only made a brief stay of four or five days. The next man-of-war to come was H. M. S. *Enterprise*, Captain Collinson, in 1851, which vessel also made but a short stay of about a week. The *Enterprise* was a companion ship with the *Investigator* both vessels being in search of Sir John Franklin's ill fated expedition. The former had parted company from the *Investigator*, and had probably taken the Bonins on her way up to Kamschatka and the Arctic.

Thomas H. Webb, a British subject who had arrived at Port Lloyd in the American Barque *Japan of* Nantucket in 1849, and where he is still a resident, has a lively recollection of Captain Collinson's visit, and it is to Webb, that I am indebted for much of the information I am able to give in respect to the visits of ships to Port Lloyd from the year 1847 up to the time of the *Curlew's* visit in 1875, excepting of course the visit of Commodore Perry in 1853 of which a full account has been published elsewhere.

In 1852 H. M.'s surveying brig *Serpent* touched at Port Lloyd and remained there some eight days.

We now come to Commodore Perry's visit in 1853, an important one to the settlers on Peel Island.

On the 14th June, 1853, the U. S. men-of-war *Susquehannah* and *Saratoga* dropped anchor in Port Lloyd, having left the port of Napha in the Loochoos on the 9th of the same month. At this time, of the original settlers who came in 1830, and whose names are mentioned at the commencement of this paper, only one, Nathaniel Savory was left, but there were now on Peel Island in all 31 inhabitants, made up as follows ; four English, four American, one Portuguese, the rest being natives from either the Sandwich, the Ladrones, the Caroline or Kingsmill Islands, together with children actually born on the Bonins.

The stay of the *Susquehanna* and *Saratoga* was limited to four days, the ships leaving on the 18th June, and returning to the Loochoos which they reached on the 23rd of the same month, but the time was fully taken up in exploring both Peel and Stapleton Islands.

To the exploration of the first mentioned two parties were told off from the *Susquehanna*, one headed by Mr. Bayard Taylor which took the South, while Dr. Fahs Assistant Surgeon of the ship with his party went over the North of the Island. They started early on the morning of the 15th June and did not return to the ship till 10 p.m. of the same night. A full account of this day's proceedings, and indeed a very full account generally of the Bonins is given in chapter X, volume I, of the narrative of Commodore Perry's expedition to China and Japan, published by order of the United States Government.

I do not qnote at length from the account therein contained because the work is one of modern date, and is within reach of any one who cares to procure it.

It will be sufficient if I note that not only are the Bonin Islands prominently mentioned in the work above alluded to, but on his return to the States the Commodore placed in the hands of the compiler some further notes on the subject of these Islands and submitted a scheme for their colonization. He appears to have thought that their situation was most advantageous as forming a point on a proposed mail line which starting from San Francisco would touch at Honolulu and the Bonins for coal and supplies and then on to Shanghai as its terminus. The importance that Yokohama was to attain to as a place of call for mail steamers could not then of course be foreseen, considering too that the scheme of a mail line across the Pacific to China, although attracting attention, had not then been developed.

It was during the visit of the *Susquehanna* and *Saratoga* at Port Lloyd that Commodore Perry recommended the settlers to draw up a code or rules of governance for themselves, rather than that they should live under what he described to one of the settlers as *Club Law*. No mention is made of this in his book, but an organization scheme was drawn up. It consisted of three articles and thirteen sections, and was called "organization of the settlers of Peel Island." It provided for the election of a Chief Magistrate and Council of two persons to be elected by and from amongst the settlers, the chief Magistrate and Council to have power to enact rules and make Regulations for the Government of the Island, such rules and regulations to be binding on the residents provided the concurrence and approval of two-thirds of the whole number of residents had been obtained.

A copy of the organization scheme has been placed at my disposal, and the manner in which it came about was narrated to me on the Island.

Under these rules Nathaniel Savory was elected as Chief Magistrate and James Motley and Thomas, H. Webb as Councilmen. The document was signed by Nathaniel Savory, Thomas H. Webb, James Motley, William Gilley, John Brava, Joseph Cullen, George Brava and George Horton.

The rules however were never enforced, and the existence of the scheme is now scarcely remembered on Peel Island.

It is of importance that I should follow up the fate of those whose names appear appended to the documents.

Nathaniel Savory died in 1874.

Thomas H. Webb is now living at Port Lloyd.

James Motley died on the Bailey Islands in 1870.

William Gilley was killed at Port Lloyd thirteen years ago, by a man named Jack Spania said to be an Englishman.

John Brava and George Brava are still living on the Bonins.

Joseph Cullen died in Port Lloyd two years ago.

George Horton was removed to Japan in 1862 by the Japanese, and handed over to the U. S. Consul at Kanagawa. Horton died I believe shortly after arrival in Japan.

To some of the above names I shall have again occasion to refer.

Before taking leave of Commodore Perry I should state that he left on Peel Island four head of cattle, and on one of the other Islands five Shanghai sheep and six goats.

I enquired at Port Lloyd what had become of this stock, and was told that the cattle had disappeared, having probably been lifted by the crews of the whalers that were in harbour either at that time or that came shortly after Perry's visit. The sheep died, but the goats have multiplied to such an extent that the islands now swarm with them.

Not long after the *Susquehanna* and *Saratoga's* visit the U. S. man-of-war *Plymouth* came to Port Lloyd. Her stay was marked by a most unfortunate accident. One of her cutters with fourteen men had gone outside the harbour in the face of a somewhat rough sea and were never more heard of, there being no doubt that she capsized with all hands, not one of whom ever reached shore.

The place is a very dangerous one for boat work, which should be avoided as much as possible outside the harbour. Much anxiety was felt while I was at Port Lloyd on account of a party of Japanese that had put off one morning from the steamer *Meiji Maru*, and rounding the southern headland of the harbour was lost to sight from the ship. At 6 o'clock p.m. of the same day, and night setting in, there were no signs of the boat; a gun was fired and a rocket sent up from the *Meiji Maru* but it was not until 10 p.m. of the same evening that some of the missing ones returned with the report that the boat had been beached the other side of the headland close to the Frenchman Leseur's holding. The boat was eventually recovered, but Leseur said it was a marvel she had ever escaped for she was lifted in on the top of a raging surf right over the rocks and landed close to his own dwelling.

The next visit of men of war after the *Plymouth* was that of four Russian ships which came to Port Lloyd in 1854. This squadron consisted of a frigate, a corvette, a store ship and a small steamer. Their visit was followed by that of the U. S. Frigate *Macedonian*, Captain Abbott, on her way to Manilla. The *Macedonian* had left the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

U. S. Flag ship *Powhattan* in Yedo Bay. Commodore Perry entrusted to Captain Abbott's care implements of husbandry and seeds to be distributed amongst the settlers, in a letter to one of whom the Commodore writes "it "must be understood that the sovereignty of the Bonin "Islands has not yet been settled, and the interest taken "by me in the welfare and prosperity of the settlement "has solely in view of the advantages of commerce gene-"rally."

In the ensuing year 1855 the U. S. Man-of-war *Unicennes* visited Port Lloyd and remained 10 days.

In 1871 an attempt to colonize Peel Island was made from Japan, and in November or December of that year a Japanese steamer was despatched to Port Lloyd from Yedo, having on board a Commissioner, subordinate officers and about 100 colonists.

Rules and Regulations for the governance of the settlers inclusive of foreigners, and harbour Regulations so called were drawn up in English by the Commissioner and his assistants. They appear never to have been enforced, and the present settlers seem for the most part ignorant of their existence. I have however a copy by me from which I extract the following somewhat unintelligible rules.

Article 3.—It shall be unlawful for any vessel or vessels that may be come into this port to discharge any of the cannon that will hurtful for the fishing.

Article 4.—Any vessel or vessels may come into this port or harbour said the vessel shall to pay to the pilot amount of the established pilotage.

Article 5.—If any person or persons come on shore from any vessel that may be come into this port who shall have pleasure hunting and waste upon the land of any inhabitants and also committed any of such he or they shall be seized and transported to the Captain of their vessel.

Communication would appear to have been kept up with Port Lloyd from Japan from time to time during 1862, for it is recorded that the colonists soon wearying of the enterprise, left Port Lloyd in batches, until early in 1863 the Commissioner himself withdrew, taking with him the few Japanese that had for some fifteen months cast their lot upon the Islands.

The Japanese settlement was situated on the South side of the harbour and one of the houses erected by them still remains. Close to this house a large stone has been erected which records that the Bonins were first visited in the time of Iyeyasu by Ogasawara Sadayori and that in 1593 they received the name of Ogasawara-jima, that they were again visited in 1828, that they are Japanese territory, that they were re-visited in 1861 and that this tablet was erected as a perpetual memorial.

From time to time whalers arriving at Yokohama have been reported as from the Bonins, and in 1872, 1873, and for some time in 1874 a small schooner, the *Tori*, under American colours made trips between Yokohama and Port Lloyd, taking stores and cheap piece-goods from this, and returning with turtle shell, turtle oil, lemons and other Island produce.

In 1874 the U.S. man-of-war *Tuscarora* while engaged on her line of soundings visited Port Lloyd and made a brief stay, and in November 1875, we have the visits of the Japanese steamer *Meiji Maru* and H. M. S. *Curlew*.

Later on, and since my return, the Bonins have I believe been visited by the Russian man-of-war *Hydamack* and the German frigate *Hertha*.

I have given prominence to the visits of men-of-war but it is not to be concluded that the settlers were dependent on these alone for their glimpses of the outer world. Port Lloyd has been the frequent resort of whalers mostly under American colours, in some instances flying the French or Hawaiian Flags. In one year the arrivals at Port Lloyd have been as many as 15 vessels, but lately the sight of a whaler has been somewhat rare, as may be judged from the fact that last year 1875, but one vessel, a whaler, had touched there prior to the arrival of the *Meiji Maru* and *Curlew*.

In 1849 the year of the rush to California several vessels, so I was informed by one of the residents, touched at Port Lloyd on their way from China to San Francisco; these ships varied in size from 300 to 1,000 tons, and so far as I can learn must have been coolie passenger ships. That same year, 1849, is also a memorable one in the annals of the settlers, for in the autumn a lorcha and schooner under Danish colours and cutter with the British flag came to Port Lloyd and made a stay of some two months, during which the vessels were hove down and repaired. They then left in company, but after a few days the lorcha and cutter returned and their crews made a raid on the place, offering no personal violence but carrying off every thing they could lay hands on. The two vessels then quitted Peel Island and were seen no more.

I have thus briefly sketched the history of the Islands down to the time of my visit, but I shall probably in the course of this paper have to refer to past dates in order to complete, as well as can be done in the limits of a paper of this nature, the history of Peel Island and its settlers up to the present time.

(*To be continued.*)

OUR NEIGHBOURHOOD.

Nobody ever puzzled the neighbours so much. They did not know what to make of him. Even the little Barber himself was at his wit's ends. "The deuce was in the man" he said, but as to what was in his bundle, that was quite beyond conjecture—a mystery within a mystery. It was all to no purpose that they discussed it; nothing came of it. Curiosity grew bigger from day to day, but the bundle neither increased or diminished a whit. The Barber was observed to languish, nor did he seem to consider that his friend the Tapster —to whose consideration the matter had been unanimously referred—had fully enumerated all its possible contents when he gave it as his deliberate opinion, after two whole days of reflection, that perhaps the bundle contained—nothing at all. It may be asked—and not unreasonably too,—why did not the good folks satisfy their very natural curiosity by enquiring of the old man himself who he was, and wherefore carried a bundle? Nothing would have pleased them better, it may at once be conceded: but they hadn't a chance, he was off so early every morning on his mysterious business. An early riser, or a roysterer homeward bound at that chill mid-season when the lamps still struggle with the rising sun, might now and then behold him stealing along the main street, or emerging swiftly from the alley where he lived and hurrying past the shuttered houses,—walking on his toes as though afraid to wake the sleeping neighbours and carrying his bundle beneath his arm—disappear round the corner of the *saké* shop, without so much as bestowing a glance upon the sign board overhead with its appetising legend of "*San toku shu.*" Nor did he return till after nightfall, and then he closed his ricketty tenement against all comers, denying admittance to every visitor except perhaps the boisterous north-east wind, which rattled and banged so furiously upon the crazy shutters at times, that it succeeded at last in forcing an entry, and then, as if dissatisfied with its quarters when it did get in, blew a hole in the black thatch overhead, and dashed out again to roar and scamper down the street, swinging about the sock-maker's sign as it went, and shaking the bushes over the wineshops, and blowing out the watchmen's lanterns, whistling through a chink here and handing in a toothache there, and in fine conducting itself so viciously and uproariously on its way to play at hide and seek amongst the cryptomerias in the Temple grounds, as almost to justify the Macaroni woman in declaring that she "never did see such a good-for-nothing wind, and for her part she could not stand it." "What's most concealed is soon revealed" saith the proverb; whereby it is inferred that mysteries will break loose when they get the chance, though barred and bolted in and double padlocked. Some are dragged from their concealment by your professed mystery-hunter, who finds as much pleasure in the achievement as an antiquary experiences over a *cairn*; others accidentally discover themselves; and others again shed their contents as naturally as a bean pod does its seeds, when they have grown ripe enough for disclosure. And when the murder is out, how often is expectancy satisfied by results? How many times in a hundred is the fever of curiosity, the *angina*, in direct ratio or the reverse of the matter's importance? Perhaps the old folks in Our Neighbourhood could

give an answer to that worth the listening to. Here had they been puzzling their stupid sluggish brains for days and days over nothing, labouring mightily like the mountain over a mouse, building theory on theory about an old man with a bundle, till the structure, like a house of cards, without cohesion and topheavy, collapsed as often as it neared completion.

It must not, however, be omitted in their favour that our village is but a dull place, and any new subject of conversation is a godsend to the good folks after the labours of the day are over. Like a stone dropped into stagnant water, it stirs the surface for a little time and gives an air of liveliness and motion where till then was stillness and repose. On that account, perhaps, it is as well that certain persons in the little circle, who, from having brains less densely stolid than is common with the other villagers, have come to be regarded as clever fellows—should for want of better mental occupation, or from a twist of mind which is congenital perhaps, delight to deal in mystery, and, like the schoolboy who constructs an image out of snow in order that he may destroy it, take pleasure in devising *ab initio*, or adding to when once set rolling, and setting upon end and fashioning in like manner, stories and sayings and such like, in order that they might gain credit for discovering and demonstrating and demolishing these fictions, which, if left alone, would as surely be dissolved in process of time by the light of day, as the snow image aforesaid is by the sun. For such or other reasons perhaps, the mystery of the old man with the bundle continued to engross the minds of the neighbours for (considering the small amount of mystery in it) a considerable time. Nay, it might have so continued to this day, and even have gone to the grave with the Barber and remained for ever undiscovered, were it not that chance, in the shape of a horse boy,—who met the old fellow on the road one moonlight night—stalked into their midst and told the whole story without any reserve, and thereby disproved many most ingenious theories as to the antecedents, circumstances, and present occupation of the old man with the bundle. "He met along the road," he said, as he was having his hair dressed—to the Barber's undying fame be it said that it was under his hand that the affair came to light, thereby increasing his reputation for sagacity mightily, and adding much to his own mental satisfaction—"he met along the road as he came from Riogoku, an old fellow walking gingerly along on his toes"—"Ah! ha! the old burglar" exclaimed wiseacre No. 1 to the company with a wink—"How's that, friend," enquired the Horse boy. "Doth not a burglar steal along upon his toes for fear of making noise, you lout?" replied wiseacre, amidst a hum of approbation. "I know not the ways of burglars as well as some people, perhaps, but this I do know that a man with a sore upon his heel must fain walk upon his toes for ease thereof." Here the Barber, eager for the continuation of the story or anxious to prevent an unseemly altercation, pinched his client's nose to divert his thoughts into another channel, and so the tale proceeded. "He was walking on his toes and carrying in his arms a heavy bundle. As our way lay in the same direction I got into conversation with him, and perceiving him by reason of his lagging gait to be exhausted, I relieved him of his parcel and placed it on my horse for the sake of good companionship; and right glad I was I did so, for when able to walk with freedom and lift up his drooping shoulders and straighten up his crooked back a bit"—"An old courtier for certain, remember I always said so," whispers wiseacre No. 2 loud enough to be heard by all, but still not sufficiently so to interrupt the speaker—"and straighten up his crooked back a bit, ahem," repeated the Barber, to remind the story teller whose attention had been diverted from the matter in hand by a new arrival—"he become very entertaining, and told me that he postured at *matsuris* as a wrestler, and was earning something now though at first he fared but badly. He had no success at all all first indeed, he remarked, because a certain inconvenient bashfulness prevented him speaking in a key which was loud enough to engage attention, and he found himself incontinently hustled away from vacant places because he had no properties to give him an air of being in the trade, but seemed rather a temporary interloper intruding where was coin, with a view of diverting such from its regular and lawful channels—a bird of prey feeding on its fellows, as it were. Since then, however, experience had taught him wisdom, and the bundle which he carried did duty for his box of tricks, or what not, although containing nothing more serviceable than tattered clothes. What he yet required, however,—(and here he sighed regretfully, but he had hopes that his association with the rogues he met would remedy that defect in time,)—was the true vagabondish cast of countenance without which no mountebank could be considered genuine. By these and many other pleasant sayings he beguiled the way, until I half forgot that I had travelled fifteen *ri* that day, and I was right sorry to part with his company at the cross roads leading past the village. Here he left me, saying that he lived a little distance off in a place where once his fortunes were very different from what they now are, and that if he did not keep himself concealed, the prying fools about him, of whom a confounded jack-a-napes of a Barber was the worst, would soon find out all about him and he'd have no peace for ever after."

ASIATIC SOCIETY OF JAPAN.

A General Meeting of the above Society was held in the Grand Hotel on Wednesday, the 15th instant, the President Dr. S. R. Brown in the Chair. The attendance of members and friends was unusually large. The minutes of last meeting were read and approved.

Mr. Russell Robertson then proceedeed to read his interesting paper on "The Bonin Islands."

On its conclusion Dr. Brown remarked that he was sure it would not be regarded as a mere formality, when he said that the Asiatic Society was much indebted to Mr. Robertson for the elaborate and interesting account he had given of the Bonin Islands. That group so near to us, and yet out of the usual track of vessels that traverse the Pacific has long been known to navigators and others, but the reports respecting the islands have been so fragmentary and scattered, that it was difficult, if not impossible, to form a correct conception of their physical characteristics, or of the condition of their inhabitants. Mr. Robertson has given us, what must have cost him much pains taking, an almost exhaustive description of those islands, as the result of his research among books of voyages and travel, and his own careful personal observations, gathering up into a connected whole all that is known of their past history and present state. The variety of nationalities among the 69 residents there shows that whalers have most frequently visited those islands. That little community is composed of persons from the United States, Great Britain, France, Germany, Portugal, the Sandwich Islands, the Ladrones, the Kingsmill and other groups in the Pacific, as well as Japanese and natives of the Bonin Islands.

The Japanese Government not long ago made an abortive attempt to colonize those islands, and perhaps still claims sovereignty over them, but the people on the Islands it appears prefer to be left to themselves.

Mr. Robertson's concluding remarks respecting the social, intellectual and moral condition of those people deserve consideration. Webb, the only man among them who can read and write, must soon pass away, and there is none to fill his place in burying their dead or reading the marriage service at their weddings. It is pitiful to think of the deeper ignorance and degradation into which those people must of necessity relapse, unless some outside influence intervenes to prevent it. Mr. Robertson's suggestion that the foreigners in Japan might do something to improve their condition and prospects, commends itself to all hearts that have a fellow feeling for their kind.

Dr. Brown referred to George Horton whose name is mentioned as one of the men living there a few years ago. He said he knew him, that Horton's history served to show through what checquered fortunes obscure individuals often pass. He was left in the Bonin Islands as an invalid at his

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

own request, by Commodore Perry in 1853 or 1854. In 1862 he was brought to Yokohama under arrest, in a Japanese whaling vessel, charged with having made a piratical attempt upon that vessel. Horton was about 80 years old at the time. Being brought before the United States Minister for trial, the facts elicited were these. While the Japanese vessel lay at Port Lloyd, Horton one day was out shooting at a mark with an old pistol, when a man of the island who had been out on a cruise in the whaler, asked him to go on board with him and help him to bring off his chest, as he wished to leave the ship. Horton consented and when the boat drew up along side the ship, threw his rusty old weapon down in the stern sheets of the boat, and went up on deck. Here some wordy altercation about the removal of the chest, between its owner and the Captain, resulted in Horton's being accused of piratical designs against the ship, and he was tied up with ropes, and made fast to a spar. In this condition he was brought to Yokohama and handed over to the United States authorities for trial. A mere look at the shaky decrepit old man was enough to disprove the charge and he was accordingly acquitted. The decision of the Court was that Horton should either be replaced in possession of his clearing and house at the islands, or that $1000 should be deposited with the American Consul for his support here. The latter alternative was preferred by the Captain of the ship. Horton was a native of Boston in England, had at first owned and commanded a vessel, had been a seaman in the British navy for twenty-five years, was in the battle of Copenhagen, served under Nelson in the battle of the Nile, and finally had served in the U. S. Navy eighteen years, when left on the Bonin Islands. He survived his removal to Yokohama by about two years, and his remains lie interred in the cemetery here.

LATE TELEGRAMS.

London, March 6.—A Select Committee has been appointed to enquire into the serious depreciation of silver.
